

# The New Safety Net

By Erine A. Gray

Founder and CEO, [findhelp.org](http://findhelp.org) / Aunt Bertha, a Public Benefit Corporation

## Rules Committee Testimony

---

### Introduction

My name is Erine Gray and I'm the Founder and CEO of Aunt Bertha, a Public Benefit Corporation based in Austin, TX. We created [findhelp.org](https://findhelp.org), a publicly accessible website that's used by millions of people in the US and hundreds of thousands of social workers and care coordinators who assist others. [findhelp.org](https://findhelp.org) allows people to easily search and connect with food programs, housing programs, and hundreds of thousands of free and reduced cost services provided by government and charitable organizations in the United States.

We are fortunate to live in a generous country with a strong safety net, but for most of us, navigating the safety net is complicated. My experience with the safety net began at an early age. I was born in Olean, NY and my first home was at the Martha Avenue Housing Projects until my parents could afford to buy a house. From time to time, our family was able to eat because of the Food Stamp (now SNAP) program, and we were able to eat lunch at school because of the free lunch program.

The name of our company is inspired by my mother, who raised seven kids and took in two additional kids for a period of time because they didn't have a place to live. Although she wasn't a social worker, she was a janitor, she inspired me to dedicate my life to helping others.

### Simplifying Navigation

We can't escape this life without having some curveballs thrown our way. Whether it's caring for aging parents, losing someone close to us, or watching someone we love struggle with addiction, many of us don't know where to begin in managing these crises.

The information age has given us some amazing technological advancements. We live in an age where we can order shaving cream while shaving and it'll be delivered securely to our garage the very next day. Yet, finding the nearest food pantry that is currently open and has capacity can feel like, pun intended, an act of Congress. In 2010, our company set out to fix this information problem.

Eleven years later we've helped millions of people find and connect to social services. Our website is used by people looking for all types of services like help paying rent, finding affordable housing or finding the nearest food pantry. Professional care coordinators and social workers from hospital systems, health plans and nonprofits use our website on behalf of the clients they serve every day.

Every one of us has stories of a time in our lives where we looked around and said to ourselves "I don't know what to do." [findhelp.org](https://findhelp.org) helps people during these moments. Our website is available to any user, anonymously. If someone finds a program close to them that they qualify for, they can just go ahead and connect electronically to the nonprofit or government agency that provides those services. And in many cases, organizations that provide those services can respond quickly giving the person in need the dignity of a yes or a no in a timely fashion.

Our Austin, TX based data operations team continually works to ensure that the programs showing up in the search results are up-to-date by keeping up with the ever-changing landscape of available services. We partner with nonprofits and give them tools to assist their clients. We protect our users' information and do not sell advertisements, nor do we sell their data.

Our vision is to connect all people in need and the programs that serve them — with dignity and ease. In order to solve this problem, we need to get people the information they need in the moments they need them.

## **Digitization Tells Stories & Then We Can Act**

Before the internet, in both small towns and big cities, professional social workers and care coordinators have been doing this hard work each and every day. They still do. But up until now, we were not able to quickly understand where the supply of available social services is meeting the demand for them. In order to figure out which programs to fund, public foundations and governments would spend months or even years using anecdotal information to figure out what's needed.

Now, as this information continues to be digitized, the data tells the story of where supply is not meeting demand in near real-time. For example, when COVID-19 hit, our data showed a dramatic spike in the need for a range of social services, from food programs to housing assistance. According to our data, food related searches increased 326% from February to April. Accordingly, the search for non-emergency health services as a percentage decreased as most people were putting off non-essential healthcare.

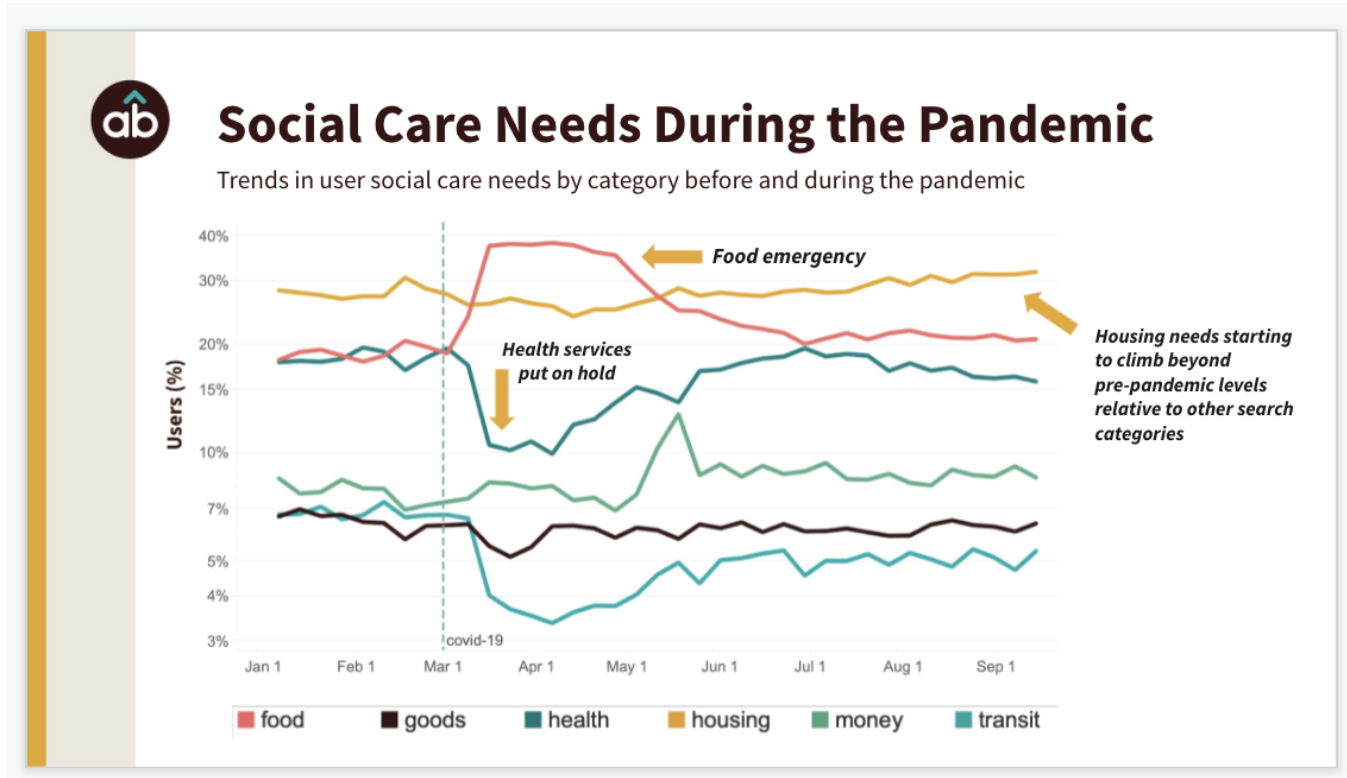

Figure 1: Visual demonstration of the increase in searches for food related programs during the COVID-19 epidemic.

By analyzing the anonymized and aggregated search data, we also see a relationship between demand for social services and when the federal stimulus checks went out. Search volume went down as more people had extra money in their pockets and businesses started hiring again.

Digging in further, we can also analyze trends across locations. In the graph below, based solely on search activity on the [findhelp.org](https://findhelp.org) network, we can identify states that do not provide dental benefits to adults on Medicaid.

Figure 2: Our analysis finds that we see higher volumes of search activity for dental care services in states that do not offer extensive dental coverage for adults on Medicaid.

In the addendum, you will find what may be some interesting trends for the states that you live in based on search activity we are seeing across the [findhelp.org](https://findhelp.org) network.

## A New Safety Net

With new information available we have an opportunity to envision a new safety net built for the information age. The new safety net must be responsive — not just to trends, but to individual people — right in their moment of need. Government alone cannot build this new safety net. We need nonprofits, religious institutions, and the private sector.

Imagine the possibilities of what a new safety net might look like. If we saw a dramatic spike in demand for food because a factory closed down, we could immediately speak with local nonprofits to ask them what they need. Funds could be transferred in moments and they could serve people right away.

A new safety net makes it easy for people to raise their hand and say “I need help.” And those same people deserve to get that help without having to jump through bureaucratic hoops. The good news is that this **can be done**. As a country, we’ve solved far more complicated information and logistical problems in other sectors.

## Conclusion

Reinhold Niebuhr once said that: *“Nothing that is **worth doing** can be achieved in our lifetime; therefore we must be saved by hope.”*

Ending Hunger in the United States is one of those things that is **worth doing**. But I differ with Niebuhr on this. I believe it can happen in our lifetime. It'll be hard. It'll take work. And it'll take hope.

Thank you for the opportunity to share my thoughts today.

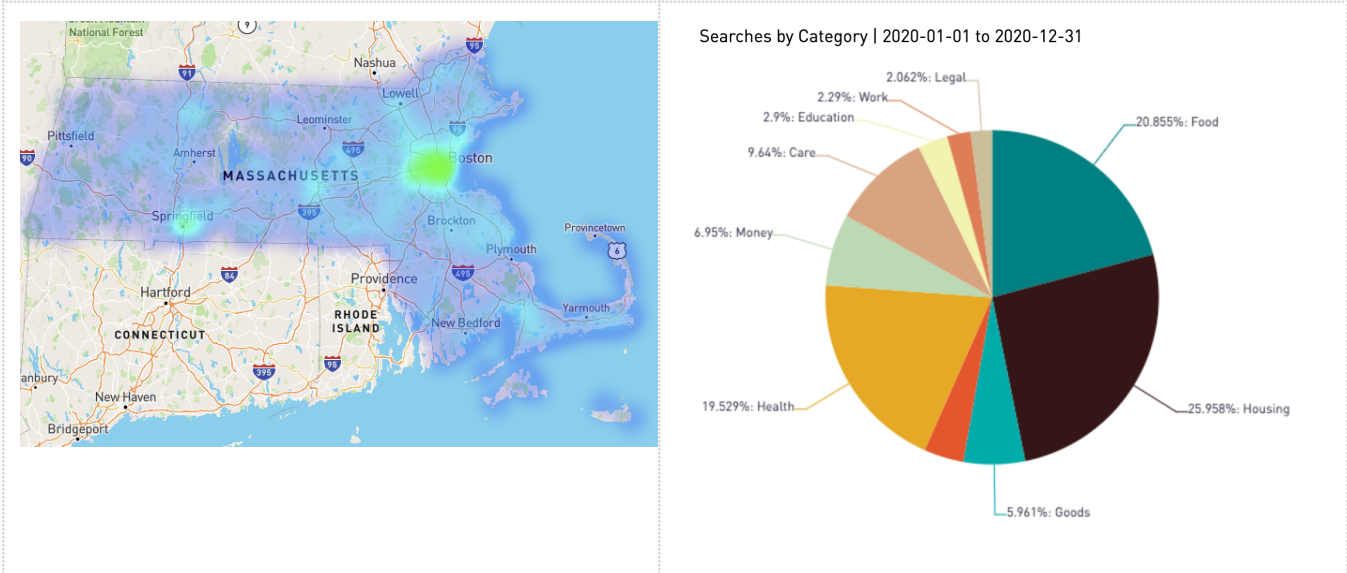

## Addendum

In this addendum, you will find some helpful insights about what your citizens are searching for in aggregate. This is just a small subset of the type of data we are happy to provide as you work towards your vision of ending hunger by 2030.

In the last 3 months in Massachusetts, housing has been the top searched for need, specifically “help find housing.” During this same time frame last year, food was the most searched for need, specifically “food delivery.” We think this is reflective of the population’s general needs, particularly as it relates to the evolution of the pandemic. This time last year many families were struggling to obtain groceries as a result of loss of income as well as panic buying and supply chain disruptions. Many medically vulnerable people were afraid to leave their home due to the threat of the virus, and turned to our platform for help delivering food. Now housing, our typical top searched for service, is the most searched for need as many families struggle to find and afford housing.

The benefit of having realtime data is that it often allows us to identify needs as they arise. In Oklahoma, we can see as we approached summer, “help pay for utilities” quickly became our most searched for term. Below you’ll find a small subset of summary data for each state you represent — illustrating the breadth of our search and needs data.

## Massachusetts

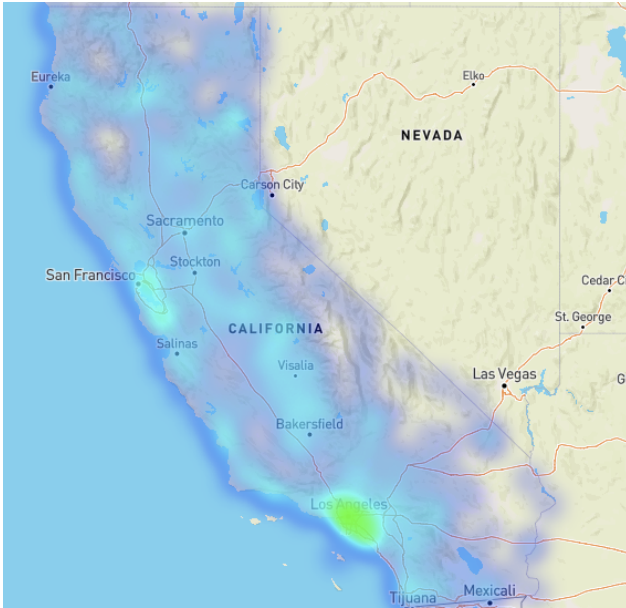

### Top Searched Terms in Massachusetts in 2020

Term	Domain	Searches
food pantry	food	6,791
help pay for housing	housing	5,710
food delivery	food	4,920
