LETTER OF TRANSMITTAL

HOUSE OF REPRESENTATIVES,
COMMITTEE ON RULES,
Washington, DC. November 15, 2022.

Hon. CHERYL L. JOHNSON,
Clerk, House of Representatives,
Washington, DC.

DEAR MS. JOHNSON: On November 14, 2022, by voice vote, I was directed by the Committee on Rules to submit herewith the Committee's report entitled, "Ending Hunger in America: Challenges, Opportunities, and the Political Will to Succeed".

Sincerely,

James P. McGovern
Chairman

Opening From Chairman James P. McGovern of the House Committee on Rules
HEARING: ENDING HUNGER IN AMERICA: CHALLENGES, OPPORTUNITIES, AND BUILDING THE
POLITICAL WILL TO SUCCEED (APRIL 28, 2021).....
Congressional Research Service Memo.....
Witnesses and Testimony:
Dr. Thea James, Vice President of Mission and Associate Chief Medical Officer,
Boston Medical Center.....
Dr. Diane Schanzenbach, Margaret Walker Alexander Professor,
Northwestern School of Education and Social Policy.....
Ayesha Curry, Co-Founder, Eat. Learn. Play. Foundation; Ambassador, No Kid Hungry.....
Heather Reynolds, Managing Director of the Wilson Sheehan Lab
for Economic Opportunities, University of Notre Dame.....
Additional Materials for the Record:
"The Safety Net as an Investment" by Dr. Diane Schanzenbach and Dr. Hilary Hoynes, January 27, 2016..
"California must take bold action to support schools and feed children"
by Steph and Ayesha Curry, The San Francisco Chronicle, June 24, 2020.....
"It's time for a second Conference on Food, Nutrition and Health" by Dariush Mozaffarian,
Daniel J. Glickman, and Ann Veneman, The Hill, February 26, 2021.....
"Report of the Anniversary of the White House Conference on Food, Nutrition, and
Health: Honoring the Past, Taking Actions for our Future" from Tufts University, March 2020.....
ROUNDTABLE: ENDING HUNGER IN AMERICA: EXAMINING HUNGER IN VETERANS AND
MILITARY FAMILIES (MAY 27, 2021).....
Witness and Testimony:
Mark Walker, Deputy Director, East Bay, Swords to Plowshares.....
Abby J. Leibman, President & CEO of MAZON: A Jewish Response to Hunger.....
Kathy Roth-Douquet, CEO of Blue Star Families.....
Dr. Colleen Heflin, Professor of Public Administration, and International
Affairs in the Maxwell School at Syracuse University.....
Chad Morrison, Chief Executive Officer, Mountaineer Food Bank.....
Additional Materials for the Record:
"Association between Food Insecurity, Mental Health, and Intentions to Leave the US Army
in a Cross-Sectional Sample of US Soldiers" from The Journal of Nutrition, 2021.....

BIDEN-HARRIS ADMINISTRATION NATIONAL STRATEGY ON HUNGER, NUTRITION, AND HEALTH.....

America is a land of abundance. Our farms and farmers are the envy of the world—growing incredible produce, tending livestock and poultry, and cultivating the rich natural bounty that blesses this continent from coast to coast. The fertile soil of this land has fed generations of American prosperity—allowing us to become the richest, most powerful country on the planet.

Yet hidden in plain sight—amid amber waves of grain and supermarkets shelves of excess—is the shadow of hunger. Tens of millions of our fellow Americans—including a shocking number of children—do not know where their next meal will come from.

As a young man, my first involvement in the movement to end food insecurity began back when I was a student interning for Senator George McGovern—no relation.

For decades, America’s hunger crisis had remained in the shadows—until April 1967, when a Senate subcommittee visited the Mississippi Delta as part of their examination of the effectiveness of President Lyndon Johnson’s Great Society.

CBS News ran a special report on the visit called “Hunger in America” which brought the issue into the living rooms of homes across the country—putting on full display the painful poverty and abject hunger that many viewers assumed did not exist in the world’s only superpower.

Millions of Americans—including South Dakota Senator George McGovern—watched from the comfort of their own homes as a little boy told the interviewer that had no food at school and was regularly hungry.

“How does it make you feel to watch other kids eat while you go without,” he asked.

The little boy said he was “ashamed.”

That night, Senator McGovern told his family: “You know, it’s not that little boy who should be ashamed, it’s George McGovern, a United States Senator, a member on the Committee on Agriculture.”

McGovern turned his shame into action—serving as chair of the Special Select Committee on Hunger and Nutrition. As a staffer, I watched him champion these issues in a bipartisan way, alongside leaders like Senator Bob Dole.

Together, the pair secured a Conference on Food, Nutrition and Health—the first ever—at the White House.

Out of that conference came incredible progress in the fight against hunger—the creation of the modern-day Food Stamp program (now known as SNAP), the Special Supplemental Nutrition Program for Women, Infants, and Children, the National School Lunch Program, and more.

The 1980s ushered in the rise of trickle-down economics. Attempts to demonize those who relied on anti-hunger programs escalated, funding was cut, and hunger came back with a

vengeance. The Personal Responsibility and Work Opportunity Reconciliation Act, signed into law in 1996, cut further holes in our safety net, some of which we are still feeling to this day.

By the time I got elected in 1996, the situation was so bad that I knew my top priority in Congress was preventing further cuts and bringing back the political will to end hunger in America.

Inspired by the leadership of Senators McGovern and Dole, I knew that I wanted to use my time as a Member of Congress to make meaningful progress in the fight against hunger.

As Chairman of the Rules Committee, I have used my position to convene hearings, roundtables, site visits, discussions, interviews, and more to give voice to those who do not have enough food.

The result of our work is this record of innovative solutions from across the nation that can help us build a roadmap to ending hunger once and for all.

Included in this report, you will find the testimony, reports and other materials compiled in anticipation of a second White House Conference on Hunger Nutrition, and Health.

This report informed the national strategy, included at the end of this report, that was released by the Biden-Harris Administration, and includes many of the concepts learned during our hearing and roundtables. This strategy includes solutions that work—to not just manage hunger, but to ensure that food is a fundamental human right for every single American.

Let this report be a reminder that the abundance of our land can and must be shared equitably by all who call this great country home—and that working together with common purpose toward the shared prosperity of all, we can and will end hunger now.

Sincerely,

A handwritten signature in blue ink that reads "James P. McGovern". The signature is written in a cursive style with a horizontal line underneath the name.

Chairman James P. McGovern

HEARING: “Ending Hunger in America: Challenges, Opportunities, and Building the Political Will to Succeed”

April 28, 2021

MEMORANDUM

April 20, 2021

To: House Committee on Rules
Attention: Kim Corbin, James Fitzella, Allie Neil

From: Randy Alison Aussenberg, Specialist in Nutrition Assistance Policy,
Kara Clifford Billings, Analyst in Social Policy, Kirsten J. Colello, Specialist in Health
and Aging Policy, Alyse N. Minter, Research Librarian,
Angela Napili, Senior Research Librarian

An Overview of U.S. Hunger and Major Nutrition Assistance Programs

Subject:

This memorandum provides requested background information for a forthcoming hearing on hunger and nutrition assistance programs in the United States (U.S.). The memo first discusses how food insecurity is measured and recent trends in the data. Next the memo briefly summarizes the domestic federal nutrition programs administered by the U.S. Department of Agriculture (USDA) and U.S. Department of Health and Human Services (HHS), including brief program descriptions and data from the last two fiscal years. Finally, the memo provides an overview of these programs in the Coronavirus Disease 2019 (COVID-19) pandemic, focusing particularly on the 116th and 117th Congress pandemic response laws.

Measuring Hunger, Food Insecurity

Congress has long been interested in issues of hunger and, over the past century, has allocated federal resources to address hunger in this country. The federal programs discussed in this memorandum largely pursue the goal of alleviating hunger by providing food to low-income and needy populations. The earliest of these efforts, the National School Lunch Program (NSLP), dates to the Depression era. Other programs have been added over time, particularly towards the end of the twentieth century. Today's nutrition programs also pursue objectives broader than the provision of food, such as preventing diet-related disease, increasing socialization opportunities for seniors, and improving employment and training opportunities.

Assessing the level of hunger in the United States is crucial to identifying populations in need of assistance and understanding if federal efforts to prevent hunger are working. However, *hunger*—an individual-level physiological condition—is a challenging concept to measure. Starting in the 1980s, a consortium of federal agencies and private-sector researchers developed an alternative: *food insecurity*,

defined as disrupted eating patterns and/or reduced food intake due to a lack of resources.¹ Food insecurity prevalence is currently measured as part of the federal Current Population Survey each year.

The latest official data showed that 10.5% of U.S. households were food insecure at some point during 2019, the lowest rate in recent years.² However, the economic ramifications of the COVID-19 pandemic have contributed to newly-food insecure individuals and exacerbated food insecurity among others. Estimates from private-sector surveys put the food insecurity rate between 17%-22% during the pandemic.³ Data collected by the U.S. Census Bureau during the pandemic show that between 10%-15% of Americans reported sometimes or often not having enough to eat in the past seven days—a more severe indicator than food insecurity.⁴

The ways in which food assistance programs discussed in this memorandum have responded to heightened food insecurity during the pandemic are discussed further under “Response to COVID-19 Pandemic.”

Nutrition Assistance Programs: Program Descriptions and Data

The tables to follow briefly describe and include recent data for the nutrition programs administered by USDA’s Food and Nutrition Service (FNS) and HHS’s Administration on Community Living (ACL):

- **Table 1** lists those USDA-FNS programs that were most recently reauthorized by the 2018 farm bill, the Agriculture Improvement Act of 2018 (P.L. 115-334). The nutrition title, Title IV, of the law included all of the programs listed in **Table 1**. The primary food assistance program in the farm bill is the Supplemental Nutrition Assistance Program (SNAP).
- **Table 2** lists the USDA-FNS programs typically included in a child nutrition reauthorization law. The most recent child nutrition reauthorization act was the Healthy, Hunger-Free Kids Act of 2010 (P.L. 111-296).
- **Table 3** lists the HHS-ACL nutrition programs authorized in the Older Americans Act. This law was most recently reauthorized by the Supporting Older Americans Act of 2020 (P.L. 116-131).

Note that there are additional federal grant programs, at HHS and the Department of Housing and Urban Development (HUD) for instance, that provide funding for a broad range of social services and other community-based initiatives.⁵ Nutrition services may be an allowable use of funds for these broad-based programs. The decision to use these grant funds to provide nutrition assistance among other services is often at the discretion of the state grantee or other grant recipients; thus for the purposes of this memorandum, CRS has provided information on domestic food assistance programs that as their statutory purpose fund nutrition assistance.

¹ For further detail on the definition of food insecurity, see A. Coleman-Jensen, M.P. Rabbitt, and C.A. Gregory, *Household Food Security in the United States in 2019*, U.S. Department of Agriculture (USDA), Economic Research Service, September 2020, <https://www.ers.usda.gov/publications/pub-details/?pubid=99281>. For further background on the development of the measure, see National Research Council, *Food Insecurity and Hunger in the United States: An Assessment of the Measure*, Washington, DC, 2006, pp. 23-51, <https://www.nap.edu/catalog/11578/food-insecurity-and-hunger-in-the-united-states-an-assessment>.

⁵ Examples include HHS programs Social Services Block Grant (SSBG), Medicaid (joint federal and state funding), Community Services Block Grant (CSBG) program; and HUD’s Community Development Block Grant program (CDBG).

Table I. Overview of Major Nutrition Programs in the 2018 Farm Bill

Administered by USDA's Food and Nutrition Service

Program	Authorizing Statute (Year First Authorized)	Description	FY2019		FY2020	
			Expenditures (exceptions noted)	Participation	Expenditures (exceptions noted)	Participation
Supplemental Nutrition Assistance Program (SNAP) (formerly, Food Stamp Program)	Food and Nutrition Act of 2008 (1961)	Provides to low-income households electronic benefits redeemable for SNAP-eligible foods at SNAP-eligible retailers. Benefit amounts vary by household size and benefit calculation rules. Non-benefit SNAP funding provided for matching states' administrative costs, Employment & Training, nutrition education, and other SNAP-related costs. Operates in 50 states, the District of Columbia, Guam, and U.S. Virgin Islands.	\$60.4 billion	35.7 million	\$79.2 billion ^a	39.9 million
Nutrition Assistance Block Grants	Food and Nutrition Act of 2008 (1982)	Puerto Rico, American Samoa, and Commonwealth of the Northern Mariana Islands receive capped, block grant funding in lieu of SNAP.	\$2.6 billion (Puerto Rico only)	1.3 million (Puerto Rico only)	\$2.7 billion (Puerto Rico only)	1.4 million (Puerto Rico only)
The Emergency Food Assistance Program (TEFAP)	Food and Nutrition Act of 2008; Emergency Food Assistance Act (1981)	Distributes federally-purchased foods (and cash support for storage and distribution costs) through states to local emergency feeding organizations (e.g., food banks). Operates in 50 states, the District of Columbia, Puerto Rico, Commonwealth of the Northern Mariana Islands, Guam, and the U.S. Virgin Islands.	\$1.9 billion ^b	not available	\$3.5 billion ^{ab}	not available
Commodity Supplemental Food Program (CSFP)	Agriculture and Consumer Protection Act of 1973 (1969)	Provides supplemental monthly food packages to low-income elderly persons.	\$259 million	703,000	\$278 million	692,000
Food Distribution Program on Indian	Food and Nutrition Act of 2008; Agriculture and Consumer	Provides, in lieu of SNAP benefits, food commodities to low-income households on Indian reservations and to Native American families residing in Oklahoma or in designated areas near Oklahoma.	\$159 million	84,000	\$138 million	75,000

Program	Authorizing Statute (Year First Authorized)	Description	FY2019		FY2020	
			Expenditures (exceptions noted)	Participation	Expenditures (exceptions noted)	Participation
Reservations (FDPIR)	Protection Act of 1973 (1973)					
Senior Farmers' Market Nutrition Program (SFMNP)	Farm Security and Rural Investment Act of 2002 (2002)	Provides vouchers/coupons to low-income seniors to purchase fresh produce at farmers' markets and other direct-to-consumer venues.	\$20.5 million (transfer)	832,000	\$20.5 million (transfer)	Not available
Community Food Projects ^c	Food and Nutrition Act of 2008 (1996)	Competitive grants to nonprofit organizations for programs that improve access to locally produced food for low-income households.	\$5.0 million (annual appropriation)	Not available	\$5.0 million (annual appropriation)	Not available
Gus Schumacher Nutrition Incentive Program (GuSNIP) ^c	Food Conservation and Energy Act of 2008 (2014)	Competitive grants for projects that increase low-income consumers' purchase of fruits and vegetables by providing incentives at SNAP points of purchase or (added by 2018 farm bill) providing produce prescriptions to SNAP/Medicaid participants.	\$45.0 million (funding provided by authorizing law)	Not available	\$48.0 million (funding provided by authorizing law)	Not available

FY2019 participation and funding data from USDA-FNS Key Data Report, based on data through September 2020. SFMNP funding and data displayed for FY2019 from USDA-FNS program website.

Notes:

- a. FY2020 total includes FY2020 expenditures of COVID-19 pandemic supplemental appropriations and/or policy changes that authorize increased spending.
- b. TEFAP funding totals include all USDA food purchases (entitlement, bonus, and trade mitigation) and administrative funds. FY2019 data from USDA, Office of Budget and Program Analysis, "2021 Explanatory Notes – Food and Nutrition Service," p. 34-104, <https://www.usda.gov/sites/default/files/documents/32fns2021notes.pdf>. Final FY2020 expenditure data for TEFAP are not available; budget authority is from USDA FNS, "Additional Information on FY 2020 Funding Sources for The Emergency Food Assistance Program (TEFAP)," FNS-GD-2020-0091, June 12, 2020, USDA, "USDA Announces Coronavirus Food Assistance Program," Release No. USDA 0222.20, April 17, 2020, and USDA Agricultural Marketing Service (AMS), "USDA Announces Additional Food Purchase Plans," May 4, 2020.
- c. These grant programs are administered by USDA's National Institute of Food and Agriculture (NIFA), not FNS.

Table 2. Child Nutrition and WIC Programs at a Glance

Program	Authorizing Statute (Year First Authorized)	Description	FY2019		FY2020	
			Expenditures (exceptions noted)	Participation (exceptions noted)	Expenditures (exceptions noted)	Participation (exceptions noted)
National School Lunch Program (NSLP)	Richard B. Russell National School Lunch Act (1946)	Provides federal reimbursements for lunches served in participating pre-K-12 schools. Options for schools to provide afterschool snacks and summer lunches through NSLP.	\$14.2 billion	27.4 million average daily lunches served	\$10.4 billion	21.0 million average daily lunches served
School Breakfast Program (SBP)	Child Nutrition Act (1966)	Provides reimbursements for breakfasts served in participating schools (also pre-K-12). Option for schools to provide summer breakfasts.	\$4.6 billion	13.7 million average daily breakfasts served	\$3.6 billion	11.5 million average daily breakfasts served
Child and Adult Care Food Program (CACFP)	Richard B. Russell National School Lunch Act (1968)	Provides reimbursements for meals and snacks in child care centers, day care homes, and adult day care centers. Rules and funding differ based on type of institution.	\$3.6 billion	4.7 million children; 136,500 adults (daily average)	\$3.0 billion	4.1 million children and 106,700 adults (daily average) ^a
Summer Food Service Program (SFSP)	Richard B. Russell National School Lunch Act (1968)	Provides reimbursements for meals and snacks served by nonprofit organizations and schools during the summer months. Eligibility rules vary by type of meal site.	\$475 million	2.7 million children (daily average) ^b	\$4.1 billion	4.7 million children (daily average) ^a
Special Milk Program (SMP)	Child Nutrition Act (1954)	Provides reimbursements for milk in schools and institutions that do not participate in other child nutrition programs.	\$7.3 million	2.2 million half-pints served on average daily ^c	\$3.7 million	71,800 half-pints served on average daily ^c
Special Supplemental Nutrition Program for Women, Infants, and Children (WIC)	Child Nutrition Act (1974)	Provides benefits redeemable for supplemental foods as well as nutrition counseling and breastfeeding support to pregnant/breastfeeding/postpartum women, infants, and children (under five years old).	\$5.3 billion	6.4 million recipients (monthly average)	\$4.9 billion	6.2 million recipients (monthly average)

Program	Authorizing Statute (Year First Authorized)	Description	FY2019		FY2020	
			Expenditures (exceptions noted)	Participation (exceptions noted)	Expenditures (exceptions noted)	Participation (exceptions noted)
WIC Farmers' Market Nutrition Program (WIC FMNP)	Child Nutrition Act (1992)	Provides vouchers for WIC participants to redeem at farmers' markets.	\$18.5 million (appropriations)	1.6 million recipients total in FY2019	\$18.5 million (appropriations)	Not available
Fresh Fruit and Vegetable Program (FFVP)	Richard B. Russell National School Lunch Act (2002)	Provides funding for fresh fruit and vegetable snacks in elementary schools, with priority for low-income schools.	\$171.5 million (allocation to states)	Not available	\$193.5 million (allocation to states) ^d	Not available

Source: Except as noted, FY2019 and FY2020 participation and funding data from USDA-FNS Keydata Report, based on data through September 2020. WIC FMNP FY2021 appropriations from P.L. 116-260.

Notes: Many programs experienced declines in funding and participation in FY2020 due to the COVID-19 pandemic, with the exception of summer meals, which filled a gap when school meal participation declined.

- a. Average daily participation is estimated by USDA based on the number of meals served and program operating days. Estimates may be less reliable in FY2020 since operating days have varied during the COVID-19 pandemic.
- b. According to a May 2018 U.S. Government Accountability Office (GAO) report, estimates of participation in SFSP may be imprecise due to reporting error. GAO, Actions Needed to Improve Participation Estimates and Address Program Challenges, GAO-18-369, May 2018.
- c. Estimated by CRS based on the number of half pints served per month divided by an estimated 20 operating days per month.
- d. USDA-FNS, "FFVP: Allocation of FY2019 Funds," SP 16-2018, May 2018; USDA-FNS, "FFVP: Allocation of FY2020 Funds," SP 29-2019, May 2019.

Table 3. Overview of Older Americans Act (OAA) Nutrition Programs

Administered by HHS-ACL

Program	Authorizing Statute (Year First Authorized)	Description	FY2019		FY2020	
			Annual Appropriations	Participation	Annual Appropriations	Participation
Congregate Nutrition Program	Older Americans Act (1965)	Provides meals to older adults in settings such as senior centers, schools, and adult day care centers. Offers social services such as nutrition education and screening, nutrition assessment, and counseling at meals sites. Provides older adults with opportunities for social engagement and volunteerism.	\$495 million	1.5 million	\$510 million	Not available
Home Delivered Nutrition Program	Older Americans Act (1965)	Provides meals to older adults who are homebound. Offers services such as nutrition screening and education, nutrition assessment, and counseling.	\$251 million	882,000	\$266 million	Not available
Grants to Native Americans: Supportive and Nutrition Services	Older Americans Act (1965)	Provides for the delivery of supportive and nutrition services comparable to services provided under Title III (i.e., congregate and home-delivered nutrition) to older Native Americans.	\$34 million	65,000 (data are for FY2018)	\$35 million	Not available
Nutrition Services Incentive Program (NSIP)	Older Americans Act (1965)	Provides funds to states, territories, and Indian Tribal Organizations to purchase food or to cover the costs of food commodities provided by USDA for the congregate and home-delivered nutrition programs. Funds are allotted to states and other entities based on each state's share of total meals served during the prior year. Most states choose to receive their share of funds in cash, rather than commodities. ^a	\$160 million	Not applicable	\$160 million	Not applicable

Source: Prepared by CRS based on FY2019 and FY2020 Labor-Health and Human Services (HHS)-Education Appropriations acts and accompanying report and explanatory statement language available at the CRS appropriations status table. Participation data are from the Administration on Aging, AGing Integrated Database (AGID), <https://agid.acl.gov/>; data are rounded to the nearest thousand.

Notes: Excludes COVID-19 supplemental appropriations, which are discussed in “Response to COVID-19 Pandemic.” For more information on programs and funding under the OAA, see CRS Report R43414, *Older Americans Act: Overview and Funding*.

- a. For example, in FY2020, five states elected to spend over \$1.2 million of their NSIP grants on commodities (ACL, *Fiscal Year 2021 Justification of Estimates for Appropriations Committees*, p. and *Fiscal Year 2021 Justification of Estimates for Appropriations Committees*, p. 54, <https://acl.gov/about-acl/budget>). State participation data are not available, see USDA, FNS, Food Distribution Program Tables, <https://www.fns.usda.gov/pdf/food-distribution-program-tables>.

Response to COVID-19 Pandemic

In addition to responding to a higher need for food assistance during the pandemic, the nutrition programs have faced other challenges. Specific challenges may vary by individual programs but include safety concerns, particularly for programs that serve older adults (at highest risk for severe disease), and administering programs that have in-person requirements.

COVID-19 pandemic response laws enacted during the 116th and 117th Congress provided additional funding and new policies for the domestic nutrition programs at USDA and HHS. Both USDA and HHS programs were included in four response laws:

- Families First Coronavirus Response Act (FFCRA; P.L. 116-127, enacted March 18, 2020);
- Coronavirus Aid, Relief, and Economic Security (CARES) Act (P.L. 116-136, enacted March 27, 2020);
- Consolidated Appropriations Act, 2021, Division N, Title VII (P.L. 116-260, enacted December 27, 2020); and
- American Rescue Plan Act of 2021, Title I (ARPA, P.L. 117-2, enacted March 11, 2021).

USDA nutrition programs were also included in a fifth law, the Continuing Appropriations Act, 2021 and Other Extensions Act (P.L. 116-159, enacted October 1, 2020).

USDA-FNS Programs

USDA-FNS programs are often part of emergency response efforts, providing foods for distribution, additional benefits for redemption, and program flexibilities. Increasing households' food purchasing power may also be a means of economic stimulus.⁶ The response of FNS programs to the COVID-19 pandemic has been shaped by new federal laws as well as USDA, states, and providers working under the parameters of the laws.

COVID-19 pandemic response laws have included supplemental funding for USDA nutrition assistance programs, both in the form of finite, specified amounts and as open-ended funding, authorized and appropriated in such sums as necessary to accommodate certain policy changes. A specific ceiling was not provided in the laws for the open-ended funding. SNAP and child nutrition programs funding was most often open-ended. While some of this new funding and policies are reflected in the FY2020 totals presented earlier in this memorandum, much of the spending will be in FY2021 and subsequent years.

An overview of these provisions is provided below. Further detail about the COVID-19 response laws' provisions, including specific funding amounts where applicable, is in CRS Report R46681, *USDA Nutrition Assistance Programs: Response to the COVID-19 Pandemic*.

SNAP and Territory Programs in lieu of SNAP

Within SNAP, the COVID-19 pandemic response laws have allowed for certain changes to eligibility and benefit amounts. Among other changes, FFCRA authorized an emergency allotments option for states to increase households' benefits. More recently, P.L. 116-260 and then ARPA increased the maximum benefit amount by 15% for January through September 2021. FFCRA also suspended for the COVID-19 public health emergency, a work-related rule, the time limit for non-disabled adults without dependents. P.L. 116-260 temporarily expanded eligibility rules for students of higher education. In addition, the laws

⁶ Patrick Canning and Rosanna Mentzer Morrison, "Quantifying the Impact of SNAP Benefits on the U.S. Economy and Jobs," *Amber Waves Magazine*, July 18, 2019, <https://www.ers.usda.gov/amber-waves/2019/july/quantifying-the-impact-of-snap-benefits-on-the-us-economy-and-jobs/>.

allowed for a variety of administrative flexibilities; for instance, provisions designed to make it easier for states to manage the recertification of participating households during social distancing. The laws also provided additional funding for benefits and specified grants for other SNAP and related functions.

The pandemic response laws supplemented the block grant funding for Puerto Rico, American Samoa, and the Commonwealth of the Northern Mariana Islands. Together the laws provided over \$1.9 billion for these territories' nutrition assistance programs.

P-EBT and Child Nutrition Programs

FFCRA first established the Pandemic Electronic Benefit Transfer (P-EBT) program, and subsequent pandemic response laws expanded it. This program provides SNAP-like benefits to households, serving as replacements for meals that normally would have been provided in schools and, following expansion of the program, in child care centers. In March 2020 through September 2020, states issued over \$10.6 billion in P-EBT benefits to a monthly average of nearly seven million people.⁷

The pandemic response laws have also enabled changes within institution-based child nutrition programs, including school and summer meals programs. The pandemic response for these programs has included a supplemental appropriation of \$8.8 billion in the CARES Act, an expansion of USDA's authority to waive child nutrition program requirements, the temporary ability for providers to serve free meals to all children, and a program to cover financial losses for meal providers.

WIC

The laws have also provided additional funding for the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC). FFCRA provided \$500 million for the program. ARPA specifically provided authority and funding to increase fruit and vegetable vouchers (\$490 million) and new funding for outreach and modernization (\$390 million). In addition, the laws gave USDA authority to issue a wide variety of program waivers, including changes to benefit issuance, product availability, and physical presence requirements.

Food Distribution Programs

Supplemental funding was provided to programs that distribute USDA-purchased commodities. Much of this food aid was distributed through The Emergency Food Assistance Program (TEFAP). This program provides federally purchased foods and administrative funds to states for distribution to emergency feeding organizations, including food banks, food pantries, and soup kitchens. Three of the pandemic response laws together provided over \$1.2 billion to TEFAP. Smaller amounts were also provided for the Food Distribution Program on Indian Reservations (FDPIR) and the Commodity Supplemental Food Program (CSFP).

Other USDA Initiatives

In addition to responding to the COVID-19 pandemic through its existing nutrition assistance programs, USDA launched two new programs to feed people on a temporary basis: the Farmers to Families Food Box program, initially funded under the FFCRA, which has provided food boxes to individuals and households; and the Emergency Meals to You program, which provided food boxes to households with school-aged children in rural areas. The Emergency Meals to You program operated from March 2020 to August 2020, and the Farmers to Families Food Box program has operated since May 2020. The Biden

⁷ USDA, FNS, Keydata Report (November 2020 data), available at <https://www.fns.usda.gov/data/march-keydata-report-november-2020-data>.

Administration recently announced plans to end the food box program by the end of May 2021.⁸ FNS also activated emergency food distribution programs in certain states and tribal nations during the early months of the pandemic.

HHS-ACL Programs

Compared with younger individuals, older adults are at higher risk of severe illness due to Coronavirus Disease 2019 (COVID-19), including hospitalization and death.⁹ Physical distancing measures and stay-at-home orders associated with the COVID-19 pandemic have affected senior nutrition programs that many older adults rely on for their daily nutrition intake.¹⁰ For example, nutrition services at congregate or group meal sites were no longer available or accessible. Alternatively, other nutrition services, such as home-delivered meals (e.g., “meals on wheels”), were and may continue to be in greater demand as older adults adhere to recommendations to avoid gathering with individuals outside their household. The following COVID-19 relief legislation provides a total of \$750.0 million in FY2020 and \$950.0 million in FY2021 in funding for OAA nutrition programs:¹¹

- FFCRA provides a total of \$250 million for OAA nutrition services (\$80.0 million for congregate nutrition; \$160.0 million for home-delivered nutrition; \$10.0 million for Native American nutrition services). Funding is to remain available until September 30, 2021.¹²
- CARES Act provides a total of \$500.0 million for OAA nutrition services (\$480.0 million for congregate and home-delivered nutrition services; \$20.0 million for Native American nutrition services). Funding is to remain available until September 30, 2021. It provides a state agency the authority to transfer up to 100% of these funds between nutrition services programs.¹³
- P.L. 116-260 (Division N) provides a total of \$175 million for OAA nutrition services (\$168.0 million for nutrition services; \$7.0 million for Native American nutrition services). It further provides that for FY2021, state agencies and area agencies on aging may transfer up to 100% of the funds received between the two programs without prior approval.¹⁴
- ARPA, Title II, Subtitle L provides \$775.0 million for OAA nutrition services (\$750.0 million for nutrition services; \$25.0 million for Native American nutrition services, supportive services, and family caregiver services). Funding is to remain available until expended.

⁸ McCrimmon, R., “Vilsack details new direction for USDA food boxes,” POLITICO Pro, April 14, 2021.

⁹ Centers for Disease Control and Prevention, *Risk for COVID-19 Infection, Hospitalization, and Death By Age Group*, <https://www.cdc.gov/coronavirus/2019-ncov/covid-data/investigations-discovery/hospitalization-death-by-age.html>.

¹⁰ For more information on programs and funding under the OAA, see CRS Report R43414, *Older Americans Act: Overview and Funding*.

¹¹ Funding listed below was not included in the above table. FFCRA, CARES Act, and the Consolidated Appropriations Act, 2021 do not apply the 15% state matching requirements to these funds.

¹² State and tribal organization allocation tables for the FFCRA and CARES Act are at ACL, *State and Tribal Funding Allocations*, <https://acl.gov/about-acl/older-americans-act-oaa>.

¹³ Furthermore, during any portion of the COVID-19 public health emergency declared under Section 319 of the Public Health Service Act (PHSA), Section 3222 of the CARES Act provides state agencies and area agencies on aging, without prior approval, the authority to transfer up to 100% between OAA nutrition programs. This provision extends priority for home-delivered nutrition services to those unable to obtain nutrition due to social distancing as a result of the emergency similar to those who are homebound due to illness and authorizes the Assistant Secretary to waive certain dietary requirements for nutrition services.

¹⁴ Similar to the CARES Act, it further clarifies participant requirements for home-delivered nutrition services to include those unable to obtain nutrition due to social distancing as a result of the emergency and authorizes the Assistant Secretary to waive certain dietary requirements for nutrition services.

EXCEPTIONAL CARE. WITHOUT EXCEPTION.

Testimony of Dr. Thea James
Vice President of Mission & Associate Chief Medical Officer
Boston Medical Center

April 28, 2021

U.S. House of Representatives Committee on Rules Hearing on
Ending Hunger in America: Challenges, Opportunities, and Building the Political Will to Succeed

Thank you Chairman McGovern, Ranking Member Cole, and distinguished Members of the House Committee on Rules for holding this hearing and providing me with the opportunity to speak today about hunger in America and our bold intentions to collectively put an end to it.

My name is Dr. Thea James – I am Vice President of Mission and Associate Chief Medical Officer at Boston Medical Center, where I also trained for my residency and have been honored to serve as an Emergency Physician for the last three decades. Boston Medical Center is the largest safety-net hospital in New England and ranks among the ten busiest trauma and emergency services centers in the country. The patients we serve are predominantly low-income, with approximately half of our patients covered by Medicaid or the Children’s Health Insurance Program (CHIP) – the highest percentage of any acute care hospital in Massachusetts. Hunger, malnutrition, and food insecurity are all too common among our patients – in fact, of the more than 100,000 patients we’ve screened for health-related social needs to-date, 1 in 5 identified as food insecure – double the national rate. The current pandemic and economic crisis has further exacerbated this need among our patients.

In the emergency department at BMC, I see firsthand the ways in which hunger directly impacts health. Patients present for heart failure and diabetic emergencies that could have been avoided with proper nutrition. I treat complications of conditions that are not adequately managed like seizure disorders and COPD because patients are having to choose between paying for food or paying for medicines. Treating illnesses in the emergency room that are the downstream effects of hunger is not only disheartening, it’s the most expensive way to intervene. At BMC we know we can do better by our patients if we move further upstream. We are proud of our long history of addressing the root causes of what make our patients sick, including the inability to afford enough food. We know from clinical experience and decades of

research that when our patients are hungry, their health suffers. This is why BMC is committed to advancing solutions that reduce hunger among our patients and the communities in which they live. Our clinicians and staff are trained to look outside our four walls, and move beyond healthcare to understand the social factors that impact our patients' health. At present, BMC has over 40 programs that address health-related social needs, many of which have been replicated nationally.

Over the past 40 years, our anti-hunger work has grown from a pediatric subspecialty clinic ("The BMC Grow Clinic") treating babies diagnosed with "failure to thrive," to an integrated hospital-wide program designed to meet the full array of our patients' food and nutrition needs. Emblematic of these efforts, our preventive food pantry, which has been in service since 2001, has grown to distribute over one million pounds of food annually to our patients and families facing food insecurity or specific nutritional challenges at home. Patients are referred to the pantry by a "prescription" from their clinicians in the same way that they would to receive medicine from the pharmacy. Our program began as the first hospital-based preventive food pantry in the country, and now our staff regularly advise other hospitals and health systems on how they can launch their own.

People are often surprised to learn that our urban hospital campus also has a 7,000 square foot rooftop farm and state-of-the-art teaching kitchen, which are integral to the BMC food and nutrition program.¹ The rooftop farm, in its fifth year, plays host to more than 20 crops, providing fresh, local produce to hospitalized patients, hospital cafeterias, the preventive food pantry, teaching kitchen, and a weekly in-hospital farmers' market. The teaching kitchen provides patients with opportunities to learn how to cook healthy meals specific to their clinically-prescribed dietary needs, as well as how to utilize the foods that come from the preventive food pantry.

In addition to these efforts, decades of research from Children's HealthWatch – a research and policy network headquartered at BMC – has shown that enrollment in the USDA's Supplemental Nutrition Assistance Program, or SNAP, reduces food insecurity and improves health.² Given these findings and other compelling evidence on the health-promoting impact of SNAP, we recently launched an initiative to enroll likely-eligible patients in SNAP through a robust outreach strategy and streamlined enrollment process for patients applying for Medicaid.

¹ Musicus AA, Vercammen KA, Fulay AP, Moran AJ, Burg T, Allen L, Maffeo D, Berger A, Rimm EB. Implementation of a rooftop farm integrated with a teaching kitchen and preventive food pantry in a hospital setting. *American Journal of Public Health*. 2019;109(8):1119–1121. <https://doi.org/10.2105/AJPH.2019.305116>

² Ettinger de Cuba SA, Bovell-Ammon AR, Cook JT, Coleman SM, Black MM, Chilton MM, Casey PH, Cutts DB, Heeren TC, Sandel MT, Sheward R, Frank DA. SNAP, Young Children's Health, and Family Food Security and Healthcare Access. *American Journal of Preventive Medicine*. 2019;57(4):525–532. <https://doi.org/10.1016/j.amepre.2019.04.027>

As an academic medical center and health system, and an anchor institution for our local community, we are acutely aware of the power we hold to impact the health of our patients and community given our role not just as a health care provider, but also as an employer, purchaser of goods and services, and investor. Given this role and our commitment to moving further upstream, BMC has made targeted investments in the community to address systemic causes of food insecurity and hunger among our patients. As a part of a multi-million dollar investment in affordable housing and community-based programs, BMC provided a \$1 million no-interest loan to establish a healthy food market alongside a new affordable housing development in the Roxbury neighborhood of Boston. Through this investment, we intend to disrupt the status quo by increasing the availability of healthy, affordable food options in the places where people with low-incomes live.

While we work hard to respond to the realities of hunger among our patients, we know that we cannot end hunger, even in our little corner of the world, on our own. We welcome the federal government to play a bigger role in ending hunger – not only as a convener and coordinator, but as an incubator and accelerator, helping to ensure the scale of the solution matches the scale of the problem.

I will close my remarks today by offering this anecdote: in a recent survey to patients at our hospital preventive food pantry, we asked: “What would it take for you to never need this again?” As a physician, some of the responses to this question were heartbreaking. Many people we talked to said they could never imagine not needing to rely on the food pantry. To me, this highlights why as a country we must reimagine our commitment to ending hunger. In doing so, we must seek solutions that respond to its root causes, instead of perpetually filling in gaps, and prioritize thriving for people in order to truly alter the quality of their life course trajectory.

Holding this hearing today sends a signal that hunger is a solvable problem if only we can step outside of business-as-usual practices to chart a new course forward.

Thank you for your time. I look forward to the discussion.

**Testimony of
Dr. Diane Whitmore Schanzenbach
Margaret Walker Alexander Professor of Social Policy
Northwestern University
on the subject of “Ending Hunger in America: Challenges, Opportunities, and Building the
Political Will to Succeed”
before the U.S. House of Representatives Committee on Rules
April 28, 2021**

Chairman McGovern, Ranking Member Cole, and Members of the Committee:

Thank you for the opportunity to appear before you today at this hearing on ending hunger in America.

My name is Diane Schanzenbach, and I am the Director of the Institute for Policy Research at Northwestern University, where I am also the Margaret Walker Alexander Professor of Social Policy and Economics. For the past two decades, I have conducted and published numerous reports, peer-reviewed research studies and book chapters on food hardship, hunger, and federal nutrition assistance programs like the Supplemental Nutrition Assistance Program (SNAP). I also serve on the boards of the Greater Chicago Food Depository and the Food Research and Action Center and am an elected member of the National Academy of Social Insurance as well as the National Academy of Education. I have served as a member of the National Academies of Science Engineering and Medicine’s Committee on Examination of the Adequacy of Food Resources and SNAP Allotments, and the National Academies panel on Improving Consumer Data for Food and Nutrition Policy.

My testimony today draws primarily from research that I have conducted or reviewed that considers the role of the Supplemental Nutrition Assistance Program (SNAP, formerly known as the Food Stamp Program) and other influences on hunger, food insecurity, health, and economic security.

The Current State of Hunger in the United States

Even during a strong economy, there are several million Americans who experience hunger.

In 2019, 35.2 million people (11 percent of the population) were food insecure, meaning they did not have consistent, dependable access to enough food to live an active, healthy lifestyle. In 2019, 11.8 million of these food insecure individuals (4 percent of the population) were also categorized as hungry. Hunger—not having enough to eat, or in USDA’s parlance experiencing “very low food security” (VLFS)—is a more severe measure than food insecurity (Coleman-Jensen et al. 2020).

During COVID-19, between August 2020 and March 2021, Census Bureau surveys indicate that 35.9 million Americans (11 percent of the population) lived in households in which they

sometimes or often did not have enough to eat in the past week—in other words, they were hungry. While the food security statistics collected on a regular basis during COVID-19 are not strictly comparable to those collected on an annual basis, it is clear that rates of hunger are elevated in comparison to their pre-pandemic levels. Rates of hunger have been especially high among households with children and among children themselves. I estimate that 68.0 million Americans (20 percent of the population) were food insecure during COVID-19 (Schanzenbach and Pitts, 2020).

Typically, measures of food hardship increase when the unemployment rate increases, so high rates are not surprising given the state of the economy. The coronavirus pandemic and the measures to address the public health emergency led to a rapid and an unprecedented spike in unemployment, as well as hour reductions for many workers. School and childcare closures, where many children typically receive free or subsidized meals, further added to the pressure on families' food budgets. In addition, food prices increased sharply at the start of the pandemic leading to a reduction in the purchasing power of families' limited income.

We have seen strong progress against hunger in the last three months. Rates of hunger peaked in December with 46 million reporting they sometimes or often didn't have enough to eat in the prior week. By the end of March, the numbers fell to 30 million—the lowest since the pandemic began. This progress reflects a range of factors, including the Economic Impact Payments, increases in SNAP benefit levels, a new round of Pandemic EBT payments paid to families who lost access to free or reduced-price school meals, and a strengthening job market.

I emphasize that rates of hunger would have been even worse this past year were it not for government programs already in place, extraordinary emergency measures passed by Congress

both at the beginning of the pandemic and throughout the past 12 months, and a surge in aid from food banks and other organizations.

Trends in Hunger in the United States

Households with children tend to experience higher rates of hunger than households overall. Households with elderly members tend to experience somewhat lower rates of hunger than households overall, and changes in hunger among the elderly are less tied to the economy. These rates are still unconscionably high, though. Over the last decade, 3 percent of elderly households reported experiencing hunger.

As shown in Figure 2, below, annual rates of hunger overall and among households with children increased by 40 percent at the onset of the Great Recession and remained elevated for at least seven years. During COVID-19, children have been much worse off, with hunger rates in households with children averaging 3.5 percentage points higher than overall households.

The extended elevation of food insecurity for years following an economic downturn in part reflects the fact that an economic recovery takes longer to reach more disadvantaged households. Unemployment rates for groups that tend to have higher rates of hunger (e.g. those with low levels of education) generally increase more during recessions and take longer to come back down. Because of this tendency, I have advised my colleagues who run food banks to expect need to be elevated for months and even years to come.

The experience of lack of adequate food is widespread across the United States. The most recent USDA numbers prior to the pandemic show hunger rates ranging from a low of 2.6

percent in New Hampshire to a high of 7.0 percent in Louisiana (see Figure 3, Panel A). During COVID-19, in every state, at least 1 in 15 adults say they don't have enough to eat and in 27 states more than 1 in 10 adults report not having enough to eat (see Figure 3, Panel B).

Figure 3A: Hunger by State, 2017–19
Very Low Food Security during the Year
All Households

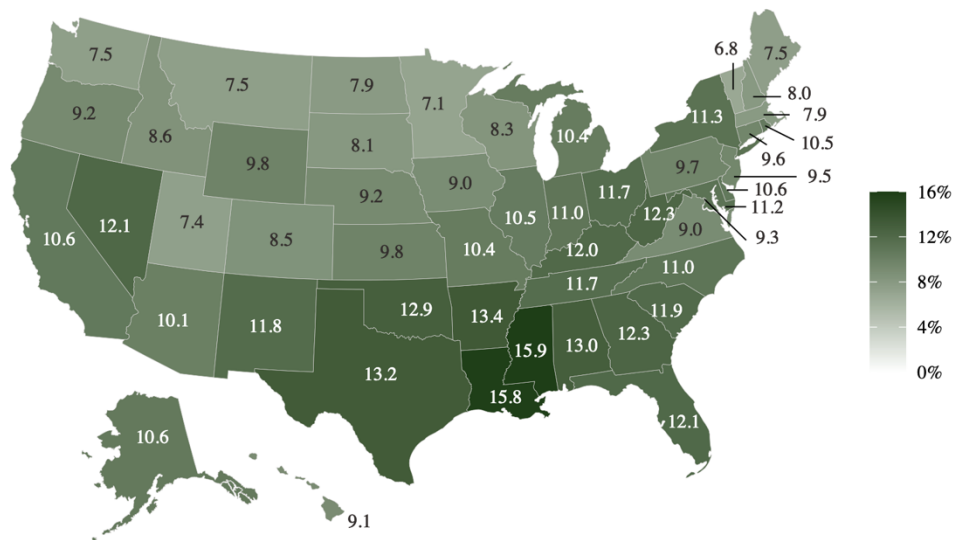

Figure 3B: Hunger During COVID-19
Sometimes or Often Not Enough to Eat in the Past 7 Days
All Households – August 19, 2020 – March 29, 2021

Black, Hispanic/Latino, and Native American families are more likely to experience hunger compared to White families (see Figure 4). Typically, in the annual data, Blacks are a little more

than twice as likely as Whites to experience hunger. Rates among Hispanic/Latinos fall between those of Blacks and Whites. These same relative patterns have held during COVID-19. By my calculations, more than 1 in 10 Native Americans experienced hunger over the last decade. (Data on Native Americans are not yet available during COVID-19).

Of course, the share experiencing hunger declines as incomes increase. About half of households experiencing hunger have incomes lower than the poverty threshold, and three-quarters have incomes below twice the poverty threshold. This means that many people who are eligible for or are participating in SNAP and other programs still suffer from hunger, suggesting that the programs as they are currently structured are insufficient to eliminate hunger. Another one-quarter have higher incomes than twice the poverty threshold and generally are not eligible for government food support programs like SNAP and free school meals. During COVID-19, about 4 percent of adults report that they have received food from a food pantry in the last week.

Paths to Eliminating Hunger

There is a host of evidence that we can move the needle on hunger, and indeed I believe that together we could eliminate it entirely.

The centerpiece for federal efforts to address hunger and food security in the U.S. is SNAP, which provides resources to eligible families to purchase food to be prepared and consumed at

home. SNAP already does much to reduce hunger but could be even more effective with some modest policy changes. Other policies that play crucial supporting roles are school meals, the Pandemic and Summer EBT programs, and summer feeding programs, the Special Supplemental Nutrition Program for Women, Infants and Children (WIC), Unemployment Insurance, Social Security, the Economic Impact Payments, and the newly expanded Earned Income Tax Credit and Child Tax Credit.

To be sure, there is an important role for food banks and other charities. They help meet emergency needs, and for some people facing hunger—such as those with incomes that place them out of the range of most food support programs but have fallen on hard times—are the only source of help. I regularly hear from leaders in this sector that their work is more effective when it is supported by a strong SNAP program.

SNAP

SNAP is a highly efficient and effective program, designed to work through the normal channels of trade like grocery stores and supermarkets. SNAP supplements the cash resources that a family has to purchase food, so that between SNAP and their other income, a family should be able to afford to buy a sufficient, healthy diet. Average monthly benefits for a family of 3 in 2019 (before the pandemic) amounted to \$365 per household—which is about \$4 per person per day. SNAP kept 2.5 million people out of poverty in 2019, including 1 million children and a quarter of a million elderly (Fox, 2020).

SNAP is efficiently targeted to families who need benefits the most, reduces the likelihood that families have trouble affording food, and serves as an automatic fiscal stabilizer in times of economic downturns. SNAP also offers vital long-term benefits to children. Research has shown that SNAP provides key benefits across people's lives, boosting health and economic outcomes. Recent research that I conducted found that those who had access to SNAP benefits as children were more likely to graduate from high school and grew up to be healthier; women in particular were more likely to become economically successful due to childhood access to SNAP benefits (Hoynes et al., 2016).

SNAP serves a diverse caseload. About 2 in 5 households on SNAP have children at home. The majority of these families are employed, but do not make enough to afford the food they need on their own. For them, SNAP helps stretch their grocery budget and reduces the likelihood they suffer hunger or food insecurity. A lot of these families cycle on and off of SNAP, using it temporarily when their jobs or hours are unstable. Another 2 in 5 have elderly or disabled members. They generally will be eligible for SNAP and participate for longer periods of time, because their incomes tend to be stable but too low to afford the food they need without additional help. The remaining 1 in 5 households tends to be very poor, many with incomes below half the poverty threshold or even no cash income at all. Many of these have just a single adult in the household and face many challenges and barriers that make finding stable employment difficult. In many of these cases, SNAP is the only program available to them.

SNAP can serve such a diverse caseload because it is well designed. The benefit levels are flexible, topping up purchasing power for those who lack enough money to buy the food they need, and providing a floor for food consumption for our nation's most vulnerable families. A key reason for SNAP's success is that it relies on the private sector to provide efficient access to food through grocery stores and other retail outlets. The program's reliance on the free market system has been a critical feature of SNAP from the beginning.

SNAP provides many benefits to both individuals and society. It benefits the wider economy by providing an effective economic stimulus in difficult economic times, and by also ensuring that recipients preserve their ability to buy food. By design, SNAP can very quickly adapt to economic downturns. As more households become eligible for the program—for example, due to job loss—they can be quickly enrolled, with total program outlays automatically increasing along with need, and then reducing again as the economy recovers.

SNAP stimulates the economy and helped turn the tide from contraction to expansion. Its recipients quickly spend their benefits, providing a relatively rapid fiscal stimulus to the local economy including the retail, wholesale, and transportation systems that deliver the food purchased. The USDA estimates that every \$5 in new SNAP benefits generates as much as \$9 of economic activity. This translates into almost 10,000 jobs from \$1 billion dollars in total SNAP spending (Hanson, 2010). Alan Blinder and Mark Zandi (2015) have found that Congress' authorization of a temporary SNAP increase during the Great Recession had a larger fiscal stimulus impact than any other potential spending increase or tax-cut policy.

By increasing resources available to purchase food, SNAP increases food spending, lifts millions of people out of poverty, reduces hunger and food insecurity, and improves both the quantity and the quality of foods purchased. When families receive SNAP, they are able to buy more nutritious foods they otherwise could not afford. A recent study found that a monthly \$30 increase in SNAP benefits would increase participants' consumption of nutritious foods such as vegetables and healthy proteins, while reducing food insecurity and fast-food consumption (Anderson & Butcher, 2016).

Reforming SNAP

SNAP is effective, and it would be even more effective if the benefit were better aligned with families' needs. Even before COVID-19, there was wide recognition that SNAP benefits were inadequate to buy and prepare healthy food with a benefit amount based on an out-of-date foundation called the Thrifty Food Plan.

For example, today food preparation is dramatically different from when SNAP was introduced. High-quality prepared and convenience foods—pre-washed bagged salads, cleaned baby carrots, rotisserie chickens, etc.—have helped reduce the time it takes to prepare meals, and has helped drive a shift in time use (especially among women) away from food preparation and towards other productive activities, such as nurturing children and paid employment. SNAP benefits, however, are based on an increasingly outdated formula that assumes that household

recipients can allocate an unlimited amount of time to prepare meals from scratch (Ziliak, 2016). Currently USDA is updating the Thrifty Food Plan to better reflect an accurate cost of a healthy basic diet today. Evidence suggests that even a modest, \$30-per-month increase in SNAP benefits would improve dietary quality and reduce hunger and food insecurity.

We also need to make sure that those in need can access SNAP benefits. Participation rates are especially low among the elderly. The Elderly Simplified Assistance Demonstration Project streamlines the application and certification process for some households with elderly and disabled members and should be expanded nationwide to address senior hunger.

Currently, SNAP benefits for the group known as ABAWDs (Able-Bodied Adults Without Dependents, who are not elderly or disabled and are not living with children) are time-limited in normal economic times to only 3 months in a 36-month period, unless they are employed at least 20 hours per week or are engaged in a workfare or training activity. States are not required to offer a job or training program to individuals subject to the SNAP time limit, and the law limits the characteristics of training programs that a state can provide. As a result, the requirements are mismatched, not adequately meeting needs of the population to be served. The rule is also administratively complex, and one of SNAP's most error-prone aspects (Bolen & Dean, 2017). During the COVID-19 pandemic, work requirements have been suspended nationwide. This population is among the most vulnerable and often faces substantial barriers to employment, in good economic times as well as poor. I believe it is a mistake to tie basic food aid to employment.

Other Approaches to Eliminating Hunger

To eliminate hunger requires a multi-dimensional approach, built on SNAP as a cornerstone but including a range of additional tools.

School lunches and breakfasts play an important role in providing healthy meals to children—their importance was underscored during COVID-19 when kids lost access to these meals. Congress enacted the Pandemic-EBT program, which provides food benefits similar to SNAP to students who lost access to school meals due to school closures. My research found that these payments reduced child hunger in the weeks after they were received by 30 percent (Bauer et al., 2020). This program was modeled after a pilot program conducted several years ago by USDA. The Summer EBT program gave families \$60 per month in benefits per eligible child during the summer months to offset the loss of school meals. The evaluation of this pilot program found that those children awarded additional benefits experienced less hunger and food insecurity, and improved their diets, consuming more fruits, vegetables, whole grains, and dairy products, and fewer sugar-sweetened beverages (Gordon et al., 2016). The Biden Administration recently announced that these payments will continue through this summer. Making this program permanent will help eliminate hunger.

Research has documented the importance of adequate nutrition in early life on later-life health and economic outcomes, so it is particularly important to ensure that pregnant women and

young children are protected from hunger. While WIC does an exemplary job ensuring that infants have adequate access to the foods and breastmilk or infant formula they require, it falls short along other dimensions. Participation rates drop substantially as children age; while 84 percent of eligible infants participate in WIC, the share drops to 33 percent by age 4. To protect children from hunger, we need to increase participation rates in WIC. Since all pregnant and postpartum women, infants, and toddlers on SNAP are automatically eligible for WIC, it would be straightforward to measure and establish performance metrics for cross-enrollment of eligible SNAP participants into WIC, similar to the performance metrics for the National School Lunch Program.

Our refundable tax credits play an important role as well. Together the Earned Income Tax Credit (EITC) and the Child Tax Credit (CTC) lifted 7.5 million out of poverty in 2019. Both have been expanded in smart ways as part of COVID-19 relief packages. The EITC increases employment and incomes, especially among families with children. The recent changes will also make it a more effective program for childless individuals. While the EITC plays a vital role, it has some limitations. Since it is only paid out once per year, it generally does not help with month-to-month expenses. Further, because it is conditional on employment, it provides little insurance during job loss or economic downturns. The new, fully refundable CTC will be paid out monthly, providing a needed boost in resources to children even when their parents cannot find work. These reforms to the CTC are expected to cut child poverty nearly in half next year, and will surely help reduce hunger. This will also spur better outcomes for these children in the long run.

Social Security deserves a special mention, as it lifts 26.5 million people (including 17.5 million seniors) out of poverty. Without question, the rate of hunger among the elderly is much lower because of this program. So, too, does Unemployment Insurance, which helped millions of Americans weather the spike in COVID-19 job losses.

Of course, eliminating hunger and enhancing economic security is greatly assisted by sustained, broad-based economic growth. When people have the education and training they need, more are employed and wages are growing, the need for government assistance declines.

Conclusions

Over the last year, we have seen the highest rates of hunger in the United States since we began systematically measuring it. As we continue to emerge from the national crisis caused by COVID-19, we should not be satisfied with merely reducing hunger in the U.S. back to its previous level. We can eliminate hunger entirely.

We can dramatically reduce, and I believe even eliminate, hunger by better using the tools we have already developed. We can enhance SNAP by aligning its benefits with what it realistically takes to purchase and eat a healthy, basic diet, and by increasing participation. Further, we can improve participation in other nutrition programs like school meals and WIC. The recent expansions to the EITC, Child Tax Credit, and Summer EBT will also reduce hunger; making these expansions permanent will make great strides. Bolstered by stronger income and nutrition support programs, the nonprofit sector will be made even more effective in filling remaining gaps and addressing some of the root causes of hunger.

Thank you, and I look forward to answering any questions you might have.

Ending Hunger in America: Challenges, Opportunities, and Building the Political Will to Succeed

Testimony of Ayesha Curry, Co-Founder of the Eat. Learn. Play. Foundation and No Kid Hungry Ambassador, Before the House Committee on Rules, U.S. House of Representatives

Chairman McGovern, Ranking Member Cole and members of the Committee, thank you for the opportunity to appear before you today to testify to the importance of ensuring that every child has the nutritious food they need to thrive every day. My name is Ayesha Curry, and I am the co-founder of Eat. Learn. Play. Foundation and an ambassador for the No Kid Hungry campaign.

The Eat. Learn. Play. Foundation is committed to unlocking the amazing potential of every child by fighting to end childhood hunger, ensuring students have access to a quality education, and providing safe places for all children to play and be active. Focused on youth in underserved communities, our work is anchored around ensuring every child has access to three vital ingredients to a happy, healthy, and successful childhood: nutritious food, a quality education from early-childhood through college completion, and the opportunity to play and be physically active. Children are our future, and we are deeply dedicated to empowering them and opening doors for their futures.

We've made an impact through our collaborations with No Kid Hungry, World Central Kitchen, the Alameda County Community Food Bank, and so many other incredible organizations, but to address the size and scope of the hunger crisis, **we need your help.**

Meeting this challenge requires concerted, coordinated action on a national level.

The hunger crisis in America is urgent.

One in six kids in the United States, and one in four kids in the Bay Area, is affected by hunger. This hunger affects everything:

- The ability to learn
- Their physical and mental health
- The opportunity to reach their full potential

Every missed meal counts for a kid, because an empty stomach that hurts today also hurts their futures. And, this is especially true for kids from families of color, who face hunger, poverty, and hardship at even higher levels. I've personally seen hunger in my hometown of Oakland – but I know that no community or Congressional District - urban, suburban, or rural – is free from this issue.

Food is an essential school supply. When kids don't get the food they need, it's harder for them to learn or focus in class, affecting everything from test scores to graduation rates. Giving kids the best opportunity for success starts with ensuring that they have the nutrition they need to thrive.

Fighting hunger in our community.

I'm a working mother. My husband and I have three little ones at home. Like every mom, I want my kids to grow up strong, healthy, and happy. I know how important a good breakfast is to help them focus and learn, and how cranky they can get when they're hungry.

STEPHEN & AYESHA CURRY'S
EAT. LEARN. PLAY.

Families are working so hard to make ends meet, often working multiple jobs and making tough choices between buying groceries or paying the rent. But no parent should have to deal with the pain and stress of wondering how they are going to put enough food on the table for their kids tonight. And that's why I'm also an advocate.

The work of Eat. Learn. Play. is rooted in being a village for those who don't always have one. I want to share a story of a loving mother, who like many, faced incredible hardships this past year. The effects of COVID-19 created an unprecedented challenge in our community. Before the start of the pandemic, nearly 35% of children in Oakland struggled with food insecurity regularly, including 18,000 students, 88% who are children of color, who relied on school for two or more of their daily meals. Ensuring these students continued to have access to meals once schools closed became our top priority.

Christina is a Black woman from the San Antonio neighborhood in Oakland, CA. She is a single mother of two elementary school-aged children, who attend Garfield Elementary School, a part of the Oakland Unified School District (OUSD). Christina's children are among the 18,000 students that have counted on their schools for a significant percentage of their nutritional needs. On March 13 of last year, OUSD's school buildings were shut down because of the pandemic, and parents like Christina were left wondering where their child's next meal will come from. Shortly after that, Christina was laid off from her service industry job because her business closed when local shelter-in-place orders went into effect.

Christina's story is similar to the 10,000 Oakland families who showed up twice a week to receive meals during the pandemic at OUSDs meal distribution sites. Thanks to critical federal nutrition programs and the heroic work of OUSD school workers, Oakland students have continued to have access to healthy and nutritious meals. This past year has shown us how critical nutritious school meals are in order to keep children healthy and on track to reach their full potential.

These Federal Nutrition Programs feed kids, but we need Congress to make them stronger.

Childhood hunger is solvable. Federal Nutrition Programs are essential for kids to get the food they need, no matter where they live, or what time of year it is. But to serve as many kids as we need to reach right now, we need these programs to be stronger. And that means action from Congress. Charities and non-profits cannot do it alone.

For example:

- Programs like **SNAP and WIC** are grocery benefits that make sure parents can feed their kids at home. These programs have well-documented benefits for kids.^{[1][2][3][4]} Increasing these benefits and modernizing their administration will mean that families can buy more of the groceries they need, when they need them. That is especially important now with rising grocery prices and with so many parents out of work, particularly in the service industry.^[5] No parent should have to choose between going to work to keep their job and going to the SNAP or WIC office to keep their benefits.
- **School meals** make sure kids have the nutrition they need to focus and stay nourished during the school day. They also play a role in kids showing up for school – studies commissioned by No Kid Hungry showed that making breakfast part of the school day can reduce chronic absenteeism and lead to better student outcomes.^[6] School meals also tend to be the healthiest meals that children get.^[7] This year, the USDA made sure schools could adapt their programs to reach kids even when they were learning from home, and we need to keep these programs flexible and strong.
- **Summer** is the hardest time to reach kids with the food they need because they're out of school. Kids with working parents often lack safe transportation options to get to meal sites. Combined with other

STEPHEN & AYESHA CURRY'S
EAT. LEARN. PLAY.

challenges like weather shutting down outdoor sites and bureaucratic red tape, six out of seven kids who needed summer meals pre-pandemic were missing out.^[8] But last year, we saw what happens when schools and community organizations were allowed to adapt their programs – letting parents pick up multiple meals at a time, or dropping meals off at a child's house. This worked: the number of meals served in July 2020 was 160% higher compared to July 2019.^[9]

Another highly successful way we can reach kids over the summer is evident in the Pandemic EBT program, which provides families with kids who qualify for the free and reduced-price meals with funds on an EBT card while schools are closed due to the public health emergency. It has shown incredible reach and efficacy. This builds on the success of the Summer EBT demonstration program which has been shown to be extremely effective at alleviating summer hunger.

I applaud Congress and the White House for expanding the P-EBT program through this summer when kids and families struggle the most. We will need continued help from Congress to make sure programs help hungry kids during future summer months.

All of these nutrition programs work together to reach kids of all ages where they live, where they learn, and where they play. For some hard-working families who need a little help, participating in one program may work well for them and be enough to fill a gap. For many others a combination of federal nutrition programs ensures their kids have enough to eat – for instance, when her kid gets free or reduced-price meals at school, a mom can stretch her SNAP benefits to cover more of the month and put healthier dinners on the table.

Conclusion

At home in my role as a mom, and at Eat. Learn. Play. in my role as an advocate, I'm working hard to make sure all kids can live out their dreams. I'm continually inspired by the hunger heroes in our communities who are doing amazing work to feed kids every single day. It takes a village to meet the level of food insecurity that exists in communities across the country, especially during the pandemic.

Our collaboration with No Kid Hungry, World Central Kitchen, the Alameda County Community Food Bank, OUSD, and so many other wonderful organizations, has made an incredible impact for hungry kids and families – we've helped serve 16 million meals since COVID began.

But charities alone cannot fill all the gaps to make plates full and children whole.

Congress has the power to change this. With your leadership, these programs can be stronger, more flexible, and reach more kids. People used to say hunger is a nonpartisan issue – **I say we all need to be KID PARTISAN.**

I urge Congress to support and strengthen federal nutrition policies to close the summer meal gap, strengthen school meals programs, and ensure benefits like SNAP and WIC are reaching the kids and families who need them. As we rebuild our economy post-COVID, we have the opportunity to build back hunger-free.

Finally, I would like to invite all of you to come out and see our work in Oakland, to meet the people behind these stories, to learn their triumphs and struggles first-hand, and see the difference that federal nutrition programs make in their lives. I also encourage you to get to know the families that are struggling in your districts and to understand the trade-offs and challenges they are facing so that as you craft policies you can make sure the needs of those families and their children are at the center.

Thank you for allowing me to meet with you today, I am grateful for our time together.

The University of Notre Dame**

**United States House of Representatives Committee on Rules
*Ending Hunger in America: Challenges, Opportunities,
and Building the Political Will to Succeed***

April 28, 2021

Chairman McGovern, Ranking Member Cole, and members of the Committee, thank you for your time today. My name is Heather Reynolds and I have the privilege of serving as Managing Director of the Wilson Sheehan Lab for Economic Opportunities, or LEO. LEO is a research lab at the University of Notre Dame that helps service providers apply scientific evaluation methods to better understand and share effective poverty interventions. Prior to coming to Notre Dame, I spent almost two decades at Catholic Charities Fort Worth (CCFW), the last 13 years as its CEO. My time at LEO and at CCFW have both shaped my insights on the audacious goal of ending hunger in our country.

A wise man once said, "We have the food, the ability, and the means to end hunger in America—what we lack is the political will and moral courage to act. We must change that." Thank you, Chairman McGovern, for this source of inspiration. I have three points on how we can achieve your vision.

First, ending hunger begins with the safety net, but it does not stop there. The safety net plays a key role in combating hunger. The Supplemental Nutrition Assistance Program, or SNAP, ensures people—most notably children—are not hungry today. Nationally, more than 66% of SNAP participants are families with children. While SNAP provides a modest benefit, an average of \$1.39 per person per meal, it is an essential basic needs assistance

program and part of a critical foundation for health and well-being for vulnerable Americans.

The social safety net lessens the impact of poverty on families in difficult situations. Unfortunately, these programs mainly treat the symptoms of poverty and not their root causes. The causes of poverty vary considerably across people—lack of skill, a mental illness, the absence of a parent in the household, a physical disability. Unfortunately, the social safety net cannot alter these underlying conditions. Rather, it can only help provide what poverty is preventing—health insurance, three hot meals a day, a roof over their family’s head.

A coordinated effort to eradicate hunger must then include programs whose larger goals are to move families permanently out of poverty. These programs work hand-in-hand with the social safety net and can only be successful when the safety net is strong and effective.

We see the importance of the safety net daily. Across the country, social service providers and local governments are implementing innovative programs aimed at overcoming barriers and generating upward mobility. These programs, with economic stability as the goal, work in the context of broader safety net programs such as SNAP, Temporary Assistance for Needy Families (TANF), and housing vouchers. LEO is running several studies—in Texas, Indiana, and South Dakota—aimed at getting students with low incomes credentialed and degreed to support a goal of increased earnings. Our evidence shows promising results, but also shows that service providers must balance the short-term needs of clients with the long-term goal of financial stability. People cannot work on their education if they worry their children will not have food on the table today. The safety net is needed in our country, but its role is to ensure people are not hungry today. Tomorrow’s hunger needs to be solved differently.

Which brings me to my second point. To achieve an end to hunger, we need comprehensive, family-centered solutions to poverty. We need a comprehensive approach that provides not just food, not just housing, not just job training, but also the human support and interactions that help drive changes and choices in the face of despair.

These solutions need to be family-centered, individualized, and comprehensive. Simple declarations, such as getting people employed, fall short. We need to look no further than the SNAP program to see this. As of 2018, 79% of all families receiving SNAP have at least one person working, and one-third of these families have two or three people working (Census.gov). I found this to be true from my experience as a provider, where we served over 100,000 people a year. More than 70% of our clients had a full-time job, yet they were still walking through our doors needing assistance.

The Padua program, operated by Catholic Charities Fort Worth and studied by us at LEO, is designed to see all the complexity that poverty brings, and address each element through supportive case management. This holistic approach begins with an individualized assessment and case plan, engagement in the social safety net as a first step, small caseloads for staff, case managers serving as both connectors and coaches, and the ability to serve clients for the long haul. Padua is designed to support participants to reduce dependency on government benefits, earn a living wage appropriate to their family size, accumulate emergency savings, and reduce bad debt.

Participants saw a 25% increase in full-time employment. Padua was particularly successful for those who were not already employed at enrollment, with a 67% increase in the probability of working full-time and a 46% increase in monthly earnings. Receiving support from Padua also improved participants' health conditions by 53%. The program had a significant effect on those who were deemed most vulnerable when CCFW first encountered them. Padua participants who lacked stable housing when they entered the program saw a 64% increase in housing stability. This program demonstrates that weaving the social safety net with holistic, individualized programming for those who need it can have the greatest impact. To achieve an end to hunger, a more comprehensive solution to poverty, like Padua, is needed.

Why do I believe solutions like Padua are what our country needs? Because not only do I see the clients, know their stories, and believe in the approach, but I have evidence to back this up. Which brings me to my final point. Ending hunger will not happen through hunches, assumptions, and good intentions. Ending hunger will happen with evidence-based programs and policies.

LEO evaluated the Excel Center program in Indianapolis. This program, founded by Goodwill of Central and Southern Indiana, works with adults to help them complete their high school degree. It does so with holistic support, by accommodating students' work schedules, providing childcare, and helping them navigate challenges along the path to completion. LEO's research shows that the Excel Center leads to significantly higher earnings and a move from the service sector to health and education sector jobs. Excel Center graduates have higher earnings than adults who instead complete the more typical GED. Programs like these work with low-income individuals to improve their financial outcomes, support a move towards economic stability, and, thus, achieve food security.

The social service community contains the innovations that, when studied, can show us what works. At LEO, we spend our time engaging with those poverty fighters on the front lines and bring to the table the research rigor to shine a light on the impact of their services. We do this because we believe that people in poverty deserve interventions that work. We conduct causal evidence building, typically through randomized controlled trials, with providers across the country to learn what works and then to ensure that evidence is used. We have witnessed our partners discover that something they are doing does not actually work, and then pivot and change their model for the good of those they serve. We have also seen our partners learn that something does work and scale up the service so they can serve more people in their local communities and break into new markets with a proven intervention. We need you as policymakers to see this, too.

The gap between policymakers, academics, and social service providers is wide. We need local, innovative solutions implemented by dedicated service providers, paired with academics to help discover evidence of what works, and then scaled up by your investment in them as policymakers.

In closing, ending hunger begins with the safety net, but it does not stop there. We need comprehensive solutions for people working to achieve a life outside of poverty. Evidence-based programs and policies will ensure we are offering families services that work. Chairman McGovern, I love your quote and I share your belief. I would suggest one addition: "We have the food, the ability, and the means to end hunger in America—what we lack is the political will, *the evidence-based programs and policies*, and moral courage to act *on them*." And I am with you—we must change that.

The Safety Net as an Investment

January 27, 2016

By Hilary W. Hoynes (University of California, Berkeley) and Diane Whitmore Schanzenbach (Northwestern University and The Hamilton Project)

The Supplemental Nutrition Assistance Program (SNAP) plays an important role in the lives of low-income children. After accounting for underreporting in the data, researchers have found that in 2012 the program lifted 4.9 million children out of poverty — and also lifted more than 2.1 million children out of deep poverty, defined as having an income level less than half of the poverty line (Sherman and Trisi, 2015). In addition, two-thirds of total SNAP benefits go to families with children. A growing body of evidence suggests it is particularly important to protect children from deprivation. In recent work joint with our colleague Douglas Almond of Columbia University, we find that SNAP’s impact on children is large and the benefits endure into adulthood, especially when implemented at key developmental points in infancy and childhood.

A large literature in economics and medicine has pointed to the importance of childhood as a time of investment in future outcomes, documenting the importance of childhood events on subsequent adult outcomes such as earnings, health, and mortality. One strand of research documents the importance of high-quality preschool education on later life outcomes. Research from Nobel Laureate James Heckman and others show that attending a high-quality preschool increases lifetime earnings, reduces the likelihood of criminal activity, and improves health (Heckman, 2006; Heckman et al., 2010; Conti et al., 2015). Early-life access to adequate levels of food and other health inputs has been shown to impact subsequent adulthood outcomes. Evidence from diverse settings ranging from children exposed to war, disease, or famine points to deprivation in childhood being a cause of adults’ chronic health conditions (Almond, 2006; Schulz, 2010).

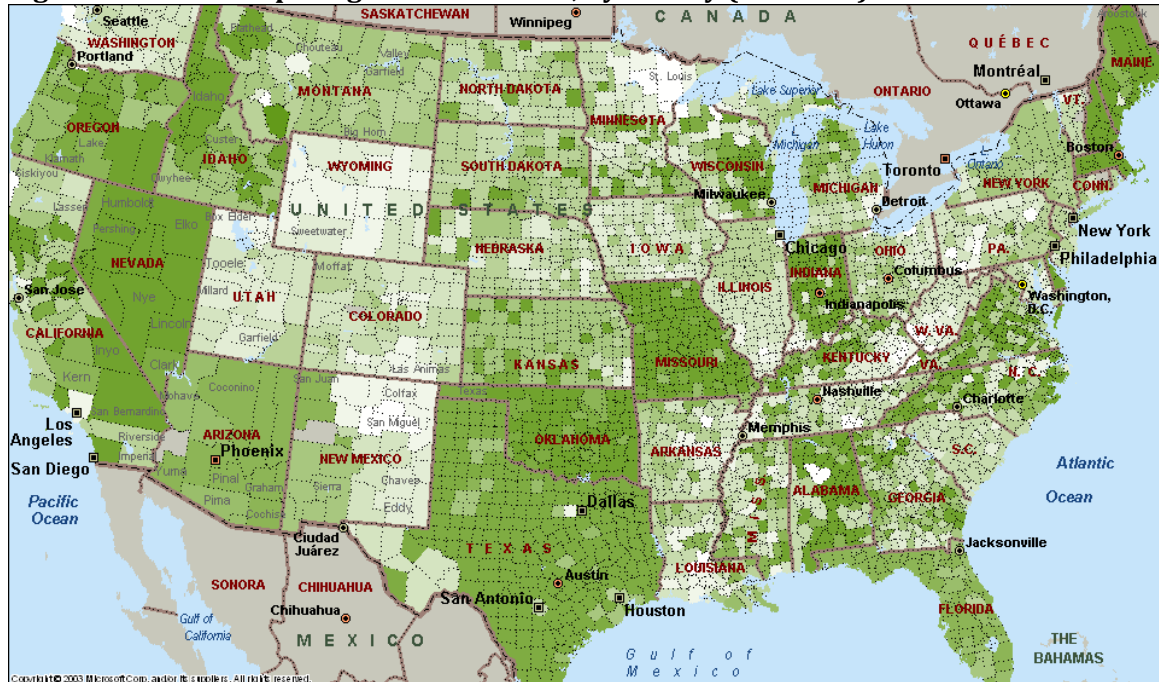

Measuring the impact of SNAP

A key challenge to measuring the impact of safety net programs like SNAP is finding a strategy that will allow the researcher to separate causation from correlation. SNAP is designed to supplement a family’s food budget when they have an income shortfall, so that during a negative income shock, such as a job loss, a family can continue to purchase adequate food. By design, then, families with high levels of poverty or food insecurity receive SNAP benefits. As a result — because SNAP serves people when they need the program — it is empirically difficult to disentangle the (presumably positive) impact of SNAP from the (presumably negative) impact of the circumstances that made a family eligible for the program. For example, Bitler (2015) finds that SNAP recipients are significantly more likely to be blind or have other vision problems — a condition that is not likely to have been caused by SNAP, but is more likely correlated with other factors that have driven the person’s need to participate in the program.

The researchers’ challenge, therefore, is to find an aspect of participation that allows them to separate the cause-and-effect relationship between SNAP participation and outcomes of interest such as food security, nutritional quality, and so on. One common strategy is to leverage variation in the way a program functions across locations or over time. This approach has been used successfully in evaluations of cash welfare programs, unemployment insurance, and other safety net programs. Estimating the impact of SNAP has been notoriously difficult, though, because the program has been relatively uniform across states and over time. As a result, it has been hard for researchers to disentangle SNAP’s impact from the effects of recipients’ other economic circumstances.

In a series of recent papers, we overcome this fundamental challenge in estimating the impact of SNAP by using variation from the gradual, county-by-county introduction of the program in the 1960s as part of the War on Poverty. We use variation across counties within states to estimate the impact of the program — then called the Food Stamp Program (FSP) before it was renamed SNAP in 2008 — on a variety of outcomes. Since the program was introduced 50 years ago, the individuals who were children at its introduction are now adults, and we can statistically follow their progress in order to estimate the long-term impacts of access to SNAP during childhood on how much education they completed, as well as their earnings and detailed health outcomes.

Figure 1: Food Stamp Program Start Dates, by County (1961-75)

Note: Authors' tabulations of Food Stamp administrative data (U.S. Department of Agriculture, various years). The shading corresponds to the county FSP start date, where darker shading indicates a later-date county implementation.

Figure 1 demonstrates the variation in the introduction of the Food Stamp Program, with lighter-shaded counties adopting the program earlier than darker-shaded ones. The program started out in a handful of pilot counties in 1961–63, and then was made permanent by the 1964 Food Stamp Act, which gave local areas the authority to start the program in their county, subject to budgetary limits. Between 1965 and 1975, the program was rolled out in counties across the country. As is shown on the map, two neighboring counties within the same state often adopted the program in different years. As a result, we can compare children who were born in the same year — for example, 1967 — in two different counties in the same state, who were exposed to the program at different times. To strengthen the comparison, we also compare these differences to differences among children who are older (or younger) from the same two counties. This allows us to control for the effects of county of residence, birth year, and a host of other potentially confounding effects, and statistically isolate the impact of the then-Food Stamp Program, now known as SNAP. For more details, see Hoynes and Schanzenbach (2009).

SNAP's positive impacts start before birth

In the short run, we find that SNAP (then called the Food Stamp Program) improves infant health (Almond et al., 2011). In particular, when an expectant mother has access to the program during her pregnancy's third trimester, it improves her baby's birth weight. The improvements are largest in more vulnerable populations, such as babies born in high-poverty counties, and those babies with the lowest birth weights. The study results are summarized in Figure 2 below. The figure shows the impact that SNAP (the-then Food Stamp Program) has on improving infant health. Each bar shows the reduction in the likelihood that a baby was born below a given birth weight due to the mother having access to the program during the third trimester of her pregnancy. Some important thresholds are 1,500 grams (approximately 3 pounds and 5 ounces), below which a baby is considered "very low birth weight," and 2,500 grams (approximately 5 pounds and 8 ounces), below which a baby is considered to have "low birth weight." As shown in the figure, African American and white babies are respectively 6 percent and 2.4 percent less likely to be born with very low birth weight (less than 1,500 grams) after the introduction of the program in the mother's county of residence. The figure also shows that the improvements in birth weight are largest among the lowest-birth-weight babies.

Figure 2: Impact of In Utero Exposure to Food Stamps: Reduction in Likelihood of Birth Weight Below Selected Cut-Offs

Source: Almond, Hoynes, & Schanzenbach (2011).

Note: * denotes estimate statistically significantly different from zero.

We then turned to examine whether the impacts of childhood access to SNAP persisted into adulthood. This could occur through a variety of mechanisms. For example, a host of studies have documented that birth weight has downstream impacts on school achievement, subsequent health, and adult economic outcomes (Currie, 2009). Since the program improved birth weight, we would expect some downstream improvements to follow. But the benefits may come through other pathways, potentially including other health improvements, reducing family stress, or being able to pay more attention in school because of reduced hunger.

SNAP's impacts persist through adulthood

To investigate the impacts of childhood access to SNAP (then called the Food Stamp Program) on adult outcomes directly, we used the research strategy described above based on the timing of the introduction of the program, and measured outcomes using data from the University of Michigan's Panel Study of Income Dynamics (PSID). The dataset has followed a large number of individuals and their offspring from the 1960s through the present day, and measures a variety of factors, including where they live, their earnings and labor market activity, and a variety of aspects related to their health status. As a result, we could observe a host of economic and health outcomes of individuals in their 30s to 50s, who had differential access to the program during their childhoods in the 1960s and 1970s.

To summarize adult health status, we combined measures of obesity, body mass index, and presence of chronic conditions such as diabetes and high blood pressure into a measure of health status we call the "metabolic syndrome index." Here, a lower value represents better health. Figure 3 presents estimated impacts of accessing SNAP at a given age. We find that individuals with access to food stamps before age 5 had measurably better health in adulthood, with impacts larger for younger children. In particular, we find that if SNAP was introduced prior to a child's birth, their subsequent adult health improved by 0.4 standard deviation units, as measured by the index we constructed. Note that we find no long-term health impacts for children who were first exposed to the program when they were older, underscoring the importance of intervening in early childhood.

Figure 3: Effects of Introduction of Food Stamp Program on Metabolic Syndrome Index, by a Child's Age at Introduction

Figure 4 summarizes the long-term impacts of exposure to SNAP (the then-Food Stamp Program) as a child, separately by gender. The magnitudes of the results represent the impact of having access to Food Stamps from the time of a child's conception through age 5. We find sizeable improvements in health as measured by the metabolic syndrome index for

both men and women. Women also are substantially more likely to self-report that they are in good health. We also find that, for women, childhood access to SNAP increases economic self-sufficiency in adulthood. Those with access to the program as children were more likely to graduate from high school, earn more, and rely less on the social safety net as adults than those who did not.

Figure 4: Long-term Impacts of Exposure to Food Stamps from Conception Through Age 5

Source: Hoynes, Schanzenbach, & Almond (forthcoming).

Note: * denotes result statistically significantly different from zero; estimates are for high-impact sample where the head of household had less than a high school education.

Policy lessons

There are several important lessons from these studies for policy today. First, the benefits of SNAP are both measurable and accrue across a broader range of outcomes than previously documented. Not only does the program improve food security in the short-run, but it also helps prevent the negative, long-term, and lasting effects of deprivation during childhood.

Second, the benefits accrue to more than just the program recipients directly, but the benefits also pay out to taxpayers more generally. The long-term improvement in health due to the program implies a decrease in future taxpayer costs for health care. Additionally, by increasing self-sufficiency, SNAP today can reduce the future costs of the safety net down the line and also increase tax revenues.

Our findings suggest that the SNAP benefits that go to children are better thought of as an investment rather than as charity.

California must take bold action to support schools and feed children

Stephen and Ayesha Curry

June 24, 2020

Updated: June 24, 2020 4 a.m.

We recently paid a visit to Garfield Elementary School in Oakland's San Antonio neighborhood, one of the largest and most diverse schools in Oakland. Twenty-two different languages are spoken there. Since closing its classroom doors on March 13 because of coronavirus, Garfield has become a vital hub for distributing food to tens of thousands of kids and families in Oakland struggling with a sharp increase in food insecurity.

On the day of our visit, Garfield distributed 31,000 meals to Oakland students, predominantly Black and brown children who have continued to rely on school meals as a primary source of food while schools have remained closed in these difficult, ever-changing times. It was inspiring to watch members of our community rising to support one another, and they have done this day after day these past three months.

Now our country is fighting two monumental challenges: a global pandemic claiming more than 120,000 U.S. lives that has created the worst economic recession since the Great Depression and has tripled food insecurity rates in households with children; and structural racism, which has plagued our society for generations. Inequities continue to widen as unemployment has skyrocketed and, according to Cornell University, disproportionately affects communities of color, while schools and other vital public agencies face severe budget constraints when their services are needed most.

California's unprecedented challenges will require a coordinated effort of public and private partnerships. Schools districts are losing money because of the heroic way they have responded to this crisis, and many won't be able to serve meals through the summer and into fall without additional funding. There are

long-term costs as well. According to the Centers for Disease Control and Prevention, student nutrition has been proven to positively affect academic achievement and quality-of-life outcomes. The lack of access to healthy food is exacerbated by socioeconomic status and most prevalent in low-income communities of color, meaning children who are forced to miss meals now may face more hardships later.

Places like our hometown of Oakland, with deep traditions of community engagement, protest and civic action, understand what is at stake. Oakland grasps that a community's members cannot lift themselves up without proper nutrition, a steady income and stable housing. Local school districts, including Oakland Unified, have taken the initiative to provide 4 million meals to children during school closures by marshaling resources through a collaborative established by our Eat. Learn. Play. Foundation, in partnership with Alameda County Community Food Bank, No Kid Hungry, Office of Kat Taylor, and World Central Kitchen. Oakland is rising to meet this moment, led by volunteers and food service workers, primarily women of color, who have become masked heroes to these children and their families.

Communities throughout California need a strong commitment to provide funding to the school districts that have been unflinching in serving their communities during this crisis. Even with recent federal legislation, there is no bailout on the horizon. School districts are incurring debt and straining their limited resources to stay open and safely serve meals to children in need. Many school districts, like Oakland, could be facing enormous financial shortfalls in a few months. We would like to see a stronger acknowledgement from the state of the scale of these additional COVID-related costs, as well as bold action to provide funding to reimburse schools for months of bringing this service to high-need communities.

California's budget is a statement of our values, principles and priorities as a people. The inclusion of funding that supports schools giving children and families access to food — a most basic human need to foster learning and growth — is a critical lifeline for families now, and our children's future.

The state Legislature has proposed funding through the state budget to school districts to continue providing meals, and we urge the Legislature and Gov. Gavin Newsom to pass this budget. Just as the heroes in Oakland have stepped up to provide food to children and families who have struggled so hard for so long,

California must step up and ensure this much needed funding. Together with our partners, we will continue to do all we can to support children and families in our community through this crisis.

The Eat. Learn. Play. Foundation, established by Stephen and Ayesha Curry, is playing an integral role in helping to ensure Oakland kids and families have access to food throughout the COVID-19 crisis. Since the beginning of the pandemic, it has helped to serve more than 3 million meals in partnership with Oakland Unified School District, engaged 108 Oakland restaurants in partnership with World Central Kitchen to put 400 people back to work while preparing 70,000 meals/week for seniors, families, and unhoused individuals, and partnered with Alameda County Community Food Bank to distribute over 2 million meals to Oakland families.

It's time for a second Conference on Food, Nutrition and Health

BY DARIUSH MOZAFFARIAN, DAN GLICKMAN AND ANN VENEMAN, OPINION CONTRIBUTORS — 02/26/21 01:00 PM EST

Fifty-two years ago, President Nixon convened the first and still only [White House Conference on Food, Nutrition and Health](#).

This seminal bipartisan event brought together diverse leaders from public and private sectors to craft real solutions to address widespread hunger in America. Of its 1,800 concrete recommendations, 1,650 were implemented two years after the conference. This included many of the federal food and nutrition programs we take for granted today, significantly reducing hunger in America.

Fifty-two years later, the food and nutrition problems we face have changed dramatically. While more than [14 million](#) households still struggle with food insecurity, rates of obesity and diabetes have skyrocketed. [Diet-related diseases](#) have become the leading cause of poor health and preventable health care spending. [More than half](#) of American children have poor quality diets, which further [threatens](#) national security. At the same time, farmers and rural communities are struggling and the nation's natural resources are being rapidly consumed.

It's time for a second White House conference to solve these modern challenges. Our food system is complex, touching multiple aspects of our lives, economy and planet. Fixing it will require innovative solutions. A new conference is crucial to bring together the diverse stakeholders to connect these dots, advance the conversation and elevate actions above business-as-usual to achieve meaningful impact and change.

We face a special moment in time. COVID-19 has highlighted the fragility of our food system, with fractured supply chains, lost jobs, food waste and school closures all increasing hunger and nutrition insecurity. And, the pandemic is far more severe due to underlying high rates of obesity, diabetes and other diet-related conditions, all top contributors to poor outcomes from [COVID-19](#).

Addressing hunger and poor nutrition is also foundational to America's re-awakened struggle against racism and poverty. Black and Hispanic Americans, people living in rural and lower-income counties and those in the south and southwest suffer the greatest disparities in diet quality, nutrition security and corresponding diet-related diseases. The [resulting inequities](#) are profound, harming families and leaving communities behind.

Food and nutrition are also fundamental to building back a better national health and science [infrastructure](#), advancing [food is medicine](#) interventions and lowering health care spending and boosting business innovation and job creation.

Food is also central to addressing climate change and its shocks. Globally, the food system contributes to [25 percent](#) of greenhouse gases, the majority of ocean and freshwater [pollution](#), [70 percent](#) of water use, and [80 percent](#) of all deforestation. These impacts are depleting our resources including our land, water, topsoil, forests and biodiversity.

The 1969 White House conference was successful because it had the direct backing of the president, support of bipartisan congressional leaders Sen. George McGovern (D-S.D.) and Sen. Bob Dole (R-Kan.), and careful planning and organization, led by future Tufts University President Jean Mayer, that involved multiple working groups who reviewed and prepared specific policy proposals leading up to the conference.

Like the original conference, this second conference would be an essential convening of private and public stakeholders — including multiple federal agencies and bipartisan congressional leadership — and incorporate significant advance work to develop clear policy proposals. This will be instrumental to build a national consensus strategy around food and nutrition, with a concrete plan of action and clear benchmarks to measure success.

To address the issues we face, while increasing and shifting U.S. agricultural productivity to provide nourishing food to a hungry world, calls for interdisciplinary, multi-stakeholder cooperation. No one department or agency, business sector, advocacy group or academic institution can do this alone. A coordinated government approach, together with businesses and civil society, must identify win-win solutions for greater health, equity, sustainability and revenues — true profits for all.

It's time to bring together the nation in a unifying mission to fix food. Our country's poor metabolic health, spiraling health care costs, high levels of nutrition insecurity, persistent racial disparities and warming climate demand real solutions. We call on the Biden administration to take advantage of this unique moment in our nation's history and build a new national consensus and strategy around food. Like in 1969, a new White House Conference on Food, Nutrition, and Health will be a springboard for policy actions and have far-reaching implications for a reimagined U.S. food system.

Dr. Dariush Mozaffarian is a cardiologist and Dean of the Tufts Friedman School of Nutrition Science & Policy. Dan Glickman represented Kansas in Congress for 18 years and served as the U.S. Secretary of Agriculture. Ann Veneman served as the U.S. Secretary of Agriculture and Executive Director of UNICEF. [Donna Shalala](#) served as the U.S. Secretary of Health and Human Services and President of the University of Miami.

Introduction from the 50th Anniversary Conference Co-Chairs

The 1969 White House Conference on Food, Nutrition, and Health was a landmark event. Commissioned by President Nixon and chaired by Dr. Jean Mayer, the historic 1969 conference convened a diverse group of organizations and dedicated citizens to craft a bipartisan agenda for ending hunger and malnutrition in the U.S. The meeting itself, and the report that emerged as a result, had significant and lasting policy impacts: subsequent years saw the expansion of the Food Stamp Program and the National School Lunch Program, the creation of the School Breakfast Program and the Special Supplemental Nutrition Program for Women, Infants and Children, and the development of dietary guidelines, nutrition education, and standardized food labeling, including the Nutrition Facts label. Of the approximately 1,800 specific recommendations generated by the conference, an estimated 1,650 were later implemented.¹

Based on these recommendations and corresponding federal actions, the U.S. made major strides in ameliorating the severe hunger and wasting present in the 1960s, especially in Appalachia and the southern states. Federal food programs that were implemented and expanded in the wake of the 1969 conference led to measurable health improvements among their beneficiaries.²⁻⁴ As described in this anniversary [video](#), the 1969 White House conference was a crucial milestone and breakthrough addressing the most pressing food and nutrition problems of that time.

Today, a half century later, the U.S. faces a very different set of nutrition challenges: epidemics of diet-related obesity, diabetes, and other chronic diseases; widening disparities in food access and affordability; food insecurity; and tremendous stresses to the environment, including threats to soils, waterways, oceans, and climate. The burden of chronic illness reduces quality-of-life and life expectancy for millions of Americans, and results in healthcare costs that are placing unprecedented strain on the budgets of federal, state and local governments, businesses, and families. Overweight and obesity are threatening our national security by disqualifying young men and women from military service. Meanwhile, environmental degradation caused by global food production is exacerbating climate change and depleting natural resources.

To honor the 1969 White House conference, recognize the emergence of a new national crisis in nutrition, and discuss actions for the future [we convened](#) the 50th Anniversary Conference, which consisted of a series of events held in October 2019 in Boston and Washington, D.C. Although we could only aspire to be as broad and inclusive as the 1969 conference, we assembled 46 partner organizations to participate in these events and discuss the food and nutrition problems of today. This report presents policy recommendations inspired by these discussions, as well as action items drawn from the policy statements of partner organizations, as reviewed by our report workgroup.

The aim of the 50th Anniversary Conference and of this report is to renew the bipartisan spirit and vision of the 1969 event in engaging the great challenges and opportunities of food and nutrition for our time. We hope this report sparks a much broader dialogue about food systems and health, access and equity, and sustainability in the 2020s and beyond.

Signed,

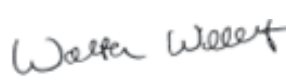

Dr. Frank Hu

Dr. Dariush Mozaffarian

Mr. Jerold Mande

Dr. Walter Willett

Executive Summary

THE 1969 WHITE HOUSE CONFERENCE ON FOOD, NUTRITION, AND HEALTH

The 1969 White House conference was a historic moment for food and nutrition policy in America. Responding to a national crisis of hunger and malnutrition, President Nixon commissioned the first, and still only, White House conference on nutrition. The conference, which was chaired by Dr. Jean Mayer, was historic in its bipartisanship, ambition, inclusivity, and impact. More than 3,000 attendees from all sectors and walks of life put forward 1,800 recommendations for improving national food policy. The 1969 meeting and the proposals it generated spurred major improvements and expansions of federal food programs, which led to significant reductions in hunger and nutrition-related diseases.

50TH ANNIVERSARY

Fifty years after the original White House conference, the U.S. faces a very different but equally urgent national crisis of nutrition, with added challenges of climate change and sustainability. While calorie malnutrition in the U.S. has been largely eradicated, changes to our food system accompanied by increasing economic inequality have created a crisis of diet-related obesity, diabetes, and other chronic diseases, and widened other disparities in the accessibility and affordability of nutritious foods. Another imperative – not addressed at the 1969 Conference but highly relevant today – is to feed a growing population healthfully and sustainably, without exacerbating climate change and depleting natural resources.

To honor the 50th anniversary of the 1969 conference, 46 organizations came together to form a Conference Partnership Circle in 2019. At meetings on October 3–4, 2019 in Boston and October 30, 2019 in Washington D.C., these organizations, together with students, academics, business leaders, advocates, and policymakers, gathered to discuss America's nutrition and sustainability challenges for the 21st century. To kick off these discussions, a keynote address from former U.S. Department of Agriculture undersecretary Cathie Woteki, together with a panel discussion by key participants from 1969, recounted the history and successes of the first White House conference (a historical video, accessible in an appendix to this report, was also produced for the event). Subsequent panel discussions and speakers took stock of current food and nutrition issues in the U.S. and proposed actionable solutions for improving diet and health and addressing food justice and sustainability (details of the meetings are provided in the appendix).

POLICY RECOMMENDATIONS

Drawing from the meetings in Boston and Washington D.C., and from the policy priorities of the Conference Partnership Circle, a report workgroup compiled and reviewed policy recommendations across eleven policy domains: (1) schools and childhood settings; (2) the Supplemental Nutrition Assistance Program (SNAP); (3) the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC); (4) the food environment; (5) education and information; (6) healthcare; (7) worksites; (8) government structure and coordination; (9) sustainable food systems; (10) business innovation and responsibility; and (11) research and discovery.

Tackling the current food and nutrition crisis requires changing the current toxic food environment and thus warrants an ambitious, bold, multi-sector, comprehensive national effort. No single

recommendation from this report offers a “silver bullet” for solving the diverse food and nutrition challenges that face our nation today. However, we have identified several priority recommendations that have the potential to deliver population-scale benefits and achieve a needed course change in Americans’ health and nutrition outlook:

1. Leverage the power of U.S. Department of Agriculture (USDA) programs.

USDA’s 15 nutrition assistance programs touch the lives of one out of four Americans each year, from infants to the elderly—with their \$100 billion annual budget, these programs can have broad health impacts. For example, recent research on two key federal programs, the National School Lunch Program and WIC, demonstrates that USDA nutrition policy can significantly improve diet quality and reduce obesity.^{77,82} Small shifts to emphasize better nutrition in USDA programs, accompanied by adequate benefits and equal access, will lead to population-level health impacts.

2. Utilize economic incentives.

Taxes and subsidies are powerful levers for driving consumer behavior and demand toward healthier and more sustainable food and beverage choices. Strategies to increase the price of less healthy and sustainable foods and beverages, such as taxes in retail and restaurant settings, paired with subsidies to lower the price of healthy foods and beverages should be considered at all levels of government and in private settings.

3. Protect children from harmful advertising and marketing.

Despite repeated efforts to limit the marketing of unhealthy foods and beverages, children and adolescents continue to be subjected to an onslaught of targeted advertising for the unhealthiest products across all media platforms.⁵ Regulating marketing to children and limiting favorable tax treatment for industry marketing of unhealthy foods and beverages are top priorities for stemming rising rates of childhood obesity.⁶

4. Equip health professionals with effective nutrition interventions and better nutrition knowledge.

With diet-related disease being the number one cause of poor health in America, nutrition should be among the top priorities in our healthcare system. Health providers need better nutrition training and effective, evidence-based nutrition interventions, tailored to specific populations, that can improve diet-related health outcomes and reduce healthcare costs.

5. Align agriculture, health, and sustainability.

U.S. agriculture has been spectacularly successful in feeding a growing population, but market forces have historically promoted foods and growing practices that are not in the interest of population health or planetary health. Better aligning U.S. agricultural investments with the *Dietary Guidelines for Americans* and with global sustainability goals through economic incentives for both consumers and farmers is crucial to slowing the rate of climate change and to making healthy, sustainably produced foods the most accessible, affordable, and convenient choices.

Honoring the Past

THE 1969 WHITE HOUSE CONFERENCE ON FOOD, NUTRITION, AND HEALTH

The 1969 White House conference was convened in response to a national recognition that hunger and malnutrition were causing tremendous suffering across the country and that meaningful actions could be taken to address this suffering. As journalists, citizen groups, scientists, and advocates raised awareness about the dire nutritional status of many Americans, the nation's political leaders resolved to create an informed, coordinated federal response.

In 1967, the U.S. Senate Committee on Labor's Subcommittee on Poverty held a hearing on hunger in America. Civil rights attorney Marion Wright testified to desolate conditions in poorer states like Mississippi and urged senators to visit and witness the hunger and poverty firsthand. Her testimony shocked the subcommittee and inspired Senators Robert F. Kennedy and Joseph Clark to travel to the Mississippi Delta to verify Wright's account.

Accompanied by Marion Wright, staff aides (including Peter Edelman), and members of the media, Senators Kennedy and Clark encountered dilapidated homes, empty pantries, and malnourished and wasting children covered in sores and bloated from hunger in their visit to Mississippi that year. Media coverage of the tour inspired a cascade of civil and political action to address hunger in a new national effort.

Physicians and scientists with expertise in nutrition, including Dr. Jean Mayer (a scientist at the Harvard School of Public Health who went on to become president of Tufts University and found the Friedman School of Nutrition Science & Policy), were dispatched to Mississippi to conduct a medical survey. The doctors diagnosed numerous cases of kwashiorkor, marasmus, rickets, and other diseases of severe malnutrition – shocking conditions that were thought to be found only in third world countries at that time.

In 1968, the Citizens Crusade Against Poverty, a nonprofit advocacy organization that was engaged in surveying the Delta as part of its civil rights activism, created a "Citizens' Board of Inquiry into Hunger and Malnutrition in the United States." The Board published its findings in April 1968 in a report titled *Hunger USA*.⁷ Executives at CBS, moved by the report, sent reporters and photographers across the country to review and document the conditions outlined in the Citizens' Board report. In May 1968 as an influential documentary, *Hunger in America*, aired on prime time television and brought graphic images of starving children and their families into the living rooms of millions of Americans.⁸

That same year, a broad coalition of civic groups and workers' unions joined together to create a National Council on Hunger and Malnutrition in the United States, chaired by Dr. Mayer. The Council began providing evidence to Congress and advocating for meaningful federal action against hunger.⁹

In response, the U.S. Senate voted unanimously in July 1968 to create a Select Committee on Nutrition and Human Needs, to be chaired by Senator George McGovern and ranking member Senator Jacob Javits. Funding for the committee was authorized in February 1969, and hearings on hunger began with Dr. Mayer serving as the committee's first witness.

At the same time, hunger marches and sit-ins were occurring regularly in Washington D.C., the most significant being the Poor People's March on Washington, led by Martin Luther King, Jr. Dr. Mayer

noted the national attention on this issue, saying “fast action was obviously imperative, not only to take care of the hungry, but also to ensure ‘domestic tranquility.’”⁹

On May 6, 1969, President Nixon announced plans to convene a “White House Conference on food and nutrition” to advise him on “how the private food market might be used to improve the nutritional status of Americans, and how federal food programs could be improved.”¹⁰ On June 11, Nixon appointed Dr. Mayer as Special Consultant to the President in charge of organizing the conference.

From June until November 1969, 26 panels and 8 task forces met to draft and review recommendations for addressing hunger and poverty in the U.S. The 475 individuals who served on these panels included experts from academia, medicine, industry, and agriculture. The 300 people who participated in the task forces represented nonprofit advocacy groups, women’s organizations, industrial and consumer trade groups, professional organizations, and religious dominations.

The official White House Conference convened on December 2, 1969, at the Sheraton Park Hotel in Washington D.C. President Nixon set the tone for the conference, declaring in his opening speech: “This meeting marks a historic milestone. What it does is to set the seal of urgency on our national commitment to put an end to hunger and malnutrition due to poverty in America.”¹⁰

More than 3,000 people attended the conference. The audience included academics, physicians, industry leaders, representatives of consumer organizations, healthcare representatives, agricultural and trade organizations, social action groups, and more than 400 of the poor themselves—white, black, Mexican-American, Puerto Rican, and Native American—all brought together to discuss recommendations that had been developed by the panels and task forces.

Over the course of three packed days, these attendees engaged in “intensive and constructive discussions” on how to solve the problem of hunger in America.¹⁰ The results of these discussions were published in a report that contained 1,800 “specific, workable” policy recommendations addressing nutrition guidelines, nutrition education, nutrition surveillance, consumer issues, food distribution, and special recommendations for vulnerable groups.^{9,10} Dr. Mayer delivered the report to President Nixon on December 24, 1969.

Dr. Jean Mayer (1920-1993) was appointed by President Nixon to chair the 1969 White House Conference on Food, Nutrition, and Health. Dr. Mayer was a French-American scientist who advocated for using nutrition science to drive policies to fight hunger and malnutrition in the U.S. Dr. Mayer directed a laboratory at the Harvard School of Public Health for two decades that conducted path breaking research on the physiological bases of hunger and the metabolism of essential nutrients.

Dr. Mayer was appointed President of Tufts University in 1976 and led the university for 16 years, dramatically raising its impact and profile. Among his major accomplishments were the founding of the Tufts Institute of Nutrition, which soon became the Tufts School of Nutrition; and the USDA Human Nutrition Research Center on Aging at Tufts University.

By the time of a follow-up conference two years after the original White House conference, an estimated 1,650 of the original 1,800 recommendations had been implemented in some form. Together, these recommendations established the current national framework for addressing hunger in America.

By the time of a follow-up conference two years after the original White House conference, an estimated 1,650 of the original 1,800 recommendations had been implemented in some form.¹ Together, these recommendations established the current national framework for addressing hunger in America. A key accomplishment was the expansion and harmonization of federal food assistance programs. In 1968, the Food Stamp program (now called SNAP) served 2 million Americans; by 1971, it served 11 million. Before the conference, the National School Lunch Program (NSLP) served 2 million children; by 1971, it served 8 million.

A specific recommendation concerning nutrition for high-risk pregnant women and infants resulted in the creation of the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC), which was launched as a pilot in 1972 in Kentucky and was operating in 45 states by 1974. The School Breakfast Program, established as a pilot in 1966, became nationally available by 1975.

Other policies initiated as a result of recommendations from the 1969 White House conference included new consumer programs, such as unit pricing; federal nutrition and ingredient labeling (Nutrition Facts label); the Generally-Recognized-As-Safe (GRAS) ingredient classification to help ensure the safety of food additives and inform industry innovation;¹ and, in 1977, the first ever round of Dietary Goals for the American people, soon to become the *Dietary Guidelines for Americans* (DGAs), as established by the Senate Select Committee on Nutrition and Human Needs.¹¹ Since that time, the U.S. Department of Agriculture (USDA) and the U.S. Department of Health and Human Services (HHS) have published eight iterations of the DGAs (in 1980, 1985, 1990, 1995, 2000, 2005, 2010, and 2015), which have served as the basis for federal nutrition policy and programs, nutrition education, health promotion, and disease prevention initiatives.

In sum, the national policies and programs implemented after the 1969 White House conference spurred major reductions in hunger and its associated diseases. As Dr. Mayer observed 20 years

later, “in a united, bipartisan effort, the American people had directed Federal resources at a massive problem, and it had worked.”¹¹

KEY FEDERAL NUTRITION POLICY AGENDAS IN THE PAST 50 YEARS

The 1969 White House conference remains one of the few times in modern U.S. history that the federal government placed specific attention on food and nutrition issues to develop national policy priorities. Other food and nutrition convenings and policy agendas from the past 50 years, summarized below, are noteworthy, but, beyond First Lady Michelle Obama’s eight-year *Let’s Move!* Campaign, most have not had nearly the prominence nor the impact of the 1969 event.

In the decade following 1969, Dr. Mayer held several follow-up meetings to highlight resulting policy recommendations and monitor their implementation. Dr. Mayer also published articles marking the 20th anniversary of the conference.¹⁹ In 2000, to mark the 30th anniversary of the White House conference, the USDA and HHS held a joint National Nutrition Summit in Washington, D.C. to highlight subsequent accomplishments in the areas of food, nutrition, and health and identify actionable priorities for the future.¹² The report from this event recommended creating supportive and healthy food environments; using multichannel, culturally relevant interventions; prioritizing obesity prevention in healthcare; researching interventions to change population behavior and assess their cost-effectiveness; coordinating federal agencies; establishing public-private partnerships, and developing national campaigns to target specific behavior changes.

In 2009, 40 years after the 1969 conference, First Lady Michelle Obama launched her *Let’s Move!* campaign. As ambitious as President Nixon’s goal to “end hunger in America,” *Let’s Move!* was aimed at “solving the problem of obesity within a generation.”¹³ In addition, President Obama created the first-ever Task Force on Childhood Obesity in 2009 to develop a national plan for engaging the private and public sectors to improve children’s health, supported by the Partnership for a Healthier America.¹⁴ The *Let’s Move!* campaign rivals the 1969 White House conference in its sustained focus over two terms of an administration; this campaign was also similar to the 1969 conference in its emphasis on coalition building and in its commitment to an agenda with an ambitious common goal—in this case, ending childhood obesity.¹⁵

Initiatives championed by First Lady Michelle Obama include the Healthy Lunchtime Challenge and Kid’s State Dinner, Drink Up, and the White House Kitchen Garden.¹⁶⁻¹⁸ A number of policy changes were also introduced and implemented as a result of *Let’s Move!*: major improvements in school nutrition standards through the 2010 Healthy, Hunger-Free Kids Act (HHFKA); reform of SNAP-Education

Cover of the final report on the 1969 White House Conference. The report contained 1,800 recommendations addressing nutrition guidelines, nutrition education, nutrition surveillance, consumer issues, food distribution, and special recommendations for vulnerable groups.

Dr. Jean Mayer presents President Nixon with the three volume report on the 1969 White House Conference.

(SNAP-Ed) to focus on obesity prevention and include policy, systems, and environmental change; an updated Food and Drug Administration (FDA) Nutrition Facts label; mandatory labeling of calorie contents on menus at chain restaurants; FDA attempts to regulate front-of-package labels; FDA's voluntary sodium target guidelines; USDA's launch of MyPlate; and the reestablishment of the Interagency Committee on Human Nutrition Research (ICHNR), among other historic milestones for recognizing the importance of nutrition in the Affordable Care Act.

Agency-specific roadmaps to address nutrition and obesity from the past 50 years include: HHS's Healthy People Goals (2000, 2010, 2020),¹⁹ the HHS Blueprint for Action on Breastfeeding (2000),²⁰ the 1988 Surgeon General's Report on Nutrition and Health,²¹ the 2001 Call to Action to Prevent and Decrease Overweight and Obesity,²² and the Strategic Plan for National Institutes of Health (NIH) Obesity Research (2011).²³ In 2014, Congress created a bipartisan National Commission on Hunger, which published recommendations for using existing USDA programs and funds to combat domestic hunger and food insecurity, where food insecurity is defined as the limited or uncertain availability of nutritionally adequate and safe foods and beverages because of insufficient money or other resources.^{24,25} The Office of Technology Assessment (OTA) and the Government Accountability Office (GAO) have also published key reports on needed improvements in federal food programs.²⁶⁻³¹ The National Academy of Medicine and its forerunner, the Institute of Medicine, a private nonprofit institution, have issued many federally supported independent analyses, including the Dietary Reference Intakes (DRIs) and more than 100 other reports on topics ranging from food marketing to children to nutrition standards for school meals and revision of the WIC food packages.

Without the high-level political will and the coordinated, bipartisan congressional attention on food and nutrition issues that was present during the 1969 White House conference and *Let's Move!*, many key opportunities for further progress have languished.

Coalitions and non-governmental organizations, meanwhile, have developed their own agendas for improving food and nutrition policy. Recent report examples include the 2017 *Blueprint for a National Food Strategy*, put out by the Harvard Law School's Food Law and Policy Clinic and the Vermont Law School's Center for Agriculture and Food Systems;³² the Bipartisan Policy Center's 2018 SNAP Task Force report, which included recommendations for leveraging federal programs to improve nutrition;³³ the Institute of Medicine of the National Academies' 2015 *Framework for Assessing Effects of the Food System*;³⁴ and the *EAT-Lancet* Commission's 2019 scientific review of healthy diets from sustainable food systems.³⁵

Relatively few of the policies and actions recommended in these reports have been implemented, however, and many important policy gains of the recent past (such as the HFFKA) are now vulnerable. Without the high-level political will and the coordinated, bipartisan congressional attention on food and nutrition issues that was present during the 1969 White House conference and *Let's Move!*, many key opportunities for further progress have languished.

AMERICA'S CURRENT NUTRITION CRISIS

Fifty years after the original White House Conference on Food, Nutrition, and Health, the U.S. faces a very different national nutrition crisis, together with newer challenges of climate change and sustainability. While calorie malnutrition in America has been largely eradicated, changes to our food system

accompanied by persistent poverty and increasing economic inequality have created a crisis of diet-related obesity, diabetes, and other chronic diseases, and widened other disparities in the accessibility and affordability of nutritious foods. Not addressed at the 1969 conference but highly relevant today is the added challenge of feeding a growing population healthfully and sustainably and without exacerbating climate change and depleting natural resources.

Poor diet is now the leading cause of poor health in the U.S., causing more than half a million deaths per year.³⁶ The prevalence of obesity has risen sharply from 15% of adults and 5.5% of children in 1980 to 39.8% of adults and 18.5% of children in 2016. Nearly three in four (71.6%) American adults are either overweight or have obesity.³⁷⁻⁴⁰ More than 100 million Americans – nearly half of all U.S. adults – suffer from diabetes or pre-diabetes, while one in three U.S. children born after 2000 is expected

Source: Trust for America's Health, NHANES

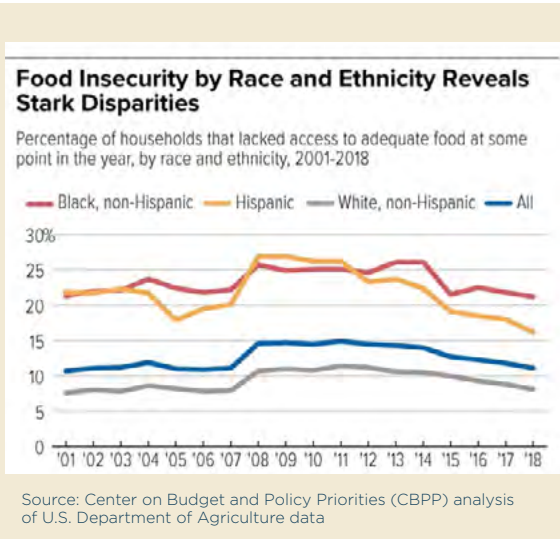

to develop Type 2 diabetes.^{41,42} Cardiovascular disease afflicts about 122 million people and causes roughly 840,000 deaths each year, with rates of coronary heart disease and obesity-related cancers increasing among younger adults.^{43,44} And, for the first time in American history, life expectancies are falling, with declines for three consecutive years due in part to significant increases in midlife mortality from diet-related diseases.^{45,46}

Although hunger and poverty are by no means a problem of the past, severe malnutrition has largely been replaced with food insecurity – the limited or uncertain availability of nutritionally adequate and safe foods and beverages because of insufficient money or other resources.²⁴ In 2018, 14.3 million U.S. households experienced food insecurity, with 8.7 million of these households experiencing low food security (based on reports of reduced quality, variety, or desirability of diet with little to no indication of reduced food intake) and 5.6 million households experiencing very low food security (based on reports of multiple indications of disrupted eating patterns and reduced food intake).^{47,48} The USDA spends about \$70 billion per year supporting food insecure individuals and families through the SNAP program. This critical program has been shown to reduce food insecurity,⁴⁹ improve child education and economic outcomes,⁵⁰ and reduce healthcare expenditures.⁵¹ However, SNAP participants still experience disparities in diet quality when compared to food secure households and, in some studies, other income-eligible nonparticipants.⁵²⁻⁵⁶

Social, economic, and environmental injustice, including racism, poverty, and geographic isolation are

major underlying causes of food insecurity and poor diet quality as well as obesity and other diet-related chronic diseases. These conditions and disparities lead to a vicious intergenerational cycle of food insecurity and poor nutrition, obesity, poor health, lost productivity, increased health costs, and poverty for the most vulnerable Americans.

The economic costs of this new national nutrition crisis are staggering. Total U.S. healthcare expenditures have risen from 6.9% of gross domestic product (GDP) in 1970 to 17.9% in 2017.^{57,58} These rising medical costs, dominated by diet-related chronic health conditions, are crushing government budgets and private business growth. Total direct healthcare and indirect economic costs for cardiovascular diseases are estimated at \$316 billion per year; for diabetes, at \$327 billion per year; and for all obesity-related conditions, at \$1.72 trillion per year.^{37,59} These amounts dwarf the annual budgets of

many federal agencies, including the budgets of the Departments of Agriculture (\$140 billion), Education (\$72 billion), Homeland Security (\$52 billion), and Justice (\$28 billion), as well as the budgets of the National Institutes of Health (\$39 billion), Centers for Disease Control and Prevention (\$11 billion), Environmental Protection Agency (\$5.7 billion), and Food and Drug Administration (\$5.7 billion).

Healthcare costs are imperiling other priorities in federal and state budgets and in the economy as a whole. Healthcare spending rose from 5% of all federal spending in 1970 to 28% in 2018 and from 11.3% of state budgets in 1989 to 28.7% in 2016. For U.S. businesses, healthcare expenditures rose (in constant 2017 dollars) from \$79 billion in 1970 to \$1.18

trillion in 2017).^{58,60,61} On a per capita basis, annual healthcare spending has increased from \$1,797 per person in 1970 to \$10,739 per person in 2017 (in constant 2017 dollars).⁵⁸ Research suggests that those with greater food insecurity shoulder significantly higher healthcare costs, as much as \$77.5 billion in additional expenditures annually.⁶² These spiraling costs, which are driven by diet-related diseases and continue to rise, are crowding out other needed federal, state, and business investments, while also causing real wages to stagnate for many American workers.⁶³

The current food and nutrition crisis also poses a severe threat to national security and U.S. military readiness. Mission: Readiness, a group of more than 700 retired general and admirals, has published several reports since 2010 documenting this threat.⁶⁴⁻⁶⁷

Today, 71% of young people between the ages of 17 and 24 do not qualify for military service, with obesity being the leading medical disqualifier.⁶⁴ Poor nutrition and diet-related diseases also strain the budgets of the Departments of Defense and Veterans Affairs.

America's food system has been largely successful, through advances in agricultural productivity, at feeding a growing population and contributing to the end of calorie malnutrition in the U.S. But agriculture faces growing environmental challenges and threats to long-term sustainability, including resource scarcity, loss of biodiversity, and soil degradation.^{68,69} Climate change is warming the planet to dangerous levels and causing droughts, hurricanes, forest fires, and heat waves of increasing severity and unpredictability—it is also contributing to lower crop yields and creating new economic risks for farmers. In the U.S., current consumption patterns and market forces perpetuate the production of foods that have larger environmental impacts, in terms of greenhouse gas emissions, land use, water

use, and energy use, and that are not aligned with *Dietary Guidelines* goals.⁶⁹⁻⁷¹ At the same time, at least 31% of the food produced in the U.S. goes to waste on farms, during distribution, at the store, and in people’s homes.⁷²

In summary, governments, businesses, farmers, and individuals all bear the health and environmental burdens of our food system—at massive expense. Globally, the externalities of our food system are estimated to total \$12 trillion, an amount greater than the entire food sector’s revenue.⁷³

ACTIONS FOR THE FUTURE

Food Environment Panel at 50th Anniversary White House Conference, Boston MA, October 4, 2019. From left to right: Greg Drescher, Dr. Sara Bleich, Dr. Marion Nestle, Dr. Norbert Wilson, Dr. Christina Economos

To mark the 50th anniversary of the first White House Conference on Food, Nutrition, and Health and—more importantly—to document, create multi-sectoral conversations around, and recommend future actions for addressing our current national crisis of nutrition and sustainability, more than 40 organizations partnered to hold events on October 3-4, 2019 in Boston and October 30, 2019 in Washington, D.C. (more detailed information about these events is provided in the appendix).

These policy actions—taken together and implemented across the food system—have the potential to create meaningful, positive impacts in terms of health, equity, and sustainability; reduced healthcare costs; and improved military readiness.

This section describes 60 recommendations across 11 domains—all aimed at achieving a healthier, more equitable, and more sustainable food system. These recommendations were drawn from discussions at the anniversary events and from the policy statements of members of the Conference Partnership Circle, and compiled and reviewed by a report workgroup. No single recommendation or action offers a “silver bullet” for solving the diverse food and nutrition challenges facing our nation today. Rather, these policy actions—taken together and implemented across the food system—have

the potential to create meaningful, positive impacts in terms of health, equity, and sustainability; reduced healthcare costs; and improved military readiness.

I. Schools and Childcare Settings

Early care and education (ECE) or childcare settings play a key role in ensuring that children get a healthy start and in supporting working parents. More than 60% of children ages 3-5 spend 30 or more hours each week in ECE settings.⁷⁴ Further, schools play a critical role in shaping lifelong eating habits, and participation in school meal programs is associated with better academic performance, reduced absences, and improved memory,^{75,76} setting generations of children up for more successful and productive outcomes in the future. Our recommendations include several policy priorities for further strengthening and improving nutrition and equity in ECE and school settings.

- i. **Early care and education:** Protect and expand current nutrition standards in the USDA's Child and Adult Care Feeding Program, raise the reimbursement level for meals and snacks in line with current costs, and support greater uptake of the program in communities with low utilization. Make obesity prevention standards in the HHS Child Care and Development Block Grant Program mandatory instead of voluntary. Expand the HHS Early Head Start and Head Start programs to ensure that all at-risk infants and toddlers enter school ready to learn and succeed.
- ii. **School meal nutrition standards:** Restore and further strengthen the successful 2012 nutrition standards for the National School Lunch and School Breakfast Programs, including strong standards with respect to fruit and vegetable, sodium, and whole grain content and reduced levels of added sugars and refined grains.⁷⁷
- iii. **Marketing and branded foods:** Restrict the marketing and advertising of unhealthy* foods and beverages in schools and institutions of higher learning, including sponsorships and branded foods that are individually packaged and reformulated to meet Smart Snacks standards, but that do not meet standards for nutrients of concern for school meals when sold on grocery-store shelves.
- iv. **Fresh Fruit & Vegetable Program:** Expand this USDA program, which is currently offered only to elementary schools, to middle schools and high schools, and expand the number of schools that are eligible to participate (eligibility is currently restricted to those schools with the highest percent of children who qualify for free and reduced-price meals).
- v. **Federal reimbursement and eligibility:** Raise the school-meal reimbursement rate for all schools to provide more flexibility to cook from scratch and use healthier ingredients. Protect and expand categorical eligibility, including community eligibility to allow schools in high poverty areas to reach more children with free breakfast and lunch while also reducing administrative costs.

* The terms "healthy foods" and "unhealthy foods" are used for brevity throughout the policy recommendations. Healthy foods are those that align with the *Dietary Guidelines for Americans* and are consistent with healthy eating patterns that have been associated with positive health outcomes, including fruits, vegetables, nuts, beans, minimally processed whole grains, plant oils, and fish. Unhealthy foods are those that have been shown to be associated with preventable disease, including sugar-sweetened beverages, processed meats, junk foods, and other foods high in calories, refined grains, added sugars, and salt.

- vi. **Kitchen facilities and culinary techniques:** Increase funding for USDA's Equipment Assistance Grant Program so more childcare providers and schools can update their facilities and equipment and increase their capacity to prepare nutritious meals. Establish a pilot program utilizing chefs in schools to ensure that healthy options are delicious and appealing to all age groups, and evaluate the program's success in terms of increased participation and reduced plate waste.
 - vii. **Nutrition education:** Increase mandatory funding and expand access for the USDA Farm to School Grant Program and the Centers for Disease Control and Prevention's (CDC's) Farm to Early Care and Education Program, prioritizing grantees that combine a nutrition education curriculum with hands-on learning in the classroom and in school gardens.
 - viii. **Summer Food Service Program:** Strengthen nutrition standards for USDA's Summer Food Service Program in line with HHFKA guidelines; increase program participation, especially among hard-to-reach rural populations; and conduct a pilot program that allows parents to receive summer meals with their children using their SNAP Electronic Benefit Transfer (EBT card).
-

II. Supplemental Nutrition Assistance Program (SNAP)

As the nation's largest federal food and nutrition program, SNAP provides a critical safety net for about 40 million individuals living below the federal poverty level each month. Better leveraging of this \$68-billion annual program can not only reduce food insecurity but, by improving nutrition and health, also reduce disparities and associated healthcare costs. Our policy recommendations include several priorities for strengthening the SNAP program; improving access, participant satisfaction, food security, diet quality, and health; and reducing healthcare costs.

- i. **Access and participation:** Increase SNAP participation among the 15% of income-eligible individuals and families who do not participate.⁷⁸ Reduce barriers to participation for eligible college students by educating students about these benefits on campuses and by reducing work requirements.
- ii. **Program structure and benefits:** Protect the structure and funding of this critical program for the millions of Americans who struggle with food insecurity. SNAP benefits should be updated and increased to ensure that low-income individuals, college students, and families can be food secure and meet DGA goals, taking into account the time and opportunity cost of shopping and preparing meals.
- iii. **Diet quality:** Make diet quality a congressionally mandated third core objective, commensurate with SNAP's other current core objectives of food security and fiscal integrity; update the USDA Food Plans to create a Thrifty Food Plan that improves SNAP diet quality; and create a deputy administrator for nutrition within the USDA's Food and Nutrition Service (FNS) to ensure nutrition is at the forefront of all USDA food assistance programs.
- iv. **Pilots and innovation programs:** Implement, evaluate, and scale as appropriate innovative programs, including the Gus Schumacher Nutrition Incentive Program (GusNIP); new, USDA-supported pilots and waivers that evaluate other ways to better support healthy eating (e.g., healthy retail approaches, healthy food incentives combined with disincentives

or restrictions for unhealthy foods); alternative benefit disbursement schedules (i.e., weekly or bi-monthly); and alternative delivery mechanisms (e.g., online, home delivery).

v. **SNAP-Education:** Create a robust SNAP-Ed infrastructure, similar to SNAP Employment and Training (SNAP E&T) and GusNIP, to support the implementation and evaluation of SNAP-Ed, including administrative support, state training and technical assistance, and testing of new SNAP-Ed interventions (especially policy and systems changes, and environmental supports) using SNAP pilot authority.

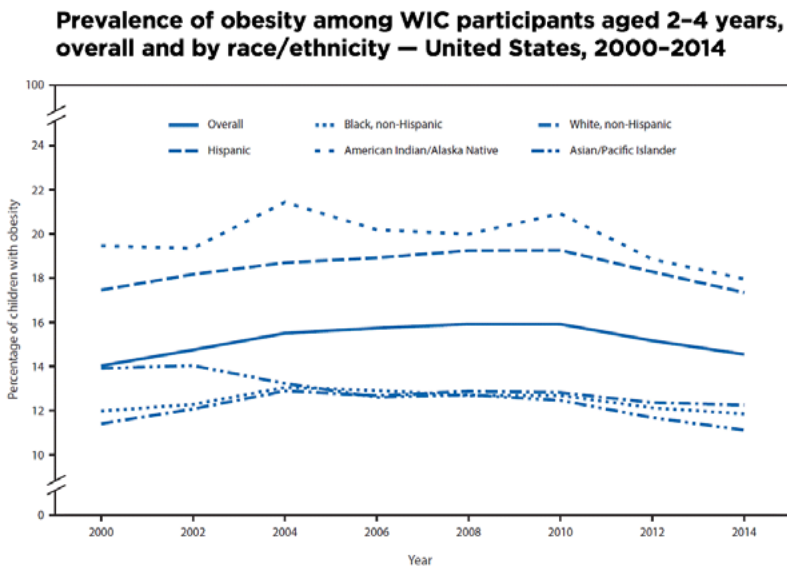

vi. **Retailer standards and data:** Update USDA retailer incentives and stocking standards to increase the availability and encourage the purchase of healthy foods. Study the feasibility of evidence-based product placement strategies and restrictions on the marketing of unhealthy products, such as energy drinks and sugary beverages, to SNAP recipients. Encourage private-public partnerships around the sharing of retailer data in ways that protect participant and retailer information while also allowing for rigorous evaluation to identify evidence-based strategies for strengthening SNAP's public health impacts.

III. Special Supplemental Nutrition Program for Women, Infants, and Children (WIC)

The WIC program serves roughly 6.9 million women, infants, and children living below the federal poverty level. Poor nutrition in gestation, infancy, and early childhood can cause long-term damage to health and development, setting the stage for obesity, Type 2 diabetes, and other chronic diseases. Extensive research shows that WIC supports the health of infants and their mothers, more than doubling its return on investment through healthcare savings; for example, recent studies show significant reductions in the prevalence of obesity among WIC beneficiaries ages 2-4.⁷⁹⁻⁸² Our recommendations include several policy priorities for strengthening and improving the WIC program:

i. **Breastfeeding:** Support breastfeeding among postpartum women by expanding investment in the Breastfeeding Peer Counselor Program, providing funding for breastfeeding supplies, and allowing for the purchase of banked donor milk.⁸³

ii. **Food package:** Support the evidence-based, WIC food package standards and increase the quantity of whole fruits and vegetables in food packages, including shifting away from fruit juice and toward whole fruit.⁸³

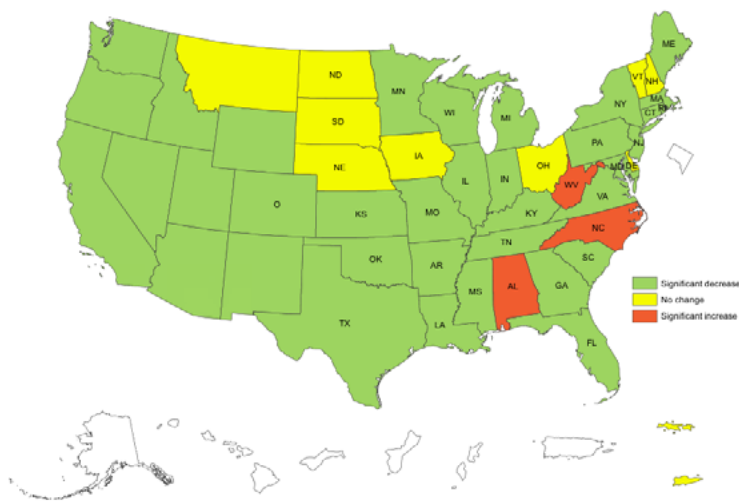

Source: Pan L, Freedman DS, Sharma AJ, et al. (2016)

iii. **Nutrition education:** Support and expand WIC Nutrition Education as a successful component of early childhood health and development and continuing care for new mothers, including expanding education on feeding practices, sleep, screen time, and sugary beverage consumption.

iv. **Eligibility and certification:** Extend postpartum eligibility for mothers from six months to two years, and extend eligibility for children by one year, until their sixth birthday, to ensure that no child slips through the nutrition gap between WIC and the National School Lunch and School Breakfast program. Explore opportunities to streamline participant access by extending certification periods to two years.

v. **Technology and evaluation:** Invest in improvements to information systems and technology to better serve WIC participants including through online resources, texting, telehealth options, and app tools to support breast-feeding and nutrition education, and to enhance the clinic and shopping experience. Pilot new delivery approaches such as online purchasing. Continue to support efforts to improve program evaluation, including through data collection, research, and innovation.

Changes in obesity prevalence among children aged 2–4 years enrolled in WIC, by state or territory agency — United States, 2000–2016

Source: Pan L, Blanck HM, Park S, et al. (2019)

IV. Food Environment

Multi-faceted changes to the food environment are necessary to improve the accessibility, affordability, and nutritional quality of foods on the market. Our recommendations include several policy priorities for improving the food environment.

- i. **Ingredients:** Reduce harmful food ingredients in packaged foods, including excessive amounts of added sugars, refined grains, saturated fat, and sodium. This can be done through targets (specifically mandatory targets for sodium,⁸⁴ which are set by the FDA), industry agreements, and changes to the levels of use that are “generally recognized as safe” (GRAS).
- ii. **Economic incentives:** Utilize city, state, tribal, and federal tax strategies to increase the price of less healthful and less sustainable foods and beverages in retail and restaurant settings, and pair these taxation strategies with subsidy strategies to lower prices for healthy foods.
- iii. **Retail food:** Use legal strategies and incentives, such as contractual limitations, licensing, economic development incentives, Energy Star credits, and other tax and zoning laws to improve food and beverage offerings in retail environments including supermarkets, grocery stores, corner stores, and convenience stores. Policies should aim to reduce the marketing of unhealthy foods and beverages, increase the depth of stock refrigerator and freezer options for perishable foods, and prioritize the placement and promotion of healthy products.
- iv. **Restaurant meals:** Educate and incentivize restaurants—from quick serve to full service restaurants—to increase their offerings of appropriately sized healthy options on menus, reduce value-based pricing, and follow strong, shared voluntary or mandatory industry targets that shift default menu choices toward healthier food and beverage options for both adults and children. such as swapping default sugar-sweetened beverages for water and plain milk.

The FDA should continue to implement menu labeling as a successful strategy for encouraging restaurants to reformulate their offerings.

v. **Access:** Leverage federal incentives (e.g., Opportunity Zones) and restore or expand funding to other programs (e.g., Racial and Ethnic Approaches to Community Health or REACH) to support efforts in low-income and other marginalized communities to improve the availability, affordability, and accessibility of healthy foods. Improve nutrition standards in community venues (e.g., childcare settings, schools, worksites, parks and recreation centers, clinics, etc.) and create new business opportunities, especially in low-resource communities, for community members to create a healthier and more equitable food environment.

V. Education and Information for the Public

Despite advances in nutrition science, many consumers are confused about what to eat. This is due in large part to the abundance of conflicting, misleading, and often false messages in the media, in advertisements, and on food packaging. Our recommendations include several policy priorities for raising awareness about the importance of food and nutrition and reducing consumer confusion through education and information.

i. **Media campaigns and education to promote healthy diet patterns:** Fund sustained, focused, science-based, and culturally-appropriate media campaigns and educational programs to encourage the consumption of healthy foods and beverages and reduce the consumption of specific unhealthy foods and beverages. In addition, educate consumers about the environmental impacts of food and beverage choices.

Total Carbohydrate		300g	375g																										
Dietary Fiber		25g	30g																										

ii. **Front-of-package nutrition labels:** Add an effective, consumer-friendly, evidence-based front-of-package (FOP) label that links to the Nutrition Facts label and ingredient list as a way to encourage healthier food and beverage choices and prompt the reformulation of food products to meet DGA goals. FOP label information could include top three ingredients, type and number of additional ingredients, carbohydrate quality, fat quality, and mineral quality (e.g., potassium-to-sodium ratio). Consider growing evidence from countries such as Chile that strong FOP labeling results in significant improvements in purchasing patterns, product reformulation, and the nutritional quality of new products.

iii. **Packaged food ingredient list:** Update ingredient lists to have the same easy-to-read formatting used in the Nutrition Facts label. Additional labeling changes should include aggregating sugars, refined grains, and non-nutritive sweeteners; listing food colors by individual common names; using simple vitamin letter names; clarifying whole grain content; and adding additional precautionary allergen labeling (e.g., sesame).

iv. **Marketing to children:** Strengthen existing policies and enact new limits on the marketing of unhealthy foods and beverages, in all forms of media, to children under age 12, including advertising targeted to children of color. Marketing restrictions should be based on specific nutrition criteria (e.g., sodium, fat quality, added sugars, refined grains). In addition, industry's ability to claim tax credits for the marketing of unhealthy foods should be limited.

VI. Healthcare

Poor quality diets are the number one cause of poor health and a leading driver of rising healthcare costs, yet the U.S. healthcare system places little to no emphasis on nutrition. Our recommendations include several policy priorities for integrating nutrition in the provision of healthcare.

i. **Nutrition interventions for healthcare providers who practice under risk-sharing models:** Equip healthcare providers, who are under pressure to reduce healthcare costs as part of risk sharing agreements such as Accountable Care Organizations (ACOs), with a set of effective individual and community nutrition interventions that they can employ to reliably improve diet-related health outcomes while bringing down healthcare costs.

ii. **Healthier hospitals:** Incentivize hospitals to adopt healthy and environmentally sustainable policies for food and beverage procurement and vending. For example, adoption of the voluntary Food Service Guidelines (FSGs) for Federal Facilities offers a way for hospitals to promote the health of employees, patients, and the communities they serve.⁸⁵

iii. **"Produce Rx" Programs:** Offer clinician-provided prescriptions for free or discounted healthy foods that can be redeemed in healthcare settings and through retail grocers, farmers' markets, and Community Supported Agriculture (CSA) programs. This innovative approach has been piloted through Medicare and Medicaid and GusNIP research grants.

iv. **Medically tailored meals:** Provide medically tailored nutritious meals, including through Medicare and Medicaid pilot programs, to high-risk, food-insecure patients with complex chronic conditions and limited capacity and social support to prepare meals for themselves.

v. **Anchor Institutions – Community benefit provision:** Leverage nonprofit hospital community needs assessments required by the Affordable Care Act and community benefits programs to create healthcare and nutrition synergies, including using community benefit to

support nutrition programs like summer meals, farmers markets, senior nutrition programs, and community nutrition education.

vi. **Nutrition education for healthcare providers:** Educate physicians and other allied healthcare providers on food and nutrition and related behavior change strategies by adding nutrition to medical and allied curricula. Incentives and requirements—for example, on schools that are funded through federal dollars—can be used to promote this change. Encourage external accrediting organizations and states to further support this effort through national reform of medical licensing exams, specialty certification exams, and continuing medical education requirements.

vii. **Nutrition in Electronic Health Records:** Integrate standardized clinical and mobile assessments of diet quality and food insecurity into Electronic Health Records and Fast Healthcare Interoperability Resources to facilitate the evaluation and tracking of nutrition in patient assessments, treatment plans, new health system and community interventions, performance standards, and reimbursement for nutrition services through Medicaid.

VII. Worksites

More than 158 million Americans spend an average of 7.6 hours each weekday at their place of employment.^{86,87} Workplace interventions that leverage technology and the built environment, together with behavioral design strategies to motivate lifestyle changes, can improve workplace productivity, lower employer healthcare costs, and increase economic competitiveness. Our recommendations include several policy priorities aimed at maximizing worksites for wellness.

i. **Wellness platforms:** Incentivize employers to offer (e.g., through tax strategies) evidence-based, multicomponent wellness programs that include a strong nutritional focus, potentially with support from trained medical professionals (e.g. registered dietitian nutritionists). In addition, compile and share best practices from businesses that are already implementing successful programs.

ii. **Procurement standards:** Implement the 2017 Food Service Guidelines (FSGs) for Federal Facilities⁸⁵ across all federal, state, and local government facilities, and hospitals. Encourage adoption of FSGs within the private and nonprofit sectors to increase healthy food offerings, food safety, environmental stewardship, local procurement, and behavioral design strategies and to bolster demand for healthy foods and beverages.

iii. **Employee incentives:** Make healthy food and beverage purchases more affordable, at work and/or outside work, for example by integrating point-of-sale discounts or rewards into wellness platforms. Incentives should be carefully designed to avoid penalizing individuals who have chronic conditions or who are pursuing a nutrition plan developed with trained health professionals.

iv. **Culinary techniques:** Make sure that healthier food options are delicious food options by utilizing culinary arts in workplace cafeterias and food services (e.g., by employing chefs trained through programs such as the Culinary Institute of America's Menu of Change program).

v. **Built-environment nudges:** Use behavioral design strategies in worksite cafeterias to promote healthier choices, such as by changing default menu options, removing trays, and

offering healthier items first in buffets. These and other options are recommended in the FSGs for Federal Facilities⁸⁵ and in the Fitwel healthy building amenity certification.⁸⁸

VIII. Government Structure and Coordination

There is tremendous untapped potential for increasing efficiency and maximizing impact through better coordination of federal programs that deal with nutrition and health. Our recommendations include several policy priorities for improving the structure and coordination of federal nutrition programs.

- i. **Federal leadership:** Create a new senior executive branch position or structure that oversees, coordinates, harmonizes, and reports to the President, the Cabinet, and Congress on food and health, equity, and sustainability issues across diverse agencies and programs including Agriculture, Defense, Education, and HHS (including the CDC, CMS, FDA, and NIH).
 - ii. **Food assistance programs and Medicaid in states:** Coordinate federal and state food assistance programs (e.g., school meals, SNAP, WIC, CACFP) with Medicaid to improve nutrition and diet-related health outcomes, including through coordination and integration of state agencies and programs (i.e., joint program enrollment, particularly SNAP and Medicaid), and by working across congressional agriculture and health committees to achieve shared goals.
 - iii. **State Nutrition Action Committee (SNAC) program:** Strengthen the USDA's SNAC program so that all states have active committees to coordinate USDA food assistance programs, ACA community benefits, wellness, and other food and nutrition programs.
 - iv. **State Physical Activity and Nutrition (SPAN):** Increase the CDC's Division of Nutrition, Physical Activity and Obesity (DNPAO) budget so that CDC can award every state a SPAN grant for use on nutrition improvement and obesity prevention.
-

IX. Sustainable Food Systems

Our recommendations include several policy priorities for better aligning agricultural investment with the DGAs and global sustainability goals, while also bolstering the viability and success of American food producers.

- i. **Draw down emissions:** Take advantage of agriculture-based opportunities to remove carbon from the atmosphere by integrating agricultural policy into a new broad federal strategy that utilizes economic incentives (e.g., a cap-and-trade program) to incentivize foods and production systems with lower carbon and methane emissions, implement actions that sequester carbon, such as agroecology and agroforestry, and incorporate dual-use energy systems that incorporate livestock or crops and renewable energy.
- ii. **Conservation programs:** Increase funding for USDA working lands stewardship programs (i.e., the Conservation Stewardship Program and the Environmental Quality Incentives Program) to help farmers implement conservation practices that protect drinking water, regenerate soil, build soil organic matter, and diversify crops while improving agricultural yields. In addition, increase funding for farmland preservation and land retirement programs (e.g.,

the Agriculture Conservation Easement Program, Conservation Reserve Program) to protect agricultural lands and encourage farmers to remove environmentally sensitive land from production and plant resource-conserving land cover.

iii. **Crop insurance reforms:** Reform crop insurance to maintain this critical safety net for farmers while further bolstering specialty crops and increasing incentives for soil-building and regenerative agriculture practices that boost farm resilience and improve nitrogen efficiency, especially cover crops

iv. **Agricultural checkoffs:** Reform USDA's agricultural checkoff programs to promote equal opportunity among producers, increase transparency, prohibit conflicts of interest and anti-competitive practices, and bring messaging more in line with the DGAs.

v. **Public plant breeding:** Increase funding and institutional capacity for public breeding and cultivar development programs to protect agricultural biodiversity and resilience.

vi. **Food workers:** Ensure that workers throughout the food system – who often have low wages and few benefits, and who often face unsafe working conditions, discrimination, and food insecurity (at a rate twice the national rate)⁸⁹ – can access safe and healthy food. Actions in support of this priority include raising minimum wages, protecting the right to organize, and expanding protections in the Fair Labor Standards Act (FLSA) to cover all workers.

vii. **Food waste:** Reduce food waste by standardizing date labels to better educate consumers to reduce household food waste; supporting innovative solutions in the nonprofit and private sectors to improve post-harvest infrastructure, transport, and processing and packing; training and equipping producers, retailers, and restaurants to implement best practices for reducing food waste; increasing tax incentives and providing stronger guidance for healthy food donations, including donations by farmers, and other food recovery strategies.

X. Business Innovation and Responsibility

Improving the health, sustainability, and equity of the food system will not be possible without engaging the private sector, which must be part of the solution. Our recommendations include several policy priorities for supporting business innovation and incentivizing companies to tackle our national nutrition crisis.

- i. **Innovation incentives:** Institute tax policies and other economic incentives across sectors (agriculture, retail, manufacturing, restaurant, healthcare, wellness) for the development, marketing, and sale of healthier, more accessible, and more sustainable foods and beverages.
- ii. **Opportunity zones:** Expand and encourage opportunity zone incentives focused on food, nutrition, and wellness investments to improve equity and reduce disparities.
- iii. **B corporations:** Encourage and highlight B-corporation status (used to designate companies with high standards of verified social and environmental performance, public transparency, and legal accountability to balance profit and purpose) across agriculture, retail, manufacturing, restaurant, healthcare, and wellness sectors to recognize and reward companies that have integrated major social and environmental priorities for health, food justice, and sustainability.
- iv. **Mission-driven investment vehicles:** Encourage and convene investment vehicles that focus on food and nutrition-related companies centered on health, equity, and sustainability. Provide small, micro-loan opportunities for underserved groups through credit union innovations.
- v. **National entrepreneurship:** Develop and support a national strategy to build an ecosystem of evidence-based, mission-oriented innovation for a healthier, more equitable, and more sustainable food system.

XI. Research and Discovery

Modern nutrition science is a young but rapidly growing field. In the past, most nutrition research focused on micronutrients and their role in deficiency diseases.⁹⁰ Emerging priorities for future nutrition research include optimal diets for disease prevention and longevity; the relationship between gut microbiomes and health; dietary needs for high-risk populations, such as pregnant and lactating women and infants 0-24 months old; effective behavior change and systems approaches for healthier eating; dissemination and implementation science; sustainable food systems, especially agroecological approaches; and the powerful influences of place and income on access to affordable, healthy food and on nutrition and disease disparities. Advances in these areas will be possible only through robust, well-funded, coordinated nutrition research. Accordingly, our recommendations include several policy priorities for strengthening coordinated federal nutrition research.

- i. **Strengthen and protect existing federal research:** Ensure robust funding and independence of the federal agencies and centers that are conducting nutrition research that aligns with the ICHNR National Nutrition Research Roadmap. This includes but is not limited to efforts at the NIH, USDA Economic Research Service (ERS), National Institute of Food and

Agriculture (NIFA), the USDA University Human Nutrition Research Centers (HNRC), the CDC's practice-based policy and environmental research through the Prevention Research Centers (PRCs), and the Department of Defense, among others. Increase support for independent, investigator-driven research to address myriad unanswered and emerging questions in nutrition science and ensure that grant review sections include multiple experts in the design, conduct, and analysis of nutritional studies. Include federal funding to update the Dietary Reference Intakes on a regular basis using the chronic disease endpoints framework and more effectively address research needs put forth in the Dietary Guidelines Scientific Advisory reports.

ii. **Federal nutrition funding, leadership, and coordination:** Provide support for a new, coordinated federal nutrition research effort and authority. This should include strong leadership, strategy, coordination, and new funding to address major nutrition science research questions at the federal level in a way that is complementary to and synergistic with existing research across federal departments and agencies.

iii. **National Nutrition Monitoring System (NNMS):** Update the National Nutrition Monitoring and Related Research Act of 1990 and provide funding for nutrition monitoring to key agencies, including but not limited to the CDC (NCHS, NCCDPHP) and USDA. In addition, require NNMS agencies to collect regular surveillance and monitoring data on national, state, and local nutrition policies (e.g., child care licensing, school wellness policies, food service guidelines), nutrition environment measures (e.g., child care nutrition practices, school vending, food service venue audits, sales, food marketing), and behavioral data (e.g., NSCH, YRBS, BRFSS, NHANES). These data should be provided to the Deputy Director of the Office of Science and Technology Policy (OSTP) for Food and Nutrition.

iv. **Evidence-based, mission-oriented private-sector innovation:** Create new policies to stimulate and reward private-sector innovation in food and nutrition, including public-private partnerships that are science-driven, transparent, and focused on increasing health, equity, and sustainability.

Acronyms

ACO	Accountable Care Organization
BRFSS	Behavioral Risk Factor Surveillance System
CACFP	Child and Adult Care Feeding Program
CDC	Centers for Disease Control and Prevention
CMS	Centers for Medicare and Medicaid Services
CSA	Community Supported Agriculture
DGA	Dietary Reference Intake
DGAs	<i>Dietary Guidelines for Americans</i>
DNPAO	Division of Nutrition, Physical Activity and Obesity
EBT	Electronic benefit transfer
ECE	Early care and education
ERS	Economic Research Service
FDA	United States Food and Drug Administration
FLSA	Fair Labor Standards Act
FNS	Food and Nutrition Service
FOP	Front-of-package
FSG	Food Service Guideline
GAO	Government Accountability Office
GDP	Gross Domestic Product
GRAS	Generally-Recognized-As-Safe
GusNIP	Gus Schumacher Nutrition Incentive Program
HHFKA	Healthy, Hunger-Free Kids Act
HHS	United States Department of Health and Human Services
HNRC	University Human Nutrition Research Centers
ICHNR	Interagency Committee on Human Nutrition Research
NCCDPHP	National Center for Chronic Disease Prevention and Health Promotion
NCHS	National Center for Health Statistics
NHANES	National Health and Nutrition Examination Survey
NIFA	Nutrition Institute of Food and Agriculture
NIH	National Institutes of Health
NNMS	National Nutrition Monitoring System
NSCH	National Survey of Children's Health
NSLP	National School Lunch Program
OSTP	Office of Science and Technology Policy
OTA	Office of Technology Assessment
PRC	Prevention Research Center
REACH	Racial and Ethnic Approaches to Community Health
SNAC	State Nutrition Action Committee
SNAP	Supplemental Nutrition Assistance Program
SNAP E&T	SNAP Employment and Training
SNAP-Ed	SNAP Education
USDA	United States Department of Agriculture
WIC	Special Supplemental Nutrition Program for Women, Infants, and Children
YRBS	Youth Risk Behavior Surveillance System

**ROUNDTABLE: “Ending Hunger in America: Examining Hunger in
Veterans and Military Families”**

May 27, 2021

**STATEMENT FOR THE RECORD
OF
SWORDS TO PLOWSHARES
FOR A ROUNDTABLE OF THE
HOUSE OF REPRESENTATIVES COMMITTEE ON RULES
ON
HUNGER AMONG VETERANS AND MILITARY FAMILIES**

MAY 27, 2021

Good morning Chairman McGovern, Ranking Member Cole, and distinguished members of the Rules Committee. My name is Mark Walker. I am a six-year United States Air Force veteran and Deputy Director of Swords to Plowshares (“Swords”) East Bay Office. Founded in 1974 by veterans, Swords is a community-based not-for-profit 501(c)(3) veterans service organization that provides needs assessment and case management, employment and training, housing, and legal assistance to veterans in the San Francisco Bay Area. War causes wounds and suffering that last beyond the battlefield. Swords’ mission is to heal the wounds of war, to restore dignity, hope, and self-sufficiency to all veterans in need, and to prevent and end homelessness and poverty among veterans. Our model of care is based upon the philosophy that the obstacles veterans face such as homelessness, unemployment, and disability are interrelated and require an integrated network of support within the community and continuum of care. I have been with Swords since November 2019.

Today’s topic of food insecurity is critical. California has a higher than national average of hunger for its residents. The Bay Area is one of the most expensive places in America to live. Our local food banks say that 1.5 million residents are "at risk" or experiencing hunger. Demand has doubled or even tripled among households with children. These providers have expanded and bought more food, but they say government intervention is what is needed, because food banks cannot alone carry the responsibility of long-term sustenance of the community.

In 2020, COVID-19 made it more difficult for homeless veterans to access food, due in part to the lack of community resources and services as service providers faced increased expenses and decreased funding. Even veterans housed in permanent supportive housing sites, many of whom are aging and immunocompromised, found it difficult to find adequate food due to the shutdowns and health risks posed by the virus. Swords worked relentlessly to address food insecurity faced by the veterans under our care. We strengthened our partnerships with local nonprofits to deliver nutritious meals to our veteran clients. To their credit, the U.S. Department of Veterans Affairs (VA) loosened program restrictions during the crisis, giving us new ways to engage with homeless veterans by providing longer-term emergency housing and food services. For many months of the pandemic, we purchased and delivered weekly groceries to veterans scattered in temporary hotel stays across the Bay Area. We also received many generous donations from corporate and community partners, big and small, that provided prepackaged meals throughout the pandemic. Most notably, Frontline Foods, a local chapter of World Central Kitchen that partners with 40+

local restaurants, supplied over \$70,000 worth of prepackaged meals to veterans in our supportive housing programs from May to November.

Veterans make up approximately 5 percent of the population in California. When veterans cannot afford daily meals, it feels worse, because of the contract they made with America. Serving this country without condition, when veterans are most in need, resources are lacking. It's a real gut punch and very demoralizing. As an organization focusing on assisting low-income, at-risk, and homeless veterans, we see up close the need for adequate meals to sustain veterans physical and mental health. Not being able to consistently eat can lead to hopelessness and negative behavior. Veterans are a prideful group; consequently, it's very difficult for us to ask for help. So, when we do and we don't get the type of care required, it can instantly lead to mistrust and isolation.

I think there is a common belief amongst civilians that leaving the military is without much anxiety. Not true! I've been working in the veteran arena for 15 years; thus, interacting with many transitioning service members and veterans. Historically, there's been a few barriers mitigating a seamless transition.

- (1) Corporate America didn't properly value the talent exiting the military. I suppose relevant skills learned on active-duty with an emphasis on integrity, discipline, risk-assessment, servant leadership, adaptability; somehow didn't transfer to marketplace productivity.
- (2) The civilian workforce didn't accept training or credentials achieved in the military. As we know, there are cases when veterans needed to close the gap on specific requirements for licenses/certifications but starting from scratch in training created a lot of frustration and redundancy in obtaining suitable employment.
- (3) The stigma of veterans dealing with invisible wounds such as Post Traumatic Stress Disorder (PTSD) and Traumatic Brain Injury (TBI).
- (4) The lazy stereotype of veterans being too rigid or lacking imagination due to years of taking orders without introspection.

These attitudes are short-sided, but they led to limiting meaningful opportunities for veteran. Furthermore, service members exiting with physical and/or mental injuries add challenges to the transition as well. This situation is exacerbated when veterans don't receive quality help with their disability claims, or the VA doesn't properly adjudicate their claims. As I mentioned these historical barriers, this is not to say things haven't changed over time. Industry is coming around on valuing talent with military backgrounds. Service branches, veteran groups, and other stakeholders have been involved in forming a seamless system for integrating military skills and training into the civilian workforce. Additionally, DOD, VA, and other federal agencies made impactful changes like revamping Transition Assistance Program (TAP) and establishing Skillbridge, which should be applauded. Congress consistently funds homeless veteran programs. I've personally witnessed at-risk and homeless veterans positively affected through programs like SSVF, HUD-VASH, and HVRP. However, there's work to be done, because veterans still fall through the cracks without targeted help or knowledge of benefits earned.

While battling food insecurity among our clients, Swords' focus is on stabilizing veterans through housing. Once safe housing is settled, veterans can work on other aspects of need. Without stable housing, the journey back to self-sufficiency is almost impossible. Due to our determined work

with homeless veterans and their families, Swords understands homeless veterans need a sustained, coordinated effort that provides secure housing and nutritious meals; essential physical healthcare, substance abuse aftercare and mental health counseling; as well as personal development and empowerment. Veterans also need job assessment, training, and placement assistance. Swords believes all programs to assist homeless veterans must prioritize helping veterans reach their highest level of self-management.

We strongly believe that with the path VA has taken in eliminating veteran homelessness, and the proper utilization of the resources at the state level and in local communities, we can continue to make progress.

Thank you for the opportunity to share Swords' perspective on hunger and homelessness among veterans.

DEFINITION OF DOD AND HOMELESS VETERAN PROGRAMS:

1. The HUD-VASH program combines Housing Choice Voucher (HCV) rental assistance for veterans experiencing homelessness provided by HUD with case management and clinical services provided by VA. At the local level, the HUD-VASH program operates as a collaborative effort between VA Medical Centers (VAMCs) and local Public Housing Agencies (PHAs). The VAMC identifies veterans who are eligible for the program and refers them to the PHA to receive a HUD-VASH voucher. The PHA provides the rental subsidy, and the VAMC provides case management and clinical services.
2. The Supportive Services for Veteran Families (SSVF) Program, administered by the Department of Veterans Affairs, is the only national, veteran-specific program available to help at-risk men and women veterans from ever becoming homeless. The program is also the most suitable resource for homeless veterans who can quickly transition out of homelessness into permanent housing. SSVF grantees are nonprofit, community-based organizations that provide very low-income veterans and their families with services in the following areas: health, legal, childcare, transportation, fiduciary and payee, daily living, obtaining benefits, and housing counseling. The program also allows for time-limited payments to third parties – e.g., landlords, utility companies, moving companies, and licensed child-care providers – to ensure housing stability for veteran families.
3. Administered by DOL-VETS for over two decades, HVRP served approximately 17,000 veterans in 2016, with a national placement rate into employment of 68.4 percent. These men and women find employment at an average cost to the program of \$2,007 per placement. Both the placement rate and the cost per placement represent improvements over the last several years. Please note, HVRP is the only nationwide program focused on assisting homeless veterans to reintegrate into the workforce. This program is a highly successful grant program that's fully funded at \$50 million.
4. The U.S. Department of Defense (DOD) SkillBridge program is an opportunity for service members to gain valuable civilian work experience through specific industry training, apprenticeships, or internships during the last 180 days of service. SkillBridge connects service members with industry partners in real-world job experiences. For service members SkillBridge provides an invaluable chance to work and learn in civilian career areas. For industry partners SkillBridge is an opportunity to access and leverage the world's most highly trained and motivated workforce at no cost. Service members participating in SkillBridge receive their military compensation and benefits, and industry partners provide the training and work experience. Separating Service members can be granted up to 180 days of permissive duty to focus solely on training full-time with approved industry partners after unit commander provides written authorization and approval. These industry partners offer real-world training and work experience in in-demand fields of work while having the opportunity to evaluate the service member's suitability for the work.

U.S. House Committee on Rules

“Rules Committee Roundtable Examining the Hunger Crisis Among Veterans and
Military Families”

Testimony of Abby J. Leibman
President and CEO
MAZON: A Jewish Response to Hunger

May 27, 2021

Chairman McGovern, Ranking Member Cole, and distinguished members of the House Committee on Rules, thank you for the opportunity to testify before you today, and thank you for examining this critically important issue: food insecurity among veterans and military families.

My name is Abby J. Leibman, and I am proud to serve as President and CEO of MAZON: A Jewish Response to Hunger, a national Jewish organization working to end hunger among people of all faiths and backgrounds in the U.S. and Israel.

Inspired by Jewish values and ideals, MAZON takes to heart the responsibility to care for the vulnerable in our midst without judgement or precondition. In Deuteronomy 15:7-11, we are commanded: “If there is among you a poor person, one of your kin, in any of your towns within your land which God gives you, you shall not harden your heart or shut your hand against them, but you shall open your hand to them, and lend them sufficient for their needs, whatever they may be.” From our founding in 1985, MAZON continues to identify emerging and persistent hunger needs, then seeks to explore, understand, and develop solutions to these problems. Today, our policy priorities include addressing food insecurity among military families, veterans, Native Americans, single mothers, LGBTQ older adults, and the people of Puerto Rico and the territories.

Nearly a decade ago, MAZON made ending hunger among veterans and military families a focus of our work as my colleagues and I became aware of an alarming number of individuals from these populations who were struggling with food insecurity. We were shocked to learn that food pantries operate on or near almost every military base in the country. We soon realized that a failure to acknowledge and address the underlying issues — by the charitable food sector, the media, and public officials — perpetuated the problem. MAZON quickly turned to action, launching a campaign to urge Congress to enact policy solutions to end this crisis.

Little noticed and deliberately obfuscated, these persistent problems had readily available solutions, but there is a lack of political will to realize those solutions.

As Chairman McGovern often says: “We can end hunger in this country. It is merely a matter of political will.” This is particularly true when it comes to addressing hunger among veterans and military families.

This is not the first time that MAZON has weighed in with Congress nor the executive branch on this topic. We have written bills that were introduced in both chambers of Congress, testified before multiple congressional committees, and sought administrative fixes with the White House, Department of Agriculture (USDA), Department of Defense (DoD), and Department of Veterans Affairs (VA). We hosted summits to educate and empower partners from the anti-hunger field as well as those working with, representing, and serving veterans and military families.

Over the past nine years, we have seen greater awareness of hunger among these families, more colleagues willing to work toward solutions, and a recognition by some policymakers that they can make a difference here. However, the problem not only persists, but it has actually worsened as the number of Americans experiencing hunger — including those who served our country and those who are still serving — skyrocketed in the wake of the COVID-19 pandemic.

Unfortunately, lack of data remains a constant barrier to advancing MAZON’s policy solutions on this issue. We often hear pushback from those resistant to addressing this issue along the lines of: “If veterans and military families are facing food insecurity, why am I not hearing about it?” The truth is that veterans and servicemembers confronting food insecurity typically do not call attention to their situation due to shame, stigma, and fear of retribution.

In April, MAZON released a report entitled “Hungry in the Military: Food Insecurity Among Military Families in the U.S.”¹ I implore every member of this committee to read our report, if you have not already done so. When you do, you will learn stories like that of Gabriel, a U.S. Marine whose family is stationed in southern California, who asks: “I’m doing all I can and serving my country, and I have to worry about how I’m going to buy food? I am risking my life to protect the Constitution of the United States, so shouldn’t the government make sure I can properly feed my family?”

Or Erika, a former military spouse, whose family was stationed in Washington state, who recounted: “When I reluctantly applied for SNAP, I was incredibly embarrassed that I was even having to apply and then when they told me that I didn’t qualify because they were counting our housing allowance as part of earned income, all I remember next was just sobbing.”

¹ Leibman, A; Protas, J. “Hungry in the Military: Food Insecurity Among Military Families in the U.S.” MAZON: A Jewish Response to Hunger. April 2021. <https://mazon.org/wp-content/uploads/MAZON-Military-Hunger-Report-April-2021.pdf>.

Fixing this confusing and unconscionable barrier that Erika mentions is one of the simplest solutions that would address military hunger: ensuring that a servicemember's Basic Allowance for Housing (BAH) does not count as income in determining eligibility for federal nutrition safety net programs.

Currently, a servicemember's BAH counts as income in determining eligibility for SNAP, which prevents many struggling military families from accessing this critically important — and often life-saving — federal benefit. By contrast, neither federal housing subsidies for civilians nor the value of in-kind housing on base are treated as income for determining SNAP eligibility. The IRS does not treat BAH as income. Similarly, the BAH is not calculated as a part of a servicemember's Adjusted Gross Income, nor is it treated as income for determining eligibility for most federal assistance programs like free and reduced-price school meals.

Simply put, if a servicemember's BAH is not considered as income for tax purposes, it should not be considered income for SNAP purposes. MAZON has worked to rectify this error for nearly a decade — advocating for both administrative action and statutory change. Unfortunately, this has not yet come to fruition, despite bipartisan and bicameral support.

As recently as 2018, we urged Congress to rectify this error in that year's Farm Bill, but we were rebuffed, and the BAH continues to be counted as income for the purposes of qualifying for SNAP. Following this setback, MAZON developed a new proposal to address military hunger through the National Defense Authorization Act (NDAA) process. The past two NDAA bills passed by the House included provisions to establish a new allowance program for certain servicemembers called the "Military Family Basic Needs Allowance." The allowance aims to help low-ranking and junior-enlisted servicemembers with multiple dependents (i.e. families) — those who are quietly trying to survive with help from food pantries and other service providers, without calling attention to their situation.

MAZON is leading a national advocacy campaign with key partners from the military community — including the National Military Family Association (NMFA) and the Military Officers Association of America (MOAA) to secure passage of the Military Family Basic Needs Allowance. We are confident that this Allowance would provide strategic and meaningful support to military families facing food insecurity, while also accounting for the challenges and expenses associated with military service.

Given that servicemembers of color are overrepresented among low-ranking and junior-enlisted ranks (and underrepresented among officers and military leadership), we believe this policy is also an important step toward correcting longstanding injustice and inequity by providing assistance to struggling military families who are disproportionately people of color.

Though this provision was included in the FY20 and FY21 House NDAA bills, the provision did not make it into the final NDAA, likely due to pushback in the Senate and DoD leadership in the last Administration. With bipartisan bills introduced in the House and Senate again this year, we are urging Congress to prioritize the Military Family Basic Needs Allowance and for the Biden Administration to support this provision in the FY22 NDAA.

It is important to note that military families face unique financial challenges and that the face of America's military has changed. In recent decades, the demographic makeup of the military's enlisted personnel has shifted from predominantly single, 18-year-old men to much more diverse troops — including many who support families. Military compensation policy has not adequately kept pace with the changing needs or rising cost of living, and today's military families face high spousal unemployment rates, unexpected costs related to frequent relocation, and lack of access to affordable childcare. Therefore, it is long past time for Congress to re-examine military pay levels, acknowledging that the composition and needs of America's military have changed significantly over time.

With regard to veterans, we at MAZON have come to understand a distinct — yet similar, and certainly related — set of challenges and solutions.

Tens of thousands of veterans struggle to adjust to and survive civilian life following the transition from military service. Some have recently returned from combat, while others are older and face challenges they thought they had long overcome. While limited data is available about veterans facing food insecurity, we know that:

- One in four **women veterans** struggle with hunger, and that this prevalence of food insecurity is associated with delayed access to health care and worse health outcomes.²
- While risk of food insecurity seems to decline with age, **older veterans** face myriad challenges related to healthcare, housing, and transportation. Studies estimate that about 4.3% of veterans age 65-74 and 2.3% of those 75 and older face food insecurity.³
- Native Americans serve in the military at higher rates per capita than any other group, and this population experiences food insecurity at rates higher than any other demographic group in the U.S.⁴ Though

"Food Insecurity among American Indians and Alaska Natives: A National Profile using the Current Population Survey-Food Security Supplement." *Journal of hunger & environmental nutrition* vol. 12,1 (2017): 1-10. doi:10.1080/19320248.2016.1227750. <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5422031>.

there has not been specific data collected about food insecurity rates for **Native American veterans**, it is clear that there is a high level of need that exists and is not being adequately addressed.

- Over one in four **post-9/11 veterans** (roughly 27%) report problems with food security — about twice the rate of the general population.⁵

We know that about 1.4 million veterans participate in SNAP,⁶ but this only tells part of the story — research shows that among food insecure veterans, less than one-third live in households that participate in SNAP, and among veterans living in households with incomes below the poverty threshold, only about 4 in 10 received SNAP benefits.⁷

While SNAP is one of the most successful and efficient federal assistance programs, veterans often face barriers to accessing the program. For a veteran trying to learn about or access SNAP, the process can often be difficult and confusing. Though SNAP guidelines are set at the federal level, each state designs its own application process — the rules are complicated, they vary from state to state, and the application process can be lengthy, often requiring recertification. This obviously makes for a complex landscape for an applicant.

In recent years, there have been several efforts to increase SNAP work requirements for certain program recipients, referred to as “Able-Bodied Adults Without Dependents” or ABAWDs. Under current law, ABAWDs ages 18-49 are restricted to only 90 days of SNAP benefits in three years unless they can prove they are working or participating in an employment and training program for 80 hours per month. States currently have flexibility to request waivers from this harsh and arbitrary time limit for communities that face high unemployment or insufficient job opportunities. While the Families First Coronavirus Response Act partially waived these work requirements for the duration of the national emergency,⁸ MAZON remains concerned about the impact on America’s veterans, and we will continue to urge policymakers to assess the distinct needs of veterans when considering the impact of any further changes.

For decades, we have known that veterans are among our nation’s most chronically unemployed and underemployed — and they are certainly among

the millions of Americans who lost work during the COVID-19 crisis. Veterans often cope with physical and mental health injuries that are not always recognized by either government agencies or potential employers, which cause them to struggle to find and maintain employment. Harsher work requirements for SNAP would only strip them of assistance — not help them find nor sustain meaningful work.

We also know that the stigma associated with receiving SNAP poses an intangible yet formidable barrier that is especially pronounced for the veteran population. Negative public perceptions of SNAP heightened in recent years as a result of harmful rhetoric, particularly from the last Administration, which advanced policies designed to restrict access to SNAP. Unfortunately, this created a chilling effect that added to existing stigma that makes veterans and others reluctant to seek help and apply for SNAP.

While there is much work required to combat these persistent challenges, we have made significant progress in addressing food insecurity among America's veterans. Following MAZON's 2015 congressional briefing about veteran food insecurity, the VA initiated the Ensuring Veteran Food Security Working Group — piloting and later implementing across the VA network a formal process to identify veterans who are food insecure. While this represented an important initial step, we were concerned that it was only a single question, and that it was not sufficient in portraying the scope of the problem. The VA recently adopted the validated two-question Hunger Vital Signs screening tool, which is used by groups like the American Academy of Pediatrics — we believe this will more accurately identify veterans who are at risk of food insecurity.⁹ MAZON welcomes the opportunity to work with the VA to employ more comprehensive intervention and response for veterans who screen positive for food insecurity, including on-site SNAP eligibility screening and application assistance in addition to a broader nutrition consultation and/or referral to local food pantry or other services.

We are also pleased to learn that USDA and VA are working together, after years of MAZON's insistence, to develop a two-page "Quick Start Guide" about federal nutrition programs that will be included in a veteran welcome kit. We look forward to seeing the final document and collaborating with federal agencies to ensure that veterans and those who serve veterans are well aware of how programs like SNAP work, who is eligible, and how to access the benefits. We also encourage VA officials to utilize MAZON's recent course, created in partnership with the PsychArmor Institute entitled "Food Insecurity: Bringing Solutions to the Table," which was designed to help identify and address the needs of veterans. Together, we can employ robust education and outreach mechanisms to reach all those within and beyond the VA system.

⁹ Cohen, Alicia J et al. "Food Insecurity Among Veterans: Resources to Screen and Intervene." *Federal practitioner : for the health care professionals of the VA, DoD, and PHS* vol. 37,1 (2020): 16-23, <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7010340>.

We know that for both current servicemembers and veterans alike, struggling with food insecurity can often lead to despair because there is either an actual or perceived lack of support, and the assistance that is available is often tinged with stigma or shame, involves an overly complicated application process, and/or lacks clear information about the programs and who is eligible. As a result, this can lead to a downward spiral that triggers despair, hopelessness, and sometimes, tragically, self-harm and suicide. In fact, a recent study led by researchers from USDA's Economic Research Service found a clear linkage between food insecurity and mental health concerns (anxiety, depression, and suicidal ideation), which correlated to a service member's intention to leave the military.¹⁰

Addressing food insecurity among veterans and currently-serving military families must be treated as a matter of troop readiness, and thus a matter of national security. Furthermore, tackling these problems will support better nutrition and improved health outcomes, reducing the likelihood of chronic diet-related health conditions. Positive health outcomes for children in military families — who are more likely to serve in the Armed Forces than children in non-military families — means that more future enlistees will be physically fit to serve.

We are encouraged by momentum in the last few months as bipartisan cosponsors continue to add their names to the Military Hunger Prevention Act and as the First Lady's Joining Forces initiative recently launched with an acknowledgment of military food insecurity. We hope the Biden Administration will include support for this provision in their forthcoming budget, but in the meantime, Congress must act to right this egregious wrong.

In conclusion, MAZON recommends that Members of Congress:

- 1. Support Chairman McGovern's call for a White House Conference on Food, Nutrition, and Hunger.**

As the Biden Administration continues to put forth policies to “build back better,” we support the call for a government-wide, public conference to convene experts in food, health, nutrition, and economic security to develop a comprehensive plan to end hunger once and for all in this country. MAZON would appreciate the opportunity to work with Chairman McGovern and government agencies to elevate issues related to hunger among veterans and military families as part of this conference.

- 2. Support the bipartisan Military Hunger Prevention Act.**

¹⁰ Matthew R Beymer, Joanna J Reagan, Matthew P Rabbitt, Abby E Webster, Eren Y Watkins, Association between Food Insecurity, Mental Health, and Intentions to Leave the US Army in a Cross-Sectional Sample of US Soldiers, *The Journal of Nutrition*, 2021, <https://doi.org/10.1093/in/nxab089>.

The Military Hunger Prevention Act (H.R. 2339, S. 1488) would establish a “Military Family Basic Needs Allowance” to ensure that all currently-serving military families have enough food to survive and thrive. Leadership of the House and Senate Armed Services Committees must prioritize this provision in the FY22 NDAA, and all Members of Congress should encourage the Biden Administration to support this policy.

3. Encourage USDA to ensure that a servicemember’s BAH does not count as income in determining eligibility for federal nutrition safety net programs.

President Biden and USDA Secretary Vilsack can and must take executive action to exclude the BAH as income for all federal nutrition programs — most importantly SNAP. This would ensure that military families are not prevented from qualifying for assistance. Now more than ever, struggling military families must have access to these programs so they do not have to turn in desperation to food pantries simply because they cannot get the government assistance they need and deserve.

4. Re-examine military pay levels.

Policymakers must consider raising the base pay rates for junior-enlisted servicemembers to acknowledge that the composition of our military has changed significantly in recent decades and that personnel with families face unique financial challenges.

5. Protect and improve SNAP.

Congress must continue to reject any proposals that would strip SNAP benefits for anyone in need. Misguided policies that aim to impose harsher restrictions for ABAWDs would severely hurt veterans, among others. Strengthening SNAP is the best way to fully and effectively meet critical needs, help lift people out of challenging circumstances, and repair the gaps that have allowed far too many people to fall through the cracks. Policymakers must also increase SNAP benefits and revise the calculations for federal poverty guidelines in ways that are consistent with current realities.

6. Connect more veterans to SNAP

The transition to civilian life poses significant challenges for many veterans, and many do not feel that they have adequate preparation and resources to help them succeed. We are pleased to learn that USDA and VA are coordinating to include a “Quick Start Guide” about federal nutrition programs into the veteran welcome kit — we look forward to

seeing the final resource and would be thrilled to work with the Administration to ensure successful implementation and outreach.

We also urge USDA and VA to collaborate with veteran service organizations and anti-hunger groups to develop a strategic outreach plan for veterans who do not receive care or services through the VA, including peer-to-peer outreach. MAZON looks forward to continuing our work on the VA's Ensuring Veteran Food Security Working Group to train all relevant VA staff on issues of food insecurity so that they know about and understand programs like SNAP, their opportunities and their limits, and the common barriers to assistance for veterans.

7. Call on the Government Accountability Office (GAO) to provide comprehensive and updated data about food insecurity among veterans and military families.

Lack of data has been a constant barrier in actualizing our policy solutions to address these problems and oftentimes used as an excuse by policymakers to continue ignoring the problem. Congress should direct GAO to collect and publish data to illustrate the full scope of the issue and include specific data related to populations that we know face barriers to assistance like servicemembers and veteran who are Black, Indigenous, and other people of color (BIPOC). This expanded data set will allow Members of Congress, the Administration, and advocates to better understand the needs facing these populations and seek tailored and targeted solutions.

8. Encourage federal agencies — including DoD, USDA, and the VA — to collaborate and share data and resources about food insecurity among veterans and military families, and to work with advocates to seek solutions.

Despite strong anecdotal evidence, food insecurity among veterans and military families is not adequately monitored or documented by government agencies, and this has obscured the problem and allowed it to be ignored. The limited data that is available is often too limited in scope, out of date, and difficult to obtain. For instance, DoD's recent 13th Quadrennial Review of Military Compensation (QRMC) documented SNAP usage, but they asked the wrong questions — rather than how many servicemembers access SNAP, it is critical to understand how many military families are struggling without this assistance, quietly visiting food pantries on or near military bases.

We must work together to change the narrative around those who struggle with hunger in this country. At MAZON, we prioritize a justice-centered approach of systemic change, and we believe that our leaders in government can play an important role in moving the public's focus away from charities straining to

meet the needs of those who are hungry and towards our commitment to strengthen public assistance programs. It is long past time to reset the public narrative to emphasize how public assistance programs offer meaningful support without judgment and provide pathways to opportunity and success, reflecting the best of who we are as a nation.

Allowing hunger among veterans and military families to persist is shameful, and it should be alarming to Congress, the White House, the Pentagon, the VA, and all of us who benefit from the protection provided by those who selflessly serve in uniform. We must do better to ensure that no one who makes great personal sacrifices in service to our nation struggles with hunger.

Thank you, and I look forward to your questions.

U.S. House Committee on Rules

“Military & Veteran Family Hunger”

Testimony of Kathy Roth-Douquet
CEO & Co-Founder
Blue Star Families

May 27, 2021

Chairman McGovern, Ranking Member Cole, and distinguished Members of the House Committee on Rules, thank you for the opportunity to testify before you today.

My name is Kathy Roth-Douquet, and I am the Chief Executive Officer and Co-Founder of Blue Star Families (BSF)—a national non-profit organization dedicated to supporting military and veteran families from all ranks and services. With over 150,000 members, BSF is the nation’s largest grass-roots military family support organization, and touches more than 1.5 million military family members every year. By cultivating innovative programs and partnerships, BSF seeks to ensure that our military and veteran families always feel connected, supported, and empowered to thrive.

BSF’s groundbreaking research calls attention to the unique experiences and challenges faced by military and veteran families. Our annual Military Family Lifestyle Survey (aMFLS)—developed in partnership with the Institute for Veterans and Military Families (IVMF)—is the largest annual comprehensive survey of military and veteran families, and is widely regarded as the gold standard among military family surveys. Data from the aMFLS has been used at every level of government to help inform those tasked with making policy decisions that impact our military-connected communities.

Military & Veteran Family Food Insecurity Findings

Blue Star Families’ research has revealed alarming rates of food insecurity¹ among military and veteran families. Prior to the COVID-19 pandemic, 7% of active duty family respondents and 12% of veteran family respondents to the 2018 MFLS answered “yes” to the question “Has anyone in your household faced food insecurity (the state of being without reliable access to a sufficient quantity of affordable, nutritious food) within the past year?” Similarly, 9% of active duty family respondents and 18% of veteran family respondents answered “yes” to the question “Has any member of your household sought emergency food assistance through a food bank, food pantry, or

¹ Food insecurity and hunger are distinct concepts. According to the USDA, food insecurity is defined as a household-level economic and social condition of limited or uncertain access to adequate food. Hunger is defined as an individual-level physiological condition that may result from food insecurity. [U.S. Department of Agriculture, “Definitions of Food Security,” Economic Research Service, September 9, 2020, <https://www.ers.usda.gov/topics/food-nutrition-assistance/food-security-in-the-us/definitions-of-food-security.aspx>.]

charitable organization?”² Due to an oversampling of senior enlisted and officer families in the 2018 MFLS, it is possible that the actual percentage of military and veteran families experiencing food insecurity pre-pandemic was higher than this data suggests.³

Blue Star Families uses a non-scientific, convenience sampling method in our surveys. As such, we are unable to track statistically-significant changes within the same population over time. That said, we posit (on the basis of our own data and that of civilian research) that the COVID-19 pandemic has aggravated military and veteran family food insecurity in the United States. In our 2020 MFLS, one in ten (9%) active-duty family respondents reported that they had experienced food insecurity (low⁴ or very low food security⁵) in the 12 months preceding the survey’s September-October fielding.

That figure rose to 14% for enlisted active-duty family respondents. While a greater proportion (29%) of junior enlisted (E1-E4) family respondents reported food insecurity, this issue was not limited to junior enlisted ranks: 16% of mid-grade enlisted (E5-E6) and 8% of senior enlisted (E8-E9) respondents reported low or very low food security. Meanwhile, 12% of veteran family respondents in the 2020 MFLS reported that they had experienced food insecurity.

Underlying Causes of Active-Duty Family Financial Stress and Food Insecurity

In the 2020 MFLS, 39% of active-duty families reported “financial issues” as a top stressor during their time affiliated with the military. Respondents reported intersecting challenges as top contributors to their financial stress, including: high rates of un/underemployment among military spouses, limited availability and high costs of child care, and out-of-pocket housing and relocation expenses. The COVID-19 pandemic has exacerbated each of these underlying factors.

² Blue Star Families, “2018 Military Family Lifestyle Survey,”

<https://bluestarfam.org/wp-content/uploads/2019/03/2018MFLS-ComprehensiveReport-DIGITAL-FINAL.pdf>.

³ For example, the Military Family Advisory Network (MFAN) has reported that one in eight military family respondents to their survey on the subject (pre-pandemic) was food insecure. [Military Family Advisory Network, “Military Family Food Insecurity,” Accessed on March 4, 2021, https://militaryfamilyadvisorynetwork.org/wp-content/uploads/MFAN-117-Food-Insecurity-One-Page-pf-1.3-002_LA.pdf.

⁴ “Low food security (old label=Food insecurity without hunger): reports of reduced quality, variety, or desirability of diet. Little or no indication of reduced food intake.” [U.S. Department of Agriculture, “Definitions of Food Security,” Economic Research Service, September 9, 2020, <https://www.ers.usda.gov/topics/food-nutrition-assistance/food-security-in-the-us/definitions-of-food-security.aspx>.]

⁵ “Very low food security (old label=Food insecurity with hunger): reports of multiple indications of disrupted eating patterns and reduced food intake.” [Ibid.]

High Rates of Un/underemployment Among Military Spouses

Spouse employment has been identified as one of the top concerns for active-duty families since the inception of the aMFLS in 2009. Despite multiple cross-sector hiring efforts, the military spouse unemployment rate has not decreased significantly since 2012,⁶ and was nearly seven times the rate of the national unemployment rate pre-pandemic (22%⁷ vs. 3.5%⁸).

In the 2020 MFLS, more than half (52%) of active-duty spouse respondents and a third (31%) of active-duty service member respondents listed military spouse employment as a top issue of concern. While nearly half of active-duty military spouse respondents were employed, either full time (30%) or part time (17%), two-thirds of employed active-duty spouse respondents (68%) reported they were underemployed in some way (indicating their current employment did not match their desires, education, or experience). Furthermore, 35% of active-duty spouse respondents reported they were not employed but needed or wanted to work.

Our research revealed an association between spouse unemployment and food insecurity. In the 2020 MFLS, 10% of enlisted active-duty spouse respondents who were employed were food insecure (with low or very low food security), compared to 20% of those who were not working but needed or wanted to work. The Department of Defense likewise reports slightly higher rates of food pantry usage (pre-pandemic) by military spouses who were unemployed in 2019 (7%) or not in the labor force (6%), when compared to employed military spouses (4%).⁹

While the causes of military spouse un/underemployment are myriad and complex, military spouse respondents report a lack of affordable child care, the unpredictability of service-member day-to-day job demands, hiring/promotion discrimination, and frequent Permanent Change of Station (PCS) moves as key barriers to employment.¹⁰ Other important, but less common factors include state licensure barriers and gaps in resumes due to frequent PCS moves.

<https://www.bls.gov/charts/employment-situation/civilian-unemployment-rate.htm>.

⁹ Office of People Analytics, DoD (2020). 2019 Survey of Active-Duty Spouses. Unpublished email correspondence.

¹⁰ "Active-duty spouse respondents who are not in the labor force most often reported they are not working because of the difficulty of balancing household and work obligations, such as homeschooling or supervising children's education (35%), or that their service member's day-to-day work schedule is too unpredictable (33%) or too long to balance work and home demands (30%). An additional but related barrier is the cost of child care (34%), which may quickly overwhelm a spouse's take-home pay, particularly if they are underemployed, resulting in a situation in which active-duty spouses can't afford to work... The lack of affordable, available child care is not new nor unique to active-duty families, but it is exacerbated by families' frequent relocation, which may disrupt both the spouse's employment and existing child care arrangements... Spouses who seek work often perceive reluctance from employers. More than half of active-duty spouse respondents (51%) agreed their military affiliation prevented them from receiving a promotion at some point in their career." [Blue Star Families, "2020 Military Family Lifestyle Survey: Finding 13,"

https://bluestarfam.org/wp-content/uploads/2021/03/BSF_MFLS_CompReport_FULLL.pdf]

Limited Availability and High Costs of Child Care

According to the Department of Defense, 37.8% of military children are five years old or younger.¹¹ The DoD recognizes that childcare is a “workforce issue that directly impacts the efficiency, readiness, retention, and lethality of the Total Force,” which is one of the reasons it is the largest employer-sponsored child care provider in the United States.¹² Yet, challenges obtaining affordable child care in a timely manner continue to have cascading impacts on military family financial well-being.

Many military families have trouble finding child care that meets their needs. In the 2020 MFLS, most active-duty family respondents had children under the age of 18 (80%) at home, and among those, 65% needed child care at least some of the time. Of those with a need, 23% reported always being able to find child care that works for their situation; however, that number fell to 19% for respondents with a child who has special needs.

In addition to limited availability, child care affordability continues to be a major concern for military families. Among active-duty family respondents to the 2020 MFLS who reported being financially stressed and having a need for child care, “out-of-pocket child care costs” were the most commonly reported contributor to their financial stress (31%). Unfortunately, having a higher level of income did not seem to completely resolve this issue. Although active-duty military family respondents in lower income brackets had greater difficulty finding affordable child care, respondents across all income levels reported child care as being a need that was often out of reach.

Child care expenses likewise remain a top barrier to military spouse employment with 34% of active-duty spouse respondents to the 2020 MFLS who were not working but needed/wanted to work stating “child care is too expensive.” Similarly, in the 2019 MFLS, 54% of service member respondents with children reported that the lack of affordable child care negatively impacted their pursuit of employment and/or education post-service. (Female service members, in particular, were particularly affected by the lack of affordable child care, with 62% of female service member respondents saying that childcare “moderately” to “completely” prevented their pursuit of education compared to 51% of their male counterparts.)

Out-of-Pocket Housing and Relocation Expenses

Most active-duty family respondents in the 2020 MFLS (64%) live off installation and use their basic allowance for housing (BAH) to rent (27%) or purchase (37%) housing. Starting in 2015, BAH¹³ was incrementally reduced to 95% of local area rent,¹⁴ making it a matter of policy for military families to

¹⁴ Ryan Guina, “BAH Rate Cuts: 95% BAH – The New Reality & The Future of BAH,” *The Military Wallet*, April 21, 2019, <https://themilitarywallet.com/bah-rate-cuts/>.

pay out-of-pocket for quality housing, though they rarely have full control over where they are stationed or when they move. According to the Department of Defense, the 5% of housing cost that military families are expected to cover out-of-pocket should range from \$70 to \$158 per month in 2021.¹⁵ Yet, of those active-duty family respondents who reported paying out-of-pocket housing expenses (83%), more than three quarters (77%) reported the costs exceeded the anticipated range (\geq \$200).

All of these factors – out-of-pocket expenses, the lack of affordable childcare, military spouse un/underemployment, and others – can contribute to food insecurity among active duty military families. Unfortunately, this food insecurity does not end when service members leave the military. To the contrary, the financial difficulties of many military families can be further compounded by transition-related challenges—thereby leading to veteran family hunger.

Financial Inequity

There is reason to believe that military families of color might be struggling with food insecurity at higher rates than their white peers. In the 2020 MFLS, 15% of active duty family members of color reported low or very low food security, compared to only 7% of white, non-Hispanic active duty family members.¹⁶ Furthermore, in line with civilian research which finds that Black and Hispanic/Latinx families have fewer financial resources to navigate uncertain financial times than white families,¹⁷ data from the COVID-19 Military Support Initiative (CMSI) Pain Points Poll¹⁸ indicates that Black and Hispanic/Latinx military families may be in greater need of financial assistance than their white peers. On average, 40% of Black and 33% of Hispanic/Latinx active-duty family respondents reported relying on savings or credit cards during the COVID-19 pandemic, compared to 29% of white active-duty family respondents. As one Black military spouse told CMSI:

I [took on] a loan to fly home to bury my mother-in-law in New Orleans. I'm using credit cards to stock up on food, paper goods, etc... [and all of our] bills are going up to keep the house running.

These findings align with existing research around wealth inequality in the United States. According to the Pew Research Center (April 2020), 73% of Black and 70% of Hispanic Americans reported they did not have enough savings to cover expenses for three months of financial hardship.¹⁹ When we consider that the net worth of a typical white family is nearly ten times greater than that of a Black

family,²⁰ it is unsurprising that Black and Hispanic/Latinx families are more reliant on savings and credit cards to pay expenses than their white counterparts.

To make matters worse, the CMSI Pain Points Poll suggests that Black and Hispanic/Latinx military family respondents may not be receiving effective communication about available community resources. “Communication about resources/services available” was the second most commonly cited “unmet local community need” among Black (25%) and Hispanic/Latinx (20%) respondents – and both groups reported this need at higher rates than their white peers (16%). Similarly, in CMSI’s Resilience Under Stress Study (RUSS), only 46% of Black military family respondents felt as though they could easily locate information about local resources, compared to 67% of white, non-Hispanic military family respondents who said the same.²¹ These findings might suggest that some military families of color are less aware of and/or connected to resources that might help alleviate their financial difficulties.

Barriers to Help-Seeking

Bureaucratic

While 14% of active-duty enlisted family respondents to the 2020 MFLS reported some level of food insecurity in the past year, only 2% of active-duty enlisted family respondents reported utilizing Supplemental Nutrition Assistance Program (SNAP) benefits within the 12 months preceding the survey’s fielding. One reason might be that bureaucratic barriers are currently preventing food insecure military families from accessing SNAP.

As detailed in a 2016 report by the Government Accountability Office (GAO), service members’ BAH is currently treated as income for the purpose of determining eligibility for SNAP benefits.²² Meanwhile, housing vouchers for low-income civilians are not treated as income for the purposes of determining SNAP eligibility.²³ Current eligibility policy for SNAP thus establishes an unnecessary and harmful barrier to nutrition assistance for struggling military families.

Psychological

In Blue Star Families’ November 2020 Pulse Check poll of active-duty and veteran families’ financial needs, respondents were asked in an open-ended question “what barriers, if any, would prevent [them] from seeking financial assistance in the event that [they] required it.” Among those who provided a response, the greatest proportion – 28% of active-duty family respondents and 27% of veteran family respondents – wrote that emotional barriers, such as shame and embarrassment, would prevent them from seeking support. In Blue Star Families’ March 2021 poll, this same question

was included with a multiple choice response. Roughly the same proportion of respondents selected “pride, shame, or embarrassment” as a barrier (25% of active-duty, 23% of veteran, and 22% of National Guard family respondents).²⁴

Additional barriers to help-seeking reported in the November 2020 and March 2021 polls include: the desire to avoid chain of command involvement, an incohesive assistance network, confusing application processes, and qualification requirements that can make it difficult to justify the effort required to apply.²⁵

What Congress Can Do To Help

Upstream Solutions

Food insecurity is a real, but preventable, experience for many military and veteran families. As a society, we must collectively work to destigmatize help-seeking behavior—among those seeking help and those who facilitate it. The federal government must also work to expand its data collection around military and veteran family food insecurity, so as to better inform policy responses to these issues.

In the long term, we must also work to relieve financial inequity and address the underlying causes of military family financial insecurity (outlined above). One way to do this is by implementing policies that align with a Total Family Force model.²⁶ For example, Congress could:

- Work with the Department of Defense to ensure military families have more control over their careers—including when and where they relocate. This would allow them to make decisions that support their families’ financial stability, and may necessitate a reconsideration of current “up-or-out” talent management policies.²⁷
- Support a fixed period of federal student loan deferment for military spouses who leave a job in order to relocate due to military orders.²⁸

²⁴ Blue Star Families, “Pulse Check: Military and Veteran Families’ Financial Needs,” March 2021, https://bluestarfam.org/wp-content/uploads/2021/05/BSF_PulseCheck_Report_Mar2021.pdf.

²⁵ Ibid.

²⁶ To ensure optimal mission readiness, resilience, and retention, the military ought to adopt a “Total Family Force” model. This is an extension of the “Total Force” concept that the military pioneered in the 1970s, which was designed to break down barriers between service branches to create one “total” force with similar goals and objectives. Blue Star Families wants to build upon this concept to acknowledge the fact that military family well-being is inextricably linked to mission readiness, and that military personnel policies ought to reflect that reality.

²⁷ See, for example: Bipartisan Policy Center, “Building a F.A.S.T. Force: A Flexible Personnel System for a Modern Military, Recommendations from the Task Force on Defense Personnel,” March 2017, <https://bipartisanpolicy.org/report/building-a-fast-force/>.

²⁸ In the 116th Congress, Rep. Elise Stefanik (R-NY) introduced the Military Spouse Student Loan Deferment Act of 2020 (H.R.7433). This bill would have allowed certain military spouses to defer payment on their federal student loans for 90 days. Specifically, borrowers would be eligible to receive this deferment if (1) their spouse is an active duty service member of the Armed Forces, (2) they lost their employment due to a permanent change of station move, and (3) they could provide certain documentation to the Department of Education. Loan interest would not accrue during the deferment period. Blue Star Families supported this proposal. [Blue Star Families, “2020 Military Family Lifestyle Survey: Finding 13,” https://bluestarfam.org/wp-content/uploads/2021/03/BSF_MFLS_CompReport_FINDING_13.pdf.]

- Support incentives for employers to make retirement savings plans more accessible and portable for military spouses.²⁹
- Commission a report on discrimination against military spouses in employment, housing, and public accommodations due to their military affiliation. The report should include an assessment of the viability of policy solutions to prevent such discrimination (e.g. expanding USERRA to cover military spouses, making military spouses a protect class, etc.).³⁰
- Enhance and expand access to fee assistance programs. For example, direct the Services to expand fee assistance eligibility under the Military Child Care in Your Neighborhood (MCCYN) program to military families who wish to enroll their child in a childcare facility that is state licensed, even if it is not accredited.³¹
- Commission a report on the demand for various child care options among military families, and to assess the pros/cons of requiring families to first seek care at their local CDC before being authorized to use MCCYN fee assistance.³²
- Standardize, expedite, and simplify the Career Intermision Program (CIP) application process for service members who are unable to implement their family care plans due to an unexpected extended emergency (such as virtual schooling during a pandemic).³³
- Explore different ways to calculate BAH to reduce out-of-pocket costs, such as pegging it to the median rent/housing cost in the best local school district and/or restoring payments to 100% of local area rent.³⁴

Downstream Solutions

It is no doubt critical that we work to address financial inequity and alleviate the underlying causes of military family food insecurity (by reducing out-of-pocket expenses, increasing the availability of affordable child care, and improving spouse employment outcomes). However, these issues are persistent and will take time to resolve. In the interim, Congress can tackle military food insecurity and hunger downstream by removing a legislative barrier that prevents many military families from qualifying for federal nutrition assistance, despite being food insecure.

²⁹ In the 116th Congress, Rep. Jason Crowe (D-CO) introduced the Military Spouse Retirement Security Act of 2020 (H.R.7927). This bill would have allowed a small business employer to take a tax credit for each of their employees who is a military spouse and is eligible to participate in the employer's defined contribution retirement plan. Blue Star Families supported this proposal. [Ibid.]

³⁰ Blue Star Families included a deep dive on this recommendation in our 2020 MFLS comprehensive report. [Blue Star Families, "2020 Military Family Lifestyle Survey: Recommendations," https://bluestarfam.org/wp-content/uploads/2021/03/BSF_MFLS_CompReport_RECOMMENDATIONS.pdf.]

³¹ Blue Star Families, "2020 Military Family Lifestyle Survey: Finding 11," https://bluestarfam.org/wp-content/uploads/2021/03/BSF_MFLS_CompReport_FINDING_11.pdf.

³² Blue Star Families included a deep dive on this recommendation in our 2020 MFLS comprehensive report. [Blue Star Families, "2020 Military Family Lifestyle Survey: Recommendations," https://bluestarfam.org/wp-content/uploads/2021/03/BSF_MFLS_CompReport_RECOMMENDATIONS.pdf.]

³³ Blue Star Families included a deep dive on this recommendation in our 2020 MFLS comprehensive report. [Ibid.]

³⁴ Blue Star Families included a deep dive on this recommendation in our 2020 MFLS comprehensive report. [Ibid.]

In 2018, Blue Star Families endorsed an amendment to the farm bill which would have excluded BAH as counted income when calculating SNAP eligibility. That effort failed.³⁵ Undeterred, BSF then endorsed the Military Family Basic Needs Allowance (MFBNA),³⁶ which would have alleviated military family food insecurity by supplementing the base pay of military family members at or below 130% of the federal poverty line.³⁷ BAH would not have been treated as income when calculating eligibility for the Basic Needs Allowance. Moreover, the Defense Finance and Accounting Service (DFAS) would have automatically notified service members of their eligibility—thereby removing the need to disclose one’s financial circumstances to command. The MFBNA was thus structured in a streamlined and efficient manner to eliminate common barriers to nutrition assistance, including shame, stigma, and fear of retribution. Unfortunately, the MFBNA was removed from the final versions of the FY20 and FY21 National Defense Authorization Acts (NDAA).

Support Currently-Proposed Legislation

We therefore call upon Congress to take immediate action to support the financial well-being of active-duty military families by:

- Passing the Military Hunger Prevention Act of 2021, which would create a basic needs allowance to provide temporary financial assistance to low-income military families. (Our data demonstrates the importance of making the MFBNA *rank neutral* and *means tested* for those living at or below 130% of the federal poverty line.)
- Passing the Military Child Care Expansion Act of 2021, which would direct the Department of Defense to conduct a pilot program on the expansion of public-private childcare partnerships between the DoD and private childcare providers.
- Passing the Jobs and Child Care for Military Families Act of 2021, which would amend the Internal Revenue Code to allow employers to take a work opportunity tax credit for hiring a qualified military spouse, and would require the Departments of Defense and Homeland Security to implement flexible spending arrangements (FSAs) to allow members of the Armed Forces to use pre-tax dollars to pay for their dependents’ childcare.

³⁵ Blue Star Families continues to support the exclusion of BAH as counted income from SNAP eligibility calculations in the next farm bill. [Blue Star Families, “2020 Military Family Lifestyle Survey: Recommendations,” https://bluestarfam.org/wp-content/uploads/2021/03/BSF_MFLS_CompReport_RECOMMENDATIONS.pdf.]

³⁶ The 2018 farm bill amendment and military family basic needs allowance were also endorsed by MAZON: A Jewish Response to Hunger, the National Military Families Association (NMFA) and many other military and veteran support organizations.

³⁷ Note that to qualify for SNAP, you must be at or below 130% of the federal poverty line.

I would again like to thank the distinguished Members of the Committee for their attention to this critical issue. Those who make significant sacrifices for our country should never struggle to put food on the table.

Sincerely,

A handwritten signature in black ink, appearing to read "Kathy Roth-Douquet". The signature is fluid and cursive, with the first name "Kathy" being the most prominent.

Before the Rules Committee

United States House of Representatives

Examining the Hunger Crisis Among Veterans and Military Families

May 27, 2021

Chairman McGovern and distinguished members of the House Rules Committee, thank you for the opportunity to provide testimony and for convening today's hearing on food insecurity among military and veteran families.

My name is Colleen Heflin, and I am a Full Professor in the Maxwell School of Citizenship and Public Affairs at Syracuse University in Syracuse, NY. My research focuses on poverty policy and its effect on vulnerable families, especially the role of social programs in assisting families to meet essential needs such as food, housing, and medical care.

Today, I will speak about the problems military and veteran families confront in meeting their basic food needs. I focus on three issues:

- 1) Food insecurity is a significant problem among today's active-duty military personnel.
- 2) The transition period from military service to civilian life is a period that is often associated with difficulty meeting essential needs.
- 3) Disabled veterans are at a particularly high risk of food insecurity.

The bottom line is that although our country spends billions of dollars annually to create the best military force in the world, food insecurity exists among our active-duty military personnel and families, and persists among our veterans, especially our disabled veterans. I believe that food insecurity represents a policy failure across many dimensions and one that requires cooperation across government agencies to solve.

Food insecurity, which is defined by the United States Department of Agriculture as a "lack of access to enough food for an active, healthy life for all household members"¹ was present in 10.5% of American households in 2019, before the COVID-19 Pandemic.¹ By late

March and early April 2020, food insecurity rose to 21.9%, an 11.4 percentage point increase and the highest level ever recorded in the 25-year history of the measure.² In the general population, food insecurity tends to be higher among non-white households, those with lower levels of income and education, households with children, men and women living alone, and single headed households with children. The risk of food insecurity also varies by geography: Rates of food insecurity are higher in urban cities and rural (or nonmetropolitan) areas and varies significantly across states from a low in New Hampshire (6.6%) to a high in Mississippi (15.7%).¹

Food insecurity is present among today's active-duty military families. The size of the population to which I am referring is quite large: In 2019, there were about 1.4 million active-duty service members and 1.6 million family members, two-thirds of which were children.³ Although the Department of Defense does not collect systematic data on food insecurity or use of food assistance programs among active-duty members and their families (as noted by a 2016 GAO report), there are many indicators that food insecurity is a consistent problem and one that has grown during the pandemic. A number of sources reported that approximately 1 in 7 to 1 in 8 military families were food insecure prior to the COVID-era, although estimates on specific military installations were noted to be as high as 1 in 3.^{4,5,6,7} Estimates collected in June 2020 during the COVID-19 era from one Army installation, in research conducted by Matthew Rabbitt, a USDA researcher, and colleagues at the US Army Public Health Center, found that 1 in 3 US Army soldiers surveyed were marginally food insecure during Covid, a 150 percent increase in food insecurity from the prior year.⁸ Most recently, the Military Family Advisory Network (MFAN) reports that 1 in 5 military families were food insecure during Winter 2021.⁹

In addition to survey measures, we can look to the use of food pantries, a source of short-term emergency food assistance that most Americans turn to with reluctance, as evidence that military families have difficulty making ends meet. Feeding America estimated in 2014 (the most recent data available) that 20% of all families served by their network of 200 food banks contained a household member who currently or formerly served in the military.¹⁰ More recently, in a report released last month, Mazon reports that food pantries operate on or near every military installation in the country.¹¹

Finally, we can point to data on participation in school-based food and nutrition assistance programs as evidence of the difficulty military families face meeting their children's food needs. According to a 2016 GAO report, within Department of Defense Education Activity Schools, 45% of children were eligible for free (24%) and reduced-price meals (21% in total).¹² For comparison, nationally, 52.1% of all students were eligible for free or reduced-price lunch in 2015-16.¹³

Why is this occurring? The reasons behind military service member food insecurity are the same as they are among the civilian population: household income is not sufficient to support adequate food consumption. Military salaries for enlisted personnel (a designation that comprises 82% of armed forces with the remaining 18% classified as officers), particularly during their first enlistment period (usually four years) are quite low: I am referring specifically to the enlisted members at the E1-E4 level, a range that includes 52% of enlisted military personnel.¹⁴ A military service member who is supporting a spouse and children on their E1-E4 salary alone are likely living below 130% of the federal poverty line.¹¹ For example, an enlisted service member earning a salary at the E2 level with less than two years of service who is supporting a spouse and two children is living at 88% of the federal poverty line (annual pay=\$23,310/\$26,500

federal poverty line=88%).¹⁵ Households living on resources at 130% of the federal poverty line and below are at increased risk for food insecurity.¹ In 2019, for example 33.0% of US households with incomes below 130% of the federal poverty line experienced food insecurity.¹

A common economic strategy used by families across America facing low earnings is for both spouses to work. While spouses of military families often do work, they face a number of unique barriers to employment. Frequent residential moves associated with transfers limit the ability of spouses to accrue time working for any specific employer which depresses wages. Relocation is a particular problem for spouses working in occupations that require certification given the differences in state requirements. In addition, spouses of active-duty military members must cope with their spouses being at work for long hours or deployed. As a result, spousal employment is lower among active-duty families than among civilian families, and when spouses work, they tend to work fewer hours and earn lower wages.¹⁶

Another reason why military families have lower levels of household resources than similar civilian households is that the Supplemental Nutrition Assistance Program (SNAP), which is the cornerstone of federal food and nutrition assistance programs, has eligibility standards that specifically prevent military families from accessing benefits. Military families that live off base receive a Basic Housing Allowance (BAH) which is based on the geographic duty station, pay grade, and dependency status and is designed to cover the cost of housing and utilities.¹⁷ However, this benefit, which resembles housing assistance for civilian households, is treated as income during the SNAP determination process and many military families stationed in high-cost housing areas are rendered ineligible for SNAP benefits. The BAH is treated as income for SNAP determination even though the IRS does not tax it or count the BAH towards estimation of a household's adjusted gross income. While SNAP does not count housing

assistance from the United States Department of Housing and Urban Development as income, it does count the BAH. This system creates all sorts of inequities within military families as well: Households at the same pay level may qualify differently for SNAP based on if they live on-base or off-base and the housing costs associated with the duty station.¹² As a consequence, active-duty military households are less likely to participate in SNAP than civilian households. In prior research, I found that only 2.2% of active-duty members participated in SNAP between 2008-2012.¹⁸ For comparison, among the general population, participation in SNAP was about 12% in 2018.¹⁹

Food insecurity likely causes retention problems for the military: Among soldiers who indicated in 2019 that they were likely to leave the military after their current service period, 46% were marginally food insecure (compared to 36% for those who were neutral or unlikely to leave the military). Additionally, food insecurity among active-duty members is associated with poor mental health outcomes (depression, anxiety and suicidal ideation), and poor mental health is associated with an intention to leave military service.⁷

Unfortunately, the transition from military to civilian life is often a point of increased hardship, especially for those separating at younger ages with fewer job skills that easily transition to the civilian economy.²⁰ Unemployment is a significant problem among what are known as Gulf War-era II (post 9/11 wars) veterans, particularly those aged 25 to 34 (IVMF 2021).²¹ While the Department of Labor, the Department of Defense and the Veterans Administration have partnered to create a Transitional Assistance Program (TAP) since 1991 to provide service members with job counseling and information about services and programs for which they might be eligible, my own research finds that more than 50% of separated service members did not remember attending a workshop.²²

Military service members who transition to civilian life face a number of new challenges regarding their food consumption. Individuals who transition no longer have access to free or subsidized meals in military mess halls and cafeterias, or lower-cost and tax-free groceries at military commissaries (unless they retire from the military). To the extent that these benefits are not replaced immediately with civilian labor market earnings or family and network support, military members may experience food insecurity during the transition period. In my own research with Andrew London, I have documented that SNAP participation is about 10% higher during the first year after leaving military service than it is for all veterans (7.1% versus 6.5%).²³ However, given the social stigma associated with SNAP participation, as well as the previous negative experience some military families may have had related to being deemed ineligible for SNAP, this level of participation likely understates the level of recently transitioned veterans who are eligible for SNAP benefits and could benefit from the program.

More should be done to lessen the risk of food insecurity during the transition from military service to civilian life. For example, as a way of thanking our service members for their service to our country, the federal government could provide an automatic transitional SNAP benefit to all families leaving military service at the E4 level and below. If half of the separating service members qualify for the benefit (or about 100,000 per year) and received the FY2019 average household benefit level of \$258 per month, this would cost the federal government approximately \$154 million annually (total federal SNAP benefits were approximately \$55.6 billion in FY2019).²⁴

Finally, I want to turn to the issue of food insecurity among the veteran population, approximately 19 million individuals representing around 9% of the total US adult population.²⁵ While military service members are selected for their good health, veterans are more likely to be

disabled than civilians due to the unique risks of injury and exposure to circumstances such as combat, interpersonal violence, substance abuse and stress-related mental health issues that are associated with disability.²⁶ Having a disability is a significant risk factor, indeed maybe the strongest risk factor, for being food insecure or having other forms of material hardship.^{27,28,29,30,31} According to a 2020 analysis by Alisha Coleman-Jensen at the US Department of Agriculture, US households with an adult who is unable to work because of a disability face levels of food insecurity that are 3 times that of the general population (31.6% versus 10.5% in 2019).^{32,33,34} According to analysis by She and Livermore (2007), individuals with a disability make-up over half of the population identified with food insecurity.³⁵

In my own work with Andrew London and Janet Wilmoth, I have found that among adults aged 25-65 being a veteran is associated with a reduction in the probability that a household experiences poverty, food insecurity or other forms of material hardship such as home hardship, medical hardship or bill-paying hardship. However, being a disabled veteran removes this protective effect of veteran status.^{36,37} While veterans tend to be in better health around retirement age, they tend to experience steeper age-related declines in health.³⁸ When I examined older adults (those aged 65 and above), I found that, while food insufficiency (a measure that is similar to the most severe form of food insecurity, very low food security) was lower generally among older adults than younger adults, disabled veterans had a higher risk of food insufficiency than disabled non-veterans.³⁹

Why is disability so highly correlated with food insecurity? To some extent, the mechanisms that link disability and food insecurity are the same for veteran and civilian populations. First, incomes are often lower in households with a disabled member. Individuals with a work-limiting disability face difficulties in the labor market and, as a result, have lower

earnings.^{40,41} Additionally, caregivers for wounded veterans often experience a disruption in their economic activity. According to one estimate, 3 out of 4 caregivers left work or school to care for a wounded veteran resulting in an economic loss of \$38,100 annually.⁴² Secondly, physical limitations in the ability to buy food, transport it home, prepare it, and eat without assistance may pose a barrier to food access. Third, disabilities that present themselves as cognitive limitations, such as those associated with a traumatic brain injury, may make it harder to do the financial planning and juggling of household expenses that is required to stretch limited financial resources to cover food needs each month. Finally, hearing loss may be associated with reduced social interactions and network support that increase the risk of food insecurity. In work using the National Health and Nutrition Examination Survey, I have found that each of these forms of disability is associated with an increased risk of food insecurity.⁴³

Veterans with a disability should have a substantial economic advantage relative to their civilian counterparts and that is the ability to receive disability compensation through the Veterans Administration in addition to the civilian Social Security Disability Program. Why do our disability programs not better protect our veterans with a disability from food insecurity? Veterans with a service-connected disability are potentially eligible for the Veteran's Administration Disability Compensation Program and Social Security Disability Insurance (DI) when their disability interferes with their ability to work for at least one year. However, in previous work using the Survey of Income and Program Participation, joint work with my Syracuse colleagues Janet Wilmoth and Andrew London, I have found that joint participation in both programs is quite rare: In 2008, about 13% of veterans received support from the VA's Disability Compensation Program, 7% received support from Social Security's Disability Insurance Program but only 4% receive support from both programs.⁴⁴ While eligibility for the

two disability programs does differ significantly, the low levels of joint participation likely also reflects some level of stigma and lack of information that disabled veterans face when considering civilian disability benefits. Perhaps as a result of these barriers, previous research has shown that disabled veterans have lower incomes than non-veterans who report the same number of disabilities.⁴⁵

Improved coordination of services between the Veterans Affairs's Disability Compensation Program, the Social Security Administration's Disability Insurance Program, and SNAP is needed to improve access to these programs, raise household income for disabled veterans and reduce food insecurity. One avenue for increased coordination is through the creation of categorical eligibility across programs. In general, the concentration of food insecurity within households dealing with disabilities is an area that deserves further policy attention.

In closing, food insecurity is a significant problem among our active-duty service members and veterans today because of the failure of several different federal agencies to work together and consider how our policies interact and are experienced by families across America. We owe the brave men and women who have served our country to defend democracy both at home and abroad a comprehensive safety net that protects them and their families from experiencing food insecurity throughout their lifetimes.

Thank you for the opportunity to testify here today.

U.S House Committee on Rules

“Rules Committee Roundtable on the Issue of Military and Veteran Hunger”

Testimony of J. Chad Morrison
Chief Executive Officer
Mountaineer Food Bank

May 27, 2021

Chairman McGovern, Ranking Member Cole, and distinguished members of the House Committee on Rules, thank you for the opportunity to provide this testimony to you today. I greatly appreciate the elevation of this critical issue of hunger among our military and veteran populations.

Mountaineer Food Bank is a private non-profit organization located in Gassaway, WV committed to feeding West Virginia’s hungry. The food bank is a member of Feeding America, a nationwide network of 200 food banks and over 60,000 food pantries meal programs across the United States. We provide food to over 200,000 individuals in 48 counties in West Virginia, including children, seniors and veterans.

I am testifying on the current capacity, needs and barriers to addressing the issue of food insecurity among military families and veterans. We are in favor and support all measures that increase food access to military families and veterans by increasing resources and removing barriers to accessing food.

Since 2016, Mountaineer Food Bank has been involved in partnerships with local VAMCs to address veteran hunger, providing food boxes to 1,000 veterans monthly. These programs have not only proven effective, but quite necessary to fulfill the nutritional needs of veterans and to help them overcome the many barriers they face in having healthy lives. Many veterans struggle with transportation, food access, and connections to resources and employment due to the broadband connectivity. Additionally, limited or non-existent funding opportunities create barriers of resources for food programing that targets veterans.

Mountaineer Food Bank was created in 1981, for the purpose of providing food and other resources to community organizations such as food pantries, shelters, and soup kitchens. Food banks began to be established in the late 1960’s in Phoenix, AZ and were replicated in the 70’s and early 80’s. Food banks initially worked through food waste initiatives, sourcing surplus and outdated foods from food producers. Food banks would work with local and regional food manufacturers to bring donated

WWW.MOUNTAINEERFOODBANK.ORG

loads of food into their service area, which could then be re-distributed to smaller organizations, mostly food pantries.

Today, the Feeding America network, formerly America's Second Harvest, maintains relationships with almost all major food producers and retailers, driving donated food items to local food banks and food pantries. Since 2008, almost all major retail grocers have developed and maintained retail donation programs that contribute donations locally of close dated product. Our food bank receives almost 9 million pounds of donated product annually.

In 1983, the federal government established the Emergency Food Assistance Program (TEFAP), which became integrated into the operational models of most food banks across the country, including Mountaineer Food Bank. The purpose of TEFAP was to utilize government-held agricultural surpluses to address hunger. In 2020, TEFAP made up almost 50% of the foods distributed by Mountaineer Food Bank due to the COVID-19 pandemic and Trade Mitigation responses, though in typical years it accounts for 30% of foods distributed.

While donations and commodities make up significant portions of available food, they consistently fall short overall in filling the gaps of food needed to feed our communities. Food banks operate significant purchasing programs to supplement food items that just are not available through other means. While corporate donors create efficiencies and secondary markets, food banks see less product donated. In 2020, Mountaineer Food Bank purchased over \$4 million dollars' worth of food to meet the needs of our food pantries and programs.

Over the last 40 years food banks have evolved in many ways. Many food banks started as small community action programs, but have developed into highly efficient scaled operations with warehouses, truck fleets, and skilled professional staff to ensure donated dollars are used as efficiently as possible. Food banks have also evolved in other ways, including scope and operational programming.

Food banks services generally service the needs of counties, with data reflecting the inputs of food and overall food insecure populations based on county-level analytics. This has been the norm for decades, but in the past two years, Mountaineer Food Bank has begun the shift from a county-centric model to a community centric model using zip-code data on poverty, food insecurity, employment, home ownership and other socioeconomic data. This shift has allowed us to focus on the most vulnerable communities and populations in our service area to make sure that even small communities have the food access that they need to thrive.

Over the last six years, we have emphasized growth in programs funded and operated by the food bank. Again, historically, we had focused on providing food to other 501(c) three nonprofit feeding programs. These programs generally target specific vulnerable populations including children, seniors and veterans.

The food bank has developed several programs targeting childhood hunger including Backpack Programs, Summer Feeding (SFSP) and Fresh Initiative Kid's Markets. Backpack programs traditionally

WWW.MOUNTAINEERFOODBANK.ORG

provide small bags of food to elementary age students on the weekend. We currently work with 80 partners and 122 schools to feed almost 8,000 children weekly through this program. The SFSP is operated in coordination with the West Virginia Department of Education to provide summer meals to students. Our Kid's Market program is unique, in that it, combines access to local fresh produce, nutrition education and agricultural connections to elementary age students in a farmer's market style distribution. The Kid's Market is intended to not only provide food access, but to connect children with community resources, educational tools and reduce stigma about needing a helping hand from a food bank.

In 2017, West Virginia became the 47th state to become part of the Commodity Supplemental Food Program (CSFP), a commodity food program dedicated to meeting the nutritional needs of seniors. West Virginia accepted a caseload of 5,000 boxes split between the state's two food banks per month, Mountaineer and Facing Hunger Foodbank in Huntington, WV. While preparing for the program, the food banks realized that almost 30,000 seniors in the state would qualify. Over the past four years, both food banks have consistently maxed out their allocated resources and in 2021, was awarded their request of additional food boxes, bringing the total to 10,000 per month in West Virginia.

In July 2016, we were approached by Feeding America to participate in a new initiative, the Veteran Pantry Pilot. We were one of seven food banks solicited in our network to creating partnerships with our local VA medical centers (VAMC) and design a program that would address the food insecurity needs of veterans accessing the services of VA centers. At the time, Feeding America could only offer support services in the form of staff, not resources such as funding for food purchases, warehouse and operational costs.

We joined the pilot cohort and were quickly connected with the Social Work department at the VAMC in Martinsburg, WV, who had volunteered to coordinate the project design and possible implementation. After discussing the opportunity, the Martinsburg VAMC felt that they could easily reach at least 50 veterans receiving services that were struggling with hunger. While the food bank had no dedicated resources or funding for this project, we immediately decided that the urgency of the need and the population that we were trying to reach was so critical, that we needed act without delay and make the path by walking.

The food bank reallocated general funds to target this pilot program to get it off the ground. In October 2016, Mountaineer Food Bank became the first food bank as part of this pilot project to actually hold a food distribution on-site, providing food to a little over 50 veterans at the Martinsburg VAMC.

The food bank's hope was to create a physical space, a pantry, on the VA center grounds that could be accessible by veterans at any time during the month regardless of when their appointment was. However, due to space and storage limitations, our first distributions were held in a 'mobile' style with a refrigerated box truck outside. Participants received fresh produce, frozen foods and shelf stable meal items that could be taken home and prepared. Over the coming months, the program was refined, developing a shelf stable food box that was then delivered to the VAMC center and stored for access as

veterans needed it. The unfortunate tradeoff was that due to storage limitations, the center could not store items that required refrigeration or cold storage.

Development of the Veterans Table

In January 2017, a partnership with the Beckley, WV VAMC was established and in February 2017, 71 veterans were provided food. At Beckley, the distribution started outdoors at an on-site picnic shelter using the same model as the mobile distribution in Martinsburg. The Social Work department at the VAMC was the lead contact on-site, with social workers helping to identify, sign up and communicate with veterans that could be helped by the program.

Standard operating procedures had been developed including registration forms, screening tools and communication methods to reach participants. Throughout the partnerships with the VAMC's, Mountaineer Food Bank has attempted to keep registration data minimal to basic information and intentionally eliminated the need for income verification for this population. While income verification is required for federal programs such as TEFAP and CSFP, this being a privately funded program gave the food bank the opportunity to eliminate a barrier for veterans that may live on the margins or just struggle with temporary hardships and be in need of a helping hand. The VAMC staff assist with verification of veteran or active statuses.

As the program continued to grow, Mountaineer Food Bank realized the need to pursue funding opportunities from private and corporate donors. Through the pilot program through Feeding America, we were advised that there was no available funding at the time through Feeding America or the VAMC for this program. At the end of 2017, the food bank had branded and created program guidance, partner agreements and communication tools for the Veterans Table, a program dedicated to providing food to struggling veterans in West Virginia. Our hope was the program could continue to grow to all VAMC, clinics and throughout our service area to reach all veterans in need.

In May 2018, a partnership was created with the Clarksburg, WV VAMC, providing food boxes to 56 veterans at an adjacent Veteran's Memorial Park next to the medical center. The distribution was held in a mobile style, but incorporated shelf stable food boxes, dairy and produce since the refrigerated truck provided storage capacity. The VAMC supported the distribution by providing staff, volunteers and coordinating partnerships to do SNAP outreach for veterans that were eligible. Staff was coordinated through the VAMC Homeless Program.

The distribution at the Beckley VAMC had moved off-site to a local church parking lot due to space and traffic issues. The distribution had grown from 71 veterans to almost 200 veterans in 2018. Beckley VAMC also began coordinating their Community Based Out-Patient Clinics (CBOC), while Mountaineer Food Bank provided food boxes to staff for these sites. CBOC's could reach an even more vulnerable sub-population of veterans that may lack transportation, be homebound, or live in rural communities so far away from the VAMC to make it unfeasible.

The Veterans Table Today

The Veterans Table has continued to grow in service and in scope. The original site in Martinsburg continues to serve 50-75 veterans per month. The social work team triages and distributes boxes to veterans as needed. The VAMC has local VFW's and American Legion groups that assist when needed.

The site at Clarksburg VAMC doubled to 180 and then doubled again during peak COVID-19 responses to over 400 veterans per month. Mountaineer Food Bank, the Clarksburg VAMC and Feeding America recently partnered on a social impact software called Advantego to enhance the registration and client data tracking process. The overall target of this software is to assist with identifying evidence based practices using technology to address social determinants of health for short and long-term health outcomes. This partnership is continuing and includes the VA Research arm.

The site in Beckley, WV also continued to grow and now serves between 400-450 veterans per month. The mobile distribution remains off-site, but the food bank still works closely with the Beckley VAMC. At this VAMC, Voluntary Services is the main liaison between the food bank and VAMC. This partnership allows 11 counties to be served and 200 food boxes are delivered to the most vulnerable veterans through a home delivery program. Voluntary Services coordinates with the Disabled American Veterans (DAV) to establish teams of volunteer drivers with DAV vehicles to deliver food boxes into the most rural, remote parts of West Virginia. DAV's primarily transport veterans who are at the lowest income level below poverty to medical appointments. Most of the drivers are elderly themselves, but feel that it is their duty, honor, and privilege to continue this service.

Beckley VAMC is located in Southern West Virginia, Congressional District 3 (WV-3). Southern West Virginia has the highest food insecurity rate in the state at 16.4% and some of the highest poverty rates in Appalachia. This area has continued to lose population, jobs, and funding over the past two decades due to massive declines in the coal industry and the loss of severance taxes that accompanied. Coupled with a massive substance abuse epidemic, the challenges to Southern West Virginia are massive at this time. According to staff at the Beckley VAMC, of the 13,000 veterans receiving services annually, almost 10%, 1,300 veterans would greatly benefit from the food boxes if available.

In order to reach underserved populations of veterans, Mountaineer Food Bank began partnering with clinics and veteran minded community organizations including resource centers and VFW's. We now have partnering sites in Morgantown, Westover, Gassaway and Charles Town, WV that serve an additional 110 veterans each month.

In 2021, two AmeriCorps VISTAs were on-boarded and placed in Martinsburg and Beckley to help continue the growth of the program and develop community "roots" for on-going operations. The VISTAs will be tasked with developing additional resources that the VAMC or community organizations can connect veterans with, advocate locally for the program and foster the network of support for struggling veterans in the area.

Barriers to Food Access

While there are many barriers for those struggling with hunger, transportation and food access are key. In most parts of West Virginia, there is little or no access to public transportation. In the most rural parts of the state, those resources dwindle further. For programs like the Veterans Table, veterans rely on voluntary services or other means including rides with friends and home deliveries to access the food they need. The lack of transportation has led to veterans eating less and eating less nutritious food as they may not be able to access food frequently enough to have fresh, healthy options and instead rely on foods that may not meet their dietary needs.

The distance to get to food is also a major driver of food insecurity in rural West Virginia. For many in the state, especially in Southern West Virginia, a trip to the grocery store may be 1-2 hours round trip, if not more. Food access in rural communities is often limited to small discount stores or gas stations, leaving those populations with little opportunity to purchase healthy foods, while driving up the costs for those foods that they can purchase. A dollar spent at a small rural grocer just doesn't carry the same weight as one spent in denser areas.

Food access dramatically influences food choices, as when individuals do have the opportunity to purchase foods they need, they are much less likely to purchase foods that could spoil or thaw quickly. We have many scenarios, including those with veterans, where the homes do not have utilities such as water or electric and are completely off grid. For these individuals, healthy options are less an option.

Information access and broadband continue to be issues in all parts of West Virginia, and individuals suffer the worst access in rural areas. Services such as telehealth and accessing online directories to resources, are near impossible for those living even 5-10 miles outside of a major population center. The connection rates and speeds are so low, that developing additional industry and attracting service providers is minimal, as the overall barriers to being connected in rural areas are so high. These all lead to less workforce opportunities, less funding for social service projects and higher poverty rates.

Additionally, due to the lack of technology and broadband infrastructure, organizations like Mountaineer Food Bank struggle with collecting valuable data to continue to reach into communities to meet their needs. It is difficult to go beyond the generalized census data, when consistent avenues of learning about the populations be served are not available. Solutions to software are being developed by Feeding America, including a service insights platform that will enable food banks to be able to dive deeper into the populations they serve. Connectivity to high speed internet will likely threaten the effectiveness of this software in rural areas.

The barriers for organizations to provide services are primarily rooted in continued funding sources and staffing. For Mountaineer Food Bank, the Veterans Table is privately supported by charitable donations, meaning no state or federal funding is available for this type of work. The food

bank works with corporate sponsors and individual giving campaigns to meet the \$350,000 annual budget of the existing program. Currently, an average of 1,000 veterans receive boxes each month, which cost \$25-\$30 each delivered to a community site. In order to add the additional 900 veterans estimated by the Beckley VAMC alone, Mountaineer Food Bank would need an additional \$324,000 in funding that currently does not exist.

Closing

In closing, I greatly appreciate the committee's interest and commitment to addressing military family and veteran hunger in the United States. West Virginia's population is home to almost 95,000 veterans, with thousands of those struggling with hunger. Many of those individuals have retired, come home and are now facing health issues that challenge them and the communities they live in.

Programming to address military and veteran hunger has a tremendous impact on those participants. Through partnerships in the non-profit and governmental sectors, we are able to reach veterans that otherwise would have fell into the gaps. In order to continue these programs, collaborative partnerships and resources such as funding for food and transportation are needed to address the high need for this vulnerable population.

There needs to be continued work on the collection of data and dispersion of resources into smaller communities where many veterans live, beyond the centric primary models of access to resources. By widening our focus to include these smaller areas, we'll open the door to reaching the most fragile and struggling individuals in our country.

Again, I fully support all measures that increase food access to military families and veterans by increasing resources and removing barriers to accessing food. I am leaving you with some quotes and testimonies from veterans that have participated and volunteers that work within this program. I am happy to provide more details on the program and what we've learned through this operations.

J. Chad Morrison
Chief Executive Officer
Mountaineer Food Bank

Testimonials from the Veterans Table Program

"Many of the veterans, due to PTSD issues, have difficulty being among crowds or are often times wary of people they do not know. Having their food delivered fulfills two mission: 1) it gets food to our at risk veterans and 2) the veterans know the drivers of the vans and have already established rapport with them, so they'll accept the food from people they know." –Volunteer Driver

“Many of our live completely off grid and some are homeless. Some have mental health issue and have a difficult time distinguishing what are good food choices. Mountaineer Food Bank provides much needed food there veterans.” - Volunteer

“No transportation, no family to rely on. Also, to them, there is a difference between standing in line for food and having others watch them than having someone deliver the food to their home. It is less stressful for them and they will accept it.” – Volunteer Driver

“Your Veterans food box has helped me save precious resources since the end of my food stamps. They have fed me multiple nutritious items that have kept me moving forward in life. Thank you for providing these monthly boxes as they have helped me tremendously.” –Veteran participant

“That is what is so incredibly special about the veterans table. We can participate and get the food needed, but since it is not “income based”, they feel better about themselves. They see other veterans at the mobile pantry and see that all veterans can sign up for this program. It is viewed more as a thanks to them for what they did for our country, rather than a hand out.” – Volunteer/Participant

“I don’t know what I would do without this food. My children left their kids with me and my wife. I am 75 and she is 78. We don’t make enough on retirement to take care of us all.” – Veteran participant

Association between Food Insecurity, Mental Health, and Intentions to Leave the US Army in a Cross-Sectional Sample of US Soldiers

³US Department of Agriculture, Economic Research Service, Kansas City, MO, USA

ABSTRACT

Background: Previous research has demonstrated that certain groups in the United States are at a greater risk for food insecurity. However, food insecurity has not been sufficiently characterized in active duty military populations.

Objectives: The primary objective of this study was to determine the prevalence of marginal food insecurity at a large US Army installation. The secondary objective was to determine how marginal food insecurity may be associated with intentions to leave the US Army after the current service period (“intentions to leave”).

Methods: A cross-sectional, online survey was administered by the US Army Public Health Center at an Army installation in 2019 ($n = 5677$). The main predictor was the 2-item food insecurity screener (Hunger Vital Signs), and the main outcome was a 5-point Likert question, “How likely are you to leave the army after your current enlistment/service period?” that was dichotomized for this analysis. Multiple logistic regression was used to assess the association between marginal food insecurity and intentions to leave. Mental health covariates were analyzed as a potential mediator.

Results: The sample was primarily male (83%), age >25 y (49%), and White (56%). One-third of respondents were classified as marginally food insecure using the Hunger Vital Signs, and 52% had intentions to leave. There was no significant association between marginal food insecurity and intentions to leave in the composite multivariable model, but mediation analyses revealed that food insecurity was significantly and independently associated with anxiety, depression, and suicidal ideation, which was in turn associated with intentions to leave.

Conclusions: The association between marginal food insecurity and mental health showed that addressing food insecurity could improve mental health and subsequently reduce intentions to leave. Solutions to reduce military food hardship include expanding Supplemental Nutrition Assistance Program eligibility requirements, improving food resources communication, and expanding healthy food choices on-post. *J Nutr* 2021;00:1–8.

Keywords: food insecurity, military, retention, attrition, Hunger Vital Signs, food security

Introduction

Food insecurity is defined by the USDA as a “lack [of] access to enough food for an active, healthy life for all household members” (1). Households with low food security “reported multiple indications of food acquisition problems and reduced diet quality, but typically have reported few, if any, indications of reduced food intake (2).” Very low food security is classified as having “reported multiple indications of reduced food intake and disrupted eating patterns due to inadequate resources for food” (2). The USDA estimated that 10.5% of American households were food insecure, and 4.1% experienced very low food security, at any point in the 2019 calendar year (1).

Certain subgroups have higher rates of food insecurity than the national average. These groups include low-income households, households with children, single-parent households,

women and men living alone, Black and Hispanic households, and households in large cities (2). Food insecurity is associated with numerous adverse health outcomes in adults, including increased risk for diabetes (3), incomplete virologic suppression among people living with HIV (4–6), and adverse mental health outcomes (7, 8). Food insecure households are also associated with higher healthcare expenditures (9); increased risk of depression, anxiety, and sleep disorders (10); and higher mortality when compared to food secure households (11).

Numerous studies have investigated food insecurity among veteran populations in the United States. In a cross-sectional study among veterans of the US wars in Iraq and Afghanistan, 27% of veterans reported food insecurity (15% low food security and 12% very low food security) (12). In the Veterans Aging Cohort Study, similar rates of food insecurity were found, with 24% of respondents classified as food insecure

(13). In contrast, another study reported much lower rates of food insecurity in veteran households (8.4%) than nonveteran households (14.4%) (14). An analysis by the Health and Retirement Study reported similar findings, with 6.4% of male veterans classified as food insecure compared with 11.9% of male nonveterans (15).

However, active duty populations have received less attention in food insecurity research, primarily due to limited data on their food security. At the rank of private in the US Army, personnel are paid an annual salary of \$20,797.20 (16), which exceeds the federal poverty line for a single individual of \$13,300 within the 48 contiguous states (17). However, as soon as soldiers marry or have children, it is possible that their incomes do not increase at a rate that will guarantee they will remain above the poverty line, thus increasing their risk for food insecurity. In 2019 for example, 33% of households with incomes below 130% of the federal poverty line were food insecure (1).

Food-insecure soldiers are often forced to turn to food pantries and nutrition assistance programs. In 2012, Feeding America estimated that 25% of active duty, Guard, and Reserve service members used food banks to supplement meals for themselves and their families (18, 19). A 2016 Government Accountability Office report found that the US Department of Defense does not currently know the extent to which service members use food pantries due to lack of comprehensive data collection and coordination with the USDA (20). Over \$21 million in Supplemental Nutrition Assistance Program (SNAP) benefits were used by active duty service members between September 2014 and August 2015 (20). However, commissaries represent only 1 source of food, and the actual extent of food insecurity is unknown in active duty populations.

A study by Wax and Stankorb reported that nearly 1 in 7 active duty families located at Joint Base San Antonio experienced food insecurity (21). However, this study was only conducted among parents of children who were enrolled in on-base childcare and therefore the sample size was small ($n = 248$) and not representative of the entire installation. In addition, a report by the Blue Star Families organization found that 7% of military family respondents had experienced food insecurity in the past year (22). The Blue Star survey asked respondents directly about food insecurity, a term that may not have been understood by all respondents, and therefore the proportion may be an underestimate of true food insecurity.

It is also unknown if food insecurity has an impact on intent to leave the military. A previous study of attrition reported that sex, age, race, depression, and BMI (kg/m^2) are all associated with attrition (23). However, it is unclear how food insecurity may be associated with intent to leave the military. One possible explanation is that food insecurity is capturing the material wellbeing of military households. Food-insecure military households, like their civilian counterparts,

generally have experienced income shocks—through lower spousal earnings (24) or the loss of spousal employment (25) associated with military service—that make smoothing their consumption difficult. A military household may therefore be more likely to leave the military if their needs are not being met and they feel the civilian labor market offers better opportunities (26, 27). Given the substantial cost of recruiting and training US Army personnel (28), further studies on predictors for intentions to leave the military are needed.

The goal of the current analysis was to 1) characterize marginal food insecurity among a sample of active duty soldiers in the US Army and 2) determine how marginal food insecurity, controlling for demographic, financial, and mental health covariates, is associated with intentions to leave the US Army.

Methods

In 2019, Behavioral and Social Health Outcomes Program personnel of the US Army Public Health Center (APHC) were contacted by the commanding officer of a US Army installation to investigate a perceived increase in suicidal behavior and preventable deaths. A mixed-methods approach was used with qualitative data from focus groups informing the development of a quantitative survey. The investigative team provided the commander with a URL for the survey. The commander then distributed the survey through the chain of command to soldiers for completion within a period of 40 d via their smartphone, computer, or other web-enabled device. Installation leadership encouraged soldiers to complete the survey in a timely manner either during or after duty hours. No incentive was provided for survey participation.

Informed consent was obtained at the beginning of the survey, and respondents were informed that they could exit the survey at any time. Following acknowledgement of informed consent, a screening question was asked to ensure appropriate participation. Respondents were allowed to complete the survey if they indicated that they were military personnel, and all soldiers at the US Army installation surveyed were eligible to participate. Respondents who answered that they were either contractors or civilian employees were directed to the end of the survey. The US Army installation where the survey took place is located in the United States, and the installation has a population size of <10,000 soldiers. All other details of the installation are omitted in this manuscript to protect the anonymity of respondents.

Respondents were asked questions on demographic and military characteristics, nutrition and food insecurity, sleep behavior, mental health, substance use, leadership, social support, and access to installation resources. Demographic and military characteristics included sex, race/ethnicity, military rank, financial insecurity, marital status, and number of children.

The primary purpose of the survey was to assess factors associated with preventable death and suicidal behavior at the installation, not food insecurity. Food insecurity was mentioned as a concern in focus groups and therefore was added to the quantitative survey after the main survey was drafted. Because this was the first APHC survey to ask about food insecurity, the survey design team selected a short, validated food-insecurity screening tool to minimize overall survey fatigue. Marginal food insecurity was measured with a 2-item food insecurity screener (29) derived from the USDA's 18-item Household Food Security Survey Module (HFSSM), commonly referred to as the Hunger Vital Sign (30). Marginal food insecurity is a broader measure of food insecurity that captures individuals who report any indications of compromised economic access to food among themselves and their families, which are classified as having marginal, low, or very low food security according to the USDA's food security status classification system. Among a sample of 30,098 families across 7 urban medical centers, Hager et al. reported that 2 items from the HFSSM were most frequently endorsed among families experiencing food insecurity. The question "Within the past 12 months, we worried whether our food would run out before we got money to buy more," was endorsed by 92.5% of families experiencing

food insecurity. The question “Within the past 12 months, the food we bought just didn’t last and we didn’t have money to get more,” was endorsed by 81.9% of families experiencing food insecurity. The authors reported in their study that an affirmative answer to either of these questions had a sensitivity of 97% and a specificity of 83% for food insecurity compared with the original HFSSM. For the purposes of the current analysis, respondents who answered either “Often true” or “Sometimes true” to either of these 2 questions were classified as marginally food insecure.

The main outcome of interest was intentions to leave the military after the current service period. Specifically, respondents were asked “How likely are you to leave the army after your current enlistment/service period?” The potential responses were on a 5-point Likert scale with a decline to answer option. Respondents who answered “very likely” or “somewhat likely” were coded as “likely to leave the military.” Respondents who answered, “neither likely nor unlikely,” “somewhat unlikely,” or “very unlikely,” were coded as “neutral” or “unlikely to leave the military.” Respondents who declined to answer were coded as “missing.”

Statistical analysis

Bivariate associations were evaluated with chi-square tests to determine if there were significant differences between observed and expected proportions of demographic, food security, financial, and mental health predictors with the outcome of interest (intentions to leave the US Army after the current service period). Multivariable logistic regression analysis was used to examine associations between soldier-classified marginal food insecurity and soldier-reported intentions to leave the US Army after the current service period, controlling for demographic, financial, and mental health covariates.

In addition to the first model with all predictors, we ran a mediation analysis to determine associations between food insecurity, mental health (mediator), and intentions to leave. Specifically, we analyzed the association between demographic, food insecurity, and financial security predictors with mental health outcomes: anxiety (model 2), depression (model 3), and suicidal ideation (model 4). Last, the fifth model looked at the association between mental health predictors (anxiety, depression, and suicidal ideation) with intentions to leave after the current service period.

An α level <0.05 was used as a threshold to determine statistical significance of all tests. All statistical analyses were performed using Statistical Analysis Software (SAS®) version 9.4.

Ethical review

The APHC Human Protections Administrator determined this activity to be public health practice under OHP number 19-734. The APHC Public Health Review Board concurred with the public health practice determination.

Results

There were 5677 unique respondents, resulting in a response rate of approximately 85%. Respondents were primarily male (83%), <25 y of age (49%), junior enlisted in rank (private through corporal) (44%), White (56%), either married or in a relationship (48%), and reported no children (62%) (Table 1). Approximately 33% of respondents were classified as marginally food insecure. A little over half of the respondents (52%) reported they were likely to leave the Army after their current service period, 42% reported they were either neutral or unlikely to leave the Army after their current service period, and 6% had missing data.

In bivariate analyses, soldiers who reported that they were likely to leave the Army after the current service period were more likely to report marginal food insecurity (46%) when compared with soldiers who were neutral or unlikely to leave

1.15; 95% confidence interval: 0.96–1.37) (Table 3). However, soldiers who screened positive for anxiety ($P < 0.0001$), depression ($P < 0.0001$), and suicidal ideation outcomes (model 4; $P < 0.0001$) were all more likely to report intentions to leave the US Army. There was no observed relation between birth sex ($P = 0.18$), marital status ($P = 0.90$), or financial condition ($P = 0.17$) and intentions to leave the Army after the current service period.

The mediation analyses showed that food insecurity was related independently to anxiety (model 2; $P < 0.0001$), depression (model 3; $P < 0.0001$), and suicidal ideation outcomes (model 4; $P = 0.02$), controlling for demographic and financial security variables (Supplementary Tables 1–3). In addition, anxiety ($P < 0.0001$), depression ($P < 0.0001$), and suicidal ideation ($P < 0.0001$) were all significantly related to intentions to leave after the current service period (model 5) (Supplementary Table 4).

Discussion

The primary objective of this study was to analyze the relation between marginal food insecurity and intentions to leave after the current service period, controlling for demographic, financial security, and mental health variables. Although there was not a significant relationship in the composite model, the mediation analyses showed that marginal food insecurity was significantly related to mental health outcomes (anxiety, depression, and suicidal ideation) which were related to intentions to leave after the current service period (full mediation). These

results indicate that by addressing food insecurity, there will be subsequent positive effects for mental health and for reductions in intentions to leave the Army after the current service period.

The USDA estimated that 10.5% of all US households experienced food insecurity in 2019 (31), which is in stark contrast to 33% marginal food insecurity within this sample of soldiers. However, a more comparable estimate of food insecurity would be marginal food insecurity among all US households. In the USDA 2019 Current Population Survey Food Security Supplement (CPS-FSS), 17.9% of all US households were marginally food insecure in 2019. While this does reduce the discrepancy between these 2 estimates, differences remain that must be considered since it appears that soldiers are more likely than the general population to be marginally food insecure.

The increased likelihood of marginal food insecurity among soldiers relative to the general population can be explained by considering several relevant factors. First, the population of soldiers is likely younger on average than the general working-age population. According to the Bureau of Labor Statistics, 9% of full-time workers in the United States are 16 to 24 y old (32). In comparison, 49% of the subjects in this analysis were <25 y old. Since food insecurity generally declines with age, we might expect that the age of the population in the present study may be a significant reason for the differences in food insecurity. Moreover, we find that the marginal food insecurity rate increases to 25.2% for US households with adults aged ≤25 y based on the USDA 2019 CPS-FSS, demonstrating food insecurity is higher among households with younger members.

TABLE 4 Comparison in demographics between the study sample and the entire active duty population in the Army¹

¹Values are percentages of *n* for each group. E, enlisted; O, officer; W, warrant officer.

²The most recent data for the entire Army are from the 2017 calendar year.

Second, disparities in financial management skills could also explain why food insecurity is higher among the soldiers in our sample than the general population. According to the Board of Governors of the Federal Reserve System, 77% of adults in the general population were at least doing okay financially (i.e., these adults reported they were very comfortable and secure or able to make ends meet without much difficulty) in July 2019, while only 58.8% of the soldiers in our sample reported this level of financial wellbeing (33).

Third, soldiers move on average every 3–4 y for a permanent change of station, which carries a significant financial cost. Although certain aspects of the move are subsidized by the military, military.com estimates that service members spend on average \$1725 in nonreimbursable costs for each move (34). In addition, a RAND report published in 2016 found that spouses experience an average decrement in pay of \$2100, or 14% of annual income, during the year of a move (35). The out of pocket cost for moves and decrement in spousal pay may introduce financial stress, which increases the probability for food insecurity. Fourth, whereas civilians may be able to take on a second job if they desire, soldiers are required to get an off-duty agreement with the soldier's commander for a second job. Fifth, soldiers have access to lower-cost food from commissaries, but 70% of soldiers live off-post (36), which can be a challenge if soldiers and their families live far away from the installation.

Although we believe that the reasons outlined above justify higher rates of marginal food insecurity among soldiers, we also allow for the possibility that our estimate of the prevalence of marginal food insecurity among active duty soldiers may be overestimated due to the composition of our sample. The demographic composition of our sample demonstrates that our sample reasonably approximates the population of active duty soldiers (Table 4); however, we do observe senior enlisted and commissioned officers at a lower rate in our sample than that found in the overall Army population. Since the educational attainment and earnings of senior enlisted soldiers and commissioned officers are greater than those of junior

enlisted soldiers, we believe this finding implies that we are overestimating the prevalence of food insecurity among active-duty soldiers.

Therefore, our findings should be treated as an estimate for the upper bound of the probability of marginal food insecurity among soldiers. Yet given the lack of information on food insecurity among this population, this study provides important insights on food insecurity among active duty soldiers.

There are both civilian and military policy solutions for reducing food insecurity. The civilian SNAP, (formerly the Food Stamp Program) was designed to assist families in poverty with food insecurity. SNAP eligibility is determined by household income, assets, family size, and citizenship status. An analysis of the 2008–2012 data from the American Community Survey reported that 2.2% of active duty service members participated in SNAP, a proportion that is lower than participation for both veterans as well as national guard/reserve members (37). However, there may be a wide disparity between need and participation within the active duty soldier population. This gap is partially explained by the fact that Basic Allowance for Housing (BAH) is considered income in assessing SNAP eligibility for active duty personnel. If the BAH were excluded from this assessment, many more military families would be eligible for SNAP assistance (38). As recently as December 2020, there was legislation under consideration called the Military Family Basic Needs Allowance which proposed removing basic housing allowance when considering SNAP benefits, but this provision has not been approved as of this writing. In addition, SNAP eligibility criteria are determined by each state. Soldiers who qualify at one duty station may no longer qualify after moving to their new duty station in a different state. Lastly, military families may also be eligible for the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) provided they have a dependent child <5 y old.

Military policy solutions for food insecurity include educating leaders and commanders about food insecurity, increasing the awareness of those who might be at risk for

food insecurity, and offering education and resources. Many service members are not familiar with SNAP or WIC. Local installations should partner with Army Community Services, Family and Morale and Welfare and Recreation Programs, and Commanders Ready and Resiliency Councils to promote local services and educational programs. Local dietitians can also partner with commissaries to promote nutrition education programs, including Commissary Tours and educational programs.

The current investigation's findings must be interpreted in light of numerous limitations. First, the primary purpose of the evaluation was not to assess food insecurity. To reduce survey fatigue, an abbreviated 2-item food insecurity screener was used. A previous study reported a sensitivity of 97% and a specificity of 83% for the abbreviated food insecurity screener when compared with the original Household Food Security Survey instrument (30). Second, there was a high degree of missing responses for different survey questions (e.g., 27% for military rank). The missing responses for these questions could have been due to social desirability bias, survey fatigue, confidentiality concerns, or other unknown factors. The study team reiterated throughout the survey that all responses were anonymous to reduce social desirability bias, used abbreviated screeners to reduce survey fatigue, and collapsed key demographic response categories to reduce confidentiality concerns (e.g., private through corporal as opposed to separate options for each rank). Third, the survey did not collect data on either the location of housing (e.g., barracks or off-post) or Basic Allowance for Subsistence (BAS). For example, soldiers who live in the barracks, thus not receiving BAS, are entitled to eat all of their meals in the on-post dining facilities free of charge. Soldiers who do not live in the barracks often receive BAS (about \$370/mo) which they can use to purchase food either on or off post. Since food security may differ by either type of housing or BAS, future analyses of Army populations should incorporate these variables. Fourth, the survey was available to all soldiers at the installation and participation was high, with 85% of soldiers taking the survey among those invited. However, the demographics of the 15% of nonrespondents were not available, and we were unable to determine if those who participated systematically differed from the respondents. Last, the US Army installation where the survey took place is not necessarily representative of the Army as a whole and therefore may not be generalizable. The large proportion of missing responses to key demographic predictors precludes an accurate comparison of the study sample to the entire US Army population (Table 4).

To gain a better understanding of the current military climate, more research is needed to understand food insecurity in the military. Research is needed to assess use of available resources and potential use of community and government programs to improve access to adequate food and nutrition programs including SNAP, WIC, the National School Lunch Program and National School Breakfast Program, food bank/food shelf programs, or any other programs intended to offset the cost of food. Other questions of interest could include community programs, such as budgeting classes, cooking classes, community gardens, and local food pantries.

As opined by Mark Milley, chairman of the Joint Chiefs of Staff, and Secretary of Defense Mark Esper, "The army's greatest strength is our people—the intelligent, adaptable, and professional soldiers, civilians, and families who sacrifice for our nation" (39). By creating and implementing policies that reduce food insecurity among soldiers, army commanders can optimize

the mental health of the force while taking care of the force's greatest strength.

MILITARY LEADERS

Conduct routine exit interviews to understand service members' motivations for leaving the military; assess this data to determine reasons for leaving among underrepresented communities. [Finding 1]

Discrimination at the unit and installation level negatively impacts the military's readiness, recruitment, and retention. As reported in Finding 1, experiences of discrimination and harassment weigh more heavily on active-duty service member respondents from underrepresented groups, as they consider leaving active-duty service due to:

Gender-based discrimination:

- Female active-duty service member respondents reported they experienced gender-based discrimination in their unit or command (48%), in military-connected training opportunities (26%), and in promotion or advancement opportunities (37%).*
- Other than military retirement or medical/administrative discharge, 12% of female active-duty service member respondents indicated gender discrimination was one of the primary reasons why they would leave the military (compared to 1% of their male peers), and 8% indicated sexual harassment/assault was a reason (compared to 1% of their male peers).
- Excluding those who left due to retirement, 1 in 10 female veteran respondents (10%) reported leaving military service due to gender-based discrimination (compared to fewer than 1% of their male peers).

Racial discrimination:

- Active-duty service member respondents of color reported they have experienced racial discrimination in their unit/command (26%), on the base/installation (19%), and in promotion/career advancement opportunities (21%).
- Other than military retirement or medical/administrative discharge, 10% of all active-duty service member respondents of color would consider "racial discrimination" as one of the primary reasons for choosing to leave military service.*

*Statistic not reported in Finding 1 documentation

- Excluding those who left due to retirement, 8% of veteran respondents from communities of color cited racial discrimination as a reason they left the service; the number rises to nearly one in five (18%) for Black veteran respondents.

Sexual orientation-based discrimination:

- While only 4% of active-duty service member respondents in this sample identified as LGBTQ+, more than one-third (37%) of all active-duty service member respondents agreed there is sexual orientation-based discrimination against LGBTQ+ people in the military.

The DoD Board on Diversity and Inclusion “believe[s] [that] diversity is the key to innovation,” and that “inclusion is imperative for cohesive teamwork.”¹ Moreover, its report argues it is critical “that the military across all grades reflects and is inclusive of the American people it has sworn to protect and defend.”² For these reasons, the departure of service members from underrepresented communities due to discrimination/harassment undermines DoD’s strategic efforts to increase diversity and inclusion within the ranks. By conducting routine exit interviews, the services can gain a better understanding of the extent to which racism, sexism, and discrimination influence service members’ decision to leave service and take Department-wide action to prevent it.

Expand broadening assignment opportunities to include increased civilian leadership training for a larger percentage of mid-career service members. [Finding 2]

The DoD defines career broadening as “the purposeful expansion of an individual’s capabilities and understanding provided through planned opportunities internal and external to the Department of Defense throughout their career.”³ According to the U.S. Army:

Broadening is accomplished across an officer’s full career through experiences and/or education in different organizational cultures and environments. The intent for broadening is to develop an officer’s capability to see, work, learn and contribute outside each one’s own perspective or individual level of understanding for the betterment of both the individual officer and the institution.⁴

Data from this year’s survey indicates that service members who reported good communication, leadership, and flexibility in their unit also reported a greater sense of belonging to their unit or command, which, in turn, could impact military recruitment, readiness, and retention. Yet, as reported in Finding 2, fewer than half (46%) of active-duty service member respondents agreed that they felt a

sense of belonging to their unit/command. In contrast, 92% of civilian adults felt they belong within their current workplace.⁵ Providing mid-career service members with broadening assignments targeted towards civilian leadership training might prove to be an effective strategy for improving command communication, leadership, and flexibility.

The military has experimented with broadening assignments in the civilian workforce as part of its Training with Industry (TWI) program (DOD Instruction 1322.06). TWI is a one-year work experience training program designed to take mid-level officers and non-commissioned officers from specific military occupational specialties (predominantly acquisition and logistics fields) out of the military environment and expose them to the latest commercial business practices, organizational structures and cultures, technology development processes, and corporate management techniques.⁶ Dozens of companies partner with the services as part of the TWI program, including Amazon, Raytheon, FedEx, Honeywell, Microsoft, Deloitte, IBM, and Samsung.⁷ Each branch of the military, with the exception of the United States Marine Corps (USMC), participates in the TWI program; however, the number of annual participants, types of assignments, and training requirements vary by service.⁸

An evaluation of the Navy's TWI program in 2017 by Melissa Flynn and Amphay Souksavatdy at the Naval Postgraduate School found the return on investment (ROI) of the Navy's program (net benefit of the program divided by the program costs) was 88%. According to the authors: "Additional intangible benefits obtained include meeting capability gaps, meeting Naval Supply Systems Command's objectives, and increasing the professional value of the Supply Corps officers."⁹ Given the apparent success of the TWI program across the services, Blue Star Families recommends that similar broadening assignments be made available to mid-level officers and non-commissioned officers in all services and military occupational specialties.

Diversify the methods of communication that commands use when connecting with the families in their unit. [Finding 3]

Communication from the military unit was also an important issue for military-connected family respondents who experienced deployment or activation from March to October 2020, or who anticipated an upcoming deployment within nine months. Indeed, communication was one of the top reported needs among active-duty spouse respondents – with 79% saying the ability to communicate with a spouse is a top need, and 72% saying emergency contact information for their command/unit is a top need. Moreover, while more than a third (37%) of active-duty spouse respondents indicated their service member’s unit or command “communicates well,” only 33% agreed their command “communicates well during deployment.”

Effective communication requires not only the ability to routinely, succinctly, and clearly convey information, but also an understanding of the most effective vehicle for sharing that information. In this year’s survey, 81% of active-duty spouse respondents shared they prefer receiving information via email, 45% prefer social media, and 41% prefer a phone call or text message.

Unit/command leadership should be cognizant of these media preferences and diversify how they communicate with family members, particularly during deployment.

Empower active-duty families to make informed decisions about their voter registration by providing clear and consistent information about voter registration requirements. [Finding 4]

In 49 states, an eligible citizen must be registered to vote.¹⁰ However, voter registration requirements and deadlines vary by state. In some states, you can register to vote online; in others, you must do so via mail or at an authorized voter registration center. A few states provide automatic voter registration – wherein individuals are automatically registered to vote at their state DMV unless they “opt-out.”¹¹ Some states permit voters to register up to and on Election Day, while others have voter registration deadlines weeks ahead of an election. Finally, some states prohibit individuals with a felony conviction from voting, while others do not.

As reported in Finding 4, active-duty family respondents' voter registration decisions were influenced by a number of factors – the most common being state residency rules and requirements (42%), and the ease or convenience of registering (23%). While the current level of voter registration among military families is high, approximately one in 10 (9%) active-duty family member respondents reported not being registered to vote at the time of the survey. Of those who were not registered, one of the most common reasons involved a lack of knowledge regarding the voter registration process: 12% of active-duty family respondents who were not registered to vote at the time of the survey reported not knowing where to register, and 12% reported not knowing how to complete the voter registration process. Therefore, Blue Star Families recommend that military leaders provide clear and easy access to registration materials and timely voting information for all service members and their families. Examples might include adding voter registration materials to welcome packets, incorporating links to local registration instructions on websites and social media platforms, and sending out reminders regarding upcoming deadlines.

Standardize and expand the Career Intermission Program (CIP), while simplifying and expediting the CIP application process, for service members who are unable to implement their family care plans due to an unexpected extended emergency (such as virtual schooling during a pandemic). [Finding 6]

The Career Intermission Program (CIP) allows service members the ability to transfer out of the active component and into the Individual Ready Reserve for up to three years while retaining full health care coverage and base privileges. Currently, the services require members to apply for CIP six to 12 months in advance of their projected rotation date (PRD) or “soft” end of active obligated service.¹² This lengthy application timeline makes CIP an unworkable option for service members who might otherwise wish to use the program to take a temporary sabbatical in order to tend to their dependents' care during the pandemic or in response to a family emergency. Furthermore, CIP application timelines and accessibility vary by service. The Army, for example, limits the program to 20 officers and 20 enlisted members per calendar year.¹³ No such CIP quotas exist in other services.

Pandemic-related social distancing requirements, travel restrictions, and exposure concerns for extended family members rendered many service members' family care plans inoperable.¹⁴ According to a COVID-19 Military Support Initiative (CMSI) Pain Points Poll, 6% of active-duty family respondents with child care needs reported they were unable to implement their command-approved family care plan.¹⁵ This figure is

worrisome, because, according to Section 4(c) of Department of Defense Instruction Number 1342.19, "service members who fail to produce a family care plan may be subject to disciplinary or administrative action that may result in separation from the Service."¹⁶

The lack of available dependent care seems to be disproportionately impacting female service members, 20% of whom are in a dual military marriage.¹⁷ According to a CMSI Pain Points Poll, while a small proportion of female service member respondents reported their work had not been impacted by the pandemic, a greater proportion reported

the following: They had reduced work hours because of school closures or a lack of child care; their work quality had declined because they were caring for children while working; and they had shifted work hours later or earlier in the day due to a lack of child care.¹⁸ Moreover, in this year's MFLS a higher proportion of female veteran respondents (27%) compared to male veteran respondents (16%) selected a cluster of reasons for leaving the military related to challenges in balancing family life with a military career, such as "concerns about the impact of military service on my family." Similarly, a third (33%) of female service member respondents in this year's survey reported lack of child care is a top concern in military life – compared to only 15% of their male colleagues.

The lack of dependent care might influence female service members' decision to leave the service. Prior to the pandemic, the Government Accountability Office (GAO) reported women were 28% more likely to separate from service than men – often for issues related to dependent care.¹⁹ This year's survey found that two in 10 (19%) female active-duty service member respondents said that one of the reasons they would leave the military, other than medical or administrative discharge, would be because "being in a dual-military family is too difficult," compared to only 3% of male active-duty service member respondents who reported the same. Therefore, Blue Star Families recommend that the CIP application process be standardized, expedited, simplified, and expanded for service members who are unable to implement their family care plans due to an unexpected extended emergency. Service members might then choose to enroll in CIP rather than leave the service all together. Such action might thereby reinforce service member retention, especially among female service members. Participation in CIP, however, must not negatively impact a service member's opportunity for promotion, and any additional certifications or work conducted while on intermission should be considered professional development.

CONGRESS

Commission a report on the civilian employment ramifications of activation for National Guard and Reserve members. The report should include an assessment of the extent to which arbitration clauses in employee contracts undercut USERRA protections. [Finding 5]

Under section 4311(a) of the Uniformed Services Employment and Reemployment Rights Act (USERRA) of 1984, it is unlawful for an employer to deny a person initial employment, reemployment, retention in employment, promotion, or any benefit of employment on the basis of that person's membership in a uniformed service or performance of their obligated service.²⁰ Yet, as reported in Finding 5, nearly a quarter (23%) of National Guard and one-third (34%) of Reserve service member respondents to this year's survey reported they had faced negative consequences with their civilian employer after returning from an activation. Examples of negative consequences included the loss of a job, promotion, or training opportunities, as well as involuntary reduced hours and/or pay. Therefore, Blue Star Families recommends that Congress commissions a report on civilian employment retaliation/discrimination against National Guard and Reserve members as a consequence of their activation.

It is possible that employers are not being held accountable for USERRA violations because National Guard and Reserve members are failing to report such violations; failure to report might indicate a lack of knowledge on the part of the National Guard and Reserve members regarding their rights under USERRA, and future research should explore this possibility. Alternatively, it is possible that mandatory arbitration clauses in employee contracts are undercutting USERRA protections. An arbitration clause in an employment contract can force National Guard and Reserve members to forgo their right to prosecute a USERRA violation in court in favor of an arbitration. While arbitrators are supposed to adjudicate cases impartially, there is no remedy if an arbitrator misapplies USERRA, because their decisions can only be appealed in a very narrow set of circumstances.²¹ Unfortunately, mandatory arbitration clauses have become all too common in modern-day employment contracts.²² As such, these binding arbitration agreements might be undercutting USERRA protections.

Ensure that military dependents are not unfairly penalized (relative to their civilian peers) for utilizing mental health care, if and when they choose to join the military. [Finding 7]

A primary barrier to seeking mental health care for military families is concern over the confidentiality of treatment.²³ It was the second most commonly-cited barrier by active-duty service member respondents who would like mental health care but don't currently receive it, as reported in Finding 7. Yet, military children's mental health records, for those who sought mental health care in military treatment facilities, are available to the Army, Navy, and Air Force if those individuals choose to join the service as adults.²⁴

In 2018, *Military Times* reported that a number of military dependents were being dismissed from basic training because of various notations in their minor dependent records.²⁵ Under existing service policies, military children's pre-existing "military dependent" medical records are merged with their nascent "military service" medical records.²⁶ Therefore, it is possible the merging of dependent and military service medical records could deter military families from seeking mental health care for their dependents if the dependent has expressed interest in future military service.

As a result, Blue Star Families recommends that Congress takes proactive steps to prevent military dependents who seek to join the service from being penalized for utilizing mental health care (e.g., by instructing commanders to give liberal consideration to children raised in military families when deciding whether or not to grant waivers allowing them to join the military despite prior mental health conditions).²⁷

Commission a longitudinal study on the effects of the COVID-19 pandemic and virtual schooling military children's education and military spouse employment – comparing long-term outcomes of military-connected family members to those of their civilian peers. [Finding 9]

COVID-19 has had a ubiquitous effect on children's education and employment outcomes throughout the United States. However, it is likely to have longer-lasting effects on military families, who were already experiencing routine disruptions to their children's education and their civilian spouse's employment pre-pandemic.

The average military child moves three times as often as their civilian peers,²⁸ and dependent children's education was one of the top five issues for active-duty military families pre-pandemic.²⁹ Multiple

moves have been associated with educational consequences, such as gaps in learning and difficulty transferring credits and meeting graduation requirements – which might entail repeating classes. The COVID-19 pandemic has exacerbated these transition-related challenges by forcing schools to switch to virtual learning. As reported in Finding 9, virtual education delivery among active-duty families more

than tripled from the 2019/2020 school year to the 2020/2021 school year – from just 15% to more than half (51%) of active-duty family respondents with at least one school-aged child. Some are concerned that the rapid shift to virtual learning has produced emergent learning gaps.³⁰

Homeschooling was a popular practice among active-duty families pre-pandemic, as it enabled them to offset some of the challenges endemic to the military lifestyle, e.g., relocation and gaps in child(ren)'s education. As reported in Finding 9, the COVID-19 pandemic seems to have sparked new families to shift to this education style; 7%

of active-duty family respondents whose oldest child was in public or private school moved their child to homeschooling for the 2020-2021 school year. While a quarter of currently homeschooling active-duty family respondents (26%) indicated they intended to homeschool their children until they graduate, most (63%) intended to transition to traditional school at some point. The Interstate Compact on Educational Opportunity for Military Children, which aims to support military families as they negotiate school transition challenges, does not include guidance for schools supporting military families transitioning from homeschooling to public school. As such, it is possible that military children who are currently being homeschooled, but who plan to return to traditional schooling, might suffer from adverse educational impacts. Therefore, Blue Star Families recommends that Congress commissions a longitudinal study to evaluate the effects of the pandemic on the long-term educational outcomes of military children, relative to their civilian peers.

COVID-19 has also severely impacted active-duty spouse respondents' ability to work and retain employment. Since March 2020, 42% of military spouse respondents who had been working prior to the pandemic reported they had stopped working at some point during it, with layoffs and furloughs as the top reported cause. Most (68%) of those who stopped working remained unemployed as of survey fielding (September–October 2020). As stated in Finding 13, the unemployment rate of military spouse respondents is nearly seven times the rate of similar civilian peers (20% vs. 3%).³¹ For that reason, it is critical that any longitudinal study of the impacts of the COVID-19 pandemic on military families includes an evaluation of military spouse employment outcomes, relative to the civilian workforce.

Restore BAH to 100% of local area rent. [Finding 10]

Starting in 2015, the Basic Allowance for Housing (BAH) was incrementally reduced to 95% of local area rent,³² making it a matter of policy for military families to pay out-of-pocket for quality housing, though they rarely have full control over where they are stationed or when they move. As reported in Finding 10, 83% of active-duty family respondents who live off-installation reported varying levels of out-of-pocket monthly housing costs. Of those who reported out-of-pocket costs, more than three-fourths (77%) reported the costs exceeded the DoD’s anticipated range for out-of-pocket costs (\$70 to \$158 per month).³³ By contrast, only 17% of respondents reported all of their monthly housing costs are covered by their BAH. It is worth noting that of those families who listed “desirable school for children” as one of the important factors in their housing choice, 76% reported paying more than \$200 per month in out-of-pocket housing expenses. This figure is in line with research findings that desirable school districts often come with higher housing costs³⁴ due to zoning restrictions that ban rentals, multifamily housing, and smaller homes like those used to determine BAH rates.³⁵

In Blue Star Families’ 2019 Military Family Lifestyle Survey, 63% of active-duty family respondents reported they had “some stress” or “a great deal of stress” about their financial situation, and of those financially stressed families, the second most commonly reported contributor to financial stress was out-of-pocket housing costs. In this year’s survey, active-duty family respondents reported financial stress more often as their out-of-pocket housing costs increased. As Rep. Susan Davis (D-CA-53) once said: “The military pay system is not designed for junior enlisted members with families in high-cost areas.”³⁶ Therefore, Blue Star Families recommends that Congress restores BAH to 100% of local area rent.

Commission a report on the demand for various child care options among military families and assess the pros/cons of requiring families to first seek care at their local child development center (CDC) before being authorized to use Military Child Care in Your Neighborhood (MCCYN) fee assistance. [Finding 11]

According to the DoD, 37.8% of military children are five years old or younger.³⁷ The DoD recognizes that child care is a “workforce issue that directly impacts the efficiency, readiness, retention, and lethality of the Total Force,” which is one of the reasons it is the largest employer-sponsored child care provider in the United States.³⁸ Despite that, challenges obtaining affordable child care in a timely manner continue to have cascading impacts on the readiness, retention, and well-being of military families.

For example, the lack of affordable child care serves as a major barrier to military spouse employment. In this year’s survey, 34% of active-duty spouse respondents who are not working but need to work reported “child care is too expensive.” This finding concurs with the 2019 Survey of Active Duty Spouses, which found that the second most commonly cited reason among active-duty spouses for not seeking employment was “child care is too costly.”³⁹ While Blue Star Families’ data shows that child care affordability was a larger barrier to employment than availability before the pandemic,⁴⁰ COVID-19 exacerbated both. Reports by Child Care Aware of America,⁴¹ the National Association for the Education of Young Children (NAEYC),⁴² and the Center for American Progress (CAP)⁴³ all indicate that the national child care capacity has drastically declined; as of July 2020, 35% of child care centers remained closed.⁴⁴

DoD policies might likewise be hampering military families’ access to affordable child care. Under existing regulations, military families must first seek child care at their local on-post child development center (CDC) before being authorized to use Military Child Care in Your Neighborhood (MCCYN) fee assistance.^{45,46,47,48} However, 64% of active-duty family respondents live off-installation. Thus, this policy creates undue hardship for military families who live off-installation. Blue Star Families recommends that Congress commissions a report on the demand for various child care options among military families and assesses the pros/cons of requiring families to first seek care at their local CDC before being authorized to use MCCYN fee assistance.

Support legislation to exclude BAH as counted income for the determination of eligibility and benefits for all federal nutrition assistance programs. [Finding 12]

Our nation is facing a public health crisis with devastating financial consequences. Thousands of low-income military families are currently struggling to put food on the table. Unfortunately, this is neither an isolated problem nor a novel one. Military families are being served by food pantries and distribution programs on or near every military installation in the United States.⁴⁹

Prior to the pandemic, 7% of military family respondents to the 2018 Military Family Lifestyle Survey reported experiencing food insecurity; 9% sought emergency food assistance through a food bank, food pantry, and/or other charitable organization.⁵⁰ The actual percentage of military families experiencing food insecurity pre-pandemic was likely higher than these numbers suggest. Moreover, the COVID-19 pandemic has aggravated many of the underlying factors of military family food insecurity – including high rates of military spouse un/underemployment, out-of-pocket housing expenses, the limited availability and high costs of child care, etc. As reported in Finding 12, 14% of all enlisted and 29% of junior enlisted (E1-E4) active-duty family respondents reported low or very low food security in the 12 months preceding the 2020 MFLS fielding.

Unfortunately, many of these families are barred from qualifying for the Supplemental Nutrition Assistance Program (SNAP), despite being food insecure. Under current policy, a service member's BAH is treated as income when determining eligibility for SNAP. Meanwhile, housing vouchers for low-income civilians are not treated as income for the purposes of determining SNAP eligibility.⁵¹ Current SNAP eligibility policy (as authorized in the 2018 Farm Bill) thus establishes an unnecessary and harmful barrier to nutrition assistance for struggling military families. Blue Star Families joins other organizations recommending Congress excludes BAH as counted income for the determination of eligibility and benefits for all federal nutrition assistance programs.

Commission a report on employment discrimination against military spouses as a result of their military affiliation. [Finding 13]

Spouse employment has been identified as one of the top concerns for active-duty families since the inception of Blue Star Families' annual Military Family Lifestyle Survey (aMFLS) in 2009. In this year's survey, more than half (52%) of active-duty spouse respondents and a third (31%) of active-duty service member respondents listed military spouse employment as a top issue of concern. While nearly half of active-duty military spouse respondents are employed, either full-time (30%) or part-time (17%), two-thirds of employed active-duty spouse respondents (67%) reported they are underemployed in some way (indicating their current employment does not match their desires, education, or experience). Furthermore, 35% of active-duty spouse respondents reported they are not employed but need or want employment. Despite multiple efforts over the past decade, the unemployment rate of military spouse respondents is nearly seven times the rate of similar civilian peers (20% vs. 3%).⁵²

While the causes of military spouse employment are myriad and complex (including a lack of affordable child care and the unpredictability of service member day-to-day job demands), hiring and promotion discrimination is also a barrier to gainful spouse employment. As reported in Finding 13, more than half of active-duty spouse respondents (51%) agreed their military affiliation prevented them from receiving a promotion at some point in their career, compared to only 16% of veterans. Active-duty spouse respondents were the least likely of all surveyed groups to disclose their military affiliation in an interview: 23% of spouse respondents were "not at all likely" to disclose their affiliation, compared to only 3% of veteran respondents. In an open-ended question, half of spouse respondents who had disclosed their military affiliation in an interview reported the employer expressed concerns about their ability to stay at the position long-term.

In light of these findings, Blue Star Families recommends that Congress commissions a report on employment discrimination against military spouses in the civilian job market. The report should include an assessment of the viability of policy solutions to prevent such discrimination (e.g., expanding USERRA to cover military spouses, identifying military spouses as a protected class, etc.). Moreover, the report should explore potential differential effects across race and gender. This year's survey shows the unemployment rate for military spouse respondents of color (27%) is significantly higher than that of white, non-Hispanic respondents (17%). These trends align with DoD research, which finds that military spouses of color are unemployed at significantly higher rates than their white peers.⁵³ While Blue Star Families is unable to draw causal conclusions from this data, it is possible that military spouses of color (as well as those from other underrepresented groups) might be facing intersectional discrimination (i.e., discrimination as a result of their race, gender, *and* military affiliation).

STATE LEGISLATURES

Enable online school enrollment to enhance the “warm hand-off” between the sending and receiving districts, and to minimize disruptions in special education services.

[Finding 8]

Frequent moves can be jarring for all military children, but the effects are intensified for children with special needs. When military families move, children with special needs may experience disruptions in the special education and support services they receive at their current duty station. Under federal law, schools must provide free appropriate public education (FAPE) through an individualized education plan (IEP) to children with special needs.⁵⁴ Many states, however, have additional special education laws that establish variant criteria around eligibility for special education services.⁵⁵ As such, when a military family moves across state lines their child’s new school must decide if they qualify for special education services under state law. If the child is found eligible, the school will develop a new IEP. Unfortunately, this process is often time-consuming and can cause lengthy disruptions in the child’s special education services.

Despite the Interstate Compact on Educational Opportunity for Military Children having been signed by all 50 states and the District of Columbia, which states “the receiving State shall initially provide comparable services to a student with disabilities based on his/her current Individualized Education Program (IEP),” half of active-duty family respondents with a child enrolled in special education who PCSed since March 2020 reported they had trouble transferring their child(ren)’s IEP (51%) or 504 Plan (48%) to their new school. To minimize these disruptions, Blue Star Families echoes Partners in PROMISE and the Military Children’s Education Coalition (MCEC) in recommending that school districts enable military families to enroll their special needs child(ren) online (without requiring a physical presence).⁵⁶ Enrolling military students online could start the transfer process before the family arrives, allowing the family and the school to begin the special education needs assessment process earlier and potentially reducing the wait time to re-establish services.⁵⁷ According to Michelle Norman, Executive Director and Co-Founder of Partners in PROMISE, “the idea of allowing the military family to advance enroll with a set of military orders would ensure that the receiving school district would have those supports in place on Day 1. [...] With advance notice of a student’s arrival with their current Individualized Education Program (IEP), the new school district can reach out to the family and the previous school district’s teachers and ensure that they are ready to implement the IEP. It is a win-win for both military families and school districts.”

Pulse Check

FUNDING MADE POSSIBLE BY

Military and Veteran Families' Financial Needs

March 2021

4,411

RESPONDENTS

Poll conducted March 1-16, 2021

Blue Star Families' Pulse Checks on a specific topical issue provide a brief snapshot of the perspectives of currently-serving and veteran families, as well as their civilian neighbors.

Military Affiliation

Veteran Family	44%
Active-Duty Family	41%
Other Military Affiliation	16%
National Guard Family	10%
Reserve Family	4%
Gold Star Spouse or Family Member	2%
Civilian	2%

Race/Ethnicity

White	77%
Hispanic or Latinx	12%
Black/African-American	8%
Asian	5%
American Indian/Alaska Native	3%
Other	3%
Native Hawaiian or Other Pacific Islander	1%

Rank

Junior Enlisted (E1-E4)	9%
Mid-Level and Senior Enlisted (E5-E9)	53%
Warrant Officer*	3%
Commissioned Officer	34%

The military lifestyle, in conjunction with the ongoing COVID-19 pandemic, has left some families unable to cover their financial needs. This poll, the second in a series of financial Pulse Checks, sought to further quantify the immediate needs of military-connected families facing financial hardship one year after the onset of the pandemic. More than half of military-connected family respondents to Blue Star Families' 2020 Military Family Lifestyle Survey (60%) experienced "some stress" or "a great deal of stress" as a result of their current financial situation.ⁱ While it is true that active-duty military families may have been partially insulated from the financial effects of the pandemic due to relative stability of pay for service members, root causes of military family financial instability (especially high levels of spouse unemployment and underemployment) pre-date the pandemic and have been exacerbated by it.ⁱⁱ National Guard families, many of whom were activated during 2020,ⁱⁱⁱ often face different financial challenges than their active-duty and veteran counterparts.^{iv} The COVID-19 pandemic has placed an additional burden on caregiving families, and 1,327 respondents identify as unpaid caregivers in this poll's sample.^{v,vi}

Despite indications of overall financial improvement, those requiring immediate financial assistance report needs across a greater number of areas

Although there is no way to discern whether the same individuals took the two polls, there are indications that the level of financial need was lower in March 2021 than in November 2020, perhaps as a consequence of recent federal stimulus funding.^{vii} The proportion of respondents reporting no need for immediate financial assistance increased for all groups. However, for respondents who reported at least one immediate financial need, subtle differences exist across respondent groups based on their current military affiliation. While active-duty (35%) and veteran (33%) family respondents requiring immediate financial assistance for at least one item continue to report consumer debt as the top item for which they require immediate financial assistance, National Guard families most frequently reported student loans/higher education costs (31%). National Guard family respondents also identified a greater number of critical needs (e.g., mortgage/rent, key essentials, utilities, etc.) within their top five, compared to other groups. Differences between caregiving and non-caregiving families within each subgroup continue to follow the trends seen in the November poll: respondents who identified as caregivers more frequently reported at least one immediate financial need than non-caregiving respondents.

Immediate Financial Needs

No Immediate Need: Respondents who selected “none of the above”

Immediate Needs By Respondent Group

Respondents reporting at least one financial need

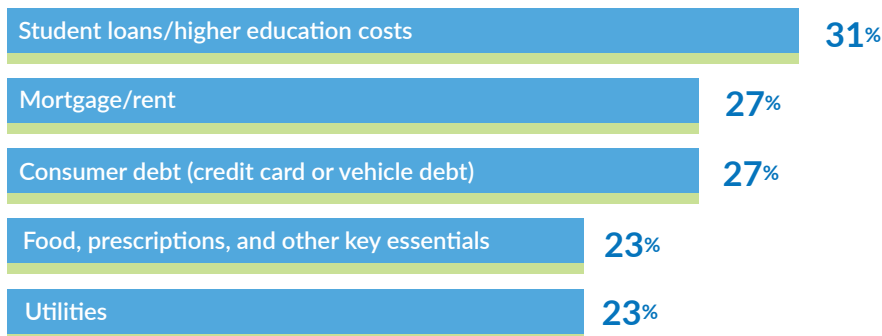

ACTIVE-DUTY FAMILY

VETERAN FAMILY

NATIONAL GUARD FAMILY

However, there are also indications of more nuanced and complicated stories for those families who do require immediate financial assistance. Consistent with the November findings, a smaller proportion of currently-serving junior enlisted respondents (E1-E4) report not requiring any immediate financial assistance than their higher ranking enlisted colleagues (E5+) (58% vs. 70%). Furthermore, while the percentage of currently-serving respondents having at least one financial need may be lower than the previous Pulse Check, at least 10% of respondents reported a greater variety of areas across which they require assistance, suggesting a deepening financial hole for those families experiencing challenges. Moreover, the level of need among mid-level/senior enlisted active-duty family respondents surpassed that of junior enlisted in several categories, including consumer debt, student loans, and child care. Nevertheless, while the majority of all respondents are using liquid assets to cover these costs, higher ranking family respondents are doing so at higher levels than their lower ranking colleagues; 73% of mid-level/senior enlisted family respondents and 70% of commissioned officer family respondents indicated they were using money from a checking or savings account to cover their current need, compared to 63% of junior enlisted family respondents.

Immediate Financial Needs By Rank Grouping

Categories of need for active-duty family respondents with at least one immediate need

	Consumer Debt	Student Loans (Higher Education Costs)	Key Essentials (Food/Prescriptions)	Child Care	Maintenance (Housing/Vehicle)	Medical/Dental Bills	Utilities	Un-reimbursed Relocation Costs	Mortgage/Rent
Junior Enlisted	34%	31%	22%	16%	31%	21%	21%	12%	19%
Mid/Senior Enlisted	37%	34%	20%	31%	21%	19%	13%	5%	16%
Commissioned Officer	29%	33%	23%	41%	20%	22%	12%	9%	14%

Spouse employment continues to support active-duty families' financial needs

A growing body of Blue Star Families research suggests that military spouse un/underemployment undermines military families' financial readiness and is a leading contributor to active-duty families' stress; these issues were exacerbated by the COVID-19 pandemic. For example, more than two-thirds of active-duty family respondents to the 2018 MFLS (69%) agreed that having two incomes was "vitally important" to their family's well-being, and yet spouse employment challenges are named as a perennial top issue for active-duty families.^{viii} "Civilian spouse's employment" was

a top stressor for 44% of active-duty family respondents to the 2020 MFLS, and "financial issues/stress" was a top stressor for 39%.^{ix} The COVID-19 pandemic brought new challenges, with 42% of active-duty spouse respondents to the 2020 MFLS who were employed prior to the pandemic leaving the workforce at some point between March and September 2020.^x

Consistent with this growing body of research, a significantly^{xi} greater proportion of active-duty spouse respondents who are employed report not requiring immediate financial assistance (75%), compared to their counterparts who are not employed, but want or need to work (or are actively seeking work) (66%). Also in line with previous Blue Star Families research, which found that food insecurity levels are higher for enlisted active-duty spouse respondents who are not employed but want or need to work (20%) when compared to those with enlisted spouses who are employed full- or part-time (10%),^{xi} difficulty covering the cost of food and other key essentials is associated with employment status in this poll. One in five (22%) active-duty spouse respondents to this poll who are not working (but want or need to, or are actively seeking employment), and require immediate financial assistance for at least one item report they require immediate financial assistance to cover food, prescriptions, and other key essentials, compared to 13% of their employed counterparts.

Results from this poll also suggest that spouse employment offers a buffer to support unanticipated future expenses; a greater proportion of employed active-duty spouse respondents also report the ability to cover a future unexpected \$500 expense using existing resources that don't require incurring additional costs (money from checking or savings accounts), compared to their counterparts who are not employed, but want or need to, or are actively seeking employment (76% vs. 60%).

Areas of Immediate Need Differ by Employment Status Among Active-Duty Spouse Respondents

Active-duty spouse respondents who report requiring immediate financial assistance for at least one item

Respondents requiring immediate financial assistance report greater barriers to seeking help

The November 2020 poll asked respondents in an open-ended format what barriers, if any, would prevent them from seeking future financial assistance in the event they required it. Among those who provided a response, the greatest proportion — one-quarter (28%) of active-duty family respondents and 27% of veteran family respondents — wrote that emotional barriers, such as shame and embarrassment, would prevent them from seeking support.^{xii} In the March 2021 poll, the question was included as a multiple choice question. About the same proportion of respondents selected “pride, shame, or embarrassment” as a barrier (25% of active-duty, 23% of veteran, and 22% of National Guard family respondents); however, these emotional barriers were not the top selected answer choice for any group. Instead, active-duty, veteran, and National Guard family respondents more frequently selected “desire to avoid future debt,” “belief others have a greater need,” and “nothing would prevent me from seeking help”; veteran and National Guard family respondents also selected “lack of knowledge of available resources” more commonly than emotional barriers. Notably, 16% of active-duty and 10% of National Guard family respondents reported the “desire to avoid chain-of-command involvement” as a barrier to seeking financial relief.

Furthermore, perceptions of barriers differ between respondents with current needs for financial assistance and those without. Although a smaller proportion of those requiring immediate financial assistance reported “nothing would prevent [them] from seeking help” than those who did not report needing support on at least one item among active-duty and veteran family respondents (13% vs. 30% among active-duty family respondents; 27% vs. 38% among veteran family respondents), this was not the case for National Guard family respondents (28% vs. 29%). The most commonly-reported individual barriers were different for each group and generally more pronounced for those requiring immediate support. For example, while 33% of all active-duty family respondents report “desire to avoid future debt” as a barrier to seeking financial assistance, a greater proportion (46%) of those requiring immediate financial assistance reported this to be the case, compared to 28% of those without a need for immediate assistance. This same pattern holds true for most perceived barriers, but the difference is most prominent for “lack of knowledge of available resources” (a 21 percentage point difference for active-duty family respondents).

However, current behaviors complicate understanding of the perceived barriers articulated above. For example, although “desire to avoid future debt” is a highly ranked barrier among those requiring immediate financial assistance, 47% of active-duty family respondents with a need for immediate financial assistance are currently

using credit cards to cover the expense, and 6% sought a traditional loan. Furthermore, these respondents are deferring payment on other bills, which could damage their future credit and lead them to incur additional fees, further undermining their financial stability (17% are not paying other bills in full, 8% are not addressing their current financial need, and 4% are not paying their full mortgage or rent).

Meanwhile, consistent with November’s report, fewer than 5% of active-duty family respondents requiring immediate financial assistance for at least one item indicated they sought assistance from a relief society to cover their current need (4%), or they would seek assistance from a relief society to cover a future need (3%). This behavior may be a consequence of the requirement for chain-of-command approval for some relief options; 16% of all active-duty family respondents reported a desire to avoid chain-of-command involvement as a barrier, and this proportion was higher among respondents requiring immediate financial assistance for at least one item (25%), compared to those without the need for immediate support (12%).

Barriers to Seeking Assistance

Responses to "what, if anything, would prevent you from seeking financial assistance support in the event that you required it?"

Conclusions and Recommendations

Financial hardship is not a challenge unique to the military community. However, elements unique to military life — such as chronic military spouse employment and potential career implications for service members — render different needs and barriers for military-connected families. Organizations and the military services can set the conditions for preventing financial hardship, and for increasing awareness of and comfort in accessing existing resources when financial challenges emerge. Doing so requires removing identified barriers and addressing systemic causes of chronic military spouse employment.

Recommendations provided in the November 2020 report continue to be relevant:

- De-stigmatize help-seeking behavior among both those who need help and those who facilitate it
- Increase awareness of available resources, especially those offering no-interest loans or grants
- Reduce or eliminate chain of command involvement in procuring financial assistance wherever feasible

The results of this poll also indicate that while the overall financial situation may be improving for many families, for those who do have a current need for immediate financial assistance, the situation may be worsening. Spouse employment challenges continue to erode active-duty families' financial well-being, and respondents who need immediate help perceive greater barriers to obtaining it.

Recommendations stemming from this poll's findings are:

Tailor programs and communications outreach strategies to address the different needs of active-duty, National Guard, and veteran families. Different types and levels of need across these groups suggest that a one-size-fits-all approach will be less successful than one that is more targeted.

Continue to invest in programming and organizational reforms to support sustainable military spouse employment. A growing body of Blue Star Families research builds a direct link between military spouse employment and broader financial well-being; however, root causes of chronic unemployment and underemployment have been exacerbated by the COVID-19 pandemic. Upstream solutions, such as addressing child care costs, will alleviate spouse employment challenges and support families' financial readiness.

Invest in connecting with difficult to reach populations. Respondents who report the need for immediate financial assistance also report greater barriers to obtaining it across a wider variety of barriers. While removing these barriers will encourage increased usage in the long term, perceptions about their existence (or lack thereof) may take longer to reverse. For this reason, in the short term, reaching high-need populations may require more work and thus a greater investment of time and energy.

Methodology

Data Collection and Sampling

Fielding for the March 2021 Financial Pulse Check commenced on March 1 and ended on March 16 utilizing GetFeedback (www.getfeedback.com), a web-based surveying platform. Participant recruitment included direct email, social media advertising, organic social media, and distribution through various partner organizations. Participant recruitment targets were set to assess needs among National Guard and junior enlisted families, and to increase the racial and ethnic representation of the survey sample. This convenience sample

is not generalizable to the general military-connected population and over-sampled White, non-Hispanic, and female respondents. Polling occurred during tax season, followed distribution of the second round of stimulus payments (authorized December 27, 2020), and immediately prior to the authorization of the third round of COVID-19 stimulus payments (March 11, 2021), which may have influenced responses.

Data Analysis & Limitations

An assessment of the differences across variables occurred within and between subgroups, including active-duty families, veteran families, National Guard families, and caregiving families. Demographic variables include employment status, race and ethnicity, and LGBTQ+ self-identification, among others. Not all results have been included herein based on limitations presented by the sample (e.g., response rates) and/or space. Seventy-eight percent of counted respondents completed the entire poll, and all responses were included in the analysis, regardless of poll completion. For that reason, descriptive statistics reflect the frequencies and percentages of respondents who provided a response to a specific question.

Some questions allowed for multiple response selections; therefore, some percentages may compute to greater than 100%. In cases where a respondent could only select a single response option, rounding may account for any tabulations equating to greater than 100%. Comparisons to the November 2020 poll are not exact and should be interpreted as indicators of possible changes due to differences in the composition of each poll's sample (each poll was conducted separately, and respondents are not part of a broader survey panel).

Dedication: For Dave Reaney whose powerful questions about military hunger inspired MAZON to seek answers, and to the brave men and women who shared their stories about food insecurity.

This report would not have been possible without the extraordinary research and writing skills of Liza Lieberman and Cara Herman.

In 2012, MAZON first became aware that there was an alarming number of currently serving military families struggling with food insecurity. Little noticed and often deliberately obfuscated, it was a persistent problem for which there were readily available solutions, but little political will to realize those solutions.

Though for many years food pantries provided emergency assistance to low-income active duty families on or near almost every single military base across the country, MAZON recognized that the failure by the charitable food sector, the media, and public officials to acknowledge and address the underlying issues contributing to food insecurity for military families perpetuated the problem.

Listening to and learning from servicemembers, military spouses, direct service providers, and organizations that prioritize the needs of military families, MAZON turned its newfound awareness into action. Analyzing existing data, anecdotal experiences, and a review of the historical response, a picture began to emerge of not only what was needed, but what was possible. When MAZON began to raise this issue with military leadership, policymakers, and other advocates, we were met with an avalanche of criticism that was unrivaled by any of our other advocacy efforts. While dismayed, we were never discouraged — it is the role of an advocate to raise the truth, no matter how uncomfortable it makes those in power — in order to secure justice for those in need.

MAZON prioritized a broad-based, flexible, and immediate response to needs that have been too long unaddressed. Securing a response proved to be complex and frustrating, but this only deepened our resolve. As we posited solutions, we were turned away by those in authority, who either disclaimed responsibility or raised specious arguments. In 2019, MAZON designed the “Military Family Basic Needs Allowance” as a simple yet powerful program that could lay the foundation for building real food security for all currently serving military families.

While the Military Family Basic Needs Allowance has also met resistance, every year since it was conceived, it has gained support from military families, military service organizational partners, anti-hunger advocates, and a growing chorus of elected officials.

As we anticipate a new path forward to enact this proposal and explore new efforts to realize our goals to end food insecurity among military families, we continue to learn from what we’ve done, when we succeeded, and when success eluded us. We will continue to lead the national effort to ensure that our policymakers address military hunger so that no family is left behind.

Sincerely,

Abby J. Leibman

PRESIDENT & CEO
MAZON: A Jewish Response to Hunger

All across America, food banks are experiencing unprecedented demand. Families struggling to put food on the table during the COVID-19 pandemic are turning to food pantries, charities, and federal benefits as they endure the painful reality of hunger. Among those seeking help are military families who don't know where their next meal will come from. Servicemembers who have enlisted to fight for their country, already sacrificing so much, are struggling to feed themselves and their families.

This is not a new problem. Sadly, even before the COVID-19 pandemic and ensuing economic crisis, military families faced food insecurity. These currently serving members of the Armed Forces — often junior-enlisted servicemembers (typically enlisted ranks E-1 through E-4) with multiple dependents — have turned in desperation to emergency assistance for years, surviving with the help of the food pantries that operate on or near every military installation in the United States. At Camp Pendelton alone, there are four pantries that serve the base community,

each of which routinely assist hundreds of military families every month. Due to the lack of transparency from the Department of Defense (DoD) in collecting data on food insecurity among servicemembers and their families, and their reluctance to publicize any information they already have access to, the true scale of this crisis is unknown. However, the data that is publicly available from both government and military interest group surveys indicate that the scope of the crisis is broad and affects military families across the country.¹ This matches anecdotal accounts reporting increases in the number of military families seeking assistance to put food on the table.

This report is based on the expertise and experience of MAZON: A Jewish Response to Hunger — a national nonprofit organization fighting to end hunger among people of all faiths and backgrounds in the United States and Israel — after nearly a decade of exploring, understanding, and developing solutions to end military hunger.

OUR KEY FINDINGS INCLUDE:

- At least part of the problem stems from an unintended barrier to assistance for struggling military families — counting a servicemember's housing allowance as revenue in determining eligibility for federal nutrition programs like SNAP (formerly food stamps).
- Junior-enlisted members are more diverse in race, ethnicity, and gender than higher military ranks. They are also supporting families at much higher rates than previous cohorts of servicemembers. The Pentagon has not adequately adjusted the base salary to reflect the reality of our modern military force.
- The circumstances that give rise to food insecurity among military families are complex, yet simplistic responses based on unfounded stereotypes are often lifted up ahead of more meaningful responses.
- In the last year, COVID-19 has exacerbated the unique financial challenges of military families such as high rates of spousal unemployment, access to affordable childcare, and frequent relocation.

TO ENSURE THAT ALL INDIVIDUALS WHO ENLIST TO SERVE HAVE ENOUGH FOOD TO FEED THEIR FAMILIES, MAZON MAKES THE FOLLOWING RECOMMENDATIONS:

- 1.** The administration must include the Military Family Basic Needs Allowance in President Biden's Fiscal Year 2022 (FY22) Budget Request, and Congress must prioritize this provision in its FY22 National Defense Authorization Act (NDAA).
- 2.** The administration must take executive action to ensure that a servicemember's Basic Allowance for Housing (BAH) does not count as income in determining eligibility for federal nutrition safety net programs.
- 3.** Federal agencies — including DoD, the U.S. Department of Agriculture (USDA), the U.S. Department of Homeland Security (DHS), and the U.S. Department of Veterans Affairs (VA) — must collaborate to share data and resources about food insecurity among military families to find solutions.
- 4.** Congress must study and document, in collaboration with the administration, the full scope of military hunger and publish comprehensive data.
- 5.** Congress should re-examine military pay levels, acknowledging that the composition and needs of America's military have changed significantly over time.
- 6.** Anti-hunger advocates, government agencies, community organizations, and media outlets must reset the narrative around hunger and address the persistent shame and stigma that prevents so many Americans — especially members of the military and military families — from seeking the nutrition assistance they need.

For 36 years, MAZON: A Jewish Response to Hunger has been fighting to end hunger among people of all faiths and backgrounds in the United States and Israel. MAZON (which means “sustenance” in Hebrew) is a leader in the national anti-hunger field, building consensus among the emergency food system in the U.S. that structural change, and working toward that change, is critical to ending hunger.

Jewish values ground and guide MAZON’s approach. Centering the importance of *tzedek* (pursuing justice) and *b’tselem elohim* (respecting the inherent dignity of every person), we empower individuals and communities to address the unjust systems that allow hunger to persist. We educate and engage Jewish community leaders and congregations around the country, working together to fight for what we know is possible: systems built on wisdom, compassion, mutual support, and meaningful opportunity.

MAZON’s legacy of seeding, supporting, and strengthening the anti-hunger movement has uniquely positioned us to identify and explore problems that have previously been overlooked or ignored. This includes the unique challenges and barriers facing military families, as well as veterans, Native Americans, single mothers, LGBTQ older adults, and Americans in Puerto Rico.

Nearly ten years ago, our partners in the charitable food network shared concerns about the uptick in the number of military families turning to them for food assistance. Across the country, servicemembers were — and still are — showing up at food pantries, sometimes in uniform, seeking help to feed their families. While many food pantries and other direct service providers have responded by developing specific and innovative programs to assist military families, most of these organizations are strapped by increasing demands for services in general and have limited capacity to specifically address the needs of military families; they are not focused on long-term solutions but rather provide short-term limited relief.

Clearly, we were alarmed, and we immediately committed to investigate the problem. We conducted an exhaustive search for accurate data from federal agencies including DoD, USDA, and VA, as well as Congress and direct service providers. We found that the hunger among military families is incredibly complex. Although often hidden, it is so prevalent that food pantries operate on or near every military installation in the United States. We also determined that an outdated and confusing federal law actually denies military families access to safety net programs that could help them put food on the table.

“Food pantries operate on or near every military installation in the United States.”

In the last decade, MAZON has prioritized solutions to address military hunger for Congress and the executive branch. Our policy experts have written bills that were introduced in both chambers of Congress, sought administrative action, testified before multiple congressional committees, cultivated media attention, and hosted summits to educate and empower partners from military service organizations and anti-hunger organizations. We have moved the needle. However, the problem persists, and sadly it has only gotten worse as the number of Americans experiencing hunger — including those in the military — has skyrocketed in the wake of the COVID-19 pandemic.

Today, MAZON remains as committed as ever to pursuing viable solutions to military hunger. Those who serve to defend our great nation and fight for our freedom deserve better. Even one hungry military family is too many.

UNDERSTANDING MILITARY HUNGER

“I will not stand by and watch as our military is permitted to erode to the breaking point due to the President’s lack of foresight and the Congress’ lack of compassion. These military men and women on food stamps — our soldiers, sailors, airmen, and Marines — are the very same Americans that the President and Congress have sent into harm’s way in recent years in Somalia, Bosnia, Haiti, Kosovo, and East Timor. They deserve our continuing respect, our unwavering support, and a living wage.”

— Senator John McCain, speaking on the Senate floor in April 2000

Historical Context

The context for today’s scope of military hunger goes back decades.

In the 1990s, news outlets reported several stories about military families participating in the food stamp program. Military and elected officials were very concerned about the optics of these news stories. However, some leaders chose to address the surface-level optics instead of addressing the root of the problem.

The late Senator John McCain, then the senior Senator from Arizona, spoke often about “ending the food stamp army,” even introducing a bill called the “Remove Service Members from Food Stamps Act of 2000.” In a campaign event that year, McCain declared it “unconscionable that the men and women who are willing to sacrifice their lives for their country have to rely on food stamps to make ends meet.”²

In 2000, Senator McCain played a vital role in creating the Family Subsistence Supplemental Allowance (FSSA), which had the express purpose of transitioning military families off food stamps (in 2008, the food stamp program became the Supplemental Nutrition Assistance Program, or SNAP). Unfortunately, the structure of FSSA was flawed from the start. The program failed to exclude the BAH as counted income

for determining eligibility. Furthermore, to apply for FSSA benefits, a servicemember had to go through the base chain of command, which deterred them from seeking the support they needed out of fear of telling a commander that their family was struggling financially. Such an admission could not only result in negative treatment and performance reviews. It could jeopardize security clearance and damage career prospects as such members were viewed as somehow vulnerable. This exacerbated the stigma and shame that often exists around seeking assistance from federal safety net programs, and FSSA participation numbers were very low.

As part of the FY 2013 NDAA, Congress created a Military Compensation and Retirement Modernization Commission (MCRMC), which later recommended that Congress sunset the FSSA program and instead direct military families toward SNAP. MAZON was the only anti-hunger organization to weigh in directly with MCRMC, urging that Congress instead adopt structural reforms to FSSA because we felt that with improvement, it could be more readily accessed by, and responsive to, military families.³ In 2015, MAZON submitted testimony and sent letters imploring DoD Secretary Ashton Carter to reform FSSA in several meaningful ways, including moving the application process out of the base chain of command, excluding the BAH as counted income for determining eligibility,

UNDERSTANDING MILITARY HUNGER

“I’m shocked that so many military families are standing in line at the food pantry because they really need help. Many of us struggle for months before finding out that there are services for us, and then it’s pretty much word of mouth.”

— Ashley, a military spouse whose family is stationed in San Diego, California

and increasing the income threshold. However, Congress and the Obama administration chose to allow the program to sunset domestically in 2016.⁴

In the five years following 2016, neither Congress nor the Obama, Trump, or Biden administrations have taken additional action to provide assistance to military families facing food insecurity. MAZON has repeatedly recommended proposals that would help these families, as outlined later in this report, but federal officials have repeatedly turned their backs on these proposals.

At MAZON’s request, Members of Congress sought a 2016 report by the Government Accountability Office (GAO) entitled “Military Personnel: DOD Needs More Complete Data on Active-Duty Servicemembers’ Use of Food Assistance Programs.”⁵ The report detailed military hunger, outlining specific recommendations for Congress and the Pentagon. Following a comprehensive review, the nonpartisan government researchers noted that DoD does not collect data about servicemembers who participate in federal nutrition assistance programs or are at risk of food insecurity, nor do they coordinate with USDA to prevent military families from going hungry.

In the five years since the GAO report was published, the Pentagon has taken no action to thoughtfully

understand nor address this problem. GAO explicitly recommended that DoD “coordinate with USDA to leverage its access to data on active-duty servicemembers and their families who use its programs and services and consider outreaching to other organizations that have data on servicemembers’ use of food assistance.”⁶ To date, there has been no official public response.

Meanwhile, the situation has grown more dire. In the past year, servicemembers have stepped up to help deliver food to those newly facing hunger in the wake of COVID-19, even as many of their own families are also struggling.

Military Families Face Unique Challenges

The face of America’s military has changed. In recent decades, the demographic make-up of the military’s enlisted personnel has shifted from predominantly single, 18-year-old men to much more diverse troops. Today’s military is comprised of men and women representing a wide array of socioeconomic, racial, and ethnic backgrounds,⁷ including individuals who support families.⁸ However, military compensation policy has not adequately kept pace with the changing needs of enlisted servicemembers or the cost of living. Our country’s military pay structure was not designed

“Every gun that is made, every warship launched, every rocket fired signifies, in the final sense, a theft from those who hunger and are not fed, those who are cold and are not clothed. This world in arms is not spending money alone.”

— President Dwight D. Eisenhower, April 1953

UNDERSTANDING MILITARY HUNGER

to support junior-enlisted servicemembers and their families, particularly not those living in high-cost areas. Compensation levels for junior-enlisted ranks are no longer consistent with the household structure and needs of military families. Furthermore, military lifestyles impose unique costs and challenges, which are often exacerbated for these junior-enlisted, low-ranking, and low-paid servicemembers with families.

Like many Americans, military families often rely on two incomes. However, the unemployment rate among military spouses has been exceptionally high for many years, even before the pandemic, due to specific demands placed on military families. This year, as national unemployment rates skyrocketed during the COVID-19 crisis, the toll hit military families particularly hard. Military spouses, who faced a 24% unemployment rate and even higher rates of underemployment before the pandemic, now report desperate levels of income loss. Surveys conducted during the pandemic estimate that military spousal unemployment rates exceed 30%.⁹ One survey found that 18% of military spouses who were working prior to the COVID-19 crisis have lost their job or are unable to work as a result of the pandemic.¹⁰ And yet, these rates do not take into account significant rates of underemployment and employment in jobs or positions below a military spouse's professional training and/or experience.

Military spouses who do work tend to be unable to accrue seniority in the workplace due to frequent moves between stations, and they are often among the first let go and the last to be rehired in a weak economy. Careers that require licensure can delay or stymie their earning capacity, given that state licenses often vary and they have little control over when or where their family will be stationed.

The cost of relocation often falls heavily on military families as well. These families go where they are ordered, often every two to three years, which may mean moving to a location with higher cost of living, limited access to affordable childcare, and/or away

“Being in a military family is challenging in ways most people can never imagine. You make so many sacrifices: missed time with loved ones, not having a constant place to call home, job security for dependents, and so much more. I don’t want another military family to worry about food the way we did.”

— Erika, a former military spouse, during testimony before the House Agriculture Committee in January 2016

from networks of community and family support. DoD will reimburse the families for some relocation-related expenses, but not all of them, which can drain military families of savings and leave them with little financial cushion. Additionally, military spouses will often have to find new employment opportunities upon relocation, which contributes to the high unemployment rates.

Built-in Barriers to Nutrition Assistance

Currently, every servicemember who lives in off-base or privatized military housing is entitled to a BAH to pay for housing that is managed by a private company or in the surrounding community. If a servicemember and their family lives in military base housing, the money is automatically deducted from the servicemember's paycheck. For those who live off base or in privatized housing, the BAH must go toward housing and utilities, and it covers an estimated 95% of housing costs. Military families are often left with little to no money to spend on other necessities of living, like food.

Although servicemembers may never see it in their bank accounts, BAH is considered income for

UNDERSTANDING MILITARY HUNGER

determining SNAP eligibility, which prevents many struggling military families from accessing this critically important — and often life-saving — federal benefit. By contrast, federal housing subsidies for civilians are not counted as income for determining SNAP eligibility, and servicemembers who receive in-kind housing on base do not have the value of that housing counted as income for determining SNAP eligibility. The IRS also does not treat BAH as income and it is not calculated as a part of a servicemember's Adjusted Gross Income, nor is it treated as income for determining eligibility for most federal assistance programs.

Given the remarkably low incomes for low-level enlistees, it is perfectly understandable that a servicemember with a spouse and two kids would need assistance from SNAP in order to afford enough

food. This is particularly true for those living in areas where housing costs are high, but their family requires more space than offered on base for junior-enlisted servicemembers. Living off-base or in privatized (on-base) housing is increasingly common, especially for those with families. However, two servicemembers with the same base pay and family composition could have different SNAP eligibility status because of where they live — only the one who lives on base will be eligible for SNAP.

BAH is an allowance, not income, as it is specifically intended to provide adequate and safe housing for military families. Although it is an addition to a servicemember's base pay, BAH is tax-exempt and it is not included on the servicemembers W-2 as income. If the BAH is not considered as income for tax purposes, it should not be considered as income for SNAP purposes.

“I’m doing all I can and serving my country, and I have to worry about how I’m going to buy food? Recently when we applied for food stamps we were denied because our BAH counts as income. The only reason we are even getting by is because our neighbor told us about the food distributions. I don’t think the government protects military families enough because so many of us need to go to food distributions run by outside groups. We are in the only job where we have to give up our lives to protect the Constitution of the United States, so shouldn’t the government make sure we can properly feed our families?”

— Gabriel, a Marine whose family is stationed in southern California

Responding to Common Pushback

When MAZON first started exploring the scope of military hunger, one large hurdle became abundantly clear: While government officials seem to accept that food insecurity can be a problem for some military families, without public data showing the pervasiveness of military hunger, most believe that the problem affects an insignificant number of servicemembers. The Pentagon has countered MAZON's concerns and proposals, saying that “military members receive appropriate compensation already” compared to counterparts in the private sector.¹¹ But the fact that we have food pantries that serve military families across the country says otherwise.

Some policymakers claim that food insecurity among military families is a matter of personal financial management. A common notion suggests that if a military family faces hunger, they must spend money irresponsibly and not budget well. Sometimes critics share stories of young servicemembers who excitedly spend their first paycheck on a new car, evoking

UNDERSTANDING MILITARY HUNGER

“The Department of Defense’s response to military hunger has been to put it politely, lacking. Their description of this problem as minimal and their suggestion that these members take financial literacy training is not only insulting and condescending, it also does nothing to help the problem. If anything, their response helps to exacerbate this problem by keeping the barriers of shame and stigma to assistance intact. Our Nation’s servicemembers are willing to fight and die for our country and we should be providing them with the funds and resources necessary to ensure that they can feed their families.”

— Congressman Don Young of Alaska, in a July 2019 statement

offensive myths and tropes of a modern-day “welfare queen.” However, such a dismissal rooted in harmful stereotypes and stigmas about poverty masks the struggles military families face.

In a private meeting between MAZON and congressional staff members, senior-level staff of the Senate Armed Services Committee claimed that servicemembers equate food pantries to discount grocery stores and utilize both simply as a matter of maximizing purchasing power. Let’s be clear: those who face food insecurity and turn in desperation to food pantries are not bargain hunting — they are trying to survive. Servicemembers and military spouses regularly say that although they were reluctant to visit a food pantry, they had no other option. Particularly for military families, there is a deep and persistent sense of shame and embarrassment in needing help, but they do what is necessary to feed their families.

Lack of data also enables policymakers to downplay and downright ignore the shameful problem of military hunger. Food pantries and other direct service providers do not inquire about the circumstances of those who use their services and they rarely differentiate between active duty servicemembers, veterans, National Guard, and members of the Reserves. Despite being called upon formally by GAO five years ago, and through

“When I reluctantly applied for SNAP, I was incredibly embarrassed that I was even having to apply and then when they told me that I didn’t qualify because they were counting our housing allowance as part of earned income, all I remember next was just sobbing. I don’t even remember leaving the office because I had been turned down from something that I felt I didn’t even want to be asking for in the first place. It was the very last ditch effort for us even asking for it.”

— Erika, a former military spouse, whose family was stationed in Bremerton, Washington

report language included in several previous NDAA bills, the Pentagon has neither collected nor provided adequate data about how many servicemembers and their families are at risk of food insecurity, including how many are impacted by the BAH barrier to nutrition assistance.

UNDERSTANDING MILITARY HUNGER

However, even in the absence of formal data, anecdotal evidence suggests widespread hunger among military families:

- Pentagon records obtained by NBC News through a Freedom of Information Act request give just a hint of the problem. The data shows that during the 2018-19 school year, one third of children at DoD-run schools on military bases in the United States — more than 6,500 children — were eligible for free or reduced-price lunches. At one base — Georgia’s Fort Stewart — 65% were eligible.¹²
- According to the Blue Star Families 2018 Military Families’ Lifestyle Survey, 7% of military family respondents indicated that someone in their household faced food insecurity in the past year, and 9% of military family respondents indicated that someone in their household had sought emergency food assistance.¹³
- Authors of the 2016 GAO report obtained data from DoD Education Activity (DODEA), which operates schools on military installations across the country, and found that 26% of students in military families were eligible for free meals and 25% were eligible for reduced-price meals.¹⁴

The Cost of Inaction

Policy reforms are necessary to solve the challenges and respond to the needs of military families facing hunger. Military suicide rates are on the rise,¹⁵ and there is a clear correlation between food insecurity and suicide.¹⁶ In addition to being the right thing to do, addressing military hunger is a matter of readiness, retention, and recruitment.

Every day that goes by without a solution to military hunger is dangerous for our country. Troops cannot be fully present if they are worried about their children’s next meal and servicemembers cannot focus on the mission at hand if they are concerned about

“Addressing military hunger is a matter of readiness, retention, and recruitment.”

providing the basic needs for their family. Ensuring that servicemembers can provide the basic needs for their family members eliminates unnecessary stress and anxiety and contributes to optimal mission readiness.

Furthermore, servicemembers cannot stay in the military if doing so means they are unable to afford food for their family. By not adequately serving those who serve our country, our government risks losing excellent talent in our military ranks. This is particularly a concern for servicemembers of color, who are disproportionately represented in the junior-enlisted ranks and underrepresented among military officers and leadership. The Pentagon is “dedicated to honoring the women and men who serve this country by ensuring them the same promotion and developmental opportunities regardless of race, color, religion, sex, or national origin.”¹⁷ To advance this shared goal of increasing diversity in military leadership, it is essential that we adequately support junior-enlisted servicemembers and enable them to fully meet their family’s basic needs so that they don’t look outside of the military for career options with greater economic stability.

Lastly, ensuring basic needs for military families — including for household food purchases — will lead to better nutrition and improved health outcomes, reducing the likelihood of chronic diet-related health conditions. Positive health outcomes for children in military families — who are more likely to serve in the military than children in non-military families — means that more future enlistees will be physically fit to serve.

As a leader in developing solutions that seek to address the scope and complexity of military hunger, MAZON called on USDA in 2012 to issue an administrative action explicitly to exclude BAH from income calculations for SNAP eligibility. However, USDA demurred, opining that this could not be done because it would require statutory change through federal legislation.

Although MAZON pressed USDA to initiate a statutory change, USDA continued to deny it had the authority to act. In response, MAZON partnered with California Congresswoman Susan Davis to craft the “Military Hunger Prevention Act,” aiming to remove BAH from a servicemember’s income for purposes of SNAP eligibility. The proposal garnered bipartisan support in both the House and Senate. In testimony supporting the legislation before the House Agriculture Committee’s Nutrition Subcommittee in January 2016, Abby J. Leibman, MAZON’s President & CEO, argued: “Those who make great personal sacrifices in service to our country should not have to struggle to provide regular, nutritious meals to their families.”

Congressman Mike Conaway, then Chair of the House Agriculture Committee, agreed to address the issue in the 2018 Farm Bill, but he did not seek advice nor

“Of all the sacrifices our military families make, the ability to put food on the table just should not be one of them. For a servicemember who was deployed overseas, the last thing they need to be worrying about is whether their loved ones are going hungry. We should be able to meet the basic needs of our military families.”

— Congresswoman Susan Davis, during a briefing in October 2020

counsel from leaders like MAZON about how to craft the provision. Conaway’s deeply partisan Farm Bill legislation rejected MAZON’s bipartisan solution in favor of a confusing provision to exclude only the first \$500 of a servicemember’s BAH from counting as income when determining SNAP eligibility. This arbitrary proposal would have only added an additional layer of complication, falling far short of solving the real problem. In the end, the provision was stripped from the final Farm Bill that was enacted into law, resulting in no congressional action to address military hunger.

In 2019, MAZON created a new proposal to address military hunger through the NDAA process. The past two NDAA bills passed by the House included MAZON’s proposed provision to establish a new allowance program for certain servicemembers called the “Military Family Basic Needs Allowance.”

In many ways, this new program will resemble FSSA, but with three critical differences:

- 1. Military personnel will be automatically notified of eligibility based on determined compensation levels.**

Servicemembers will receive notification of potential eligibility for this allowance in a streamlined and efficient manner, eliminating barriers to participation we have seen in the past like shame, stigma, and fear of retribution. Defense Finance and Accounting Services (DFAS) will automatically notify all servicemembers whose base pay is at or below a certain threshold — ideally 200% of the Federal Poverty Level, which is the upper gross income eligibility limit for SNAP.

The servicemember will have to provide evidence of any additional income that might place them above the threshold of eligibility. The servicemember will also have the right to opt-out of receiving the added allowance. If they do qualify and choose to participate, the servicemember will begin receiving the allowance automatically, and

the process will be reviewed again annually if not more regularly.

2. BAH will not be counted as income in determining eligibility and benefit amounts for this allowance.

Including the BAH as “income” clearly treats our troops differently than the civilian population and their counterparts who live on base. For civilians, the value of housing assistance subsidies and benefits are not counted as income in determining SNAP eligibility. Current SNAP policy presents a harmful and dangerous barrier that must be avoided in the new allowance program.

3. Servicemembers will proactively receive information about budgeting and additional federal assistance programs.

When a servicemember is notified by DFAS that they might be eligible for this allowance, they will receive materials and resources about financial management as well as other federal assistance programs for which they may also be eligible. These resources will help military families navigate the stresses, stigmas, and challenges of living on a tight budget.

Importantly, due to the anomaly of how Coast Guard operations are authorized, a separate provision must be enacted through DHS to ensure inclusion of these families.

MAZON is confident that creating this common-sense allowance will provide strategic and meaningful support to military families facing food insecurity, while also accounting for the unique challenges and expenses associated with military service. Given that servicemembers of color are overrepresented among low-income junior-enlisted ranks (and underrepresented among officers and military leadership), the Military Family Basic Needs Allowance is a step toward correcting long standing injustice and inequity by providing assistance to struggling military families, who are disproportionately people of color.

The Congressional Budget Office estimates that the average allowance for a junior-enlisted servicemember would be about \$400 per month — a reasonable amount to ensure the nutrition and wellness of our troops and their families, particularly within the context of the Pentagon’s total budget.

“Despite consistent pay increases in recent years, some military families are still struggling to make ends meet, and even report food insecurity, lack of quality child care, and poor financial health. That is totally unacceptable. Military servicemembers and their families risk everything for our country — they have earned a guaranteed living wage. As president, I will work aggressively to update the federal workforce compensation framework for servicemembers, so that the government leads the way in ensuring that hard-working families can attain a middle class life, and I will support legislation that will, in the meantime, provide an additional allowance for military families living below the poverty line.”

— President Joe Biden, during the 2020 Presidential campaign¹⁸

HOUSEHOLD EXAMPLES OF MILITARY FAMILY BASIC NEEDS ALLOWANCE BENEFITS, BASED ON CURRENT MILITARY PAY SCALE¹⁹ AND FEDERAL POVERTY GUIDELINES (FPG)²⁰

EXAMPLE 1

E4 / 4 Years of Service - Household of 4 (3 dependents)

Base pay = \$2,634.60 / month - \$31,615.20 / annual

130% FPG for household of 4 = \$34,060

Difference between 130% FPG and annual base pay = \$2,444.80

Monthly difference / benefit amount = \$203.73

EXAMPLE 2

E6 / 6 Years of Service - Household of 6 (5 Dependents)

Difference Base pay = \$3,354.90 / month - \$40,258.80 annual

130% FPG for household of 6 = \$45,708.00

Difference between 130% FPG and annual base pay = \$5,449.20

Monthly difference / benefit amount = \$451.10

EXAMPLE 3

E2 / Less Than 2 Years of Service - Household of 4 (3 Dependents)

Base pay = \$1,942.50 / month - \$23,310 / annual

130% FPG for household of 4 = \$34,060.00

Difference between 130% FPG and annual base pay = \$10,750

Monthly difference / benefit amount = \$895.83

1. The administration must prioritize the Military Family Basic Needs Allowance in President Biden's FY22 Budget Request, and Congress must prioritize this provision in its FY22 National Defense Authorization Act.

President Biden must support the Military Family Basic Needs Allowance and include funding for it in his FY22 Budget Request, and the House and Senate Armed Service Committees must include it in both chambers' versions of the FY22 NDAA. Leaders of those committees must prioritize this measure in the final bill. Additionally, support for a similar provision to support low-income Coast Guard families must be included through the Homeland Security Appropriations process. It is clear that this targeted and temporary assistance program will be structured in a streamlined and efficient manner to eliminate common barriers to nutrition assistance including shame, stigma, and fear of retribution.

To effectively implement and administer the Military Family Basic Needs Allowance, there must be a permanent single point of contact at DoD to coordinate with other agencies, Congress, and civil society partners like Mazon. The executive branch and Congress must continue to emphasize that permanent solutions to military hunger are an urgent national priority and fundamentally influence recruitment, retention, and morale among the Armed Services.

2. The administration must take executive action to ensure that a servicemember's BAH does not count as income in determining eligibility for federal nutrition safety net programs.

President Biden and USDA Secretary Vilsack must take administrative action to exclude the BAH as income for all federal nutrition programs including SNAP, WIC, and free and reduced-price school meals. This would ensure that military families are not prevented from qualifying for assistance. Now more than ever, struggling military families must be able to access these programs so that they do not have to turn in desperation to food pantries simply because they cannot get the government assistance they need.

3. Federal agencies including DoD, USDA, DHS, and VA must work collaboratively to share data and resources about food insecurity among military families and work together to proactively find solutions.

Federal agencies including DoD, USDA, DHS, and VA must work together to proactively inform those transitioning from military service about the availability of nutrition assistance. In particular, the VA should integrate information about federal nutrition programs like SNAP as part of the Transition Assistance Program and other veteran outreach efforts.

4. Congress must study and document, in collaboration with the administration, the full scope of military hunger and publicly publish comprehensive data.

Despite strong anecdotal evidence, food insecurity among military families is not adequately documented or monitored by government agencies, and the problem has long been obscured and ignored. Data are often withheld from the public or are excessively difficult to obtain. Available data are often contradictory, out of date or simply incomprehensible.

While the recently released 13th Quadrennial Review of Military Compensation (QRMC) documented SNAP usage,²¹ DoD asked the wrong question. Rather than how many servicemembers are accessing SNAP, we must explore how many families are struggling without the assistance of federal safety net programs, quietly visiting food pantries on our near military bases.

5. Congress must re-examine military pay levels, acknowledging that the composition and needs of America's military have changed significantly over time.

Policymakers must consider raising the base pay rates for junior enlisted servicemembers, to acknowledge that the composition of our military has changed significantly in recent decades, and that personnel with families face unique financial challenges.

6. Anti-hunger advocates, government agencies, community organizations, and media outlets must reset the narrative around hunger and address the persistent shame and stigma that prevent so many Americans — especially members of the military and their families — from seeking the nutrition assistance they need.

Collectively, we must acknowledge that there is often an unspoken stigma associated with accepting government benefits, particularly among military ranks. Some servicemembers are understandably resistant to ask for help because of the shame of their situation and the fear of retribution. This attitude can persist as a servicemember transitions into civilian life, clearly contributing to the related barriers to assistance among America's veterans.

The broader anti-hunger community must work together to prioritize a justice-centered approach to ending military hunger that appropriately centers systemic changes and policy priorities. Leaders in government, as well as the press, can play an important role in moving the public's focus away from charities straining to meet the needs of people facing hunger. This will allow us to ensure that public assistance programs will appropriately fulfill our collective responsibility to care for the vulnerable, support people in times of need, and expand opportunities so that all Americans can reach their full potential.

It is unconscionable that salaries earned by enlisted personnel in this country are not sufficient to meet their families' needs. Those who make significant sacrifices for our country should never go hungry.

We must fulfill our collective responsibility to care for the most vulnerable, support them in times of need, and expand opportunities so that all can reach their full potential. To do so, implementing the recommendations in this report will make a true difference. However, we know we must continue to strive for systemic change that addresses the structural problems that allow hunger to continue, especially among military families.

"In 1962, I took a leave from my teaching job in Pomona, CA to join my husband who was drafted. At that time, military personnel were not eligible for food stamps. I was 6 months pregnant, and we didn't have enough income to buy food for the whole month. I then resigned from my teaching position so that I could access all of the money from my pension account. A few months later, my full-term daughter was born with a low birthweight of 4 lb 12 oz and spent the first week of her life in an incubator. So thank you for all of your advocacy on behalf of food insecurity. In this land of plenty, there is no excuse for anyone to go hungry for even one day."

— Barbara Sarkany, in a note to MAZON in January 2021

The definition of key terms used in this report are listed below.

BAH: The U.S. government provides a Basic Allowance for Housing for active duty servicemembers to pay for housing on base or in the surrounding community. Previously called the Basic Allowance for Quarters, today the BAH amount is based on geography, pay grade, and number of dependents.

DoD: The U.S. Department of Defense — commonly referred to as “the Pentagon” — coordinates all agencies and functions of the government related to national security, including the military.

FSSA: The Family Subsistence Supplemental Allowance was created by Congress in 2000, with the express purpose of moving military families off food stamps.

GAO: The U.S. Government Accountability Office provides fact-based, nonpartisan reports to Congress on a regular basis.

MCRMC: The Military Compensation and Retirement Modernization Commission was created by Congress in 2012 to assess military compensation policies and issue budget recommendations.

QRMC: The Pentagon’s Quadrennial Review of Military Compensation, which most recently came out in December 2020.

SNAP: Supplemental Nutrition Assistance Program, formerly known as food stamps, is our country’s most important anti-hunger program, providing cash assistance specifically for food purchases to anyone who qualifies.

USDA: The U.S. Department of Agriculture oversees all government laws related to farming, forestry, rural economic development, and food, including federal nutrition programs like SNAP.

VA: U.S. Department of Veterans Affairs oversees all government functions related to America’s veterans, including healthcare, disability, education, and other benefits.

Nearly 1 in 8 households—and 1 in 6 households with children—experienced food insecurity in 2017, defined as limited or uncertain availability of nutritionally adequate and safe foods.¹ Food insecurity is often even more pronounced among households with individuals with acute or chronic medical conditions.²⁻⁶ Moreover, food insecurity is independently associated with a range of adverse health outcomes, including poorer control of diabetes mellitus, hypertension, depression and other major psychiatric disorders, HIV, and chronic lung and kidney disease, as well as poorer overall health status.⁷⁻¹⁴ Food insecurity also has been associated with increased health care costs and acute care utilization as well as increased probability of delayed or missed care.¹⁵⁻¹⁹

The relationship between food insecurity and poor health outcomes is a complex and often cyclic phenomenon (Figure 1). Poor nutritional status is fueled by limited access to healthful foods as well as increased reliance on calorie-dense and nutrient-poor “junk” foods, which are less expensive and often more readily available in low-income neighborhoods.^{5,20-24} These compensatory dietary patterns place individuals at higher risk for developing cardiometabolic conditions and for poor control of these conditions.^{5,8,9,12,25,26} Additionally, the physiological and psychological stressors of food insecurity may precipitate depression and anxiety or worsen existing mental health conditions, resulting in feelings of overwhelm and decreased self-management capacity.^{5,8,27-31} Food insecurity has further been associated with poor sleep, declines in cognitive function, and increased falls, particularly among the frail and elderly.³²⁻³⁴

Individuals experiencing food insecurity often report having to make trade-offs between food and other necessities, such as paying rent or utilities. Additional strategies to stretch limited resources include cost-related underuse of medication and delays in needed medical care.^{4,17,31,35} In a nationally representative survey among adults with at least 1 chronic medical condition, 1 in 3 reported having to choose between food and medicine; 11% were unable to afford either.³ Furthermore, the inability to reliably adhere to medication regimens that need to be taken with food can result in potentially life-threatening hypoglycemia (as can lack of food regardless of medication use).^{5,26,36} In addition to the more obvious risks of glucose-lowering medications, such as insulin and long-acting sulfonylureas in patients experiencing food insecurity, many drugs commonly used among nondiabetic adults such as ACE-inhibitors, β blockers, quinolones, and salicylates can also precipitate hypoglycemia, and food insecurity has been associated with experiences of hypoglycemia even among individuals without diabetes mellitus.^{32,37} In one study the risk for hospital admissions for hypoglycemia among low-income populations increased by 27% at the end of the month when food budgets were more likely to be exhausted.³⁸ Worsening health status and increased emergency department visits and hospitalizations may then result in lost wages and mounting medical bills, contributing to further financial strain and worsening food insecurity.

Prevalence and Importance of Food Insecurity Among US Veterans

Nearly 1.5 million veterans in the US are living below the federal poverty level (FPL).³⁹

An additional 2.4 million veterans are living paycheck to paycheck at < 200% of the FPL.⁴⁰ Veterans living in poverty are at even higher risk than nonveterans for food insecurity, homelessness, and other material hardship.⁴¹

Estimates of food insecurity among veterans vary widely, ranging from 6% to 24%—nearly twice that of the general US population.^{8,42-45} Higher rates of food insecurity have been reported among certain high-risk subgroups, including veterans who served in Iraq and Afghanistan (27%), female veterans (28%), homeless and formerly homeless veterans (49%), and veterans with serious mental illness (35%).^{6,32,43,46} Additional risk factors for food insecurity specific to veteran populations include younger age, having recently left active-duty military service, and lower final military paygrade.^{42,45-47} As in the general population, veteran food insecurity is associated with a range of adverse health outcomes, including poorer overall health status as well as increased probability of delayed or missed care.^{6,8,32,42-44,46}

Even among veterans enrolled in federal food assistance programs, many still struggle to afford nutritionally adequate foods. As one example, in a study of mostly male homeless and formerly homeless veterans, O’Toole and colleagues found that nearly half of those reporting food insecurity were already receiving federal food assistance benefits, and 22% relied on emergency food resources.³² Of households served by Feeding America food pantries and meal programs, 20% have a member who has served in the US military.⁴⁸

FEDERAL PROGRAMS TO ADDRESS FOOD INSECURITY

There are several important federal food assistance programs designed to help alleviate food insecurity. The Supplemental Nutrition Assistance Program (SNAP, formerly the Food Stamp program) is the largest federal food assistance program and provides low-income Americans with cash benefits to purchase food. SNAP has been shown to

FIGURE 1 Cycle of Food Insecurity and Poor Health^{5,15,19,31}

substantially reduce food insecurity.^{7,49} The program also is associated with significant decreases in cost-related medication nonadherence as well as reductions in health care costs and both acute care and nursing home utilization.^{16,50-54} Although nearly 1.4 million veterans live in SNAP-enrolled households, 59% of eligible veterans are not enrolled.^{43,55} Closing this SNAP eligibility-enrollment gap, has been a focus of recent efforts to improve long-term food security among veterans. There also are several federal food assistance programs for households with children, including the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) and school meals programs. Among federal nutrition programs for seniors, the Older American’s Act contains designated funding to support nutrition services for older adults, including congregate meal programs in community settings like senior centers, places of worship, and housing communities, and home-delivered meals through programs like Meals on Wheels.⁵⁶

VHA Response to Food Insecurity

The Veterans Health Administration (VHA) is the country’s largest integrated, federally funded health care system.⁵⁷ In November 2015, congressional briefings on veteran food insecurity organized by the national non-profit organization MAZON: A Jewish Response to Hunger and hosted with bipartisan support were provided to the US House

TABLE 1 Role of the Interdisciplinary Care Team in Addressing a Positive Food Insecurity Screen^{32,70}

Specialties	Suggested Roles
Medical assistants	If performing initial screening during intake, alert clinician to positive screen, as well as desired referrals, if applicable; and Offer relevant handouts or resource guides if available.
Clinicians	Screen for signs/symptoms of hypoglycemia; Review medication list, adjust when appropriate (eg, assess medication affordability/adherence, as well as medications requiring specific food availability or refrigeration; prioritize medications with lower hypoglycemia risk; consider prescribing glucose tabs); Assess for additional risk factors and comorbidities associated with food insecurity, including functional limitations, cognitive decline, depression/anxiety, obesity, poor appetite, unintentional weight loss, social isolation; Provide patient/caregiver education regarding hypoglycemia avoidance and treatment; Code for food insecurity (Z59.4: Lack of adequate food and safe drinking water); Consider adding food insecurity to the problem list; and Refer to other care team members as appropriate.
Dietitians	Conduct comprehensive assessment of nutritional status, needs, and barriers to obtaining/preparing nutritionally appropriate foods; Provide context-appropriate counseling and education regarding food intake and cost-sensitive meal strategies; Refer to relevant emergency and/or longer-term food resources, (eg, food pantries, soup kitchens, home-delivered meals, congregate meal programs); and Identify veterans requiring ongoing follow-up for nutritional needs.
Social workers	Assess short- and long-term food access needs as well as any additional social risk factors impacting food access (eg, transportation/housing/utility insecurity, social isolation, lack of cooking equipment); Assess veteran eligibility for potential additional VA benefits or services; Provide assistance and/or refer to relevant organizations that can provide assistance applying for SNAP benefits and other government assistance programs (eg, WIC, utility/ housing assistance, TANF, SSI, EITC, Medicaid) as applicable; Identify relevant patient assistance programs and/or Veteran Service Organizations; Refer to relevant emergency and/or longer term food resources (eg, food pantries, soup kitchens, home-delivered meals, congregate meal programs); and Identify veterans requiring continued follow-up to assess for ongoing resource need.
Registered nurse care managers	Discuss risk mitigation interventions with veterans who have experienced recurrent hypoglycemia; and Identify veterans requiring longitudinal case management to assess for ongoing needs and reinforce prevention/intervention strategies.
Pharmacists	Review medication list for prescriptions with high risk for hypoglycemia, medications requiring specific food availability or refrigeration, and/or prescriptions with high cost-share for which there is a less expensive therapeutic equivalent; and Adjust medications/discuss alternatives with prescribing clinician as indicated.
Occupational and/or physical therapists	Evaluate any functional limitations impacting a veteran’s ability to obtain/prepare food or feed themselves.

and Senate. As a result of these briefings, VHA chartered the national Ensuring Veteran Food Security Workgroup with a mandate to partner with governmental and nonprofit agencies to “focus on the issue of food insecurity, the identification of veterans at risk, the needed training of VHA staff and the coordination of resources and initiatives to support the veterans for whom we care.” Building off a pilot in US Department of Veterans Affairs (VA) Homeless Patient Aligned Care Teams (H-PACTs),³² VHA subsequently integrated a single-item food insecurity screening tool into the VA electronic health record (EHR) clinical reminder system (Figure 2). The clinical reminder, which was rolled out

across VA medical centers nationally in October 2017, provides an alert to screen all non-institutionalized veterans for food insecurity. To date, nearly 5 million veterans have been screened. When a veteran endorses food insecurity based on the initial screening question, a prompt appears to offer the veteran a referral to a social worker and/or dietitian. Positive screening results also should be communicated to the patient’s primary care provider. Depending on site-specific clinical flow, the reminders are typically completed in the outpatient setting either by nurses or medical assistants during intake or by providers as part of the clinical visit. However, any member of the health care team can complete the

clinical reminder at any time. As of September 2019, approximately 74,000 veterans have been identified as food insecure.⁵⁸

Addressing Food Insecurity

VHA has been a recognized leader in addressing homelessness and other social determinants of health through its integrated care and PACT delivery models.⁵⁹⁻⁶¹ The food insecurity clinical reminder was designed to facilitate a tailored, interdisciplinary approach to identify and address food insecurity. Interdisciplinary care team members—including medical assistants, clinicians, social workers, registered dietitians, nurse care managers, occupational or physical therapists, and pharmacists—are uniquely positioned to identify veterans impacted by food insecurity, assess for associated clinical and/or social risk factors, and offer appropriate medical and nutrition interventions and resource referrals.

This interdisciplinary team-based model is essential given the range of potential drivers underlying veteran experiences of food insecurity and subsequent health outcomes. It is critically important for clinicians to review the medication list with veterans screening positive for food insecurity to assess for risk of hypoglycemia and/or cost-related nonadherence, make any necessary adjustments to therapeutic regimens, and assess for additional risk factors associated with food insecurity. Examples of tailored nutrition counseling that clinical dietitians may provide include meal preparation strategies for veterans who only have access to a microwave or hotplate, or recommendations for how veterans on medically restricted diets can best navigate food selection at soup kitchens or food pantries. Resource referrals provided by social workers or other care team members may include both emergency food resources to address immediate shortages (eg, food pantries, soup kitchens, or vouchers for free lunch) as well as resources focused on improving longer term food security (eg, federal food assistance programs or home delivered meal programs). Importantly, although providing a list of food resources may be helpful for some patients, such lists are often insufficient.^{62,63} Many patients require active assistance with program enrollment either onsite

FIGURE 2 VA Electronic Health Record Food Insecurity Clinical Reminder

the day of their clinic visit or through connection with a partnering community-based organization that can, in turn, identify appropriate resources and facilitate program enrollment.^{63,64} Planned follow-up is also crucial to determine whether referrals are successful and to assess for ongoing need. Proposed roles for interdisciplinary care team members in addressing a positive food insecurity screen are outlined in Table 1.

VHA-COMMUNITY PARTNERSHIPS

In addition to services offered within VA, public and private sector partnerships can greatly enhance the range of resources available to food insecure veterans. Several VA facilities have developed formal community partnerships, such as the Veterans Pantry Pilot (VPP) program, a national partnership between Feeding America food banks and VA medical centers to establish onsite or mobile food pantries. There are currently 17 active Feeding America VPP sites, with a number of additional sites under development. Several of the VPP sites also include other “wrap-around services,” such as SNAP application assistance.^{65,66}

State Veterans Affairs offices⁶⁷ and Veterans Service Organizations (VSOs)⁶⁸ also can serve as valuable partners for connecting veterans with needed resources. VSOs offer a range of services, including assistance with benefit claims, employment and housing assistance, emergency food

TABLE 2 Selected Food Referral Resources for Veterans and Their Families^a

Programs	Description	More Information
Supplemental Nutrition Assistance Program (SNAP)	Monthly benefits for low-income households to purchase food at authorized grocery stores, farmers markets, and food retail outlets	www.fns.usda.gov/snap Local enrollment assistance resources, varies by area
SNAP Healthy Food Incentive Programs	Matches SNAP benefits spent on fruits and vegetables at participating locations	Varies by region
The Emergency Food Assistance Program (TEFAP)	Food distributed monthly via pantries, senior centers, and faith-based groups	www.fns.usda.gov/tefap/emergency-food-assistanceprogram-tefap
Veterans Service Organizations	Range of services, including assistance with benefit claims and emergency food assistance	www.va.gov/vso
Food pantries/food boxes	Free food and grocery items at specified locations, including certain VA medical centers through Veterans Pantry Pilot program	www.feedingamerica.org/find-your-local-foodbank
Soup kitchens	Free hot meals	Databases for local resources: www.211.org www.networks.whyhunger.org www.mealsonwheelsamerica.org/find-meals
Mobile produce vans	Provide access to free and reduced-cost produce at specified mobile van route locations	
Faith-based food programs	Free hot meals and/or food boxes	
Resources for low-income households with children		
Supplemental Nutrition Program of Women, Infants, and Children (WIC)	Money for supplemental foods for pregnant, postpartum, or breastfeeding women and children under age 5 y	www.fns.usda.gov/wic
School/summer meal programs	Free/reduced price meals for students	www.fns.usda.gov/school-meals/child-nutrition-programs
Resources for adults aged ≥ 60 y		
Congregate meal program	Group meals at participating sites, including senior centers, places of worship, and housing communities ^b	www.eldercare.acl.gov/Public/Index.aspx www.mealsonwheelsamerica.org/find-meals
Home-delivered meal program	Meals delivered to frail and home-bound older adults ^b	
Senior Farmers' Market Nutrition Program (SFMNP)	Vouchers for low-income seniors for farmers markets, farm stands, and community supported agriculture programs	www.fns.usda.gov/sfmnp/senior-farmers-market-nutrition-program
Commodity Supplemental Food Program (CSFP)	Monthly food box for low-income seniors	www.fns.usda.gov/csfp/commodity-supplemental-food-program
Child and Adult Care Food Program (CACFP)	Free and reduced-price meals at adult day care centers	www.fns.usda.gov/cacfp/child-and-adult-care-food-program

^aResources for all ages (eligibility criteria vary).

^bSome congregate meal and home-delivered meal programs may charge for meals if they do not have funding through the Older Americans Act or other local funding.

assistance, and transportation to medical appointments. Some VSOs also have established local affiliations with Meals on Wheels focused on veteran outreach and providing hot meals for low-income, homebound, and disabled veterans.

Additional Resources

Although resources vary by regional setting,

several key governmental and community-based food assistance programs are summarized in Table 2. Local community partners and online/phone-based directories, such as United Way's 2-1-1 can help identify additional local resources. For older adults and individuals with disabilities, local Aging and Disability Resources Centers can provide information and assistance connecting to

needed resources.⁶⁹ Finally, there are a number of online resources available for clinicians interested in learning more about the impact of food insecurity on health and tools to use in the clinical setting (Table 3).

CONCLUSION

The VA has recognized food insecurity as a critical concern for the well-being of our nation's veterans. Use of the EHR clinical reminder represents a crucial first step toward increasing provider awareness about veteran food insecurity and improving clinical efforts to address food insecurity once identified. Through the reminder, health care teams can connect veterans to needed resources and create both the individual and population-level data necessary to inform VHA and community efforts to address veteran food insecurity. Clinical reminder data are currently being used for local quality improvement efforts and have established the need nationally for formalized partnerships between VHA Social Work Services and Nutrition and Food Services to connect veterans with food and provide them with strategies to best use available food resources.

Moving forward, the Ensuring Veteran Food Security Workgroup continues to work with agencies and organizations across the country to improve food insecure veterans' access to needed services. In addition to existing VA partnerships with Feeding America for the VPP, memorandums of understanding are currently underway to formalize partnerships with both the Food Research and Action Center (FRAC) and MAZON. Additional research is needed both to formally validate the current food insecurity clinical

reminder screening question and to identify best practices and potential models for how to most effectively use VHA-community partnerships to address the unique needs of the veteran population.

Ensuring the food security of our nation's veterans is essential to VA's commitment to providing integrated, veteran-centered, whole person care. Toward that goal, VA health care teams are urged to use the clinical reminder and help connect food insecure veterans with relevant resources both within and outside of the VA health care system.

ISSUE BRIEF #49

May 25, 2021

Food Insecurity among Military and Veteran Families

Colleen Heflin

Food insecurity, which is defined by the United States Department of Agriculture as a “lack of access to enough food for an active, healthy life for all household members”¹ was present in 10.5% of American households in 2019, before the COVID-19 pandemic.¹ By late March and early April 2020, food insecurity rose to 21.9%, an 11.4 percentage point increase and the highest level ever recorded in the 25-year history of the measure.² In the general population, food insecurity tends to be higher among non-white households, those with lower levels of income and education, households with children, people living alone, and single-headed households with children. The risk of food insecurity also varies by geography: Rates of food insecurity are higher in urban cities and in rural areas, and food insecurity varies significantly across states from a low in New Hampshire (6.6%) to a high in Mississippi (15.7%).¹ Although our country spends billions of dollars annually to create the best military force in the world, food insecurity is prevalent among our active-duty military personnel and families and persists among our veterans, especially our disabled veterans.

KEY TAKEAWAYS

- By early April 2020, food insecurity rose to 21.9% among U.S. households - the highest rate ever recorded.
- Before COVID-19, about 1 in 7 military families experienced food insecurity.
- Data collected since COVID-19 hit the U.S. in early-2020 suggest that between 1 in 5 and 1 in 3 military families have experienced food insecurity in the last year.
- Food insecurity risk is also high among veterans, particularly disabled veterans.
- Food insecurity among soldiers is associated with lower likelihood of re-enlisting.
- Eligibility standards prevent many military families from accessing SNAP benefits.
- Several policy revisions are needed, including a change to SNAP eligibility guidelines for veterans and provision of transitional SNAP benefits to those leaving the military.

Food Insecurity is Prevalent Among Military Families

While the Department of Defense does not collect systematic data on the level of food insecurity among military families, several different estimates suggest that around 1 in 7 military families experienced food insecurity before COVID-19.^{3,4,5} Estimates collected during the COVID-19 era from one Army installation indicated that 1 in 3 military families experienced marginal food insecurity in Summer 2020⁶ and estimates collected in Winter 2021 by the Military Family Advisory Network indicated that 1 in 5 military families were food insecure.⁵ In addition, Feeding America estimates that 20% of all families served by their national network of food banks contained a household

member currently or formerly connected to the military.⁷ Currently, food pantries operate in or near every military installation in the country.

The Supplemental Nutrition Assistance Program (SNAP), which is the cornerstone of federal food and nutrition assistance programs, has eligibility standards that specifically prevent military families from accessing benefits. Military families that live off base receive a Basic Housing Allowance (BAH) which is based on the geographic duty station, pay grade, and dependency status and is designed to cover the cost of housing and utilities.⁸ However, this benefit, which resembles housing assistance for civilian households, is treated as income during the SNAP determination process and many military families stationed in high-cost housing areas are rendered ineligible for SNAP benefits. **SNAP eligibility guidelines should be revised to treat the BAH as it does other forms of federal housing assistance.**

The Transition from Military to Civilian Life is Often Accompanied by Hardship

Food insecurity likely causes retention problems for the military. Among soldiers who indicated in 2019 that they were likely to leave the military after their current service period, 46% were marginally food insecure (compared to 36% for those who were neutral or unlikely to leave the military). Additionally, food insecurity among active-duty members is associated with poor mental health outcomes (depression, anxiety and suicidal ideation) and poor mental health is associated with an intention to leave military service.⁹ Unfortunately, the transition from military to civilian life is often a point of increased hardship, especially for those separating at younger ages with fewer job skills that easily transition to the civilian economy.¹⁰ Unemployment is a significant problem among what are known as Gulf War-era II (post 9/11 wars) veterans, particularly those aged 25 to 34 (IVMF 2021).¹¹ Military service members who transition to civilian life face multiple new challenges with regards to their nutrition. Individuals who transition no longer have access to free or subsidized meals in military mess halls and cafeterias or lower-cost and tax-free groceries at military commissaries. To the extent that these benefits are not replaced immediately with civilian labor market earnings or family and network support, military members may experience food insecurity during the transition period. In my own research with Andrew London (Syracuse University), I have documented that SNAP participation is about 10% higher during the first year after leaving military service than it is for all veterans (7.1% versus 6.5%).¹² However, given the social stigma associated with SNAP participation as well as fears about ineligibility, this level of participation likely underestimates the share of recently transitioned veterans who are eligible for SNAP benefits but do not apply.

The U.S. government could demonstrate the value of our service members **by providing an automatic transitional SNAP benefit to all families leaving military service at the E4 level and below.** If half of the separating service members qualify for the benefit (or about 100,000 per year) and received the FY2019 average household benefit level of \$258 per month, this would cost the federal government approximately \$154 million annually (a very low percentage of the total federal SNAP benefits of \$55.6 billion in FY2019).¹³

Disabled Veterans Are at a High Risk of Food Insecurity

While military service members are selected for their good health, veterans are more likely to be disabled than civilians due to the unique risks of injury and exposure to circumstances such as combat, interpersonal violence, substance use and stress-related mental health issues that are associated with disability.^{14,15} Having a disability is a significant risk factor for being food insecure or having other forms of material hardship.^{16,17,18,19,20} According to a 2020 analysis by Alisha Coleman-Jensen at the US Department of Agriculture, U.S. households with an adult who is unable to work because of a disability face levels of food insecurity that are 3 times that of the general population (31.6 versus 10.5% in 2019).^{21,22,23} According to analysis by She and Livermore (2007), individuals with a disability make-up over half of the population identified with food insecurity.²⁴

In research with Andrew London and Janet Wilmoth (Syracuse University), I have found that among adults aged 25-65, being a veteran is associated with a reduction in the probability that a household experiences poverty, food

insecurity or other forms of material hardship. However, being a disabled veteran removes this protective effect of veteran status.²⁵ While veterans tend to be in better health around retirement age, they tend to experience steeper age-related declines in health.²⁶ When examining older adults (those aged 65 and above), we found that, while food insufficiency (a measure that is similar to the most severe form of food insecurity, very low food security) was lower generally among older adults than younger adults, disabled veterans had a higher risk of food insufficiency than disabled non-veterans.²⁷

Veterans with a disability should have a substantial economic advantage relative to their civilian counterparts. They should have the ability to receive disability compensation through the Veterans Affairs in addition to the civilian Social Security Disability Program. However, in previous work using the Survey of Income and Program Participation, (with Wilmoth and London), I found that joint participation in both programs is quite rare. In 2008, about 13% of veterans received support from the VA's Disability Compensation Program, 7% received support from Social Security's Disability Insurance Program, but only 4% receipt support from both programs.²⁸ While eligibility for the two disability programs does differ significantly, the low levels of joint participation likely reflects some level of stigma and lack of information that disabled veterans face when considering civilian disability benefits. Perhaps because of these barriers, previous research has shown that disabled veterans have lower incomes than non-veterans who report the same number of disabilities.²⁹

Improved coordination of services between the Veterans Affairs Disability Compensation Program and the Social Security Administration's Disability Insurance Program is needed to improve access to these programs, such as creating categorical eligibility under certain circumstances, raise household income for disabled veterans and reduce food insecurity. More generally, the concentration of food insecurity within households dealing with disabilities is an area that deserves further policy attention.

Study Aims to Show Why Some Veterans Go Hungry

Peaches sit, waiting to be picked up before the start of the first Farmers' Market on Travis Air Force Base, California. (U.S. Air Force/Senior Airman Nicole Leidholm)

30 May 2019

Military.com | By [Patricia Kime](#)

A new study seeks to understand why some veterans experience food insecurity, having little access to healthy food, skipping meals or using money budgeted for groceries to pay other bills.

With previous research showing that roughly a quarter of post-9/11 veterans have experienced hunger or food insecurity at some point after their service, Nipa Kamdar, a postdoctoral fellow at the University of Houston's Department of Health and Human Performance, sought to determine what barriers keep veterans from obtaining and eating quality food.

Using a unique approach to qualitative research called photo elicitation, she let the veterans explain their challenges through photographs of objects or situations they felt hindered or helped their access to food.

"This is a problem in this community, but it's not being fully recognized," Kamdar said during an interview with Military.com. "I really wanted to understand what was happening in the veteran household and really get the story, rather than just the numbers."

Kamdar gave cameras to 18 low-income veterans who had at least one child between the ages of 5 and 11. Later, she met with them to share pictures and allow them to explain their reasons for choosing their subject matter.

Kamdar said the photographs provide insight into families facing hardships that data or simple interviews don't convey.

"Veterans may have physical or mental health disabilities and limited social support that further restrict their access to food," she said. "There is limited knowledge about the barriers to accessing food within this community."

Study participant Alisha Strife, a former [Army](#) soldier injured in a [Humvee](#) accident in Iraq in 2005, said her barriers included being unable to work while recovering from her injuries and, later, monthly health care premiums that totaled \$1,700 -- more than half her [Department of Veterans Affairs](#) disability compensation.

As part of the research, she took pictures of her gas gauge on empty and her VA prescription bottles.

"A lot of it is ... just making sure those things were taken care of. Then, there is the amount of time it takes to attend medical appointments and take care of kids, along with the high divorce rate, or being single parents that typically veterans may be," Strife said.

Kamdar said another veteran also took photos of his medication. The former service member explained that, [with post-traumatic stress disorder](#), he has bad days when he cannot cook for his family.

"It's on the other members of the family, which includes the kids for that day, to fend for themselves," Kamdar said.

While the results have yet to be analyzed or published, Kamdar said she has learned lessons she is now sharing with community food banks and non-profits in the Houston area, where she did most of the research.

For example, she said student veterans with jobs and families who also are studying in college can't get to food banks, which normally are open during the workday.

She went to a central food distribution center this week to discuss this finding, she said.

"They didn't know about how the hours of operation of some of these pantries make it difficult for veterans to make it there," she said.

Kamdar also found that veterans are most at risk for food insecurity in the first three months of their transition from military service, when they are trying to find a job, establish a home and fend for themselves.

She'd like to see legislation to shorten the time period for veterans to qualify for the Supplemental Nutrition Assistance Program, or SNAP. It can take 30 days or more to be approved for SNAP but, since an applicant has to show income history to qualify, they must prove they are no longer receiving active-duty pay.

"If we could get them to access it sooner if they qualify ... it would increase access," Kamdar said.

The research was funded by the William T. Grant Foundation, a nonprofit focused on reducing inequality among children and youth. The group was interested in the research, Kamdar said, because food insecurity puts children at increased risk for mental health and physical disorders, impaired learning and decreased productivity in school.

What struck her most, she said, was that the children of these families were rarely affected by the food insecurity because the veterans simply went without eating themselves to ensure that their kids were fed.

"They make do with what they have and make sure the kids get what they need. It is just taken for granted that they would skip a meal, wouldn't eat or eat just once a day," Kamdar said. "They consider this normal."

Kamdar hopes to analyze the information and publish it but also bring the information to organizations that help veterans and those experiencing hunger.

"I don't know when I would do a gallery-type exhibit, but if that opportunity came to get these photos out there, [I'd do it]. Me telling you in words is not as impactful as the photos with their captions," she said.

Strife said she participated to call attention to a little-known problem for some veterans.

"Veterans don't typically ask for help," she said, "and I don't think the VA recognizes this is a major issue. My main reason for participating is to make sure that we get veterans connected to the available resources."

ROUNDTABLE: “Ending Hunger in America: Examining Hunger Among Seniors and Multigenerational Families”

June 9, 2021

Hello, My name is Linda Edge I reside in Quincy Massachusetts. I am a mother of four adult children, one who is 19 and about to graduate high school. I am a grandmother to four granddaughters. I recently got custody of my granddaughter who is 15.

I am a student at Springfield College in Boston pursuing my BA degree in Human Services. I also participate in a program called One Family Scholars, which is helping me make it through college successfully.

In addition to my studies, I am very involved in the community. I am a volunteer at United South End Settlement where I distribute food to families in need. I am also a volunteer at Urban Edge, where I help people file their tax returns.

I work as a Personal Care Attendant for a relative who has been in the hospital since January. Due to his hospitalization, I have not been able to work, and I am now receiving unemployment.

This past year has been difficult for me to provide a healthy nutritious meal for my family. When I was working, my income was too high to qualify for SNAP. Now that I am unemployed, I have applied for SNAP benefits. My income now still puts me over the income guideline to qualify for SNAP benefits.

It would mean a lot if I did not have to worry about feeding myself or my family. When you have two picky eaters it is difficult to get food they will eat and that is health for them.

I would like the members of congress and policymakers to know that there are families like me who work hard to provide for their family but because our income is over the guidelines that makes us ineligible for SNAP benefits. It would be helpful to increase the SNAP income guideline so that families like mine could qualify for SNAP benefits. I would also like members of Congress to know that people who need help feeding their families are not lazy, they are just fellow human beings who need help.

**Written Testimony of Donna M. Butts
Executive Director, Generations United
Washington, DC**

**To the Committee on Rules
U.S. House of Representatives**

June 9, 2021

I am pleased to have the opportunity to submit testimony to the Rules Committee on behalf of Generations United, an organization dedicated to improving the lives of children, youth, and older adults through intergenerational strategies. We applaud Chairman McGovern, Ranking Member Cole, and members of the Committee for your leadership in holding this roundtable examining *Hunger Among Seniors and Multigenerational Families*. The testimony focuses on hunger and food insecurity facing multigenerational families and grandfamilies and highlights intergenerational solutions to address those issues. Multigenerational families are families where three or more generations reside in the same household. “Grandfamilies” are families where children are being raised by grandparents, other relatives, or close family friends (also known as kinship families) usually without parents present.

ABOUT GENERATIONS UNITED

Generations United’s mission is to improve the lives of children, youth, and older adults through intergenerational collaboration, public policies and programs for the enduring benefit of all. Founded over 35 years ago, we are a catalyst for policies and practices stimulating cooperation and collaboration among generations, evoking the vibrancy, energy, and sheer productivity that result when people of all ages come together. We believe that we can only be successful in the face of our complex future if generational diversity is regarded as a national asset and fully leveraged.

Multigenerational families and grandfamilies epitomize the value of intergenerational interdependence, the backbone that build our country and continues to strengthen our communities. Generations United is one of the few groups that advocates on their behalf but more importantly, engages the families in identifying their strengths, challenges, and needs.

In 2011 in the wake of the Great Recession, we researched and released *Family Matters: Multigenerational Living in a Volatile Economy*. While the families were often shamed in the media at the time and held up as a sad example of what had become of our country’s “rugged individualism,” the families we surveyed said their multigenerational households helped individual family members and strengthened family bonds.

Ten years later, as we grapple with the global COVID-19 pandemic, we once again undertook a survey to see how multigenerational families were faring. In *Family Matters: Multigenerational Living is on the Rise and Here to Stay* we reported that while not for everyone, multigenerational living has helped many families to pool resources and care for one another. Living under one

roof is no longer an emerging trend but a permanent family configuration with most of the families reporting they intend to continue living together long after the pandemic subsides.

Even before we advocated for multigenerational families, Generations United worked with and on behalf of grandfamilies. Over 20 years ago, we established the National Center on Grandfamilies to improve policies, supports, and services for the millions of grandfamilies around the country who keep children connected to their siblings, kin, and culture. The Center conducts federal advocacy, provides technical assistance and training to state policy makers and advocates, develops guides, fact sheets and other resource materials including an annual *State of Grandfamilies Report*, and raises awareness about the strengths and needs of the families through events, media outreach, and weekly communications. The Center's work is guided by our GRAND Voices network of grandfamily caregivers representing 45 states, the District of Columbia, and 11 tribes. Through the Center, Generations United has successfully advocated for an array of laws and policies to help grandfamilies gain access to affordable food and nutrition supports, financial assistance, housing, counseling, respite care, and other supportive resources. More information about our work and resources are available at www.gu.org and www.grandfamilies.org.

BACKGROUND ON MULTIGENERATIONAL FAMILIES AND GRANDFAMILIES

Multigenerational Families

Multigenerational living is on the rise and here to stay. The number of households consisting of three or more generations has increased from a low of 15 percent in 1980 to 20 percent in 2018. In 2011, in the wake of the Great Recession, Generations United conducted a survey to learn more about multigenerational households and found 7 percent of Americans reported living in a multigenerational household. In 2021, we conducted a new survey and found the number had quadrupled to 26 percent which is a 271 percent increase. Six in ten families said they started or continued to live together because of the COVID-19 pandemic. Sixty-six percent said the current economic climate was a factor in their family becoming a multigenerational household with 16 percent saying it was the only reasons. Other factors can be traced to the pandemic as well with an equal 34 percent saying their household formed because of eldercare or childcare/education needs and 30 percent saying it was because of job loss, change in job status, or underemployment. "Since COVID hit, I don't have a job," said Katie Stewart who lives with her 6-year-old son, mother, stepfather, and two stepbrothers. She was working for a ticket company when the pandemic started, and concert venues shut down. "Until we get approved to open up for the concert venues again, I don't have work."

While the families may have come together by need, they are staying together by choice. In fact, 72 percent of the families said they intended to continue living in a multigenerational household long term. It is not surprising given 98 percent said their multigenerational household functioned successfully. Still 77 percent feel there should be more government programs and policies that are supportive of multigenerational households like theirs. Most frequently cited were help with caregiving, mental health services, support groups, mortgage or rent assistance as well as paid

family leave, flexible work environments, and increased access to home- and community-based services and supports.

Several benefits surfaced from the survey. Seventy-nine percent responded that it made it easier to provide for the care needs of one or more family members. The same percentage said it enhanced family bonds or relationships while 76 percent said it improved finances and mental or physical health. Living together made it possible for at least one family member to continue school or enroll in job training. Food plays an important role. Forty percent said sharing family meals with all household members present is a factor that contributed to their household's success.

The Center on Budget and Policy Priorities found “Millions of people report that their household didn't get enough to eat, isn't caught up on rent, or struggled to cover usual expenses.” The COVID-19 pandemic caused unemployment to reach an all-time high and families have hunkered down at home together by necessity or by choice to provide care, lower expenses, stretch food dollars, pass on family traditions and culture and avoid isolation. Multigenerational families may be one of the most positive changes to come out of the pandemic. Given 7 in 10 multigenerational families say they plan to continue doing so long-term, we must prepare for a multigenerational future examining our age segregated policies and approaches to better serve today's families.

Grandfamilies

More than 2.3 million grandparents are responsible for raising grandchildren across the U.S. Approximately 2.7 million children are being raised by grandparents or other relatives with neither parent in the home. When children cannot remain with their parents, the comfort of a grandparent, aunt, or godparent eases the trauma of separation. Compared to children in non-relative care, children being raised by relatives have more stability, higher levels of permanency, and decreased behavioral problems. They are more likely to maintain connections with brothers and sisters and to preserve their cultural heritage. Yet, for every child being raised by relatives inside the formal foster care system, 19 children are raised by relatives outside of the system. Grandfamilies raising children outside the foster care system are often left disconnected from basic benefits and supports like food and nutrition programs, respite care, counseling for children and caregiver training.

Grandfamilies face unique strengths and challenges. Unlike parents, grandfamily caregivers do not have inherent legal rights and responsibilities with respect to these children. They often take informal responsibility for children suddenly and have no planning time to meet their financial, housing, or other needs.

The COVID-19 pandemic hit grandfamilies especially hard. Demographic data point to the greater risk COVID-19 poses to grandfamilies than other families. Almost half of all grandparent caregivers are age 60 and older, and grandparent caregivers are much more likely to have a disability than parents of children age 18 and younger. Adults age 60 and older and those with disabilities, such as compromised immune systems, are at higher risk for getting COVID-19 and are told to heed warnings to distance themselves from young people and others. That becomes

impossible, for example, when one is the sole caregiver to a young child. Grandfamilies are also more likely to have Black or Native members than white members. Nationwide, Black Americans are dying from COVID-19 at 2.5 times the rate of white Americans, and Native and Latinx Americans are dying at about 1.5 times the rate, according to data collected by the COVID Tracking Project. Many states do not report data for American Indian or Alaska Native people and instead report them under the “other” category. The impact on American Indian and Alaska Native people is likely much greater. With this pandemic and its resulting deaths, COVID-19 is not only heightening challenges for existing grandfamilies, but creating new ones.

Access to adequate food and nutrition supports ranks highly among the challenges that grandfamilies face during the pandemic according to a survey of more than 600 grandfamily caregivers from all 50 states conducted by the Grandfamilies Outcomes Workgroup, Generations United, and Collaborative Solutions. Approximately 43 percent reported that they were fearful of leaving the house to get food because of exposure to COVID-19, 47 percent reported waiting in long lines to access food assistance, and 32 percent reported that food at pick up sites ran out when they arrived. More information about the impact of COVID-19 on the families is available in Generations United’s State of Grandfamilies Report: [*Facing a Pandemic: Grandfamilies Living Together During COVID-19 and Thriving Beyond.*](#)

Despite the important role that millions of grandparents and other relatives play in caring for children both inside and outside of the formal foster care system, the vast majority of available supportive policies and services are targeted at supporting only those kinship families where the children are part of the formal foster care system. Even those kinship families who are caring for children inside the foster care system often do not receive foster care maintenance payments to provide for the needs of the child.

Grandfamilies are often left out of aging services as well because of lack of familiarity with serving these unique families and because of age restrictions in programs such as the National Family Caregiver Support Program (NFCSP). It provides funding to Area Agencies on Aging which may be used to serve grandfamilies but is limited to those where the grandparent or other relative caregiver is age 55 and older.

The following recommendations address ways food and nutrition programs, income supports, aging services, and child welfare funding streams can better support multigenerational families, engage grandfamilies as resources to each other, and reduce barriers for these grandfamilies to allow the caregivers to access services and resources necessary to meet the needs of the caregivers and provide for the children for whom they care.

RECOMMENDATIONS

“If we didn’t get SNAP, we couldn’t make it through the month to eat.”

-Linda, Grandparent Raising Grandchildren in Oklahoma

Promote Joint Meal Programs and Fund Multigenerational Demonstration Projects in the Older Americans Act

During the pandemic grandfamilies reported challenges accessing food and nutrition assistance including being required to travel to separate locations to secure food for themselves and for the children. The Older Americans Act reauthorization also authorize congregate nutrition programs designed to provide healthy meals that present opportunities for social engagement, information on healthy aging, and meaningful volunteer roles. The Act encourages multigenerational nutrition and meal service programs where possible. It recommends that states working with area agencies on aging reduce the administrative burden on these programs and help direct limited resources to where services are needed most. The Act also promotes the creation of intergenerational shared site programs that offer adult and childcare at the same location which are ideal for many multigenerational families juggling competing caregiving needs. These programs help meet the food and nutrition needs of younger and older family members. These approaches will help more effectively serve multigenerational families and grandfamilies by providing a single location for the family to access free and reduced-priced meals.

As Congress considers appropriations for Fiscal Year (FY) 2022, we urge you to recognize the importance of the newly authorized Older Americans Act Grant Program for Multigenerational Collaboration. This grant program was created with strong bipartisan, bicameral support. We recommend allocating \$2.5 million in FY2022 funding for the OAA Grant Program for Multigenerational Collaboration, which will allow state and local organizations to create or enhance a variety of intergenerational programs serving children, youth, and older adults including those that could help with food and nutrition assistance.

Support Access to Food and Nutrition Services for Multigenerational Families

Ensure families who choose to live in multigenerational households are not punished by losing eligibility to food and nutrition programs due to having multiple incomes in the household, yet not enough food to go around. Food assistance programs provide access to food and nutrition services for those in greatest need. Because these programs are based on income, it is important that families that chose to live in multigenerational households are not punished by losing eligibility to these programs and are instead supported through these programs. Means-tested government programs were created as supports for families to thrive and should therefore be viewed as a support for multigenerational households alike, not an opportunity to disqualify individuals for finding a lifestyle that has positive impacts on those individuals and society.

Strengthen Outreach, Access and Benefit Adequacy in the Supplemental Nutrition Assistance Program (SNAP) for Grandfamilies and Multigenerational Families.

Despite need, grandfamilies and multigenerational families often experience challenges accessing SNAP benefits. Many families are unaware of what benefits they may qualify for and have difficulty navigating paperwork. A [2020 GAO report](#) found that some kin caregivers' household incomes may be too high to qualify for assistance from means-tested programs, like SNAP. Yet, the unexpected addition of a child can be a financial strain, especially to households where the caregiver is living on a fixed income which is the case for many older and retired

grandfamily caregivers. According to the [Annie E. Casey Foundation in 2012](#), less than half of low-income grandfamilies receive SNAP, even though most report food insecurity. Although we lack newer data, anecdotally we know things have not improved. Given available data during the pandemic, results have likely gotten worse for grandfamilies. Congress should examine ways to improve access to SNAP for grandfamilies and multigenerational families by considering approaches that consider only the child's income and by improving outreach and coordination with programs that serve grandfamilies.

Moreover, even when households do access SNAP, as [FRAC \(The Food Research and Action Center\) as documented](#), their benefits fall short of amounts needed to afford an adequate healthy meal plan. Without federal action, households will suffer cuts in SNAP benefit amounts in coming months, as the 15% boost in effect since January 2021 is due to sunset September 30, 2021, and SNAP Emergency Allotments will sunset upon termination of federal and state pandemic declarations.

Congress should examine ways to improve access to SNAP for grandfamilies and multigenerational families by considering approaches that consider only the child's income and by improving outreach and coordination with programs that serve grandfamilies. In particular, [as Unidos US and FRAC have recommended](#), the federal government and states should do more to support community-based outreach and application assistance to help connect families with benefits. Finally, [Congress should act now](#) to ensure that SNAP benefit amounts are adequate, not only until sufficient economic recovery has taken hold, but beyond.

Improve Outreach to Grandfamilies for the Supplemental Nutrition Program for Woman, Infants and Children (WIC)

The Supplemental Nutrition Program for Women, Infants, and Children (WIC) is a critical source of nutrition support for grandfamilies. It is one of the few programs that will only consider the income of the child and not the family or their assets. WIC helps grandfamilies provide nutritious foods for the children they are raising without having to sacrifice hard earned retirement savings or other basic critical assets. Yet many grandfamilies are unaware that they may qualify for the program because outreach is not typically geared toward these families. Improved outreach strategies and educational programs that inform them of their benefits could help reach more grandfamilies.

Improve Access to School Meals for Grandfamilies

Access to free and reduced-price school meals for children in the care of relatives can be a critical source of income support for grandfamilies and provides essential nutrition to help children in the families thrive. Yet, many of the families face challenges accessing these supports due to eligibility restrictions and complex application processes. Generations United urges Congress to pass the CARE for Kids Act to help support children who are being raised by grandparents or relatives other than their parents by addressing barriers to access free school meals.

Improve Access and Adequacy of TANF for Grandfamilies

Typically, the only source of ongoing financial assistance to most grandfamilies is Temporary Assistance for Needy Families (TANF) child-only grants, which is based on the income of the child and to help meet the needs of the child. The TANF and SNAP application process are often linked, and if a grandfamily is unable to access TANF, they are also unlikely to access SNAP. If the grandfamilies are only able to access TANF child-only based on the income of the child, this critical funding source can make it possible to get food on the table for the children as their fixed incomes may not allow them to access other food and nutrition benefits.

About twenty-five years ago, Congress enacted TANF to replace Aid to Families with Dependent Children (AFDC). Since 1996, one of the four primary purposes of TANF has been to keep children in their own homes or in the homes of relatives. Despite this declaration, most children in grandfamilies do not receive any TANF support or any other type of ongoing financial assistance.

Congress can do a number of things to improve access to this important assistance. Most fundamentally, Congress should increase its block grant funding, and encourage states, tribes, and localities to mirror their child-only TANF grant amounts on their foster care maintenance payment rates, which similarly are designed to meet the needs of children whose parents cannot care for them.

Further, direct HHS to provide clear guidance on the good cause exemption for assigning child support to the agency, as existed under AFDC. Many caregivers do not pursue TANF child-only support due to the requirement to assign their right to collect child support to the agency. Many caregivers are reluctant to do this for various reasons, including fear that the parents will remove the child from their safe and loving care. Another common concern is that the parents will not be able to reunify with the children if they are pursued for these funds, which they likely need in order to stabilize housing and other essentials so they can reparent.

Require Food and Nutrition Delivery Systems to Develop Strategies to Promote Race Equity and Address Disparities Including Promoting Equitable Treatment of Grandfamilies

Levels of food insecurity rose during the COVID-19 pandemic, hitting communities of color particularly hard. During this public health emergency, [FRAC](#) (The Food Research and Action Center) noted that Black and Latinx adults age 60 and older have experienced higher levels of food insecurity than white older adults, exacerbating prior rates of disproportionate food insecurity levels. About 24 percent of Latinx older adults of any race and 23 percent of Black older adults experienced food insecurity during the pandemic, as compared to 11 percent of white older adults.

Among all Americans, Latinx Americans (45 percent) and Black Americans (33 percent) are more likely than white Americans (19 percent) to say they live in a multigenerational household. Almost half of all grandparents raising their grandchildren are age 60 and older, and disproportionate numbers of them are Black and Native American grandchildren, with 20 percent

of grandparents raising Latinx grandchildren. These grandfamily caregivers are raising children unexpectedly and need equitable solutions to access SNAP and other nutrition programs.

We urge Congress to require states to develop and implement a plan to address racism and racial disparities in the SNAP and other federally supported nutrition programs for all families, including those grandfamilies with caregivers age 60 and older experiencing dramatic increases in food insecurity. Approaches should include providing interpreter and translation services and partnerships with community-based organizations to ensure effective outreach and access to grandfamilies with caregivers who do not speak English.

Promote Authentic Engagement of Individuals with Lived Expertise in Multigenerational and Grandfamilies in All Aspects of Planning, Policy Development, Service Delivery and Evaluation

Families are best served when they are heard and have input into all aspects of planning, policy development, and delivery of services and supports designed to help them. The majority of food and nutrition supports and other services available to help multigenerational and grandfamilies were not designed with these families in mind. As a result, programs often miss connecting with these families in outreach efforts and may be ineffective at addressing the needs of all family members. Authentic engagement of members of multigenerational families and grandfamilies can improve access and effectiveness of services.

The Children's Bureau Information Memorandum [ACYF-CB-IM-19-03](#) provides an array of key principles and considerations for engaging, empowering, and utilizing family and youth voice in all aspects of child welfare to drive case planning and system improvement. Food and nutrition services, income support and aging service programs should promote the use of similar approaches adapted for those systems through requiring and incentivizing approaches like those outlined in the memo.

Invest in Community-Based Kinship Support Services and Peer to Peer Programs

Among the most valued supports to kinship families are those provided by community-based grassroots organizations often led or staffed by caregivers who have the wisdom of experience navigating fragmented and inadequate systems. These often-under-resourced programs are trusted providers of support and information and can reach and serve families who are fearful or reticent about engaging with traditional child welfare agencies or government operated services. These organizations typically do not have the capacity to compete for federal or state funding opportunities or to invest in evaluation to demonstrate their effectiveness. Yet, they are often the first place kinship families learn about assistance programs including food programs. When these programs have a peer-to-peer component, families are more likely to successfully access food and nutrition programs. Congress should explore approaches to invest, evaluate, and promote peer to peer models of support services such as caregiver to peer navigation services, caregiver mentoring, and support groups.

Ensure Kinship Navigators Programs and the Newly Funded Technical Assistance Center on Grandfamilies and Kinship Families Have Accurate and Up to Date Information about Food Assistance Programs

Congress created federally supported Kinship Navigator Programs to help connect grandfamilies to support kinship caregivers in learning about, finding and using programs and services to meet their families' needs. Congress should ensure these programs have accurate, up to date information about food assistance programs and urge them to coordinate with federal, state and local food and nutrition assistance programs to ensure grandfamilies are accesses all available resources to meet their needs. The recently funded National Technical Assistance Center on Grandfamilies and Kinship Care should provide resources and technical assistance to kinship navigators and other programs serving grandfamilies to ensure they have the nutrition related information and tools tailored toward reaching the unique families.

Encourage Provision of Services to Grandfamilies through the National Family Caregiver Support Program (NFCSP) including by Supporting Projects of National Significance

For 20 years, the NFCSP has provided supportive services such as information and referral, respite care, support groups, counseling and supplemental services to older relative caregivers of children, in addition to family caregivers of older adults. This may include emergency support such as food and nutrition assistance to help grandfamilies when children unexpectedly come into their care. Services are provided through state and local aging service agencies which have the option to serve grandfamilies. Despite strong need, according to 2020 GAO report- [*Child Welfare and Aging Programs: HHS could enhance support for grandparents and other relative caregivers*](#), only 23 states used their 2016 NFCSP funds to serve older relative caregivers of children, and only five of these states had spent anywhere close to the maximum percentage allowed when the programs were surveyed. Those that do serve grandfamilies are restricted by law to using the funds to serve older caregivers, leaving the large numbers of younger grandparent and other relative caregivers without access to these supports. State officials told the GAO that they would like more tools for how to use the program to serve the families.

Congress should fund the Projects of National Significance authorized under the Older American's Act to provide information and technical assistance to help Area Agencies on Aging better understand the unique needs of grandfamilies, multigenerational families and effective ways to serve them including partnering with child welfare, income support, and community-based organizations that serve families regardless of the caregiver's age.

Promote and Encourage Intergenerational Community Gardens Through Collecting and Sharing Best Practices and Offering Local Tax Incentives

Communities around the country are experimenting with intergenerational community gardens to supply fresh fruits, vegetables and whole grains. Such gardens are increasingly being developed on schoolyards, senior living complexes and vacant city lots. The gardens bring together community members of all ages to plant, harvest, sell, or consume the food they grow. The harvest provides food to the community while building social relationships and helping

individuals acquire entrepreneurial skills. An example of this type of program funded by the State of Nevada SNAP-Education program is Teach Me To Grow Healthy (TMTGH). It is a community-oriented, culturally sensitive program that seeks to improve the holistic care and nutritional support of Native Americans, both urban and rural, in the Reno area. Working through local churches, community centers, senior centers, schools, contacts in several tribal groups, and the State of Nevada SNAP-Education program, TMTGH is creating an intergenerational group to grow and distribute indigenous food produce to the participants' families and communities. Congress should support efforts like these and other approaches to provide produce and other healthy food options in "food deserts" by helping to make fresh fruits, vegetables and nutritious foods more broadly available including at corner stores.

Promote Coordination of Food Programs to Better Serve Families

Expand and involve national services programs such as AmeriCorps, AmeriCorps Seniors and Learn and Serve, to focus on intergenerational nutrition needs in under-served communities. Encourage states to develop comprehensive intergenerational strategies to improve delivery and coordination of nutrition and other assistance programs to better meet the needs of family members of all ages.

"It is too expensive to get enough nutritious food for the family shopping at traditional grocery stores. The only way you can eat fresh fruit that you need is through food stamps."
- Toshia, a grandmother raising five grandchildren, New York

Multigenerational and grandfamilies draw upon the strengths of multiple generations, working together to create solutions in the best interests of family members across a range of generations. The result is resilient families who get through both good and challenging times together and the outcome is a stronger, more caring nation. We must ensure policies support and not harm these important families.

My name is Vanessa Chambers and I am a community health worker. I work at the Rockwood CDC in Gresham OR and I am one of the founders of the program called Grandma's Hands. Our program is funded through a grant from the Oregon Department of Agriculture (USDA Specialty Crop Program). Me and my husband Willie Chambers, along with the Wallace Medical team came together to do a program for grandmothers involved with their young grandchildren. From there we started working with Mr. Chuck Smith on the idea of African American grandmothers passing down their traditions to the younger generations. Each month we come together and use specialty crops such as collard greens, beans, broccoli, asparagus, cabbage, brussel sprouts, and squash, as well as foods that are not commonly eaten by families in the area. Our group of grandmas cook for the families and have them experience different varieties of vegetables and recipes based on our family traditions.

The idea for the program was as a result of me taking care of my grandkids and teaching them how to cook. My husband would come over and see me with my grandkids; teaching them how to chop and how to cook certain things like potatoes, which is personally one of my granddaughter's favorite foods. She also really likes cabbage so that was the first meal that I created for the families for our first Grandma's Hands event. As African Americans we also wanted to make sure that our children and our grandkids know the things that we create are special to us, and we want the meals to also be special to them. When kids cook with their grandmother, they have such an enjoyable time and they will remember what their grandmother cooked for them.

Our program was designed around us purchasing food from local African American farmers and having families participate in preparing and eating a meal together at the Sunrise center. When COVID happened, we got together and we all decided that we would find a way to get meals to people like delivering the meals to the families and also having them drive by and pick up their meal. We would do that every month. This went well but it also changed the experience to a degree. It became a more joyful experience to find alternative ways of keeping the program going and also being interactive with other family members. We would have them on a Zoom call and people were very glad that we found another way to have each family participate. People would give their views about the meal and tell stories about food experiences with their families. I think that was a very exciting and joyful experience that we found another way to do something that was stagnated because of COVID.

When this program came together, we invited grandmothers to join the planning group, and each grandmother decided which particular part of their meal they would present. We began to work together in the kitchen and allow the grandmother that was featured for that particular month to take the lead and we will follow them, or we would assist them in anything that they needed. We became really close as grandmothers and we learned how to work together as African American women. We have also developed relationships not just with the grandmothers but their grandkids and other family members. That is a very special experience with these grandmothers. We were also there to help each other when things were not going right in their lives. One grandmother would step in for the other and help by preparing food or going to visit particular grandmothers see how they're doing. It has caused us to have a very close knit connection with one another.

Being affiliated with other family members that participate in the program has been great. We see the interactions between the families and within the families. We all got to see the excitement on the face of a little boy when his father pulled out a cutting board from the program materials and they started chopping vegetables together. One of our team members Marchane got her other family members in

the area involved, and now her nieces and nephews and their parents are on every Zoom call. People are excited about the program and how it builds community among African Americans to be there for one another.

Our hope is for this program to be offered in other communities in our area. We would like for people to be able to take the same kind of methods and applying them in their communities. They can make it specific for their community and different nationalities they represent. Whether it's a Hispanic family or in African Somali family or a Korean family or any other nationality we wanted them to be able to take the idea that we have done here and replicate it back within their community to help their own community. We encourage using our program or a program similar to ours that is concerned about the food and the health for their community. Actually, we would like to see the idea go nationally or possibly internationally- food, health, local farmers, and the idea of being there for their families and community.

A History of Grandma's Hands

Grandma's Hands is a platform for Black grandmothers to share family recipes and food traditions with future generations. The program provides a bag of fresh produce grown by Black farmers and brings everyone together virtually to learn how to prepare the featured recipe together.

Grandma's Hands have always been there to pick us up, lift us up, and guide us to the right path.

Our Grandma's Hands story begins with Vanessa and Willie Chambers, and how Vanessa was sharing cooking traditions and experiences with their grandchildren at home. That picture was captured in Willie's mind in 2018 when he was meeting with Katrina Ratzlaff and Lisa Cline from Wallace Medical, Lynn Ketch from the Rockwood CDC, Maureen Quinn from OSU, and others working for the health of the people of Rockwood. The conversation got around to food systems how and to promote good nutrition and health. From there, the picture of grandmothers actively passing on their cultural and family food traditions to younger generations came into focus. Willie had already seen it at home; He already knew the words penned by Gil Scott Heron and sung by Bill Withers — "Grandma's Hands"

Willie reached out to Chuck Smith and the Black Food Sovereignty Coalition to help work on developing this concept. Throughout 2019 we reflected on the transformative power of Grandma's Hands and worked on how to activate Grandma's Hands in improving our health, guiding our eating habits, strengthening our connections, and building our community.

The first Grandma's Hands project was funded in 2020 through a grant submitted by the Rockwood CDC to the Oregon Department of Agriculture to serve the Rockwood community. Black Food Sovereignty Coalition (BFSC), in partnership with the Rockwood CDC did the natural and right thing- turn to the Black Grandmas in our community to have their Hands bring this project to life. Vanessa Chambers was one of those first Grandmas to guide this program.

The Grandmas who participated in launching the first project are: Vanessa Chambers, Rhonda Combs, Mildred Braxton, Martha Lewis, Laurie Palmer, Marchane Lawson, Joyce Smith-McGee, Latasha Carter, Lisa Mathis, Mary Frison, and Shantae Johnson. We also had a few men/grandfathers contribute to the effort: Arthur Shavers, Jerry Hunter, and Robert Braxton.

BFSC has respectfully accepted the honor of being caretakers of Grandma's Hands, recognizing that Grandma's Hands have always been there holding us, sustaining us, and encouraging us.

The Grandma's Hands program today is the collective gift that Black Grandmas from our community have given us. "Grandma's hands, they keep on calling to me." - Gil Scott Heron

Grandma's Hands
"Grandma's hands, they keep on calling to me"
Passing on Black Cultural Food
Traditions to Future Generations

Grandma's Hands Year 1 Summary
June 2020 to January 2021

The Grandma's Hands program is delivered in a partnership between the Black Food Sovereignty Coalition and the Rockwood CDC through an Oregon Department of Agriculture specialty crop grant. Eight monthly on-line live events were held during year 1 (June 2020 – January 2021). Each event featured a video of a grandma demonstrating how to prepare the featured dish, a full meal, sample specialty crops for participants, and a live conversation among the community members and the grandmas from the planning team. Sample specialty crops and some meal ingredients were provided by Black Futures Farm, Mudbone Grown, Wapato Island Farm, and other local Black and Indigenous farmers.

- Total Number of People Registered- 1,135 Total Number of Families Registered- 322
- Total Number Who Received Meal Kits and Materials- 874 people; Representing 258 Families
- 487 Adults and 387 Youth served
- Total Number Participating in the On-Line Live Events- 305 people; Representing 93 Families
- 98% of participants identified as Black/African American/African
- 29% of participants live in Rockwood
- 9 cooking demonstration videos produced by Grandmas Hands team members
- 22 Black, Indigenous, and POC farmers and food producers from the Portland area were promoted during the events.
- Families were introduced to 44 different vegetables and fruits.
- Over 90% of all evaluation respondents answered in the affirmative to all evaluation feedback areas.
 - Introduced to foods that I had not eaten before
 - Intent to eat more of the foods sampled today
 - Increased knowledge of foods that I could consume
 - More likely to attend events like this
 - Made connections with others in their community
 - Met new people (would be interested in connecting with them again)
 - Increased the number of people their social network

TACKLING FOOD INSECURITY AMONG OLDER ADULTS AND MULTIGENERATIONAL FAMILIES

**Statement of
Elaine Waxman*
Senior Fellow, Urban Institute**

**at the
Ending Hunger in America Event Series
hosted by the Committee on Rules,
United States House of Representatives**

ENDING HUNGER IN AMERICA: EXAMINING HUNGER AMONG SENIORS AND MULTIGENERATIONAL FAMILIES

June 9, 2021

* The views expressed are my own and should not be attributed to the Urban Institute, its trustees, or its funders. I thank Greg Acs, Amy Peake and Craig Gundersen for helpful comments and Olivia Fiol and Michael Marazzi for help in preparing this statement.

Good afternoon Chairman McGovern, Ranking Member Cole, and other Rules Committee members and guests.

I am Elaine Waxman, a Senior Fellow in the Income and Benefits Policy Center at the Urban Institute. Thank you for the opportunity to speak with you today about food insecurity among older adults, including those who are living in multigenerational households or raising grandchildren. I appreciate the opportunity to share my insights at this event and should note that the views expressed today are my own and should not be attributed to the Urban Institute, its trustees, or its funders.

Now is a pivotal time to have this conversation: The nation is just emerging from a pandemic that has disproportionately affected our older adults and a recession that brought a second public health crisis of food insecurity, defined as the inability to consistently afford a nutritionally adequate diet because of a lack of financial resources.¹ The entire US food system has undergone significant shocks, and the ways that we acquired food from groceries, restaurants, social service programs and charitable food providers changed dramatically in 2020. These shifts affected all age groups but have had special implications for older adults, who were strongly urged to avoid public spaces because of higher risk of COVID-19 infection. We have benefited from a robust response from both federal nutrition programs and the charitable food system—these systems buffered food insecurity that could have otherwise been catastrophic. Nevertheless, we continue to grapple with shortcomings, including the inadequacy of Supplemental Nutrition Assistance Program (SNAP) benefits for many recipients, even with the much-needed temporary increase in benefit amounts.

We also need to reckon with how the pandemic has brought into sharp relief the deep, preexisting racial and ethnic inequities in food access and how these have intersected with the disproportionate impact of serious COVID-19 infections and economic dislocation in our communities of color and indigenous communities. Finally, we are facing an upcoming demographic turning point that makes the topic of senior food insecurity particularly urgent: By 2030, all baby boomers in the US will be older than 65 and, within the ensuing decade, older adults (those age 65 and older) are expected to outnumber children for the first time in US history.²

In short, there is no time like the present to ask ourselves why we continue to accept food insecurity in our country, especially among our older people, and what we have to do to change that story. Doing better means not just buffering vulnerability (although doing so is critical): it also means building resilience for the future.

As we talk today, bear in mind that the concept of an “aging population” is of limited use. As a National Academies report noted several years ago, we really have to talk about “many aging populations.”³ Older adults are a rich tapestry of backgrounds and experiences. Some are in their 50s while others are well beyond their 80s. Many are retired, but a significant number continue to be

² Jonathan Vespa, Lauren Medina, and David M. Armstrong, “Demographic Turning Points for the United States: Population Projections for 2020 to 2060,” P25-1144 (Suitland-Silver Hill, MD: US Census Bureau, 2018).

³ Laura Pillsbury, Emily Ann Miller, Caitlin Boon, and Leslie Pray, eds., *Providing Healthy and Safe Foods as We Age: Workshop Summary* (Washington, DC: National Academies Press, 2010).

employed beyond age 65. Others may want to work but struggle to find employment in a labor market that favors younger workers. Our older adults vary in their level of financial security; the presence of disability or chronic health conditions; race, ethnicity, religion and culture; the availability of resources in their local communities; and level of family responsibilities and support. Each of these dimensions can influence nutritional needs and preferences and the ability to access and afford healthy foods.

Too many older adults are unable to consistently afford a nutritionally adequate diet because of a lack of financial resources. In 2018, 7.3 percent of seniors (those age 60 or older), about 5.3 million people, were food insecure, as well as 10.6 percent of adults ages 50 to 59, another 4.5 million people. It is worth noting that even in the strong economic conditions leading up to the pandemic, older adults were still experiencing food insecurity at a higher rate than before the Great Recession.⁴

Older adults from communities of color consistently experience higher levels of food insecurity, with Black and Hispanic/Latinx older adults more than twice as likely as white adults to struggle to afford an adequate diet.⁵ Native American older adults are also at higher risk of food insecurity than white adults. Unfortunately, data from national surveys rarely provide sufficient visibility to these communities. A synthesis of research from 2000 to 2010 suggests that food insecurity rates among Native Americans and Alaska Natives persisted at around one in four during that period.⁶ In 2016, poverty rates among older Native Americans, at nearly 20 percent, were twice those of their white counterparts.⁷ Although food insecurity and poverty are not the same, these data suggest significant vulnerability to material hardship among older Native Americans leading up to the COVID-19 pandemic, which hit Native American communities extremely hard.⁸

We are still working to understand how the COVID-19 pandemic affected food insecurity and nutrition among older adults and what the pandemic's longer-term consequences may be. Clearly, the pandemic shutdown and recession created a large spike in food insecurity across the country in 2020 as well as a strong mobilization of both federal nutrition and charitable food programs. Some food bank distribution sites saw lines of cars stretching for miles. Notably, some evidence suggests that early in the pandemic, seniors' use of charitable food actually *dropped*, likely because of public health advice that seniors be particularly careful about social distancing and because many neighborhood food pantries that may have been more accessible to seniors closed.

An October 2020 analysis by Dr. Jim Ziliak at University of Kentucky gives us some timely insights into older adults' reported experiences with food hardship during the pandemic. His work examines information from the Census Bureau's Household Pulse Survey, launched during the pandemic to track

⁴ James P. Ziliak and Craig Gunderson, "The State of Senior Hunger in America 2018: An Annual Report" (Chicago: Feeding America, 2020).

⁸ Talha Burki, "COVID-19 among American Indians and Alaska Natives," *Lancet Infectious Diseases* 21, no. 3 (2021): 325–26.

changes during it. Importantly, the Pulse Survey does not ask all of the questions used to determine food insecurity in the US, so its data provide an imperfect comparison between before and after the onset of the pandemic. But we can glean useful clues by using two measures of food insufficiency the survey tracks. The first asks if a household sometimes or often did not have enough food to eat. This condition increased 75 percent between 2019 and July 2020, from 2.8 to 4.9 percent of seniors. Food hardship affects a much larger number of seniors if we look at those who said they had enough to eat but were consuming a reduced variety of food: the share of seniors reporting this condition jumped from 14.5 percent in 2019 to 32.8 percent in summer 2020. Reduction in food variety can be a signal of reduced nutritional quality, which is concerning for all age groups but is particularly noteworthy among seniors who may be living with a variety of chronic health conditions.⁹ The Pulse data also reinforce what we knew before the pandemic: there is a significant racial and ethnic gap in who experiences food insufficiency, with Black seniors reporting rates two to three times those of white seniors.

Food insecurity is not just a measure of material hardship: it is an important public health indicator. Food insecurity is associated with a host of poor health outcomes across the life course, and food-insecure seniors face a variety of health challenges. Food insecurity is associated with higher risk of reduced nutrient intake, diabetes, hypertension, and depression. Research suggests that older adults struggling with food insecurity experience limitations in their daily activities that are equivalent to those of food-secure seniors who are 14 years older.¹⁰

Food insecurity is also not just about individuals: it is a household-level condition. Household members typically acquire, prepare, and share food together. About 28 percent of adults 65 and over live alone, and that share increases with age. But overall, the majority of older adults do not live alone. They often they live with a spouse or partner, and some live with an adult child. Although a relatively small share of older adults in the US live with extended family compared with other countries,¹¹ many have complex family living arrangements. In 2018, for example, more than 1.1 million adults age 60 or older were responsible for the basic needs of a grandchild living with them.¹² Further, about a quarter of the 5.8 million individuals living with intellectual and developmental disabilities were cared for by an adult age 60 or over in 2017.¹³

Older adults with caregiving responsibilities face higher risks of food insecurity, and the younger seniors are often those experiencing the most hardship. Almost a quarter of grandfamilies with adults ages 50 to 59 are food insecure compared with about one-sixth of grandfamilies with adults age 60 and older. Adults naturally shield children from food hardship, which may mean grandparents taking care of grandkids will feed kids first, leaving the grandparents with less food and at greater risk for

¹³ Administration for Community Living, *2019 Profile of Older Americans*.

the negative outcomes associated with an inadequate diet. Caregiving can also intersect with disability among older adults: about a quarter of grandparents raising grandkids report a disability of their own. Households with an adult or child who is disabled are at very high risk of food insecurity: about one in three households with older adults ages 50 to 59 struggle to afford an adequate diet.¹⁴

This summary has focused on the many challenges we face in securing consistent access to a healthy diet for all older adults. Understanding this complexity is a necessary step for achieving better outcomes. But although we often talk about the vulnerabilities of older adults, this past year has also reminded us how resilient our older adults can be and how vital they are to our communities. I'd like to focus the remainder of these remarks on ways we can build food security and resilience for all older adults.

Here are five key strategies that could help us realize those goals:

1. **Strengthen the power of SNAP for older adults.** SNAP is our first line of defense against food insecurity among federal nutrition programs: we have a strong evidence base for the program's role in reducing food hardship and poverty, and evidence is growing that SNAP can help reduce health expenditures.¹⁵ Unfortunately, before the pandemic, SNAP reached fewer than half of potentially eligible older adults,¹⁶ compared with 84 percent of all eligible individuals in 2017. There are multiple barriers to program participation, including stigma, a perception that benefits are low for older adults, and administrative complexity. We need a national strategic plan to position SNAP as a vital support for the health and well-being of all eligible low-income older adults. A starting point is to build on emerging lessons from the current Elderly Simplified Application Project, which is currently being operated in 14 states and is designed to streamline the application, verification, and recertification processes for older adults.¹⁷ We also need to engage the health care sector to make SNAP enrollment a standard part of the "prescription" for taking care of one's health and for reducing health care expenditures. A higher minimum benefit for older adults may also be important for offering older adults more meaningful assistance. Although 80 percent of older adults participating in SNAP receive an average monthly benefit of \$104,¹⁸ the monthly minimum benefit for seniors of \$16 has contributed to the perception that SNAP enrollment is not worth engaging in the challenging application process. Finally, we need to address both the persistent inadequacy of the Thrifty Food Plan as the basis for the SNAP benefit amount and the program's failure to

account for the wide geographic variation in food prices across the US, which erode SNAP's purchasing power for program participants. My colleague Dr. Craig Gundersen at the University of Illinois and I are currently updating our earlier analysis of the gap between the amount of the maximum SNAP benefit per meal and the average cost of a low-income meal in every county in the US. In partnership with Feeding America, we use 2020 food price data from NielsenIQ, and we find a similar result as when we first evaluated the gap using 2015 data: SNAP does not cover the cost of a low-income meal in 96 percent of US counties. The SNAP meal cost gap, weighted for population size, averages 22 percent across all US counties. Among the 20 counties with the highest SNAP meal cost gap, the difference between the maximum per meal benefit and the cost of a low-income meal ranges from 64 percent to 213 percent. Just these top 20 counties are found in 14 different states. Even when we add 15 percent to the maximum benefit, as is currently authorized under the American Rescue Plan, 40.5 percent of counties in the US still show a gap between the cost of a low-income meal and the maximum SNAP benefit. This shortfall is significant because the maximum benefit is the amount available to households found to have zero income available for food. Before the pandemic, nearly 4 in 10 SNAP households qualified for the maximum benefit.

- 2. Help federal nutrition programs and charitable food providers meet older adults where they are.** Efforts to feed the country during the pandemic demonstrated great creativity and rapid innovation and offer important lessons about how to remove ongoing barriers to food access for older adults. Among these are mobility and transportation barriers that have always made it more difficult for some older adults to access groceries or charitable food assistance. Throughout 2020, millions of Americans turned to online shopping and curbside pick-up or home delivery of groceries to avoid exposure to COVID-19 and comply with social distancing requirements. A growing number of seniors also sought to participate, making them the fastest growing segment of online-shopping customers during 2020.¹⁹ Greater use of curbside pick-up and home-delivered grocery options are expected to persist even as the pandemic recedes, and efforts to support access to these services for low-income older adults can help reduce barriers that have long limited food access for many. The rapid expansion of SNAP online ordering during the pandemic, which is now available in 47 states and the District of Columbia, is a vital step. Access to these services can be strengthened by working with communities to overcome the potential barrier of delivery costs, which are not covered by SNAP, and by expanding the number of approved retailers who can participate.

Charitable food providers have typically had minimal involvement with home delivery of food because of concerns about cost and capacity. During the pandemic, however, many innovative partnerships have emerged to get charitable food to older adults who were reluctant to leave their homes because of the risk of COVID-19 exposure. Food providers partnered with Meals on Wheels in some communities to pair meal and grocery delivery. Mutual-aid groups stepped up to offer "last mile" delivery support. And food delivery

¹⁹ Abha Bhattarai, "Baby Boomers, to Retailers' Surprise, Are Dominating Online Shopping," *Washington Post*, January 21, 2021, <https://www.washingtonpost.com/road-to-recovery/2021/01/21/baby-boomers-online-shopping-pandemic/>.

companies made drivers available to deliver to food-bank clients. Longer-term capacity building can support maintenance of home delivery options for those older adults in need of charitable food assistance who face persistent barriers to visiting food pantries and food-bank pick-up sites.

Congregate sites serving meals to older adults also had to pivot rapidly during the pandemic, because shutdowns meant the sites needed to close in-person operations and switch to grab-and-go or delivery options. Preserving some of the flexibility provided during the pandemic to permit food to be consumed off site may help meet the needs of older adults in the future. Moreover, partnerships with restaurants for meal preparation opened new possibilities for serving more culturally appropriate food, which has been a challenge in congregate feeding sites.

Additional federal funding during the pandemic has helped boost Meals on Wheels's ability to respond to increased demand for home-delivered meals for those who are unable to cook for themselves. But before the pandemic, many Meals on Wheels organizations needed to maintain waiting lists because of funding constraints, and more robust support following the pandemic can avoid a return to gaps in access for this population.

3. **Support grandfamilies with additional resources.** Grandfamilies are providing critical support to children, and they in turn need robust supports to help them succeed. Kinship navigator programs have emerged in many states to help connect these families with a wide variety of benefits and services, including connections to food assistance, but such programs are not available in many areas. The elevated risk of food insecurity for these families is just one of many reasons why all 50 states and DC should have navigator services available for any family providing kinship care.²⁰
4. **Prioritize racial and ethnic equity in all public and private responses to food insecurity.** Absent intentional and concerted efforts, the long-standing gaps in food access and food security experienced by communities of color and indigenous communities will persist, undermining the well-being of these communities and ultimately the nation. Dismantling structural racism is a food-security strategy. Helping communities build income and assets that serve as a buffer for hard times is a food security strategy. Collaborating directly with communities most affected by food insecurity to identify needs and priorities for action is not only a respectful strategy, it is essential for building our collective resilience.
5. **Resolve to not reach 2030 in the same place we are now.** By 2030, more than one in five Americans will belong to one of the many aging populations. As a result, the health and well-being of older adults will have a profound impact on the vitality of the entire country. Food insecurity among older adults, and indeed among all persons in the US, is a solvable problem. What it will take is resolve.

Eliminating Senior Hunger in Memphis, Tennessee through Meals on Wheels

Testimony before the House Committee on Rules, June 9, 2021

Chairman McGovern and distinguished members of the House Rules Committee, thank you for the opportunity to provide testimony and for convening today's hearing on food insecurity. My name is Sally Jones Heinz, and I am the president and CEO of MIFA, the Metropolitan Inter-Faith Association, in Memphis, Tennessee.

About MIFA

MIFA was founded in 1968 in an unprecedented cooperative effort uniting church and community leaders to confront the growing issues of poverty, hunger, and social division in Memphis. Created in the wake of Dr. Martin Luther King, Jr.'s assassination, MIFA began as a volunteer-driven advocacy agency and has since evolved into a professional social service nonprofit with a focused mission: MIFA supports the independence of vulnerable seniors and families in crisis through high-impact programs. Its vision is uniting the community through service.

MIFA's senior programs are designed to promote independence, health, companionship, and dignity – home-delivered Meals on Wheels allow seniors to continue living in their homes, while advocacy through the Long-Term Care Ombudsman program continues to support them when they move to care homes.

MIFA's family programs – Emergency Services, Emergency Shelter Placement, Rapid Rehousing, and the Homeless Hotline – provide basic services to stabilize families. This spectrum of personalized interventions is designed to address the vulnerabilities that could lead an individual or family to homelessness – interventions ranging from utility assistance to emergency shelter or permanent housing.

The Problem

The University of Memphis School of Social Work's *2020 Poverty Fact Sheet* reported that the poverty rate among those age 65+ in the city of Memphis is 14.1%; among non-Hispanic Black seniors (the overall population is 64% Black), the rate is 18.7%.

According to the most recent *State of Senior Hunger in America* study, Memphis has the highest senior food insecurity rate of any large metropolitan city in the United States at 15.6%. The risk factors for hunger are reflected in Shelby County and in the population our program serves: our

seniors are African-American, they are women, they are in poverty or disabled, and they live alone. We estimate that 3,500 seniors now living in Shelby County, Tennessee, are at the highest risk of food insecurity.

While MIFA currently provides home-delivered meals to 1,200 seniors, approximately 500 more are eligible for the local waiting list for meals managed by Aging Commission of the Mid-South. As more Americans live longer, that number will only grow.

The Program

MIFA began providing home-delivered meals for seniors in 1976, then expanded its services to congregate sites in 1981. Today, MIFA Meals on Wheels provides a service unique to our area: hot, nutritious lunches to nutritionally at-risk and disabled seniors in their homes and at congregate sites, at no cost to them.

The program receives support through the Older Americans Act administered locally by the Aging Commission of the Mid-South and supplemented by private donations to MIFA.

Our home-delivered meal program provides five lunches to seniors each week. Eligibility is based on nutritional and functional need, not income, though preference is given to low-income applicants. When surveyed in FY21, half of homebound clients reported monthly incomes less than \$1,000.

Meals are delivered by volunteers and staff drivers, and their interactions and safety checks are as vital to the program as the nutrition it provides. In addition to addressing food insecurity, home-delivered meal programs have a proven impact on social determinants of health, such as isolation and poverty. A recent report from the Robert Wood Johnson Foundation estimates that at least 40% of health outcomes are the result of social and economic factors, while only 20% can be attributed to medical care.

Our Meals on Wheels recipients are 64% women, 70% African-American, and 30% age 80+. Thirteen percent reported when surveyed that they skip meals because they lack funds to buy food; 31% have been told by a doctor that they aren't getting enough to eat. Many have health issues like diabetes (42%), high blood pressure (80%), or low blood pressure (56%). Half live alone, and 54% report feeling lonely or isolated at least some of the time.

But the program's impact is best illustrated in what we hear from these seniors. Surveyed seniors also reported the following: 96% eat healthier foods as a result of the program, 93% believe the program helps them feel better, and 93% believe the program helps them continue living in their own homes.

"Not long ago," one senior said, "I wasn't able to stand long enough to fry an egg. Now I have gained weight and strength. I don't know what I would have done without the MIFA meals, because my daughter has to work and raise her children." Another said, "Thank for the meals. I am in a wheelchair and was skipping meals. Now I don't have to do that anymore."

An Innovative Approach

In 2015, we led a grant-funded strategic growth initiative for Meals on Wheels in cooperation with our local food bank and our two largest hospital systems. Through this partnership, we had the invaluable opportunity to track and analyze the impact of meal delivery on a range of client health and social outcomes. Program evaluation was provided by the University of Memphis School of Public Health in cooperation with Methodist Healthcare and included tracking participant outcomes in the areas of healthcare utilization, nutritional capacity, and isolation, among other metrics. Evaluation revealed a clear connection between daily meal delivery and hospital utilization: when comparing hospital utilization at the time of program enrollment to one year later, analysts observed a 21% reduction in encounters. Isolation scores also improved from the initial assessment for 20% of clients, and nutritional capacity improved for 26%; among this very frail population, any improvement in health outcomes is considered significant.

The cost of achieving these outcomes is about \$2,000 – the cost of providing five hot meals a week to one senior for one year. In addition to improving quality of life for a senior, this relatively small investment can also result in significant healthcare savings.

Our COVID Response

One of the most beloved aspects of Meals on Wheels programs across the country is the opportunity for personal connection. The staff and volunteers who deliver meals also give hugs, shake hands, stay and visit with seniors who otherwise might spend the whole day alone. But in a pandemic, those interactions put our clients, our staff, and our volunteers – most of whom are seniors themselves – at risk.

In early March 2020, one of our first priorities was to find a delivery model that mitigated that risk but still allowed us to serve these vulnerable neighbors. We reduced hot meal deliveries to three days a week and supplemented with shelf-stable and frozen meals, which can be packed in boxes and delivered less often, stored by clients until they need them. Early in the pandemic, clients received a few extras each week, to help build a meal supply in case our service was interrupted.

When we learned that the city planned to end communal dining at congregate meal sites, where we serve meals to about 800 seniors a day, we shifted to providing a shelf-stable or frozen five-pack to those clients each week too. Seniors picked up boxes once a week at their regular congregate sites; during the pandemic, we increased our clients served at the sites and even opened a new suburban site.

The pandemic presented so many challenges. But in some ways, it just emphasized on what we already knew. For seniors across the country, social distancing was a way of life long before it was a CDC recommendation; the guidelines in place to protect seniors from the coronavirus also deepened their isolation. And evidence-based innovation was integral to Meals on Wheels programs across the country long before the pandemic. Senior hunger is not a pandemic

problem – it will persist when the pandemic ends, and so will our evolving efforts to eliminate it.

What We've Learned

MIFA has a long history of adapting and innovating. Our flexibility has allowed us to stay relevant and responsive for more than 50 years as we have served our community through the shifting challenges of poverty, housing instability, and food insecurity.

Since MIFA's founding – and especially in times of crisis – we have learned that collaboration is key. Through the goodwill of nonprofit and government partners and a generous community of supporters, we have delivered meals during a pandemic, distributed bottled water during a local boil water alert in a rare snowstorm, connected homebound seniors with COVID vaccines in their homes, and quadrupled the number of volunteers serving as phone buddies who check in on Meals on Wheels clients each week.

We have also learned that partnership with the healthcare community works. When a local hospital observed that at-risk patients who were frequent healthcare users could benefit from medically tailored meals, they approached us to provide referrals for service. For the low cost of a meal reimbursement, they can avoid high costs of readmission to the provider, to the hospital, and to the patient. We see tremendous potential for more and deeper partnerships between nutrition programs and the healthcare community to fund low-cost interventions that can result in long-term savings.

Throughout the pandemic – and long before it began – Meals on Wheels America, at the national level, has been a tremendous resource for programs like ours across the country, sharing best practices and innovative solutions and leading advocacy efforts for senior nutrition funding. For nearly 50 years, the proven and effective nationwide network of 5,000 senior nutrition programs established through the Older Americans Act has helped reduce hunger, promote socialization and improve the health and well-being of individuals 60 years of age and older. Yet, federal funding for this network has consistently fallen behind the demand brought on by our country's growing senior population and other factors, continually leaving a huge gap between those served and those needing, but not receiving, services. Time and time again, senior nutrition programs like ours have cited a lack of adequate funding as the primary factor impacting their ability to meet the existing need in their communities. In Memphis today, the waiting list for meals is only part of the picture of need.

With sufficient funding and a collaborative and holistic approach to service, senior hunger is a solvable problem. We believe in and will continue to pursue our vision of a community where no senior who is homebound is also hungry.

The State of Senior Hunger in America in 2018

EXECUTIVE SUMMARY RELEASED MAY 2020

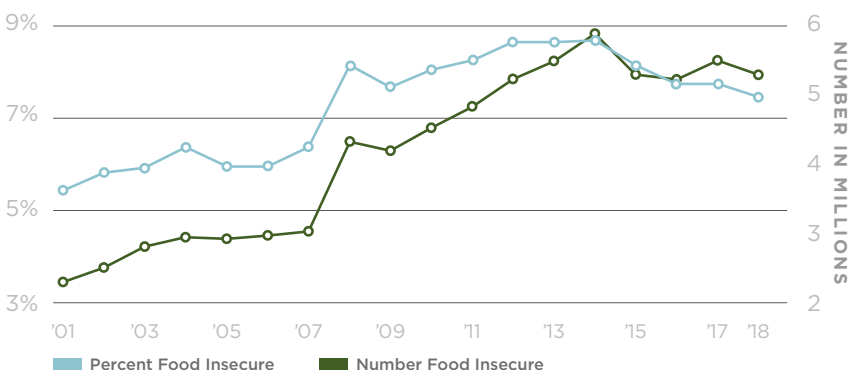

As of 2018, more than 37 million people were food insecure, which means having limited access to enough nutritious food to live a healthy lifestyle.¹ Food insecurity has negative effects for individuals across the lifespan. For seniors, these effects can be particularly problematic given the unique health, economic, and nutritional challenges that can come with aging. An estimated 7.3% of seniors age 60 and older, or 5.3 million seniors overall, were food insecure in 2018. The rate and number of food insecure seniors is essentially unchanged from 2017.

However, the current rate of food insecurity among seniors remains significantly elevated above the rate before the Great Recession (6.3% in 2007), and the current number of seniors who are food insecure is still more than double the number in 2001 (2.3 million).

In 2020, the novel coronavirus (COVID-19) pandemic threatens the lives and livelihoods of people across the country. Seniors are at higher risk for illness and may face challenges accessing food amidst closures and social distancing orders.² The long-term effects of COVID-19 on food insecurity remain to be seen, but due to the projected growth of the senior population in the coming decades, senior food insecurity is likely to remain a public health challenge for years to come.

For the fourth consecutive year, Feeding America has produced *The State of Senior Hunger in America*, an annual report series authored by Dr. James P. Ziliak and Dr. Craig Gundersen, in order to better understand food insecurity among seniors, how it varies by different geographies, and the circumstances and characteristics that may influence or be influenced by the experience of food insecurity.

TRENDS IN SENIOR FOOD INSECURITY

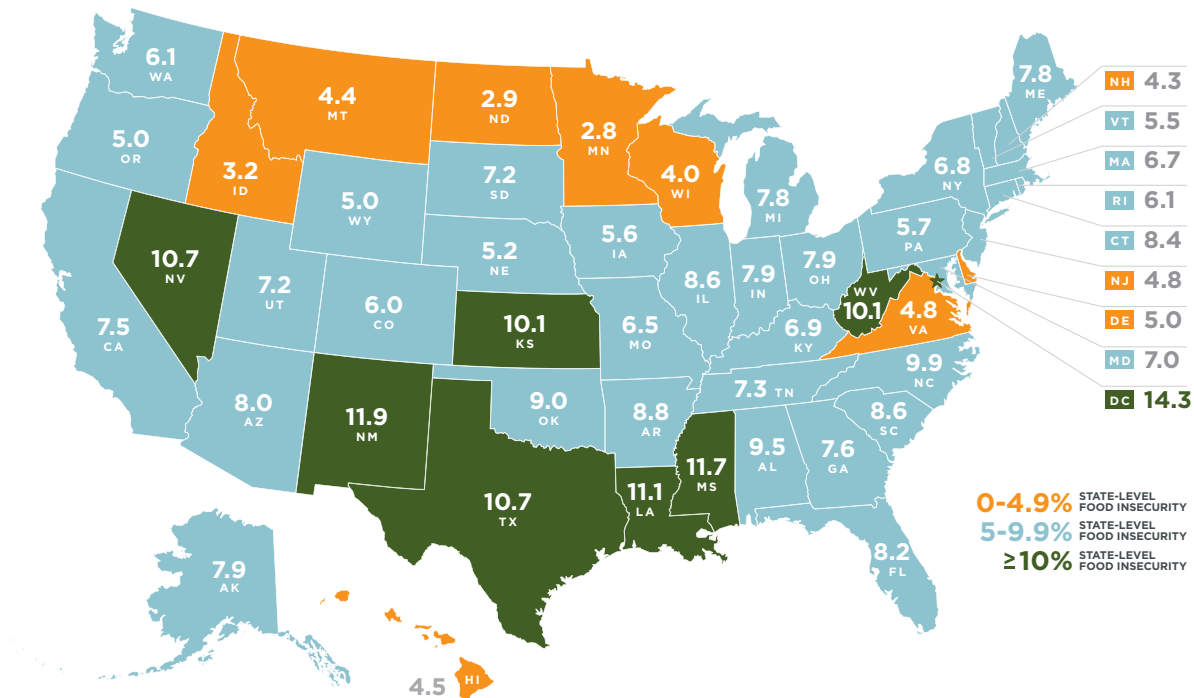

5.3 MILLION

seniors are food insecure

Senior Food Insecurity Varies by Geography

STATE-LEVEL SENIOR FOOD INSECURITY RATES IN 2018

Every state is home to seniors who experience food insecurity.

LOWEST/HIGHEST STATE SENIOR FOOD INSECURITY RATES

Senior food insecurity rates at the state level range from 2.8% in Minnesota to 14.3% in Washington D.C.

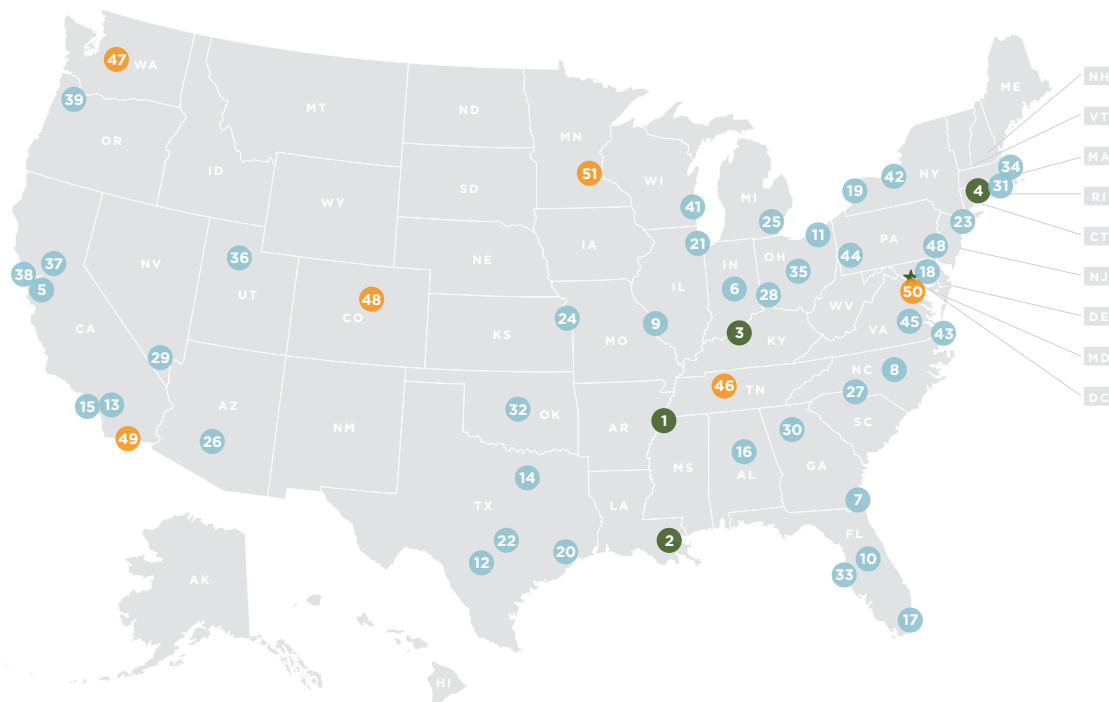

REGIONAL SENIOR FOOD INSECURITY RATES

Seniors who live in states in the southern United States are more likely to experience food insecurity: the average senior food insecurity rate in the South is 8.8%, compared to 6.7% for the next highest region, the West.

Nationally, millions of seniors face food insecurity. One way to better understand the need is through exploration of senior food insecurity rates across different geographies. To this end, *The State of Senior Hunger in America* explores senior food insecurity for all 50 states and the District of Columbia. Additionally, the report examines senior food insecurity rates for the 51 metropolitan areas that have a population of more than 1 million people.

METRO-LEVEL SENIOR FOOD INSECURITY RATES IN 2018

Every metro area is home to seniors who experience food insecurity.

≥10% METRO AREA FOOD INSECURITY

- 1 **15.6%** TN / MS / AR Memphis
- 2 **12.7%** LA New Orleans / Metairie / Kenner

Percentages represent senior food insecurity rates by category.

INCOME

RACE

ETHNICITY

DISABILITY

MARITAL STATUS

METRO LOCATION

AGE

EMPLOYMENT STATUS

GENDER

MULTI-GENERATIONAL HOUSEHOLDS

HOUSING

VETERAN STATUS

INCOME

As they age, many seniors experience decreased earnings and must rely on fixed incomes. For many seniors, this income stability can protect against food insecurity, but for others, having limited income can make it difficult to make ends meet. For instance, the average monthly Social Security benefit (\$1,461.31 for retired workers) results in an annual income (\$17,535) that is only somewhat higher than the federal poverty line (\$12,140 for a single person in 2018).^{3,4}

DISABILITY

Seniors living with disabilities face unique challenges. As seniors age, they are likely to develop health problems and disabilities which can make traveling to stores, carrying groceries, and cooking more difficult.⁵ Seniors with disabilities are more likely to be food insecure than those without disabilities due to higher medical costs,⁶ and food insecurity can cause disabilities and chronic health conditions to worsen.

HOUSING

Housing is one of many costs that can be a strain for seniors with limited financial resources. Senior renters are more likely to be cost burdened—spending more than 30% of their incomes on housing—than seniors who are homeowners.⁷ For these seniors with limited funds remaining after rent is paid, the risk for food insecurity is high—senior renters are nearly four times more likely to be food insecure than senior homeowners.

RACE/ETHNICITY

Seniors of racial or ethnic minority status tend to be at higher risk for experiencing food insecurity. Because of population size, the majority of the food-insecure senior population is White, but minority groups are disproportionately affected by food insecurity. Food insecurity among African American seniors is more than double the rate among White seniors, and food insecurity among Hispanic seniors is more than double the rate among non-Hispanic seniors.

MULTI-GENERATIONAL HOUSEHOLDS

The number of multi-generational households in the U.S. has increased in recent decades, and today one in five Americans live in a multi-generational household.⁸ While this type of household structure can yield many positive benefits, seniors who reside with a grandchild experience food insecurity at more than twice the rate of seniors in households where there is no grandchild present. Children are typically shielded from food insecurity by adults in the household, so seniors may ensure the food security of their grandchildren at the expense of their own dietary needs as they deal with the stress of caregiving responsibilities and stretch already-limited financial resources.⁹

Implications

The State of Senior Hunger in America sheds light on the extent to which food insecurity affects seniors age 60 and older in the United States, offering deeper insights into the experience of food insecurity among the aging population. After a lifetime of working and raising families, 5.3 million seniors struggle to access enough food. Food-insecure seniors live in communities across the country, including all 50 states and Washington, D.C. *The State of Senior Hunger* also finds that food insecurity disproportionately affects certain seniors, including those who have lower incomes, who are disabled, who belong to racial or ethnic minority groups, who are younger, and who live with grandchildren.

Federal nutrition assistance programs, such as the Supplemental Nutrition Assistance Program (SNAP), serve as the first line of defense against hunger for people of all ages, including seniors. However, not every senior who is food insecure is eligible to receive these federal programs. Among seniors who do meet eligibility

requirements, participation rates are lower than the overall population, which may be due to misconceptions about eligibility, limited benefit amounts, the perceived difficulty of application or recertification, and attitudes towards government assistance.

As a result, the charitable sector is an important source of food for many individuals and families at risk of hunger across the country. Feeding America and its network of 200 food banks serve millions of seniors annually through a variety of programs that range from traditional pantry programs to specialized meal and grocery programs designed to address the unique needs of seniors. Given the scope and scale of the issue, along with the anticipated growth of the senior population in the coming decades, it is important that policymakers strengthen the existing safety net of public food programs as well as invest in public-private partnerships in order to reduce food insecurity and end hunger in America.

ABOUT THIS STUDY

The 2020 release of *The State of Senior Hunger* study includes two reports authored by Dr. James P. Ziliak and Dr. Craig Gundersen. This executive summary is based on analyses within the first report, *The State of Senior Hunger in America in 2018*, and a separate summary focuses on analyses within the second report, *Hunger Among Adults Age 50-59 in 2018*. All reports and references can be found at FeedingAmerica.org/StateOfSeniorHunger.

OUR NATION'S SENIOR POPULATION IS GROWING EXPONENTIALLY

WITH **12,000 MORE**
turning 60 each day

Average life
expectancy today

This population is set to reach **93M** in the next decade, with **118M** expected by **2060** – increasing the number of seniors today by more than half

LEAVING MORE AND MORE AMERICANS AT RISK OF HUNGER AND ISOLATION

BEFORE THE CORONAVIRUS PANDEMIC, NEARLY 9.7 MILLION SENIORS WERE THREATENED BY HUNGER
5.3M OF WHOM WERE FOOD INSECURE OR VERY LOW FOOD SECURE.

1 IN 4 SENIORS
LIVES ALONE

1 IN 4 FEELS LONELY

Due to COVID-19, we know that an even greater number of older adults are experiencing food insecurity, and many seniors are lonelier than before the pandemic.

AND WHILE HUNGER AND ISOLATION CAN AFFECT ANYONE WITH LIMITED MOBILITY AND DECLINING HEALTH, FINANCIAL STRAIN MAKES THEM MUCH WORSE

NEARLY 7.4 MILLION SENIORS HAVE INCOMES BELOW THE POVERTY LINE

THAT'S AN INCOME OF **\$240 A WEEK OR LESS**, which, after housing, utility and medical expenses, leaves very little for food

HALF OF SENIORS LIVING ALONE lack the financial resources to pay for **basic needs**.

Older adults living in poverty are **nearly twice as likely** as those living above poverty level to have limitations in their ability to live independently.

HUNGER AND SOCIAL ISOLATION NOT ONLY JEOPARDIZE THE HEALTH AND WELL-BEING OF OLDER ADULTS; THEY ALSO PLACE A SIGNIFICANT STRAIN ON OUR COUNTRY'S HEALTHCARE SYSTEM AND ECONOMY

The economic burden associated with malnutrition in seniors

Older adult falls cost about **\$50 BILLION** in medical costs

Among seniors, the additional Medicare expenditures associated with social isolation are estimated to cost **\$6.7 BILLION** each year

Medicare spending has more than doubled since 2005 and is disproportionately concentrated on older adults with multiple chronic conditions and/or functional limitations

5% OF MEDICARE BENEFICIARIES ACCOUNT FOR 41% OF SPENDING

FEDERALLY SUPPORTED NUTRITION PROGRAMS – LIKE MEALS ON WHEELS – ARE DESIGNED TO MEET THE NEEDS OF OLDER ADULTS, YET THESE SUCCESSFUL PUBLIC-PRIVATE PARTNERSHIPS REMAIN SIGNIFICANTLY UNDERFUNDED, EVEN AMID EFFORTS TO COMBAT COVID-19

Among older adults who have difficulties with daily activities, **2 OUT OF 3** receive limited or no home- or community-based care

BEFORE THE COVID-19 PANDEMIC, 83% OF LOW INCOME, FOOD INSECURE SENIORS WERE NOT RECEIVING THE MEALS THEY NEEDED

AND SENIORS WAITING TO RECEIVE MEALS ON WHEELS AT HOME ARE MORE LIKELY TO:

REPORT FAIR OR POOR SELF-RATED HEALTH	REPORT NOT HAVING ENOUGH MONEY TO BUY FOOD THEY NEED	REPORT RECENT FALLS OR FEAR OF FALLING THAT LIMITS ABILITY TO STAY ACTIVE	BE BLACK OR HISPANIC
SCREEN POSITIVE FOR DEPRESSION OR ANXIETY	REQUIRE ASSISTANCE WITH SHOPPING FOR GROCERIES OR PREPARING FOOD	TAKE THREE OR MORE MEDICATIONS EACH DAY	BE ENROLLED IN BOTH MEDICAID AND MEDICARE

WE NEED INCREASED FUNDING AND SUPPORT FOR OUR SENIORS NOW TO PREVENT EVEN GREATER SOCIAL AND ECONOMIC CONSEQUENCES LATER

Meals on Wheels America is the leadership organization supporting the 5,000+ community-based programs across the country that are dedicated to addressing senior isolation and hunger. This network serves virtually every community in America and, along with more than two million staff and volunteers, delivers the nutritious meals, friendly visits and safety checks that enable America's seniors to live nourished lives with independence and dignity. By providing funding, leadership, education, research and advocacy support, Meals on Wheels America empowers its local member programs to strengthen their communities, one senior at a time.

Updated May 4, 2020

Older Americans Act: Nutrition Services Program

Introduction

The Nutrition Services Program, authorized under Title III of the Older Americans Act (OAA), provides grants to states and U.S. territories to support nutrition services programs for seniors. As stipulated in the law, the purposes of the program are to (1) reduce hunger and food insecurity, (2) promote the socialization of older individuals, and (3) promote the health and well-being of older individuals by assisting them to access nutrition and other disease prevention and health promotion services to delay the onset of adverse health conditions resulting from poor nutrition or sedentary behavior. According to the U.S. Department of Agriculture (USDA), 7.5% of U.S. households with an elderly member were food insecure in 2018, which means they lacked the ability to purchase or otherwise acquire enough to eat. Households in which elderly lived alone reported a higher rate of food insecurity, at 8.9%. As the largest OAA program, the Title III Nutrition Services Program received \$937 million in FY2020, accounting for 45% of the act's total funding (\$2.1 billion). A total of \$720 million in FY2020 supplemental funding has been provided under P.L. 116-127 (\$240 million) and P.L. 116-136 (\$480 million) for nutrition programs to respond to the COVID-19 pandemic. The Supporting Older Americans Act of 2016 (P.L. 116-131) extended authorizations of appropriations through FY2024.

Administration

The Administration on Aging (AOA) in the Administration for Community Living (ACL) within the Department of Health and Human Services (HHS) administers the Nutrition Services Program, which includes

- the Congregate Nutrition Services Program,
- the Home-Delivered Nutrition Services Program, and
- Nutrition Services Incentive Program.

States that implement these programs must target nutrition services to older persons with the greatest social and economic need, with particular attention to people with low-incomes, including low-income minorities, people with limited English proficiency, people residing in rural areas, and those at risk for institutionalization. Means tests for program participation are prohibited. Older persons are encouraged to contribute to the costs of nutrition services, but may not be denied services for failure to contribute.

Congregate Nutrition Services

Congregate nutrition services provide meals and related nutrition services to older individuals in a variety of group settings, such as senior centers, community centers, schools, and adult day care centers. The program also provides seniors with opportunities for social engagement and volunteering. Individuals aged 60 or older and their spouses (regardless of age) may participate in the congregate nutrition program. The following groups may

also receive meals: persons under age 60 with disabilities who reside in housing facilities occupied primarily by the elderly, where congregate meals are served; persons with disabilities who reside with, and accompany, older persons to meals in congregate settings; and volunteers who provide services during the meal hours. In FY2018, a total of 73.6 million congregate meals were served to nearly 1.5 million meal participants.

Home-Delivered Nutrition Services

Home-delivered nutrition services (commonly referred to as “meals on wheels”) provide meals and related nutrition services to older individuals, with priority given to homebound older individuals. According to AOA, “home-delivered meals are often the first in-home service that an older adult receives, and the program is a primary access point for other home and community-based services.” Home-delivered meals can be an important service for many family caregivers in assisting them with their caregiving responsibilities as well as helping maintain their own health and personal well-being. Individuals aged 60 or older and their spouses (regardless of age) may participate in the home-delivered nutrition program. Services may be available to individuals under age 60 with disabilities if they reside at home with the older individual. In FY2018, a total of 147.0 million home-delivered meals were provided to over 892,000 meal participants.

Nutrition Services Incentive Program (NSIP)

NSIP provides funds to states, U.S. territories, and Indian tribal organizations to purchase food or to cover the costs of food commodities provided by the USDA for the congregate and home-delivered nutrition programs. NSIP was originally established by the OAA in 1974 as the Nutrition Program for the Elderly and administered by USDA. In 2003, Congress transferred the administration of NSIP from USDA to AOA. However, states and other entities may continue to receive all or part of their NSIP grants in the form of USDA commodities. Obligations for commodity procurement for NSIP are funded under an agreement between USDA and HHS.

Funding

The AOA awards separate grants to states and U.S. territories for the congregate nutrition services program and home-delivered nutrition services program. State Units on Aging (SUAs) administer the program at the state level, and in turn, award those funds to over 600 Area Agencies on Aging (AAAs), which oversee the program in their respective planning and service areas. The AOA also awards a separate grant to states, U.S. territories, and tribal organizations for NSIP.

Grants for congregate and home-delivered nutrition services are awarded to states and U.S. territories based on a

statutory formula that takes into account each entity's relative share of the population aged 60 and over. States are required to provide a matching share of 15% in order to receive these funds. NSIP grants are awarded to states and other entities based on each entity's share of total meals served by the nutrition services program (both congregate and home-delivered meals) in all states, U.S. territories, and tribes during the prior year. There is no matching requirement for NSIP grant awards. For FY2020 program funding, including supplemental funding in response to the COVID-19 pandemic, see Table A-1 in CRS Report R43414, *Older Americans Act: Overview and Funding*.

Service Delivery

Nutrition services providers are required to offer at least one meal per day, five or more days per week (except in rural areas, where provision can be less frequent). The meals must comply with the Dietary Guidelines for Americans published by the Secretary of HHS and the Secretary of Agriculture. Providers must serve meals that meet certain dietary requirements based on the number of meals served by the project each day. Providers that serve one meal per day must provide to each participant a minimum of one-third of the daily recommended dietary reference intakes (DRIs) established by the Food and Nutrition Board of the National Academy of Sciences, Engineering, and Medicine. Providers that serve two meals per day must provide a minimum of two-thirds of the DRIs, and those that serve three meals per day must provide 100% of the DRIs. Providers must comply with state or local laws regarding safe and sanitary handling of food, equipment, and supplies used to store, prepare, and deliver meals, and providers must carry out meal programs using the expertise of dietitians and meal participants.

Nutrition service providers may offer nutrition-related services, such as nutrition education and screening, nutrition assessment, and counseling, as appropriate. Providers are encouraged to make arrangements with schools and other facilities serving meals to children to promote intergenerational meals programs. Where feasible, states must ensure that nutrition programs encourage the use of locally grown foods in meals programs and identify potential partnerships and contracts with local producers and providers of locally grown foods.

Program Participation

A national survey of OAA participants shows that in 2018, 53% of congregate nutrition survey respondents were aged 75 and older; 50% lived alone; 11% had annual income of \$10,000 or less; and 53% reported that the congregate meals program provided one-half or more of their daily food intake. Furthermore, many congregate nutrition participants reported these meals have fostered greater socialization, with 81% saying that they saw friends more often due to meals. The same survey found that 62% of home-delivered respondents were aged 75 and older; 57% lived alone; 19% had annual income of \$10,000 or less; and 62% said that the home-delivered meals program provided at least one-half of their daily food intake. According to the survey, home-delivered meals participants tend to be particularly frail and at risk for institutionalization as participants are likely to be homebound. Over one-third of

recipients (36%) reported needing assistance with one or more activities of daily living (ADLs, such as bathing, dressing, eating, and using the toilet); 12% of these recipients needed assistance with three or more ADLs. In addition, 78% reported needing assistance with one or more instrumental activities of daily living (IADLs, such as shopping, housework, and getting around inside the home).

Program Evaluation

ACL conducted a three-part evaluation of the Nutrition Services Program: a process study, cost study, and outcome evaluation. Results from these studies were compared to the last national evaluation of the nutrition program completed in 1995, where applicable. The process study collected data from SUAs, AAAs, and local service providers (LSPs) to assess program administration and service delivery. It found that more LSPs offer home-delivered meals compared to 1995, while somewhat fewer LSPs offer congregate meals (95% to 93%). However, more congregate meals programs offer breakfast and dinner (in addition to lunch, which all sites offer) and weekend meals. Programs also offer more options for "modified" meals, which are lower in fat, sodium, or calories. More LSPs report waiting lists for home-delivered meals, but waiting lists have fewer people, on average, than in 1995.

The meal cost study estimated the average costs of meals provided and examined cost variation. The report found that, on average, home-delivered meals cost more to provide than congregate meals (\$11.06 vs. \$10.69), including costs of both purchased and donated resources. This finding was consistent with the 1995 evaluation. However, costs vary by program size, geographic region, and urban, suburban, and rural or frontier areas. Researchers found that average meal costs outpaced inflation, which they attributed to food costs increasing at a faster rate than inflation between 1995 and 2015.

The outcome evaluation assessed program effectiveness (e.g., nutrient adequacy, health outcomes). Findings show that most participants had household incomes below 100% of the federal poverty level. Compared to congregate meal participants, a larger proportion of home-delivered meal participants reported being in fair or poor health, being underweight, having difficulty eating due to dental issues, and taking multiple medications. Overall, the study found a positive effect on diet quality and prevalence of adequate nutrition intake and that the majority of participants had positive impressions of these programs. With respect to health outcomes, 75% of participants had at least one chronic condition. Home-delivered meal participants were more likely to experience a health event (e.g., primary care visit, hospital admission, emergency room visit, home health episode) compared to congregate meal participants. Compared to nonparticipant comparison groups, congregate meal participants were less likely to experience certain health events and home-delivered meal participants were more likely to experience such events, likely underscoring the vulnerability of these participants.

Hunger is a Health Issue for Older Adults:

Food Security, Health, and the Federal Nutrition Programs

Poverty, food insecurity, and poor nutrition have harmful impacts on the health and well-being of older adults, which, in turn, can limit their ability to work (for those still capable of working), carry on daily activities, and live independently. Maintaining good health, consuming a nutritious diet, and/or managing an existing chronic disease can be especially challenging for older adults struggling with food insecurity for a variety of reasons, including limited finances and resources, the cost of healthy foods, competing priorities, functional limitations, and stress. One essential strategy to improve food security and health is connecting vulnerable older adults to the federal nutrition programs, including the Supplemental Nutrition Assistance Program (SNAP), Congregate Nutrition Program, and Home-Delivered Nutrition Program. These profoundly important programs have well-documented benefits for older adults.

This brief will review food insecurity rates and risk factors among older adults; the connections between food insecurity and health among older adults; and the effectiveness of the federal nutrition programs in alleviating food insecurity and supporting health for this population.

Food Insecurity Affects Millions of Older Adults

In 2018, more than 2.9 million food-insecure households included an adult age 65 or older.¹ This represented 7.5 percent of all households with an adult that was 65 or older. Among those within that age bracket who lived alone, more than 1.3 million (or 8.9 percent) were food insecure and 512,000 (or 3.4 percent) struggled with very low food security. Although these food insecurity rates are lower than the national average, households with older adults represent a considerable share of the food-insecure population: about 21 percent of all food-insecure households include an adult 65 or older.

Research shows that certain groups of older adults are at greater risk for food insecurity than others. Food-insecurity rates tend to be higher among older adults who are low income, less educated, Black, Hispanic, separated or divorced, never married, renters, residing in the South (e.g., Louisiana, Mississippi, North Carolina, Texas, Alabama), unemployed, living alone, living with a disability, living with grandchildren, or “younger” older adults (i.e., those 50 to 59 years of age).^{2,3}

1 in 5 food-insecure households include an older adult ≥ 65 years old

SOURCE: U.S. Department of Agriculture

Food Insecurity Has Harmful Impacts on the Health and Well-Being of Older Adults

It is well-established that a nutritious, adequate diet is critical for health and well-being across the lifespan. Poor dietary intake can cause micronutrient and macronutrient deficiencies, increase disease risk, or worsen existing diet-related conditions.⁸ As Meals on Wheels America describes it, “older adults cope with food insecurity in ways that adversely affect their nutrient intake, health, and ability to remain at home.”⁹

Older adults struggling with food insecurity consume fewer calories and nutrients and have lower overall dietary quality than those who are food secure, which can put them at nutritional risk.^{10,11,12,13} For example, one study using national data compared the nutrient intakes of food-insecure adults age 60 years and older to their food-secure counterparts.¹⁴ Those who were food insecure consumed less energy (i.e., calories), protein, vitamin A, thiamin, riboflavin, vitamin B6, vitamin C, calcium, phosphorous, magnesium, and iron.

Malnutrition Disproportionately Impacts Older Adults

Malnutrition is a separate, but related, concept to food insecurity. By definition, “malnutrition is considered a state of deficit, excess, or imbalance in protein, energy, or other nutrients that adversely impacts an individual’s own body form, function, and clinical outcomes.”¹⁵ Up to 50 percent of older adults are either at risk of becoming malnourished or are already malnourished. A number of factors can lead to malnutrition among older adults, including loss of appetite, limited ability to chew or swallow, certain medication regimes, functional or cognitive decline, and disease-related factors (e.g., increased metabolic demand, gastrointestinal problems). Food insecurity and poverty are common risk factors for malnutrition among community-dwelling older adults (i.e., those not in institutionalized care).

Chronic disease is a risk factor for, and consequence of, food insecurity among this population as well. More specifically, research shows that older adults with multiple chronic conditions are at higher risk for food insecurity.⁴ According to one study, older adults with two to four chronic conditions and five or more chronic conditions are 2.12 and 3.64 times as likely to be food insecure, respectively, than older adults with no or one chronic condition. In addition, older adults engaging in cost-related medication nonadherence (i.e., taking less medication than prescribed due to cost) are 1.9 times more likely to be food insecure than those not reporting such practices.

Chronic disease is a strong predictor of food insecurity among older adults, and so too are functional limitations.^{5,6} Low-income older adults with functional limitations have 69 percent higher odds of food insecurity and 65 percent higher odds of poor dietary quality, based on national survey data.⁷ These associations are even greater for those living alone. (Functional limitation classification was based on reports of being unable to perform or having difficulty with certain activities, such as walking without special equipment, lifting or carrying something that weighs 10 pounds, doing chores around the house, and pushing or pulling large objects.)

Poor health not only can be a risk factor for food insecurity among older adults, it also can be a consequence of food insecurity for this population.¹⁶ Older adults who are food insecure often experience negative mental and physical health conditions and outcomes, such as diabetes, fair or poor health status, depression, lower cognitive function, limitations in activities of daily living, hypertension, congestive heart failure, peripheral arterial disease, history of a heart attack, osteoporosis, gum disease, and asthma.^{17,18,19,20} The association between poor health and food insecurity is particularly strong for diet-related conditions: food-insecure older adults (compared to food-secure older adults) are 19 percent more likely to have high blood pressure, 57 percent more likely to have congestive heart failure, 65 percent more likely to be diabetic, and 66 percent more likely to have experienced a heart attack.²¹ In addition, food insecurity significantly increases the risk for falls, which are the leading cause of fatal and nonfatal injuries for older adults.²² According to one study, food-insecure Medicare Advantage members had a 1.69 times greater likelihood of experiencing a fall in the past year, compared to their food-secure peers.²³

Because of limited financial resources, adults — including older adults — who are food insecure also may use coping strategies to stretch budgets that are harmful for health. Examples of these coping strategies include engaging in cost-related medication underuse or nonadherence (e.g., skipping doses, taking less medicine, delaying to fill a prescription, not taking certain medications with food); postponing or forgoing preventive or needed medical care; purchasing a low-cost diet that relies on energy-dense, but nutrient-poor, foods; watering down food or drinks; forgoing the foods needed for special medical diets (e.g., diabetic diets); and making trade-offs between food and other basic necessities (e.g., housing, utilities, and transportation).^{24,25,26,27}

Food-Insecure Older Adults Often Resort to Cost-Related Medication Underuse

Rates of cost-related medication underuse among adults 65 and over are²⁸

- 25 percent for those experiencing marginal food security (low level of food insecurity);
- 40 percent for those experiencing low food security; and
- 56 percent for those experiencing very low food security (most severe level of food insecurity).

(Cost-related medication underuse for this study was defined as skipping medications to save money, taking less medicine than prescribed to save money, delaying filling a prescription to save money, requesting lower-cost medications to save money, and not being able to afford medicine due to cost.)

Food insecurity, along with the health-compromising coping strategies associated with food insecurity, can exacerbate existing disease. Some of these exacerbated conditions among adults include poor glycemic control for people — including older adults — with diabetes,^{29,30,31,32,33} end-stage renal disease for people with chronic kidney disease,³⁴ and low CD4 counts (a measure of immune system health) and poor antiretroviral therapy adherence among people living with HIV.^{35,36}

Not surprisingly, food insecurity is a strong predictor of greater health care utilization and increased health care costs across the lifespan.^{37,38,39} In 2014, the direct and indirect health-related costs of hunger and food insecurity in the U.S. were estimated to be a staggering \$160 billion.⁴⁰ Among older adults, those who are food insecure have more frequent hospitalizations and visits to physician offices and emergency rooms than their food-secure counterparts.^{41,42} And in terms of health care costs, one study found that “on average, food insecurity added about 11 percent to the health care costs of older adults with and without a specific chronic condition.”⁴³

The Federal Nutrition Programs Alleviate Food Insecurity and Support Health for Older Adults

The U.S. Department of Agriculture (USDA) and U.S. Department of Health and Human Services (HHS) administer a number of federally funded nutrition programs that support the food and nutritional needs of low-income older adults, including the Supplemental Nutrition Assistance Program (SNAP), Congregate Nutrition Program, Home-Delivered Nutrition Program, Commodity Supplemental Food Program, Senior Farmers' Market Nutrition Program, and Child and Adult Care Food Program.*

This section of the brief focuses on the importance and effectiveness of SNAP, the Congregate Nutrition Program, and Home-Delivered Nutrition Program for the older adult population. These three programs are of particular interest given their considerable reach in communities across the nation as well as the recent surge of research examining their impacts.

SNAP

Administered by USDA, SNAP is an effective anti-poverty initiative that serves as the first line of the nation's public policy defense against hunger and undernutrition. Over 36 million people participate in SNAP in a given month.⁴⁴ On average each month, SNAP serves about 5 million households with older adults 60 years or older (or 24 percent of all SNAP households).⁴⁵ Even so, only an estimated 48 percent of eligible older adults participate in SNAP, compared to 86 percent of eligible nonelderly adults.⁴⁶ The rates are even lower — 29 percent — among eligible older adults who live with others. Eligible older Americans are far less likely to participate in the program than most other demographic groups for a variety of

reasons, including barriers related to mobility, technology use, stigma, and widespread mistaken beliefs, such as how the program works, who can qualify, and benefit levels.⁴⁷

Increasing SNAP participation among older adults is critically important given the high rates of food insecurity in this population and the well-documented effectiveness of the program. First and foremost, the monthly benefits provided by SNAP enhance the food purchasing power of eligible low-income older adults. The benefits can be used only for food and are delivered through Electronic Benefit Transfer (EBT) cards, which are used like debit cards at authorized food retailers. In addition, a considerable body of evidence shows that SNAP plays a role in improving food security, economic security, health, and dietary intake throughout the lifespan.[†] The following selection of studies demonstrates the many economic and health benefits of SNAP participation for older adults.[‡]

- In analyses using nationally representative data, SNAP reduced the probability of food insecurity by 18 percent for all-elderly households of low-income.⁴⁸ In this study, “elderly” was defined as 60 or older.

*These and other programs available to older adults are summarized in FRAC's *Federal Nutrition Programs and Emergency Food Referral Chart for Older Adults*, available at www.frac.org. The chart includes program descriptions and eligibility information.

† For a comprehensive review of the literature, see FRAC's *SNAP and Public Health: The Role of the Supplemental Nutrition Assistance Program in Improving the Health and Well-Being of Americans* at www.frac.org.

‡ Studies that examine SNAP participation among adults have considerable variations in the ages of those included in the studies' samples. For example, many studies examine SNAP participation among adults 18 and older, which would include older adults. However, for the purposes of this brief, studies focused specifically on older adults are included in the selection of SNAP studies, with age descriptions provided. Refer to FRAC's *SNAP and Public Health: The Role of the Supplemental Nutrition Assistance Program in Improving the Health and Well-Being of Americans* at www.frac.org for additional studies on SNAP's effectiveness among adults generally.

- Nationally, SNAP lifted 3.2 million people — including 315,000 adults 65 and older — above the poverty line in 2018, based on Census Bureau data on poverty and income in the U.S.⁴⁹ For older American households, a separate study found that SNAP participation was associated with lower intensity and inequality of time spent in poverty.⁵⁰
- Food-insecure older adults participating in SNAP were less likely to be depressed than nonparticipants in a study using longitudinal data.⁵¹ The study sample included adults over the age of 54.
- Participation in SNAP was associated with increased use of preventative health care and receipt of a flu shot, based on longitudinal data of adults at least 60 years old.⁵²
- In analyses using national survey data, older adults participating in SNAP were 4.8 percentage points less likely to engage in cost-related medication nonadherence than eligible nonparticipants.⁵³ According to the study's authors, the “findings point to a spillover ‘income effect’ as SNAP may help older adults better afford their medications, conceivably by reducing out-of-pocket food expenditures.” This study sample included adults age 60 and older.
- In another study using national survey data, adults 65 years and older with diabetes who were participating in SNAP were 5.3 percentage points less likely to engage in cost-related medication nonadherence than eligible nonparticipants.⁵⁴ The study's authors write that the “findings suggest that participation in SNAP may help

improve adherence to treatment regimens among older adults with diabetes. Connecting these individuals with SNAP may be a feasible strategy for improving health outcomes.”

- SNAP participation was associated with reduced hospitalization and, among those who were hospitalized, less costly hospital stays in a study of older adults in Maryland dually enrolled in Medicare and Medicaid. According to the study team's estimates, “expanding SNAP access to nonparticipating dual eligible older adults in Maryland could have resulted in inpatient hospital cost savings of \$19 million in 2012.”⁵⁵ A companion study also found an association between SNAP participation and reduced nursing home admissions and admission costs, with estimated cost savings of \$34 million in 2012 if SNAP had been provided to eligible nonparticipants.⁵⁶ Both studies involved adults 65 years of age and older.
- A \$10 increase in monthly SNAP benefits was associated with reduced hospitalization and, among those who were hospitalized, less costly hospital stays, based on the study of older adults in Maryland dually enrolled in Medicare and Medicaid.⁵⁷ Similar findings were observed for nursing home admissions: a \$10 increase in benefits was associated with reduced nursing home admissions and, among those who were admitted, shorter and less costly stays.⁵⁸ Both studies were among adults 65 and older.

Congregate Nutrition Program and Home-Delivered Nutrition Program

The Congregate Nutrition Program and Home-Delivered Nutrition Program are authorized by Title III-C of the Older Americans Act and administered by the Administration of Community Living's (ACL) Administration on Aging at HHS.⁵⁹ The healthy meals and nutrition services (e.g., screening for nutritional risk, nutrition education) provided by the Congregate and Home-Delivered Nutrition Programs are targeted to adults who are 60 and older and in the greatest social and economic need (e.g., low-income, minority, rural resident, limited English proficiency, high risk for institutional care). In some cases, the programs also serve caregivers, spouses, and/or persons with disabilities. Unlike SNAP, there is no means test for participation, the funding for these programs is capped, and the programs cannot reach every eligible individual. According to estimates from the U.S. Government Accountability Office, only about 10 percent of low-income older adults receive congregate or home-delivered meals and only about 17 percent of low-income older adults struggling with food insecurity do so.⁶⁰

The Congregate Nutrition Program provides group meals and related nutrition services at participating sites throughout the country (e.g., recreation centers, churches, senior housing).⁶¹ The program also fosters social engagement and offers educational and volunteer opportunities. In 2018, the program reached more than 1.5 million people and served about 71 million meals.⁶²

The Home-Delivered Nutrition Program provides in-home meals and related nutrition services to those who are frail, homebound, or isolated. The in-home visits provide an important opportunity to conduct safety checks and promote social engagement among those who are homebound. In 2018, the program reached more than 861,000 people and served about 145 million meals.⁶³ For both programs, meals are provided at no cost, although voluntary contributions are accepted.

The primary goals of the Congregate and Home-Delivered Nutrition Programs are to reduce hunger and food insecurity, promote socialization, promote health and well-being, and delay the onset of adverse health conditions among older adults.⁶⁴ A number of studies and literature reviews conclude that the programs have achieved these goals and

more,^{65,66,67,68} with one study even demonstrating health care savings from increased home-delivered program participation.⁶⁹ But perhaps most notable of all these studies is the ACL-funded comprehensive evaluation of the Congregate and Home-Delivered Nutrition Programs, which found multiple positive effects on nutrition, health, and well-being as a result of program participation.^{70,71} For instance, the majority of congregate and home-delivered meal participants reported that the programs helped them eat healthier foods, improved their health and helped them to achieve or maintain a healthy weight, and allowed them to live independently and remain in their home.

What Are the Goals of the Congregate and Home-Delivered Nutrition Programs?

- Reduce hunger and food insecurity
- Promote socialization
- Promote health and well-being
- Delay the onset of adverse health conditions

A number of studies and literature reviews conclude that the programs have achieved these goals and more.

The ACL evaluation, which was conducted by Mathematica Policy Research, also compared program participants to eligible nonparticipants on a number of outcomes. In terms of dietary intake, congregate meal participants consumed diets that were more adequate in key nutrients (phosphorus, zinc, riboflavin, niacin, vitamin B6, and vitamin B12) and higher in overall dietary quality, when compared to nonparticipants. Home-delivered meal participants consumed diets that were more adequate in key nutrients as well (zinc, vitamin A, vitamin B6, and vitamin D). Additional analyses that supplemented and expanded on the program evaluation found that congregate and home-delivered meal participants were significantly more likely to consume milk and dairy, fruit or 100% juice, and vegetables over a 24-hour period than nonparticipants.⁷²

Furthermore, the evaluation demonstrated the favorable impacts of congregate meal program participation on food security, socialization, and health care use.^{73,74} Compared to eligible nonparticipants, congregate meal participants had lower rates of household food insecurity, were less likely to screen positive for depression, and were more satisfied with their socialization opportunities. Congregate meal participants also had lower health care use: participants were less likely, in the short run, to have a hospital admission, emergency room visit that led to a hospital admission, or home health episode (among those with at least one episode), and, in the longer run, participants were less likely to have a nursing home admission.

Conclusion

Food insecurity has serious consequences for the health and well-being of older adults. Beyond the consequences for individuals and families, food insecurity also has costly implications for the health care system. Fortunately, solutions exist to tackle these challenging issues, including increased use of the federal nutrition programs. Specifically, the Supplemental Nutrition Assistance Program, the Congregate Nutrition Program, and Home-Delivered Nutrition Program are all important and effective interventions for low-income older adults. Increasing access to and strengthening these programs would further their role in improving the food security, health, and well-being of older Americans.

FRAC has numerous resources focused exclusively on older adults, including food insecurity data and maps (by state); SNAP participation data and maps (by state and county); SNAP fact sheets (by state); a primer on SNAP's importance in supporting older adults; best practices in improving SNAP access and participation; and how to identify and address food insecurity among older adults in health care settings. SUBSIDIZED
SENIOR HOUSING
MARKET SNAPSHOT REPORT

SUBSIDIZED SENIOR HOUSING

SECTOR SIZE

1.7M

HUD AFFORDABLE HOUSING APARTMENTS

headed by a senior (62 or older)

800,000

LOW INCOME HOUSING TAX CREDIT APARTMENTS

headed by a senior (62 or older)

124,480

USDA RURAL HOUSING SERVICE SECTION 515

headed by a senior (62 or older)

HUD 202 SUPPORTIVE HOUSING FOR THE ELDERLY

400,000 UNITS CONSTRUCTED:

- 205,000 units with section 8 rent subsidy
- 122,000 units with project rental assistance contract subsidy

average annual household income: \$13,238

38% of residents frail or near-frail

16% units have household head 85 or older

50% of 202 communities have a service coordinator

FEDERAL FUNDING (ANNUALLY)

- HUD Funding: \$49 Billion
- Low Income Housing Tax Credit: \$8.2 Billion
- USDA Rural Housing Service: \$1.6 Billion

KEY FEATURES OF HUD ASSISTED HOUSING

INCOME TARGETED

- > Section 202 program serves households with incomes below **50%** of area median income.

AFFORDABLE

- > Households pay **30%** of their adjusted household income for rent. The average Section 202 household pays **\$297** a month for rent.

STABLE

- > Households can remain in their HUD apartments for as long as necessary. The average age at which elderly households leave assisted housing is the highest for Section 202 residents compared to other housing programs.

SUBSIDIZED SENIOR HOUSING

DEMOGRAPHICS AND HOUSING DEMAND

from the Joint Center for Housing Studies of Harvard University

FAST FACTS

- Currently, only **36%** of those who qualify receive housing assistance benefits (roughly 1.4 out of 4 million households).
- The number of older households will increase from **29.9 million** in 2015 to **49.6 million** in 2035.
- In 2015, 15 million older adults earned less than **80%** of their area median income. By 2035, this group will reach 27 million.
- Between 2015 and 2035, the number of households headed by a person aged 70 and over will grow by **90%**.
- The number of single-person and married couple households headed by someone aged **65 or over** will more than double by 2035.
- By 2025, the number of older households with a disability will increase by **76%** to reach 31.2 million households.
- Today, only **1%** of the housing stock offers zero-step entrances, single-floor living, wide halls and doorways, electrical controls reachable from wheelchairs, and lever-style handles on faucets and doors.
- Of the projected **31.2 million** older adult households with a disability in 2035, **17 million** will have at least one person with a mobility disability.

LINKAGES

Health Services

- Housing is a key social determinant of health.
- The availability of an on-site service coordinator reduced the odds of having a hospital admission among residents by 18%.
- Residents with a social worker and a registered nurse who coordinates and additional health services are less likely to visit the emergency room and move to a nursing home.

Health care savings

- Having an enhanced service coordinator and a wellness nurse on-site slows Medicare growth by \$1500 per year, per resident participating in the program for more than three years.
- Medicaid Home and Community Based Services waiver programs produced savings of \$43,947 per participant for the year studied compared to institutional care.

Americans with Disabilities Act

- Affordable housing allows states to comply with the ADA and the Supreme Court's *Olmstead* decision, which requires favoring community-based and

integrated settings over institutional settings for older adults with disabilities.

- Without the availability of housing affordable to them, older adults do not have a place to receive community-based services.

Life's Necessities

- According to Harvard's Joint Center for Housing Studies, housing cost burdens among older adults can put considerable strain on households' budgets.
- Older adult renter households with the lowest incomes who also spent more than half of their incomes for housing spend 51% on health care, 37% less on food, and 67% less on transportation than their non-housing cost burdened peers.
- Older adult owner households with the lowest incomes are similarly left with less for other life necessities, spending 67% less on health care, 34% less on food, and 49% less on transportation compared to their non-housing cost burdened peers.

Healthy Aging—Nutrition Matters: Start Early and Screen Often

Susan B Roberts,¹ Rachel E Silver,¹ Sai Krupa Das,¹ Roger A Fielding,¹ Cheryl H Gilhooly,¹ Paul F Jacques,¹ Jennifer M Kelly,¹ Joel B Mason,¹ Nicola M McKeown,¹ Meaghan A Reardon,¹ Sheldon Rowan,¹ Edward Saltzman,² Barbara Shukitt-Hale,¹ Caren E Smith,¹ Allen A Taylor,¹ Dayong Wu,¹ Fang Fang Zhang,² Karen Panetta,³ and Sarah Booth¹

ABSTRACT

The amount of time spent in poor health at the end of life is increasing. This narrative review summarizes consistent evidence indicating that healthy dietary patterns and maintenance of a healthy weight in the years leading to old age are associated with broad prevention of all the archetypal diseases and impairments associated with aging including: noncommunicable diseases, sarcopenia, cognitive decline and dementia, osteoporosis, age-related macular degeneration, diabetic retinopathy, hearing loss, obstructive sleep apnea, urinary incontinence, and constipation. In addition, randomized clinical trials show that disease-specific nutrition interventions can attenuate progression—and in some cases effectively treat—many established aging-associated conditions. However, middle-aged and older adults are vulnerable to unhealthy dietary patterns, and typically consume diets with inadequate servings of healthy food groups and essential nutrients, along with an abundance of energy-dense but nutrient-weak foods that contribute to obesity. However, based on menu examples, diets that are nutrient-dense, plant-based, and with a moderately low glycemic load are better equipped to meet the nutritional needs of many older adults than current recommendations in US Dietary Guidelines. These summary findings indicate that healthy nutrition is more important for healthy aging than generally recognized. Improved public health messaging about nutrition and aging, combined with routine screening and medical referrals for age-related conditions that can be treated with a nutrition prescription, should form core components of a national nutrition roadmap to reduce the epidemic of unhealthy aging. *Adv Nutr* 2021;00:1–11.

Keywords: aging, nutrition, noncommunicable diseases, sarcopenia, cognition, age-related macular degeneration, diabetic retinopathy, obstructive sleep apnea, urinary incontinence, constipation

Background: Living Longer Compared with Living Healthier

Leading a long and healthy life is a goal that is embraced worldwide (1), and fear of death has long been proposed to be a defining characteristic of humans (2, 3). From these perspectives, the 30-y increase in life expectancy during the 20th century is a transformational advance. Furthermore, life expectancy continues to increase for adults aged >65 y (4), and adults >85 y are the fastest growing demographic (5). However, a little-recognized corollary of the recent trends is that older adults are now living in an ill and disabled state for longer: the mean duration of disability at the end of life was just 5.3 y in the 1960s (6), whereas more recent calculations indicate that the duration of poor health and functional impairments has increased from 8.9 to 10.2 y between 1990 and 2017 (7). This extension of unhealthy life is unprecedented in human history, and presents major personal and public health burdens. This is particularly

evident during the current coronavirus disease-19 (COVID-19) pandemic, because the association of COVID-19 severity and age is substantially weakened when comorbidities are taken into account (8), and highlights the need to identify ways to support healthy aging (9). This review summarizes current knowledge of the underrecognized role of diet in prevention and treatment of diseases and functional losses that become increasingly prevalent during aging, with a focus on data available from research conducted in North America and Europe.

There is no single definition of “healthy aging” or the related term “healthspan” (1, 10, 11), but it is generally taken to mean the absence of the archetypal diseases and functional impairments associated with old age. The specific diseases and functional losses associated with aging have been defined as those conditions where there is a quadratic relation between disease prevalence and chronological age (12). These include: sarcopenia [loss of skeletal muscle (13)],

wasting, and osteoporosis (14, 15), which are linked to frailty and falls (16); impaired cognitive function and increased risk of dementia (17, 18); impaired vision via age-related macular degeneration, cataracts, and diabetic retinopathy (19); hearing loss (20); noncommunicable diseases (NCDs) such as type 2 diabetes, cardiovascular disease, and cancer (12); obstructive sleep apnea (21, 22) and poor sleep quality (22, 23); and urinary incontinence (24) and chronic constipation (25, 26). The prevalence of these problems is often > 50% in adults aged > 85 y, especially in racial and ethnic minorities (26–28). The proposed underlying mechanisms of the aging-associated pathologies include inflammation, oxidative stress, and limited capacity for removal of damaged proteins and DNA repair (29–34). Because these changes affect all organ systems, aging with multiple comorbidities is the norm (35, 36).

Current Status of Knowledge

Unhealthy nutrition throughout life, but especially in old age

American adults of all ages typically eat a broadly unhealthy diet relative to national recommendations (37). **Figure 1A** illustrates the percentage of adults in different age groups who consume less than the estimated average requirements (EARs) of micronutrients (38). Mean intakes of choline, vitamin B-6, zinc, magnesium, and calcium are increasingly inadequate as adults age. In addition, 21% of women and 13% of men aged > 70 y consume less than the RDA for protein (39), which is an important concern because emerging evidence suggests that protein levels higher than the RDA (1.0–1.2 g/kg) can be optimal for older adults to prevent muscle wasting (40) due to factors such as decreased muscle uptake of dietary amino acids and reduced anabolic signaling for protein synthesis (41). These findings of broadly low intakes of essential nutrients throughout adult life and especially in older adults are based on self-reported diet, but are consistent with nationally representative biochemical data showing that 30–36% of older adults have ≥ 1 micronutrients in the deficient range (42). Low micronutrient intakes have also been documented in older adults living in other countries

FIGURE 1 Dietary adequacy in different age-groups. (A) Percentage of adults consuming below the estimated average requirement (EAR), or at or below the adequate intake (AI) when EAR values are not available, based on reported usual intakes in the NHANES 2009–2012. Includes nonconsumers of supplements examined in NHANES 2009–2012. Figure adapted from published information (39, 43). (B) Percentage of adults consuming above, below, or at the recommended intakes for food groups in the 2020–2025 Dietary Guidelines (44) by sex and age group, based on dietary data obtained from the 2007–2010 NHANES. A: Whole grains, B: Dairy, C: Seafood, D: Vegetables, E: Fruit, F: Oils, G: Nuts, seeds, soy, H: Protein, I: Meat, poultry, eggs, J: Refined grains, K: SoFAS. Note: Total vegetables includes beans and peas. Protein excludes beans and peas (45). SoFAS, solid fats and added sugars.

(46), indicating this is likely a global, rather than a specifically US, phenomenon.

The dietary patterns of older adults are also broadly inadequate compared with food-based recommendations. **Figure 1B** shows that adults of all ages typically consume less than the 2020–2025 Dietary Guidelines recommended portions of most healthy food groups including whole grains, dairy, seafood, vegetables, fruits, nuts, seeds, and legumes (44). The figure also shows consumption of excess amounts of meats, saturated fats, and added sugars compared with the recommendations. Using currently available nutritional benchmarks, the majority of adults aged > 50 y consume diets that fall far short of recommendations (37, 39, 43). Some groups are especially vulnerable, including low-income and minority populations (37), those participating in the national supplemental nutrition assistance program (47), and older adults with obesity (41% of adults > 60 y) (48, 49).

In relation to these observations, it should be noted that current dietary recommendations for older adults are largely based on requirements measured in young adults. Thus,

FIGURE 2 Energy requirements for individuals in the healthy weight range at different ages. Data are based on the Institute of Medicine's equations for predicting energy requirements of individuals with typical heights (for men: 1.58–1.9 m; for women: 1.45–1.78 m), a BMI in the healthy range of 18.5–25 kg/m², and sedentary or light activity levels (38). The dotted line represents the lowest energy menu examples in the US Dietary Guidelines.

further research is needed to refine essential nutrient and food group recommendations for healthy aging (50). Nevertheless, empirical considerations suggest that mean requirements for protein and several micronutrients can increase during aging, with only a few energy-related vitamins (such as thiamin) decreasing (51–53).

Low energy requirements contribute to unhealthy nutrition in older adults

An important yet underrecognized factor in unhealthy dietary patterns in old age is that there is a large decrease in typical energy requirements as individuals age (54). **Figure 2** shows the Institute of Medicine's estimated energy requirements of men and women of different ages and heights for the healthy weight range (BMI = 18.5–25.0 kg/m²), which were based on measurements of energy expenditure using the gold-standard doubly labeled water method (38). The equations used to generate the figure are given in **Supplemental Table 1**. As shown, the decrease in energy requirements to maintain healthy weight during adult life is substantial, with a typical reduction of ≥500–700 kcal/d between early adulthood and late life in healthy women and men. This creates the challenge that to meet the same or increased absolute intakes of protein and micronutrients in a diet containing a diminishing level of energy, the proportion of nutrient-dense foods in the diet has to keep increasing over time, with a parallel decrease of greater magnitude in the quantity of low-nutrient foods. In other words, a healthier diet is needed in older age to counterbalance decreasing energy requirements. **Supplemental Table 2** shows EARs for protein and micronutrients as a percentage of 1000 kcal of typical energy requirements, illustrating that the density of most micronutrients needs to increase in older adults by 50%, and by nearly 100% for nutrients that are required in greater absolute amounts.

US Dietary Guidelines for 2020–2025 (44) give examples of healthy dietary patterns designed for all Americans, and include portion guidelines for adults with requirements of ≥1600 kcal/d (lower-calorie menus are illustrated for children, who have different nutritional needs). However, as illustrated in **Figure 2**, many older individuals, particularly women, require <1600 kcal/d to maintain a healthy weight, and some frail older adults will need as little as 1000 kcal/d to maintain a healthy weight depending on their age, weight, and height and health status. Thus, current Dietary Guidelines do not provide adequate guidance on healthful dietary patterns for the increasing population of older adults.

Functional losses are contributors to unhealthy nutrition in older adults

There is a negative cycle between functional losses and inadequate nutrition in older adults that accelerates unhealthy aging. Sarcopenia, the age-associated loss in skeletal muscle mass and function, is a key underlying cause of decreases in movement, physiological capacity, and functional performance, and increased disability and mortality observed with advancing age (55, 56). The causes of sarcopenia are multifactorial but include inadequate nutrition, low physical activity, inflammation, and multiple NCDs and other comorbidities (57, 58). Sarcopenia also has a profoundly negative impact on nutritional status in older adults, because decreased muscle mass contributes to reduced energy requirements, and can also limit the ability to shop for food and prepare meals (58).

As summarized below, poor vision in old age also limits the capability to purchase, prepare, and consume healthy food. For example, many older adults cannot see clearly the food on their plate. Similarly, reduced dental health, taste, smell, and hunger are associated with aging and also reduce the drive to eat (54, 59–62). Older adults are also more likely to take medications that impact food intake (63) and have digestive problems including gastric atrophy, chronic constipation, and/or malabsorption (64, 65) that negatively impact appetite and nutrient absorption. Older adults additionally have changes in homeostatic mechanisms regulating thirst sensation and renal water absorption, resulting in a higher risk of dehydration, (66, 67), which can be exacerbated by the use of common diuretics and fear of incontinence due to limited mobility (68).

Socioeconomic factors are contributors to unhealthy nutrition in older adults

In addition to physiological and genetic factors influencing nutritional status during aging, there are widely recognized demographic and social factors that increase the risk of consuming an unhealthy diet as adults grow older. These include poverty and food insecurity, which make it harder to purchase the nutrient-rich foods that are both more necessary and more expensive (69, 70). Older adults are also more likely to live alone and be socially isolated, factors that limit food preparation and predict unhealthy dietary intake (61, 62).

Dietary patterns, nutrients, and weight management for prevention and treatment of aging-associated diseases and conditions

Dietary patterns and nutrients.

Table 1 summarizes the evidence from recent consensus reports, umbrella and systematic reviews, and meta-analyses for the associations of specific dietary patterns, nutrients, and

BMI with prevention of age-related diseases and functional impairments. **Table 1** also summarizes data from randomized controlled trials of nutritional treatments for specific conditions.

A variety of dietary patterns and indices have been evaluated for their association with age-associated diseases and conditions, including Mediterranean-style diets (137),

US Dietary Guidelines and the related Healthy Eating Index (138, 139), the WHO's Healthy Diet Indicator (140), Dietary Inflammatory Index (29), the MIND diet (141), and low glycemic index carbohydrate and high-fiber diets (142). These dietary profiles are associated with prevention of a broad range of age-associated diseases and conditions including: frailty and risk of falls, osteoporosis, cognitive decline, dementia, age-related macular degeneration, cataracts, hearing loss, NCDs (including type 2 diabetes, cardiovascular disease, and many cancers), and chronic constipation (72, 73, 89–92, 95, 102, 103, 107, 108, 121, 119, 109, 127–129, 120, 130, 131). In some cases, these associations are confirmed with randomized trials (143, 123). In addition Table 1 highlights specific nutrients associated with preventing unhealthy aging including: dietary protein at least equal to current RDAs for preventing sarcopenia, frailty, and falls in combination with exercise (77); adequate calcium and vitamin D intake with recommended protein for preventing osteoporosis (82–84); and whole grains and dietary fiber (in particular, coarse wheat bran fiber) for preventing type 2 diabetes and chronic constipation (133, 134).

There is also evidence that healthy aging is fostered by the cumulative effects of healthy nutrition earlier in life. For example, for prevention of osteoporosis late in life, attaining a high peak bone mineral density by age 30 is required (after which bone mineral density falls) and this requires consuming recommended levels of calcium throughout childhood and young adulthood (144). Similarly, high dietary flavanol intakes over 2 decades are associated with a reduced risk of Alzheimer disease and related dementias (145), and greater adherence to a Mediterranean diet for >5 y is associated with a 1–3-fold reduction in risk of frailty (146, 147), a 30% reduction in risk of a major cardiovascular event (123), and a 41% reduced risk of incident advanced age-related macular degeneration (148).

In addition there are a number of age-related diseases and conditions that randomized trials indicate can be treated to attenuate progression (and in some cases support remission) with a nutrition regimen (Table 1). These include sarcopenia, osteoporosis and fractures, age-related macular degeneration, type 2 diabetes, and chronic constipation (133, 74–76, 85, 86, 96). However, not all age-related diseases and conditions that are apparently prevented by healthy nutrition can also be treated after their diagnosis. For example, randomized trials have indicated no significant effect of omega-3 fatty acids, B vitamins, vitamin D, or soy protein on recurrence of various cancers (149, 150).

Although food-based nutrition is the focus of this report, a strong case can be made for targeted supplementation with specific nutrients that are hard to achieve in old age through a healthy diet. In particular, the mean intake of vitamin D in US women aged 51–70 is only about one-fourth of the RDA, and lower intakes are reported for ages ≥ 71 y (151). Similarly, mean calcium intake is less than one-third of the RDA in older adults (151). Some older adults can also benefit from supplemental vitamin B-12 because they are at increased risk

of deficiency due to chronic atrophic gastritis [present in 30–50% of older adults (152)] and the widespread use of gastric acid-blocking drugs that inhibit digestion of food-based vitamin B-12 to an absorbable form (153).

Weight management.

BMI values above the healthy range (>25.0) are strongly associated with increased risk of a wide range of age-associated diseases (Table 1). Older adults with obesity [41% of adults >60 y (154)] are at higher risk of frailty and osteoarthritis, and consequently have more functional limitations than those who are not obese (155). Obesity also increases the risk of all the major NCDs, cognitive decline and dementia, obstructive sleep apnea, sensory impairments (age-related macular degeneration, cataracts, diabetic retinopathy, and hearing loss), and urinary incontinence (7, 21, 156, 105, 106, 136, 71, 80, 87, 94). It should also be noted that unhealthy dietary patterns with high intakes of sugar-sweetened beverages, processed snack foods, and red meat, and low intakes of vegetables, whole grains, fruits, and nuts are associated with weight gain (157), which emphasizes the key link between diet, BMI, and health. As observed with dietary patterns, the risks of obesity for unhealthy aging increase over time, and there is a progressive increase in the risks of type 2 diabetes (158), cardiovascular disease (159), and cancer (160) with every year that obesity is maintained. Conversely, reduced energy intake promotes healthy aging, with data from studies of nonhuman primates (161) and a 2-y trial of calorie restriction in nonobese humans (162, 163) indicating that low energy intake promotes favorable changes in a broad range of age-related biomarkers of healthspan (162, 164).

Weight loss is also an effective first-line therapy for treatment of several age-related diseases and conditions in individuals with obesity, including urinary incontinence and sleep apnea (24, 132). Furthermore, a mean weight loss of 10% has been reported to achieve remission of type 2 diabetes in 50% of cases when implemented within 7 y of onset, providing a remarkable example of the potential for nutrition to impact age-related disease more effectively than current medication regimens (112).

It is also important to note that recommendations for maintaining physical activity into old age can play a valuable role in supporting nutritional health in old age, not only by preserving musculoskeletal health (165, 166) but also by attenuating the decline in energy requirements with aging. These findings are consistent with a recent federal report noting the lack of specificity in nutrition assistance programs to support healthy aging in current government programs (50).

Are All Generally Healthy Dietary Patterns Equivalent for Achieving Nutritional Health in Old Age?

There is currently insufficient information to categorically differentiate the effects of consuming the different broadly healthy dietary patterns discussed above. This is because they

FIGURE 3 Illustration of the adequacy of healthy food group servings that can be achieved with different dietary patterns at lower levels of energy requirements in older adults. Typical menu examples were used to calculate the number of servings per day of foods in key healthy food groups (fruit, vegetables, proteins, dairy, grains, and oils) for 3 healthy dietary patterns (US Dietary Guidelines, Mediterranean, and Vegetarian) implemented at 4 energy levels (1600, 1400, 1200, and 1000 kcal/d). Suggested servings reflect a mean of 3 different menus that adhere to the respective dietary pattern and are shown relative to the serving size recommendations outlined in the Dietary Guidelines for Americans for each dietary pattern at 1600 kcal/d intakes. The vertical black line represents 100% of the recommended servings for the specified dietary patterns, and for discretionary calories * (all calories not included in healthy food group servings) represents 200 kcal/d. Note: Legumes are included in the protein category not vegetables, and oils do not reflect oils included in food items (e.g., avocado, nuts). Discretionary calories reflect calories that remain for other uses after meeting recommended servings of fruit, vegetables, protein, dairy, and grains.

share multiple common features including an emphasis on regular consumption of vegetables and fruits, whole grains, legumes, nuts and seeds, seafood, and liquid oils such as olive and canola, and with low intakes of saturated fat and nutrient-weak foods such as sugar-sweetened beverages. However, different dietary patterns can differ in the extent to which adequate portion sizes of healthy foods can be achieved despite the decreased energy requirements associated with aging. We therefore created typical example menus for 3 healthy dietary patterns (Dietary Guidelines MyPlate, a Mediterranean-style diet, and a Vegetarian diet) and analyzed them for their ability to support nutritional sufficiency for older adults at different levels of energy requirements.

A summary of the results is provided in **Figure 3**, with descriptions of the menu items given in the **Supplemental Information on Menu Calculations**. As shown, for dietary

energy ≥ 1600 kcal/d, all of the healthy dietary patterns could provide recommended portions of different recommended food groups, and also provide a calorie allowance for other “discretionary” foods of 32 (Mediterranean-style) to 246 (Vegetarian) kcal/d. However, for the lower dietary energy requirements observed in many older adults, the menus increasingly did not provide recommended portions of all healthy foods without exceeding total energy requirements, even when discretionary calories were reduced to zero (which is unrealistic). The Vegetarian menu was the one that best met portion recommendations for all food groups and protein at lower energy levels (including possibly higher protein needs than current US RDAs), and is consistent with the United Nations’ calls for greater reliance on plant-based foods (167). Among MyPlate and Mediterranean menus, reducing dairy and grain servings (selectively removing refined grains to preserve whole grain intake) resulted in moderately low carbohydrate options that did allow proteins, fruits, and vegetable servings to be as recommended at the lower calorie levels. These calculations suggest that lower-carbohydrate Dietary Guidelines menus provide another practical approach to meeting healthy nutrition guidelines for older adults at lower levels of energy intake.

Opportunities for a National Nutrition Strategy to Reduce Unhealthy Aging

The United States currently ranks only #55 in a global assessment of years of age-related disease burden at the end of life (#1 being best-ranked) (12) despite health care expenditures that are approximately twice those of other affluent nations (168). This striking public health failure has occurred despite acknowledgement of the general importance of nutrition across the lifespan (11, 169–171). The breadth of healthy aging benefits achievable with healthy nutrition described herein clarifies the broad and important role that nutrition can play to keep older adults healthy, and supports the development of a national nutrition strategy with clinical involvement for healthy aging.

One important element of a successful nutrition strategy for healthy aging would be increasing investment in federal nutrition research directed to this goal (172), with coordination among stakeholders to maximize research efficiency. This would recognize a strong role for nutrition in supporting healthy aging (as summarized here), the relative shortage of data from conventional randomized trials of specific interventions, and the need for fresh approaches to conduct rapid, rigorous testing of different dietary interventions in diverse populations. Stakeholders in a national nutrition strategy for healthy aging would include consumers, government agencies, food producers, the food industry, health professionals, and community organizations. Health professionals would play a pivotal role by leading the development of consensus recommendations (e.g., within societies for nutrition, geriatric medicine, primary care, nursing, physician assistant, occupational therapy) that would aid diagnosis and evidence-based treatments based

on existing knowledge and identify priorities for next-generation research. This work could also be a springboard for developing training modules and continuing education for health care professionals.

Another important key to healthy aging would be the development of routine nutrition screening, implemented years before age-related diseases become prevalent, combined with research initiatives to develop and refine lifestyle interventions supporting aging-focused healthy behavior changes in different population groups. Direct nutrition screening is currently not performed in primary care and current indirect measures, such as BMI and lipid panels, do not provide adequate information to understand the specific nutritional vulnerabilities of individuals. Ideally, the development and use of broad nutrition screening panels to support healthy aging would allow for identification of at-risk individuals within primary care and either treatment within primary care or referral to specialized services (11, 70, 169, 173). In addition, artificial intelligence could be used to add nutrition screening data in real time, for rapid identification of time-sensitive nutritional risks, and such information could also be used as the basis for artificial intelligence-enabled personalized interventions. As well as evaluating dietary intake, screening assessments could include BMI and weight change. This inclusion would recognize both that obesity is a major risk factor for unhealthy aging (105), and that weight loss and protein-energy malnutrition with a low BMI are increasingly prevalent as adults age (174) and are similarly linked to reduced independence and greater risk of poor health. The apparent paradox that both obesity and weight loss with low BMI are risk factors emphasizes the importance of screening to allow for personalized nutrition support for healthy aging. There is currently no validated screening tool for the range of dietary intakes, BMI, and weight change seen in community-dwelling adults beginning in midlife on, but scales used in hospitalized patients (175) have potential for adaptation to standardized instruments for primary care.

Conclusions

Maintenance of functional independence and quality of life are of primary importance to older adults. Although aging is clearly programmed and progressive, a cohesive body of research finds that a healthy diet and weight management are able to not only reliably delay the onset of most typical diseases and functional losses in aging, but also arrest progression and severity, and even support remission for some conditions. Public health measures to facilitate healthy aging are currently lacking, but can be developed based on existing research to reduce the growing burden of poor health in old age.

NUTRITION ASSISTANCE PROGRAMS

Agencies Could Do More to Help Address the Nutritional Needs of Older Adults

GAO Highlights

Highlights of [GAO-20-18](#), a report to congressional requesters

Why GAO Did This Study

The U.S. population is aging and, by 2030, the U.S. Census Bureau projects that one in five Americans will be 65 or older. Recognizing that adequate nutrition is critical to health, physical ability, and quality of life, the federal government funds various programs to provide nutrition assistance to older adults through meals, food packages, or assistance to purchase food.

This report examines (1) the relationship of older adults' nutrition to health outcomes and the extent to which federal nutrition guidelines address older adults' nutritional needs, (2) nutrition requirements in federal nutrition assistance programs serving older adults and how these requirements are overseen, and (3) challenges program providers face in meeting older adults' nutritional needs. GAO reviewed relevant federal laws, regulations, and guidance and conducted a comprehensive literature search; visited a nongeneralizable group of four states—Arizona, Louisiana, Michigan, and Vermont—and 25 meal and food distribution sites, selected for a high percentage of adults 60 or older, and variations in urban and rural locations, and poverty level; and interviewed officials from HHS, USDA, states, national organizations, and local providers.

What GAO Recommends

GAO is making five recommendations, including that HHS develop a plan to include nutrition guidelines for older adults in a future update, and that HHS and USDA improve oversight of meal programs and provide additional information to meal providers to help them meet older adults' nutritional needs. HHS and USDA generally concurred with our recommendations.

November 2019

NUTRITION ASSISTANCE PROGRAMS

Agencies Could Do More to Help Address the Nutritional Needs of Older Adults

What GAO Found

Research shows that nutrition can affect the health outcomes of older adults. Federal nutrition guidelines provide broad guidance for healthy populations, but do not focus on the varying nutritional needs of older adults. Department of Health and Human Services (HHS) data show that the majority of older adults have chronic conditions, such as diabetes or heart disease. Research shows that such individuals may have different nutritional needs. As older adults age, they may also face barriers, such as a reduced appetite, impairing their ability to meet their nutritional needs. HHS plans to focus on older adults in a future update to the guidelines, but has not documented a plan for doing so. Documenting such a plan could help ensure guidelines better address the needs of the population.

Of the six federal nutrition assistance programs serving older adults, four have requirements for food that states and localities provide directly to participants, and federal agencies oversee states' monitoring of these requirements. In HHS's and U.S. Department of Agriculture's (USDA) meal programs, states must ensure meals meet requirements. Yet, HHS does not gather information from states, such as approved menus, to confirm this, and localities in two of the four selected states said state monitoring of menus was not occurring. Further, USDA regional officials told GAO they lack information on how meal programs operate at adult day care centers as they primarily focus on other sites for their on-site reviews. Additional monitoring could help HHS and USDA ensure meal programs meet nutritional requirements and help providers meet older adults' varying needs.

Examples of Lunches Served to Older Adults through Nutrition Programs in Selected States

Source: GAO. | GAO-20-18

In the states GAO selected, meal and food providers of the four nutrition programs with nutrition requirements reported various challenges, such as an increased demand for services. Providers in three of the four states reported having waiting lists for services. Providers of HHS and USDA meal programs in all four states also reported challenges tailoring meals to meet certain dietary needs, such as for diabetic or pureed meals. HHS and USDA have provided some information to help address these needs. However, providers and state officials across the four states reported that more information would be useful and could help them better address the varying nutritional needs of older adults.

November 21, 2019

The Honorable Robert Casey
Ranking Member
Special Committee on Aging
United States Senate

The Honorable Patty Murray
Ranking Member
Committee on Health, Education, Labor, and Pensions
United States Senate

The U.S. population is aging and, with life expectancy increasing, the older adult population is expected to continue growing. By 2030, the U.S. Census Bureau projects that one in five Americans will be 65 or older.¹ According to the U.S. Department of Health and Human Services' (HHS) Administration on Aging, adequate nutrition is critical to good health, physical ability, and quality of life, and it is an important component of home and community-based services for older adults. Various federal programs provide nutrition assistance to older adults in the form of meals, food packages, and assistance to purchase food. These include programs overseen by the U.S. Department of Agriculture (USDA), as well as programs overseen by HHS that are authorized under the Older Americans Act of 1965, as amended (Older Americans Act). State agencies and local nutrition program providers, including state government entities and private nonprofit organizations, are generally responsible for administering these programs and providing nutrition assistance to older adults.

In the last decade, attention has been given to federal nutrition assistance programs serving children, with a focus on improving the nutritional benefits of foods provided, but the extent to which this focus has been

¹U.S. Department of Commerce, Census Bureau, *Demographic Turning Points for the United States: Population Projections for 2020 to 2060* (March 2018).

incorporated into programs serving older adults is unclear.² This report examines (1) the relationship of older adults' nutrition to health outcomes and the extent to which federal nutrition guidelines address older adults' nutritional needs; (2) the extent to which federal nutrition assistance programs serving older adults have nutrition-related requirements and how these requirements are overseen; and (3) challenges program providers face in meeting the nutritional needs of older adults.

We relied on several methodologies to inform our objectives. At the federal level, we reviewed relevant federal laws, regulations, guidance, and program oversight documents, and interviewed relevant officials from HHS's Administration for Community Living and USDA's Food and Nutrition Service. Specifically, we interviewed officials from the departments' national offices and all of their regional offices. To understand challenges state agencies and local providers faced implementing federal nutrition assistance programs with nutrition-related requirements, as well as how these programs are overseen by states, we visited a nongeneralizable group of four selected states—Arizona, Louisiana, Michigan, and Vermont—between December 2018 and March 2019. We selected states and local sites within those states with a high percentage of adults 60 or older, and to ensure variation across the sites in geographic location, urban and rural location, percentage of older adults in poverty, and program provider and site type. In the four states, we interviewed relevant state agency officials, and representatives from 20 local provider organizations and visited 25 meal and food distribution sites in the selected local areas.³ Because we relied on a nongeneralizable sample of sites and states, the views of the entities we interviewed do not represent the views of all providers of federal nutrition assistance programs providing meals and food packages to older adults

²For example, the nutrition standards for meals served to students in USDA's National School Lunch Program were updated under the Healthy, Hunger-Free Kids Act of 2010 to more closely match with federal Dietary Guidelines for Americans. See Pub. L. No. 111-296, § 441, 124 Stat. 3183, 3261. The act also included updates to nutrition requirements for meals served in the Child and Adult Care Food Program, which includes adult day care centers that participate in the program and serve older adults. For the purposes of our review, we defined "older adults" as those 60 or older.

³Throughout this report, references to "local providers" are those responsible for the provision of meal services or food in the various federal nutrition assistance programs that we included in this review. Of the 20 local providers we interviewed, 14 were HHS congregate and home-delivered meal program providers, 3 were Commodity Supplemental Food Program providers, and 3 were Child and Adult Care Food Program providers.

or participants in those programs. To obtain additional information on program implementation challenges, we interviewed representatives from a range of national-level organizations involved in research, service provision, or advocacy related to nutrition assistance for older adults.

In addition, to address our first objective on older adults' nutritional needs and our second objective on nutrition assistance programs with nutrition-related requirements, we reviewed relevant research. Such research included relevant peer reviewed studies on the relationship between nutritional needs and health outcomes of older adults, the two federally supported guidance documents that detail the nutrition requirements for Americans—the 2015-2020 Dietary Guidelines for Americans and the Dietary Reference Intakes—and the evaluations of scientific evidence undertaken to support these guidance documents. In addition, we reviewed relevant studies evaluating the impact of HHS's nutrition assistance programs on older adults' nutrition.⁴

We assessed efforts by HHS and USDA to ensure federal guidelines reflect older adults' nutritional needs, to oversee the nutrition-related requirements of nutrition assistance programs serving older adults, and to assist providers of these programs, against Standards for Internal Control in the Federal Government and other relevant criteria.⁵ For more information on our scope and methodology, see appendix I.

We conducted this work from June 2018 through November 2019 in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

Background

Older Adult Population Growth

The U.S. older adult population is growing and is projected to steadily increase in the coming decades. By 2060, the U.S. Census Bureau projects that adults 65 or older will make up nearly one-quarter of the total U.S. population.⁶ In addition to the overall growth in this population, the number of adults 85 or older is expected to nearly triple, from 6.4 million in 2016 to 19 million in 2060 (see fig. 1).

⁶The U.S. Census Bureau reports population projections for older adults 65 or older.

Figure 1: Population Growth Projections for U.S. Adults 65 or Older, 2016-2060

Source: GAO analysis of U.S. Census Bureau data. | GAO-20-18

Federal Nutrition Assistance Programs Serving Older Adults

Several federal nutrition assistance programs serve older adults, which are overseen by HHS’s Administration for Community Living (ACL) and USDA’s Food and Nutrition Service (FNS).⁷ The characteristics of older

⁷In this report, we identified six key federal programs that provide nutrition assistance to older adults that are overseen by HHS and USDA. These federal nutrition assistance programs may also serve broader populations, including individuals younger than 60. For the purposes of this report, we focused on those individuals 60 or older that are served by these programs.

adults served by these programs vary, as do the types of assistance provided, the numbers of participants, and the amounts of federal expenditures (see table 1).

Table 1: Key Characteristics of Federal Nutrition Assistance Programs Serving Older Adults, by Agency

Dollars in Millions

Program	Eligible population	Type of assistance	Federal expenditures on older adults	Number of older adult participants
HHS Administration for Community Living				
Home-Delivered Nutrition Program	Adults 60 years or older	Prepared meals delivered to homebound participants	307.5 ^a	850,880 ^a
Congregate Nutrition Program	Adults 60 years or older	Prepared meals provided in congregate settings, such as senior centers	294.3 ^a	1,520,507 ^a
USDA Food and Nutrition Service				
Supplemental Nutrition Assistance Program (SNAP)	Households, including those with older adults, with low incomes ^b	Benefits to purchase food in participating retail stores	\$6,580.0 ^c	5,447,000 ^a
Commodity Supplemental Food Program (CSFP)	Adults 60 years or older with low incomes ^{b, d}	A monthly supplemental package of shelf-stable foods and refrigerated cheese	230.2 ^{e, f}	675,926 ^e
Child and Adult Care Food Program (CACFP)	Adults who are physically or mentally impaired or adults 60 years or older enrolled in an adult day care program ^g	Prepared meals provided in nonresidential adult day care centers	161.6 ^e	134,694 ^{e, h}
Senior Farmers' Market Nutrition Program (SFMNP)	Households of adults 60 years or older with low incomes ^b	Benefits to purchase locally grown fruits, vegetables, honey, and herbs from farmers' markets, roadside stands, and community supported agriculture programs	19.1 ⁱ	834,875 ^e

Source: GAO analysis of HHS and USDA information and data on these programs. | GAO-20-18

^aData reflect fiscal year 2017, the most recent year available as of July 2019 for congregate and home-delivered programs and April 2019 for SNAP.

^bFederal statute or regulations define specific income eligibility criteria.

^cThis figure represents estimated total benefits paid to older adult SNAP recipients in fiscal year 2017. According to USDA officials, USDA does not collect program expenditures by recipient type, but this estimate may be used as a proxy for federal expenditures on older adult SNAP recipients. Elderly individuals represented 13 percent of all SNAP recipients and received about 11 percent of total SNAP benefits in fiscal year 2017, according to USDA data.

^dCSFP also helps state and local agencies meet the nutritional needs of women, infants, and children who were certified and receiving CSFP benefits as of February 6, 2014 and continue to meet the eligibility requirements as of that date. Beginning February 7, 2014, CSFP eligibility was limited to adults 60 years and older. See Agricultural Act of 2014, Pub. L. No. 113-79, § 4102, 128 Stat. 649, 819-21.

^eData reflect fiscal year 2018, the most recent year available as of June 2019.

^fThis figure includes the cost of food and expenses related to administering the program.

^gIn addition to serving meals and snacks to adults enrolled at adult day care centers, the CACFP also provides meals and snacks to children enrolled at child care centers, day care homes, and afterschool care programs. This table focuses on meals and snacks served to adults enrolled at adult day care centers.

^hThe number of participants represents average daily attendance of adults enrolled at adult day care centers, which may include adults under age 60. USDA officials told us they do not collect national level CACFP data on the ages of participants.

ⁱThis figure represents total federal outlays for the SFMNP, which include the total costs of the vouchers that were redeemed at farmers' markets in fiscal year 2018.

Program Administration

The nutrition assistance programs serving older adults are overseen by ACL and FNS's national and regional offices and are generally administered by state and local entities. The ACL and FNS national offices allocate funding and develop program regulations and guidance, and their respective regional offices provide support, such as technical assistance and training, to state agencies. State agencies implement the programs directly or through local entities. In the four programs that provide meals and monthly food packages to participants, state agencies work with regional and local agencies, such as government entities or private nonprofit organizations, to provide nutrition assistance to participants (see fig. 2). Specifically, in FNS's two programs, state agencies work directly with local providers, while in ACL's two programs, states work with regional level area agencies on aging, which generally contract with local providers.⁸ Area agencies on aging are public or private nonprofit entities that are responsible for planning and delivering services to older adults within their geographic service area.⁹

⁸Area agencies on aging generally provide services through contracts with local providers, but in certain circumstances may provide services directly. States that are geographically small or sparsely populated may administer services at the state level, rather than through area agencies on aging.

⁹Service areas are determined by states and can consist of a single county or multiple counties.

Figure 2: Stakeholders Involved in Administering Selected Nutrition Assistance Programs That Directly Provide Meals and Food to Older Adults

Source: GAO analysis of HHS and USDA program information and interviews with HHS and USDA officials. | GAO-20-18

Note: Area agencies on aging are public or private nonprofit entities that are responsible for planning and delivering the congregate and home-delivered nutrition programs, as well as other services, to older adults within their geographic service area. Service areas are determined by states and consist of a single county or multiple counties. Area agencies on aging generally provide services through contracts with local providers but may provide services directly. States that are geographically small or sparsely populated may administer services at the state level, rather than through area agencies on aging.

Federally-Supported Nutrition Guidelines

The Dietary Guidelines for Americans and the Dietary Reference Intakes (DRIs) are the two federally supported scientific bodies of work that provide broad information and guidance on the nutritional needs of healthy populations to help individuals maintain health and prevent nutrition-related chronic diseases.¹⁰ The dietary guidelines are developed

¹⁰According to HHS’s Centers for Medicare and Medicaid Services (CMS), chronic conditions are defined as conditions that last a year or more and require ongoing medical attention or limit daily activities or both. The U.S. Centers for Disease Control and Prevention uses a similar definition to define chronic diseases. For the purposes of this report, we use the term “chronic condition.” We refer to the Dietary Guidelines for Americans as the “dietary guidelines” throughout this report.

by HHS and USDA and summarized in a federal policy document that focuses on providing practical nutritional and dietary information and guidance for Americans ages 2 and older.¹¹ Overall, the 2015-2020 Dietary Guidelines recommend the consumption of a variety of vegetables, fruits, grains (at least half of which are whole grains), and protein, as well as fat-free or low-fat dairy and oils—sources of essential fatty acids and vitamin E. They also recommend foods and beverages that limit saturated and trans fats, as well as added sugars and sodium. Developed by the National Academies of Sciences, Engineering, and Medicine, the DRIs are a set of values used to plan and assess diets and nutrient intakes in both the United States and Canada, and the DRIs also provide scientific support for the development of the dietary guidelines.¹² Specifically, the DRIs provide nutrient intake recommendations at levels considered safe for consumption of a wide range of nutrients, including vitamins, such as vitamins A and C; minerals, such as sodium and iron; and macronutrients, such as fiber and fat.

¹¹HHS and USDA are required to jointly publish a new edition of the dietary guidelines every 5 years. See National Nutrition Monitoring and Related Research Act of 1990, Pub. L. No. 101-445, § 301, 104 Stat. 1034, 1043-44 (codified as amended at 7 U.S.C. § 5341). HHS and USDA appoint an external advisory committee of nutrition, health and medicine experts to review scientific evidence on nutrition and health that builds off the previous edition of the dietary guidelines. The advisory committee's work culminates in a scientific report, which HHS and USDA use, among other things, to update the dietary guidelines. Dietary Guidelines Advisory Committee, *Scientific Report of the 2015 Dietary Guidelines Advisory Committee: Advisory Report to the Secretary of Health and Human Services and the Secretary of Agriculture* (Washington, D.C.: U.S. Department of Agriculture, Agricultural Research Service, 2015). U.S. Department of Health and Human Services and U.S. Department of Agriculture *2015-2020 Dietary Guidelines for Americans 8th Edition* (December 2015), available at <http://health.gov/dietaryguidelines/2015/guidelines/>.

¹²Based on systematic reviews of evidence, the DRIs are developed by committees of nutrition, health, and medicine experts under the Health and Medicine Division of the National Academies of Sciences, Engineering, and Medicine with funding from the U.S. and Canadian governments. National Academies of Sciences, Engineering, and Medicine, *Dietary Reference Intakes: The Essential Guide to Nutrient Requirements* (Washington, D.C.: The National Academies Press, 2006). National Academies of Sciences, Engineering, and Medicine, *Dietary Reference Intakes for Calcium and Vitamin D* (Washington, D.C.: The National Academies Press, 2011). National Academies of Sciences, Engineering, and Medicine, *Guiding Principles for Developing Dietary Reference Intakes Based on Chronic Disease* (Washington, D.C.: The National Academies Press, 2017). National Academies of Sciences, Engineering, and Medicine, *Dietary Reference Intakes for Sodium and Potassium* (Washington, D.C.: The National Academies Press, 2019). The 2006 report summarizes the findings of all DRIs reports published prior to 2006 on individual nutrients, such as fiber, magnesium and other essential nutrients. Since 2006, the DRIs have been updated for four nutrients: calcium and vitamin D in 2011 and sodium and potassium in 2019.

Evidence Shows Nutrition Is Associated with Older Adults' Health Outcomes, but Federal Nutrition Guidelines Do Not Address Their Varying Needs

The Majority of Older Adults Have Chronic Conditions and Evidence Shows Older Adults' Nutrition Is Associated with Their Health Outcomes

The majority of older adults in the U.S. have chronic conditions, and evidence shows that nutrition is associated with the development of such conditions.¹³ Older adults are the fastest growing segment of the population, and they also have the greatest prevalence of chronic conditions. For example, according to the most recent data available from the Centers for Disease Control and Prevention (CDC), 62 percent of older adults 65 and older had more than one chronic condition in 2016, such as diabetes or heart disease, compared to 18 percent of adults ages 18 to 64.¹⁴ Although the risk of developing chronic conditions increases with age, research has shown that poor nutrition is a contributor to

¹³According to HHS's U.S. Centers for Medicare and Medicaid Services (CMS), chronic conditions are defined as conditions that last a year or more and require ongoing medical attention or limit daily activities or both. The U.S. Centers for Disease Control and Prevention uses the same definition to define chronic diseases. For the purposes of this report, we use the term "chronic condition."

¹⁴This analysis reflects adults with more than one of the following 10 chronic conditions: hypertension, coronary heart disease, stroke, diabetes, cancer, arthritis, hepatitis, weak or failing kidneys, chronic obstructive pulmonary disease, or current asthma. CDC National Center for Health Statistics, National Health Interview Survey, family core and sample adult questionnaires, table 39, accessed July 22, 2019, <https://www.cdc.gov/nchs/data/hus/2017/039.pdf>.

negative health outcomes, including many chronic conditions.¹⁵ For example, research shows that over- and under-consumption of certain nutrients, in addition to physical inactivity, is associated with the development of chronic conditions, including certain cancers, obesity, heart disease, and diabetes.¹⁶ The CDC reported that, in 2016, nutrition-related chronic conditions, including heart disease and stroke, were among the leading causes of death for older adults 65 and older in the United States, with heart disease accounting for 25 percent of deaths among this population.

At the same time, research shows that nutrients and diet can prevent, delay, or assist in managing many chronic conditions, and individuals with certain chronic conditions may have different nutritional needs compared to healthy individuals. For example, according to research reviewed during development of the dietary guidelines and DRIs:¹⁷

- diets low in sodium that also replace some carbohydrates with protein or unsaturated fats lower blood pressure and cholesterol levels, both reducing the risk of developing heart disease and helping to manage it;

¹⁵Dietary Guidelines Advisory Committee, *Scientific Report of the 2015 Dietary Guidelines Advisory Committee: Advisory Report to the Secretary of Health and Human Services and the Secretary of Agriculture* (Washington, D.C.: U.S. Department of Agriculture, Agricultural Research Service, 2015). National Academies of Sciences, Engineering, and Medicine, *Guiding Principles for Developing Dietary Reference Intakes Based on Chronic Disease* (Washington, D.C.: The National Academies Press, 2017). Academy of Nutrition and Dietetics, "Position of the Academy of Nutrition and Dietetics: Food and Nutrition for Older Adults: Promoting Health and Wellness," *Journal of the Academy of Nutrition and Dietetics*, vol. 112, no. 8 (2012): pp. 1255-1277.

¹⁶For example, inadequate consumption of potassium or over-consumption of sodium is associated with high blood pressure, also known as hypertension, which is a risk factor for heart disease or stroke. National Academies of Sciences, Engineering, and Medicine, *Dietary Reference Intakes: The Essential Guide to Nutrient Requirements* (Washington, D.C.: The National Academies Press, 2006). The relationship between nutrition and the development of chronic conditions, such as hypertension, is of particular concern for older adults who, according to the CDC, already have an increased risk for heart disease and stroke due to age. Department of Health and Human Services, CDC, *The State of Aging and Health in America 2013* (Atlanta, GA: 2013).

¹⁷Dietary Guidelines Advisory Committee, *Scientific Report of the 2015 Dietary Guidelines Advisory Committee: Advisory Report to the Secretary of Health and Human Services and the Secretary of Agriculture* (Washington, D.C.: U.S. Department of Agriculture, Agricultural Research Service, 2015). National Academies of Sciences, Engineering, and Medicine, *Dietary Reference Intakes: The Essential Guide to Nutrient Requirements* (Washington, D.C.: The National Academies Press, 2006).

-
- consumption of certain types of dietary fats, such as omega-3 fatty acids found in fish and flaxseed, for example, may help prevent or manage heart disease;
 - increased consumption of fiber reduces total blood cholesterol, and high cholesterol is both a chronic condition as well as an increased risk for developing other chronic conditions, such as heart disease and stroke; and
 - decreased consumption of foods high in added sugars, saturated fats, and sodium helps reduce the risk of diabetes, stroke, or heart attack.

Barriers to Older Adults' Meeting Nutritional Needs May Negatively Affect Their Health Outcomes

Research has shown that certain age-related changes may impair older adults' ability to meet their nutritional needs, potentially resulting in negative health outcomes. According to a study conducted by the Academy of Nutrition and Dietetics, physiological changes that occur with age, such as decreased metabolism and reductions in muscle mass and nutrient absorption, may make it difficult for older adults to meet their nutritional needs.¹⁸ Research reviewed to develop the dietary guidelines also indicates that older adults experience a decline in calorie or energy needs as they age, due in part to decreased physical activity. As a result of reduced energy needs, older adults exhibit less hunger and also experience changes in taste sensation and sense of smell, all of which may lead to decreased food consumption, according to the Academy of Nutrition and Dietetics study.¹⁹ Inadequate consumption of certain nutrients, such as potassium, may lead to increased risk of negative health outcomes, including the development of chronic conditions, as noted earlier.

Age-related physical or mental impairments also may impact older adults' ability to meet their nutritional needs, potentially resulting in negative health outcomes. The Older Americans Act defines disability to include a physical or mental impairment, or combination of the two, that results in substantial functional limitations to certain major life activities, including

¹⁸Academy of Nutrition and Dietetics, "Position of the Academy of Nutrition and Dietetics: Food and Nutrition for Older Adults: Promoting Health and Wellness," *Journal of the Academy of Nutrition and Dietetics*, vol. 112, no. 8 (2012): pp. 1255-1277.

¹⁹Because a reduced appetite can result in limited total nutrient intake, older adults should eat nutrient dense foods, such as those high in fiber, to meet their nutritional needs, as nutrient needs often remain constant or may even increase with age, according to the Academy of Nutrition and Dietetics study.

self-care and mobility, among other things.²⁰ An HHS official we spoke with noted that some older adults' inability to perform daily activities—which can include eating, walking, or leaving the home to obtain groceries or meals, because of a physical or mental impairment—can contribute to inadequate nutrition. According to the CDC, age-related declines in cognitive functioning, such as the ability to reason and remember, may affect some older adults' ability to leave their homes and shop for food, hindering their ability to meet their nutritional needs.²¹

Further, HHS reported that older adults with age-related physical impairments, such as impaired mobility and vision, may have difficulty opening, reading, and using food packaging, limiting their ability to prepare food.²² According to an Academy of Nutrition and Dietetics study, older adults with a physical impairment, such as an inability to chew or swallow food, may have reduced ability to consume nutrients, which, as previously noted, may increase their risk of negative health outcomes.

Older adults may also require the use of medication, which may impact their ability to absorb or consume nutrients and meet their nutritional needs. For example, according to the National Institute on Aging, common side effects of certain medications can include reduced appetite and dry mouth, which may make it difficult to chew and swallow. In addition, some medications require older adults to limit their consumption of certain foods, such as citrus fruit, as consumption of these foods may change the effectiveness of the medications or cause other negative

²⁰See 42 U.S.C. § 3002(13).

²¹Department of Health and Human Services, CDC, *The State of Aging and Health in America 2013* (Atlanta, GA: 2013).

²²Department of Health and Human Services, Administration for Community Living, Center for Policy and Evaluation, *Opportunities to Improve Nutrition for Older Adults and Reduce Risk of Poor Health Outcomes* (March 2017). Further, according to an Academy of Nutrition and Dietetics study, individuals who have difficulty preparing meals may rely on processed, ready-to-eat meals that are often high in sodium. As previously noted, overconsumption of sodium is associated with hypertension. Academy of Nutrition and Dietetics, "Position of the Academy of Nutrition and Dietetics: Food and Nutrition for Older Adults: Promoting Health and Wellness," *Journal of the Academy of Nutrition and Dietetics* (2012).

health outcomes.²³ However, such restrictions may impact older adults' ability to obtain the nutrients commonly found in those foods.

Further, some older adults experience food insecurity, and therefore have limited access to adequate food and nutrients, which research has shown may lead to negative health outcomes.²⁴ According to research reviewed to develop the dietary guidelines, food insecurity is a leading nutrition-related public health issue that compromises nutrient intake, potentially resulting in an increased risk of developing a chronic condition, as well as difficulty managing chronic conditions.²⁵ USDA reported that 8 percent of U.S. households with an older adult and 9 percent of U.S. households in which an older adult lived alone experienced food insecurity in 2017—the most recent year for which data are available.²⁶ According to HHS, food insecure older adults are more likely to experience negative health outcomes than their food secure counterparts.²⁷ For example, research has shown that older adults who are food insecure consume lower amounts of essential nutrients and are more likely to experience negative health outcomes, like diabetes or physical or mental impairments.²⁸

²³For example, according to HHS's Food and Drug Administration, grapefruit—a source of vitamin C, potassium, and fiber—interferes with medications taken to address high cholesterol by allowing too much of the medication to stay in the body longer, increasing the risk factors for kidney failure.

²⁴Food insecurity is associated with reduced food intake or hunger due to a lack of money and other resources for food. U.S. Department of Agriculture, Economic Research Service, *Household Food Security in the United States in 2017*, Economic Research Report 256 (September 2018).

Federal Nutrition Guidelines Do Not Address the Varying Nutritional Needs of Older Adults

The federal nutrition guidelines—the dietary guidelines and Dietary Reference Intakes (DRIs)—provide broad nutrition guidance for healthy populations. However, the guidelines do not address the nutritional needs of older adults, including the majority of older adults in the United States who have multiple chronic conditions.²⁹ Specifically, the guidelines focus on the foods and nutrients healthy individuals need to maintain health and prevent nutrition-related chronic conditions, which limit their applicability to older adults who already have chronic conditions. According to the scientific report for the 2015-2020 Dietary Guidelines, the guidelines are expected to evolve to address public health concerns and the nutritional needs of specific populations.³⁰ Further, a report from a DRI working group indicates that the growth of the older adult population and the prevalence of chronic conditions in this group highlight the importance of understanding how nutrition can help to address chronic conditions.³¹ Although DRI researchers recently took steps to examine research on the relationship between nutrition and chronic conditions, they noted in a March 2019 report that current research on this issue is somewhat limited.³²

At the same time, the federal nutrition guidelines do not address the varying nutritional needs of older adults of different ages and instead focus on guidelines for broad age groups. Specifically, the dietary guidelines provide information by gender on the nutrient needs of all

²⁹Developed by committees of experts, the dietary guidelines and DRI values focus on the nutritional needs of healthy populations to help individuals maintain health and prevent nutrition-related chronic conditions.

³⁰The advisory committee's 15 members, appointed by HHS and USDA, are researchers in the fields of nutrition, health, and medicine. As part of its assessment of evidence on diet and health, the advisory committee also provides recommendations for future research.

³¹E.A. Yetley, A. J. MacFarlane, L. S. Greene-Finestone, C. Garza, J. D. Ard, S. A. Atkinson, D. M. Bier, A. L. Carriquiry, W. R. Harlan, D. Hattis, J. C. King, D. Krewski, D. L. O'Connor, R. L. Prentice, J. V. Rodricks, and G. A. Wells, "Options for basing Dietary Reference Intakes (DRIs) on chronic disease endpoints: Report from a joint US-/Canadian-sponsored working group," *The American Journal of Clinical Nutrition*, vol. 105, no. 1 (2017): pp. 249S-285S.

³²Researchers recently expanded the methodology used to develop the DRIs to include an examination of the relationship between nutrient intakes and the risk of chronic conditions. However, a DRIs report issued in March 2019, which sought to use the updated methodology, found that evidence examining this relationship for certain nutrients was often insufficient and the report highlighted the need for additional research on the effects of nutrients on chronic condition outcomes. National Academies of Sciences, Engineering, and Medicine, *Dietary Reference Intakes for Sodium and Potassium* (2019).

adults 51 or older, and the DRIs provide this information by gender for older adults 51 through 70 and 71 or older. However, research has shown that these broad age categories do not account for how needs change with age among older adults, particularly for those 71 or older. For instance, according to the Academy of Nutrition and Dietetics study, the nutrient needs of older adults can be wide-ranging given the various changes that may occur with aging, such as those associated with reduced energy needs.³³ Further, according to a summary report on the DRIs, physiological functioning, such as nutrient absorption, varies greatly after age 70.³⁴ HHS officials similarly noted that nutritional needs change with each stage in life, and the needs of older adults who are in their 60s and those who are in their 90s or older may be substantially different.

Additionally, researchers note that information on the varying nutritional needs of the different age groups of older adults is limited. For instance, the advisory committee that developed the 2015-2020 Dietary Guidelines noted that more data are needed on older adults' diets, particularly for those 71 or older, and the degree to which age-related changes affect older adults' ability to establish and maintain proper nutrition. Similarly, researchers at the Jean Mayer USDA Human Nutrition Research Center on Aging—one of the largest research centers studying nutrition and aging in the United States—told us that research on different age groups has been hindered in part by limitations in national nutrition and health data on older adults, and adults 85 or older, in particular, despite the projected growth of this age group.

HHS officials said they intend to include a focus on nutritional guidance for older adults in the 2025-2030 Dietary Guidelines update, but they have not yet documented their plans to do so. Broadly, HHS and USDA officials told us they intend to address the nutritional needs of individuals across the entire lifespan in future updates to the dietary guidelines.³⁵ USDA is leading the 2020-2025 Dietary Guidelines update, which will

³³Academy of Nutrition and Dietetics, "Food and nutrition for older adults," p.1258.

³⁴National Academies of Sciences, Engineering, and Medicine, *Dietary Reference Intakes: The Essential Guide to Nutrient Requirements* (2006).

³⁵HHS and USDA collaborate on updates to the dietary guidelines every 5 years with one agency—either HHS or USDA—leading the update.

include guidance for those individuals in the earliest stages of life.³⁶ HHS officials said that when they lead the 2025-2030 Dietary Guidelines update, they intend to include a focus on nutritional guidance for older adults. However, HHS has not yet documented this intention, such as through a formal plan.³⁷ As noted, older adults' nutritional needs can vary with age and many face certain challenges that additional nutrition guidance could help address, such as the management of chronic conditions or age-related changes, yet guidance currently falls short in part because of limited research evaluating older adults' nutritional needs. In its Strategic Plan for fiscal years 2018-2022, HHS notes that one of the department's objectives is to prevent, treat, and control communicable diseases and chronic conditions. As previously noted, the dietary guidelines are also expected to evolve to address public health concerns and the nutritional needs of specific populations. A plan for incorporating a focus on older adults in a future dietary guidelines update, such as one that addresses their various needs based on available research on this population and identifies existing information gaps, could help ensure federal nutrition guidelines better address the nutritional needs of this population.

³⁶Specifically, USDA is including nutrition guidance for pregnant women, infants, and toddlers up to 24 months old in the 2020-2025 Dietary Guidelines update. Historically, the dietary guidelines have focused on nutrition guidance for Americans ages 2 and older. According to USDA, proper nutrition during the earliest stages of life is critical to support healthy growth and development throughout childhood and prevent chronic condition in adulthood. As of June 2019, USDA officials reported that the 2020-2025 update is under way.

³⁷In 2018, for the first time, HHS and USDA sought public comments on a set of priority topics and scientific questions, according to the life stage, to guide the development of the 2020-2025 dietary guidelines update. HHS officials told us that the questions will help to clarify the needs of older adults. In addition to ACL, several other offices within HHS are involved in the updates to the dietary guidelines.

Several Nutrition Assistance Programs Serving Older Adults Include Nutrition-Related Requirements, and Federal Oversight of Requirements in Some Programs Is Limited

Four of the Six Federal Nutrition Assistance Programs Serving Older Adults Include Nutrition Requirements

The four federal nutrition assistance programs that we reviewed and that provide meals and food directly to older adults have federal nutrition requirements, while two other programs we reviewed that provide older adults with benefits to purchase food do not. Specifically, HHS's congregate and home-delivered meal programs and USDA's Child and Adult Care Food Program (CACFP) have nutrition requirements for older adults' meals, and the Commodity Supplemental Food Program (CSFP) has nutrition requirements for the monthly food package provided to older adults.³⁸ Two other federal programs—USDA's Supplemental Nutrition Assistance Program (SNAP) and Senior Farmers' Market Nutrition Program—provide older adults with benefits to purchase food, and neither

³⁸Congregate and home-delivered nutrition services include the provision of meals, as well as other nutrition services, such as nutrition education and counseling. In this report, we often refer these programs as the "congregate meal" and "home-delivered meal" programs.

program has specific nutritional requirements that must be met when purchasing food.³⁹

The four programs with nutrition requirements used the federal nutrition guidelines—the Dietary Guidelines for Americans—as the basis for their nutrition requirements. These guidelines are also the basis for nutrition requirements in other federal nutrition assistance programs, such as those that serve children.⁴⁰ As discussed earlier, the current guidelines provide broad guidance on nutrition for healthy populations and therefore serve a role in health promotion for all individuals.⁴¹

Congregate and Home-Delivered Meal Programs

All meals provided under HHS’s congregate and home-delivered programs must include components—such as fruits, vegetables, grains and protein—and portion sizes consistent with the dietary guidelines.⁴² Further, programs providing participants with one meal a day must include a minimum of 33.3 percent of the Dietary Reference Intakes.⁴³

³⁹The Senior Farmers’ Market Nutrition Program only offers participants fresh, nutritious, unprepared, locally grown fruits, vegetables, honey, and herbs. In our previous work on federal nutrition assistance programs, several officials and providers told us that the variety of nutrition assistance programs can help eligible households address the specific needs of individual members, which may include older adults. As such, an older adult who participates in a nutrition assistance program that has nutrition requirements, such as the Commodity Supplemental Food Program, may also benefit from participating in SNAP, which allows the purchase of food items that may meet the older adult’s specific needs. GAO, *Domestic Food Assistance: Complex System Benefits Millions, but Additional Efforts Could Address Potential Inefficiency and Overlap among Smaller Programs*, [GAO-10-346](#) (Washington, D.C.: April 15, 2010).

⁴⁰For example, meals served to children in the National School Lunch Program or School Breakfast Program must be aligned with the most recent Dietary Guidelines for Americans.

⁴¹Although as noted earlier the dietary guidelines do not address the specific needs of certain subpopulations of older adults, programs whose nutritional requirements are based on the dietary guidelines provide some assurance of meeting the broad nutritional needs of healthy adults.

⁴²For example, as part of a 2,000 calorie-level diet, the dietary guidelines recommend that a person consume 2.5 cups of vegetables, 2 cups of fruit, 6 ounces of grains, 5.5 ounces of protein, 3 cups of fat-free or low-fat dairy, and 5 teaspoons of oils each day. States administering congregate and home-delivered meal programs may implement the nutrition requirements to best meet the needs of the older adults they serve, such as using funds to provide meals that help to address statewide chronic conditions or health issues affecting the older adults in their state. Officials from state agencies in the four selected states told us they did not impose additional nutrition requirements beyond those required at the federal level.

⁴³In programs serving two or three meals per day, 66.6 or 100 percent of the DRIs must be provided, respectively.

Program providers must also be given flexibility to design meals that appeal to older adults. See figure 3 for examples of congregate and home-delivered meals served in selected states.

Figure 3: Examples of Meals Served in the Congregate and Home-Delivered Meal Programs in Selected States

Home-delivered frozen meal of chicken, peas, and mixed vegetables

Home-delivered meal of fish, mashed potatoes, and green beans

Congregate lunch of beef stew over egg noodles, carrots, corn with brown butter sauce, braised red cabbage with apples, mashed acorn squash, thyme buttermilk biscuit, and milk

Congregate lunch of beef lasagna, roasted zucchini, sweet potatoes, garlic toast, and fruit gelatin

Note: Additional items were served with these meals are not all included in the photos, such as milk, tea, or lemonade.

Child and Adult Care Food Program (CACFP)

Adult Meal Pattern for Breakfast, Lunch, Supper, and Snacks Served in the USDA's Child and Adult Care Food Program (CACFP)

Breakfast

Select all three components for a reimbursable meal:

- Fluid milk (8 fl. oz. or 1 cup)
- Vegetables or fruits or both (1/2 cup)
- Grains (2 ounce equivalents)

Lunch

- Fluid milk (8 fl. oz. or 1 cup)
- Meat or meat alternate (2 oz.)
- Vegetables (1/2 cup)
- Fruits (1/2 cup)
- Grains (2 ounce equivalents)

Supper

Must contain the food components and servings listed for lunch, except that it does not require a serving of fluid milk.

Snacks

Must contain two of the following five components for a reimbursable meal:

- Fluid milk (8 fl. oz.)
- Meat or meat alternate (1 oz.)
- Vegetables (1/2 cup)
- Fruit (1/2 cup)
- Grains (1 ounce equivalent)

Source: Summary of adult day care meal pattern requirements in USDA's CACFP. | GAO-20-18

Meals and snacks provided to older adults at day care centers as part of USDA's CACFP must follow specified meal patterns that are consistent with the federal dietary guidelines. In 2016, USDA revised the adult meal pattern for each meal service based on the most recent dietary guidelines to include a greater variety of vegetables and fruit, more whole grains, and less added sugar and saturated fat.⁴⁴ See sidebar for the current meal patterns for adult meals and snacks served at adult day care centers.⁴⁵ Figure 4 provides examples of meals served at adult day care centers in selected states.

⁴⁴The revised meal patterns were required to be implemented by October 1, 2017.

⁴⁵Several related CACFP requirements or options are not shown in the sidebar. For example, unflavored low-fat, unflavored fat-free, or flavored fat free milk must be served to adult participants. However, non-dairy milk substitutes that are nutritionally equivalent to milk may be served in place of milk to adults with medical or special dietary needs. In addition, yogurt may be served in place of milk once per day. For more information, see USDA's memorandum entitled, "Nutrition Requirements for Fluid Milk and Fluid Milk Substitutions in the Child and Adult Care Food Program, Questions and Answers" (July, 14, 2016), available at https://fns-prod.azureedge.net/sites/default/files/cacfp/CACFP17_2016os.pdf.

Figure 4: Examples of Meals Served at Adult Day Care Centers through the Child and Adult Care Food Program in Selected States

Lunch of meat loaf with red sauce, mashed potatoes and gravy, steamed string beans and carrots, fruit cup, and whole wheat bread roll with butter

Lunch of red beans and sausage on brown rice, corn bread, salad and grapes

Lunch of roasted seasoned chicken on the bone, mashed potatoes, steamed vegetables, two white bread rolls

Source: GAO. | GAO-20-18

Note: Additional items were served with these meals that may not be included in the photos, such as milk, water, orange juice, iced tea, coffee, or steamed vegetables.

As part of the federal requirements for CACFP, adult day care centers must keep on file and follow a plan of care for functionally impaired program participants, which may include information on a participant's special dietary needs, such as the need for a diabetic, heart-healthy, or

pureed diet.⁴⁶ Plans of care may be followed over CACFP meal pattern requirements as long as there is a written statement from certain medical authorities supporting the need for substitutions or modifications.

Commodity Supplemental Food Program (CSFP)

Foods that are distributed to participants monthly through USDA's CSFP must include certain quantities of dairy, fruits, vegetables, grains, and proteins in each package, consistent with the dietary guidelines.⁴⁷ In February 2019, USDA issued new requirements for the food packages after a workgroup assessed the nutritional and operational aspects of the food package as it relates to the needs of older adult participants and recommended changes. According to USDA, the new requirements include more whole grains and canned fruits and vegetables. Officials in three regions said that although states have until November 2019 to implement the new requirements, states have provided early positive feedback on the additional variety in the food package.

Several Programs Also Require the Provision of Services to Help Older Adults Meet Nutritional Needs

Nutrition Education

Several of the nutrition assistance programs that have nutrition requirements for meals or food served to older adults also require other services to help ensure older adults' nutritional needs are met. These services include nutrition education, screenings and assessments, and the use of nutrition professionals.

Three of the four selected nutrition assistance programs serving older adults that have nutrition requirements also require nutrition education to support efforts to meet older adults' nutritional needs. These programs are HHS's congregate and home-delivered meal programs and USDA's

⁴⁶Each participant enrolled in the adult day care portion of the Child and Adult Care Food Program is evaluated to determine their health and emotional needs. Once needs have been established, an individual plan of care is developed to meet the physical, emotional, and social needs of the participant. Adult day care centers are not required to have an individual plan of care for participating adults 60 or older who are not impaired, but must have a plan for each impaired adult.

⁴⁷As noted above, the dietary guidelines do not address the needs of certain subpopulations, but programs whose nutritional requirements are based on the dietary guidelines provide some assurance of meeting the broad nutritional needs of healthy adults.

CSFP, which provides monthly food packages.⁴⁸ See figure 5 for examples of nutrition education materials from selected states.

Figure 5: Examples of Nutrition Education Information Provided in Congregate Settings and the Commodity Supplemental Food Program

The figure displays three examples of nutrition education materials. The first is a '10 tips Nutrition Education Series' titled 'Got your dairy today?' from the USDA, based on the Dietary Guidelines for Americans. It lists ten tips for dairy consumption, such as 'skim' the fat, boost potassium and vitamin D, and top off your meals. The second is another '10 tips Nutrition Education Series' titled 'Make half your grains whole grains', also from the USDA, based on the Dietary Guidelines for Americans. It lists ten tips for incorporating whole grains, such as 'make simple shifts', 'whole grains can be healthy snacks', and 'be a good role model for children'. The third is a 'Food Safety' poster titled 'For People with Diabetes', featuring a purple and white design with images of food preparation and a child. It includes the text 'A need-to-know guide for those who have been diagnosed with diabetes' and is published by the U.S. Department of Agriculture Food and Drug Administration.

Source: Nutrition education documents collected during visits with program providers in selected states. | GAO-20-18

To help promote health and delay adverse health conditions among older adults, area agencies on aging, either directly or through their local providers, are required to provide nutrition education to congregate and

⁴⁸Although USDA's CACFP does not require adult day care centers to provide nutrition education to program participants, USDA oversees multiple nutrition education efforts that local entities implement in various settings. For example, the SNAP-Ed program provides states with nutrition education funding for older adults who are SNAP participants or who have limited financial resources. States can then offer SNAP-Ed programming in a variety of settings, such as CSFP distribution sites, adult day care settings, senior farmers' market programs, and congregate meal sites. For more information on these efforts, see GAO, *Nutrition Education: USDA Actions Needed to Assess Effectiveness, Coordinate Programs, and Leverage Expertise*, GAO-19-572 (Washington, D.C.: July 25, 2019).

home-delivered meal participants.⁴⁹ According to HHS regional officials we spoke with, there are no requirements for the frequency or type of nutrition education that must be provided, though as officials in one region noted, programs are encouraged to provide education that is science-based. According to the nationwide evaluation of the congregate and home-delivered meal programs, almost half of state agencies surveyed in 2014 required area agencies on aging, either directly or through their local providers, to provide nutrition education at least quarterly, and about one-quarter of state agencies require it to be provided semi-annually or annually.⁵⁰ Officials from two of the four state agencies told us local providers educate participants in a variety of ways, including by directly sharing nutrition-related information about specific menu items or meals offered to participants or by partnering with other entities, such as universities, to help educate older adults on nutritional well-being.

State agencies overseeing CSFP food packages must also establish a nutrition education plan and ensure that local providers provide nutrition education to program participants.⁵¹ For example, providers must include information about the nutritional value and use of the foods provided in the food package and should account for specific ethnic and cultural characteristics of program participants.⁵² USDA regional officials and state agency officials overseeing CSFP in three of the four states told us that providers generally use USDA's household foods fact sheets—which includes food product descriptions, general food storage information, recipes, and nutritional information—to provide nutrition education to

⁴⁹Local providers have primary responsibility for providing services to adults in the congregate and home-delivered nutrition programs. However, area agencies on aging also contribute to the provision of nutrition and supportive services to older adults, through their role in planning and coordinating services within their service area.

⁵⁰Further, the evaluation estimated that 98 percent of area agencies on aging and 77 percent of local providers offered nutrition education to participants. B. Carlson, R. Cohen, M. Hu, J. Mabli, E. Panzarella, N. Redel, *Process Evaluation of Older American's Act Title III-C Nutrition Services Program*, a report prepared at the request of the Department of Health and Human Services' Administration on Community Living (Cambridge, MA: Mathematica Policy Research, September 30, 2015).

⁵¹See 7 C.F.R. §§ 247.4(c)(1), 247.5(b)(9), and 247.18.

⁵²See 7 C.F.R. § 247.18(b)(1)-(3). In addition to the nutritional value of foods in the food package, nutrition education should include information on the relationship of the food in the food package to the overall dietary needs of the population served and information on how to meet special nutritional needs of participants using the foods provided, among other requirements.

CSFP participants.⁵³ State officials in our selected states also noted other methods CSFP providers used to support nutrition education. For example, officials in one of the states told us one of their distribution sites provides nutrition education materials in 17 languages to accommodate the different cultural backgrounds of the population it serves. Officials in another state we visited told us some of their provider sites partner with universities, inviting staff from the university's nutrition program to the provider site to share and discuss nutrition information with participants.⁵⁴

Screening and Assessments

Both of HHS's congregate and home-delivered meal programs require states to ensure area agencies or local providers conduct nutrition screenings and assessments of participants to help identify health risks.⁵⁵

⁵³Food fact sheets are included on USDA's "What's Cooking" website, accessed July 25, 2019, <https://whatscooking.fns.usda.gov/fdd/household-material-fact-sheets>.

⁵⁴According to an official from this state, this effort is part of USDA's Supplemental Nutrition Assistance Program Education (SNAP-Ed), one of USDA's largest nutrition education programs.

⁵⁵USDA's CACFP and CSFP do not require local providers to conduct nutrition-related screenings and assessments of program participants, although the evaluation of the nutrition education provided under CSFP must be directed by a nutritionist or other qualified professional. Research has shown that individuals with low-incomes have a greater likelihood of food insecurity, and both of these programs provide nutrition assistance to participants who generally have low-incomes with a focus on reducing their food insecurity.

Federal Nutrition Screening Tool

The Warning Signs of poor nutritional health are often overlooked. Use this Checklist to find out if you or someone you know is at nutritional risk.

Read the statements below. Circle the number in the "yes" column for those that apply to you or someone you know. For each "yes" answer, score the number in the box. Total your nutritional score.

	YES
I have an illness or condition that made me change the kind and/or amount of food I eat.	2
I eat fewer than 2 meals per day.	3
I eat few fruits or vegetables or milk products.	2
I have 3 or more drinks of beer, liquor or wine almost every day.	2
I have tooth or mouth problems that make it hard for me to eat.	2
I don't always have enough money to buy the food I need.	4
I eat alone most of the time.	1
I take 3 or more different prescribed or over-the-counter drugs a day.	1
Without wanting to, I have lost or gained 10 pounds in the last 6 months.	2
I am not always physically able to shop, cook and/or feed myself.	2
TOTAL	

DETERMINE YOUR NUTRITIONAL HEALTH

Total Your Nutritional Score. If it's –

0-2 **Good!** Recheck your nutritional score in 6 months.

3-5 **You are at moderate nutritional risk.** See what can be done to improve your eating habits and lifestyle. Your office on aging, senior nutrition program, senior citizens center or health department can help. Recheck your nutritional score in 3 months.

6 or more **You are at high nutritional risk.** Bring this Checklist the next time you see your doctor, dietitian or other qualified health or social service professional. Talk with them about any problems you may have. Ask for help to improve your nutritional health.

Remember that Warning Signs suggest risk, but do not represent a diagnosis of any condition. For the page to learn more about the Warning Signs of poor nutritional health.

The Nutrition Screening Initiative is funded in part by a grant from Aging Products Division of Johnson Laboratories, Inc.

Source: HHS's Nutrition Screening Initiative. | GAO-20-18

According to HHS data for fiscal year 2016, the most recent year for which data are available, just over one-fifth (347,002) of the 1.6 million congregate meal participants served and more than one-half (496,729) of the 868,382 home-delivered meal participants served were deemed at high nutrition risk.⁵⁶ HHS officials stated that there is no federal policy or requirement on how assessments are conducted or their frequency, and states have the flexibility to determine their own process for assessing the nutritional needs of participants. However, HHS provides a tool that states may use for these assessments.⁵⁷ See sidebar for the Federal Nutrition Screening tool used to determine a person's nutrition risk. According to the nationwide evaluation of the congregate and home-delivered meal programs, over half of area agencies on aging and local providers of congregate and home-delivered meal programs had a formal process for assessing nutritional needs.⁵⁸ Further, HHS regional officials we spoke with suggested that these assessments generally occur annually. Across the four selected states we visited, the majority of area agencies on aging conducted nutrition screenings and assessments, with the frequency varying from every 6 months to every few years.⁵⁹ The Older Americans Act requires states to prioritize certain groups with high social and economic needs, such as those who are low-income, minorities, or isolated, and two area agencies on aging told us they use nutrition risk screenings and assessments to address malnutrition and identify those individuals who fall in these categories.

Nutrition Professionals

HHS's congregate and home-delivered meal programs require the use of nutrition professionals, such as registered dietitians, to help local providers meet the nutritional needs of older adults—primarily through

⁵⁶Those deemed at high nutrition risk have an increased likelihood of poor nutrition or malnutrition.

⁵⁷In the 1990s, ACL partnered with other organizations to develop a nutrition risk screening tool based on the warning signs of malnutrition to help determine a person's nutritional risk and worked with states to adopt this tool into state standards. The nutrition screening tool was a result of the Nutrition Screening Initiative, a project of the American Academy of Family Physicians, The American Dietetic Association, and the National Council on the Aging, Inc.

⁵⁸Specifically, the evaluation estimated that 83 percent of area agencies on aging and 65 percent of local providers had a formal process for assessing nutrition needs. *Process Evaluation of Older American's Act Title III-C Nutrition Services Program* (Cambridge, MA: Mathematica Policy Research, September 30, 2015).

⁵⁹Officials from an area agency on aging in one of the selected states told us their local providers conduct screenings and assessments and then share the information with their agency.

menu reviews to verify that each menu is following federal nutrition requirements, according to HHS officials.⁶⁰ According to the nationwide evaluation of the congregate and home-delivered meal programs, at least one-half of the state agencies, area agencies on aging, and local providers used the services of a nutrition professional to help meet the nutritional needs of older adults.⁶¹ In the four selected states, three state agencies had a nutrition professional on staff or contracted with a nutrition professional who worked with area agencies on aging to review menus, and in the other state, a nutrition professional was on staff or contracted for by area agencies on aging or local provider sites. In addition to menu reviews, nutrition professionals in the four selected states were also involved in activities such as training meal providers or providing nutrition education and counseling to participants.

Federal Oversight of Meal Programs Provides Limited Information on the Extent to Which Programs Are Adhering to Nutritional Requirements and Addressing Challenges

As part of HHS's oversight of the congregate and home-delivered meal programs, regional officials meet with state staff and review state plans and other program information, but these efforts do not require states to provide documentation that meals served to participants comply with the programs' nutrition requirements. State agencies are responsible for monitoring area agencies on aging' implementation of these programs and ensuring that meals are consistent with the programs' nutritional requirements. HHS regional offices, in turn, conduct oversight of the nutrition programs through its reviews of states. HHS's guidance directs regional staff to collect information from states on the use of nutrition professionals in these programs. However, HHS's guidance does not direct regional staff to systematically review or collect any other information from states, such as approved menus, to confirm that meals served to participants are consistent with the programs' nutrition requirements.

⁶⁰USDA's CACFP and CSFP do not require providers to use a nutritional professional to help them meet the nutritional needs of older adults. As discussed earlier, CSFP distributes to participants monthly food packages which include prescribed foods, such as cereal, dairy, and vegetables, and quantities per federal requirements. In addition, CACFP has federally-prescribed meal pattern requirements, which define the meal components and quantities of each that must be served in meals to adult day care participants. Although not required, officials in one state we visited told us some adult day care centers participating in CACFP contract with a dietician who reviews the menus and provides suggestions.

⁶¹Some HHS regional officials we spoke with also explained that an area agency on aging may rely on staff with nutrition expertise from another area agency or state agency within their state in areas where there are a lack of nutrition professionals, such as in rural areas.

A recent national evaluation of meals provided through the congregate and home-delivered meal programs, however, indicates that state oversight of meals' consistency with program nutrition requirements may have limitations. According to the 2017 evaluation, while program meals generally contributed positively to participants' diets, the meals were higher in sodium and saturated fat than the recommended limits.⁶² For example, the diets of the majority of congregate and home-delivered meal participants included adequate amounts of a range of vitamins and minerals, with the exception of magnesium and calcium.⁶³ However, a majority of participants had intakes of sodium and saturated fat from these meals that exceeded the dietary guidelines' recommended limits.⁶⁴ Specifically, 94 percent of congregate meal participants and 69 percent of home-delivered meal participants had sodium intakes from program meals that exceeded the dietary guidelines' recommended limit.⁶⁵ Likewise, 89 percent of congregate meal participants and 72 percent of home-delivered meal participants had saturated fat intakes from program meals that exceeded the recommended limit, despite the role state agencies play in monitoring programs to ensure meals meet federal

⁶²B. Carlson, R. Cohen, E. Gearan, J. Mabli, K. Niland, E. Panzarella, N. Redel, *Evaluation of the Effect of the Older Americans Act Title III-C Nutrition Services Program on Participants' Food Security, Socialization, and Diet Quality*, a report prepared at the request of the Department of Health and Human Services' Administration on Community Living (Cambridge, MA: Mathematica Policy Research, April 21, 2017).

⁶³Specifically, the diets of the majority of congregate and home-delivered meal participants included adequate amounts of vitamin B12, niacin, riboflavin, iron, phosphorus, thiamin vitamin B6, folate, zinc, vitamin A, and vitamin C. However, less than half of congregate and home-delivered meal participants had adequate intakes of magnesium and calcium.

⁶⁴The evaluation assessed the nutritional quality of congregate and home-delivered meals offered through the Nutrition Services Program under the Older Americans Act and examined how well the meals conformed to federal nutrition guidelines in effect at the time of the evaluation. M.K. Fox, E. Gearan, K. Niland, Issue Brief: *Nutritional Quality of Congregate and Home-Delivered Meals Offered in the Title III-C Nutrition Services Program: An Examination Utilizing the Healthy Eating Index Tool* (October 2017).

⁶⁵In addition, nearly half of the daily sodium consumed by participants came from program meals (46 to 47 percent, respectively for congregate and home-delivered meal participants). Foods that contributed substantial amounts of sodium included processed meats, such as ham and sausage, and mixed dishes such as chicken teriyaki, beef stroganoff, chili, and gumbo.

nutrition requirements.⁶⁶ According to the evaluation, overconsumption of sodium and saturated fat may pose a public health concern.⁶⁷

Information obtained from the selected states we visited also suggests that state oversight of congregate and home-delivered meals' consistency with program nutritional requirements may have limitations. Specifically, some selected states did not utilize a nutrition professional at the state level to help ensure meals served through the programs met federal nutrition requirements. For example, in one state, the state-level nutrition professional position was vacant and, officials from an area agency on aging we spoke with confirmed that state-level monitoring of menus for compliance with nutrition requirements had not occurred due to the vacancy. Area agency on aging officials added that the vacancy has also meant that state staff are not available to train or provide guidance to area agencies on the programs' nutrition requirements. In the other state, officials from an area agency on aging told us the state agency has not focused on oversight of providers' menus. HHS is responsible for overseeing its federal nutrition assistance programs to ensure compliance with the programs' nutrition requirements. More complete information on state efforts to assess meal consistency with federal nutrition requirements could help HHS assure that meals served to program participants are meeting those requirements.

In USDA's CACFP, which provides meals to older adults at adult day care centers, USDA regional offices review states' monitoring of local providers for consistency with federal meal pattern requirements. States are required to review each entity involved in the CACFP at least once every 3 years.⁶⁸ During these reviews, state staff must assess provider compliance with federal requirements, which includes a review of a sample of the provider's menus to ensure they comply with federal meal

⁶⁶In addition, on average, a program meal contributed to 39 to 41 percent of congregate and home-delivered meal participants' daily intake of saturated fat.

⁶⁷HHS officials told us that following the release of this evaluation, HHS held webinars that presented these findings and made available resources through its National Resource Center on Nutrition and Aging on topics such as ways to reduce sodium and identify sources of sodium and saturated fat. In addition, HHS regional officials told us they hold regular calls with state nutritionists and one-on-one technical assistance that includes topics such as planning meals that meet the dietary guidelines.

⁶⁸Specifically, state agencies must review independent centers, including adult day care centers, and sponsoring organizations of 1 to 100 facilities at least once every 3 years, according to federal regulations. See 7 C.F.R. § 226.6(m)(4)(i).

pattern requirements. Through federal management evaluations, USDA regional staff review states' monitoring of the program, including their reviews of menus to ensure compliance with meal pattern requirements, and conduct onsite reviews at both the state agency and local provider level.⁶⁹ Regional staff told us they review all states at least once every 3 years.⁷⁰

However, USDA regional officials told us they lack information on how the program is working at adult day care centers, in part because its onsite reviews of adult day care providers are generally limited, unlike on the child care side of the program. According to USDA officials, the majority of state agencies oversee both child care and adult day care CACFP providers,⁷¹ and USDA's criteria for selecting providers for onsite reviews focus on those providers receiving the highest reimbursement amounts.⁷² According to regional officials, because CACFP serves a significantly greater number of meals to children than to adults, providers receiving the highest reimbursement amounts are those serving meals in child care sites in the majority of states.⁷³ Thus, federal onsite reviews of providers serving meals to older adults in adult day care centers generally have been limited.⁷⁴

USDA's regional officials told us that because they have not done onsite reviews at most adult day care centers recently, they lack information on how the program is working in those centers. USDA officials in four of the seven regional offices told us they receive few questions or requests for

⁶⁹During management evaluations, USDA regional staff also review technical assistance requests that states receive from providers and trainings that states offer to providers on the program's meal pattern.

⁷⁰Officials from USDA's national office told us that while there is no requirement in regulation on the frequency of CACFP management evaluations, the frequency of these reviews may reflect an agency practice.

⁷¹The exception is in two states, Florida and Illinois, in which different state agencies oversee CACFP in child care and adult day care settings, according to these officials.

⁷²USDA, Food and Nutrition Service guidance "*Management Evaluation of State Agency Operations, Child and Adult Care Food Program, Fiscal Year 2019.*"

⁷³For example, in fiscal year 2018, CACFP served nearly 2 billion meals in child care settings compared to over 79 million meals in adult day care centers.

⁷⁴In addition, at the state level, across the four selected states, state agencies reported that they have few staff responsible for overseeing the program or a small number of staff focused on the adult day care side of the program.

technical assistance from state agencies or providers operating the program in adult day care centers. However, our discussions with providers in the four selected states suggest that they face challenges operating the program in these centers and addressing the varying needs of participants they serve, such as those with physical and mental impairments, and may benefit from additional information or assistance. USDA is statutorily required to review state agency and provider compliance with regulations governing program administration and operation of certain nutrition assistance programs, including CACFP. Further, USDA guidance notes that its management evaluations are critical for monitoring state agency program compliance and improving program operations by providing a basis for assessing the administration of the CACFP and developing solutions to challenges in program operations. Without taking action to ensure on-site reviews of adult day care centers participating in CACFP are conducted more consistently, USDA may be missing an opportunity to identify and help address challenges adult day care centers face in operating the program, such as challenges meeting varied needs of participants. Such efforts could help them better assess the extent to which centers are meeting the nutritional needs of the older adults they serve and to better target technical assistance.

For USDA's CSFP, which provides monthly food packages to older adults, USDA regional office oversight includes reviews of state agencies' monitoring of local providers and visits to local providers, covering all states at least once every 3-5 years. Regional staff indicated that they review monthly participation data, food inventory reports, and state plans as part of their oversight of the program. As part of their visits with local providers, regional officials told us they open and review food packages at local sites to ensure packages include the required food components and assess the types of nutrition education provided to participants, such as recipes or cooking classes.

Providers Face Challenges, Such as Increased Demand for Nutrition Programs and Meal Accommodations, and Some Lack Information to Address Them

Providers Reported Challenges Meeting Increased Demand for Nutrition Programs, with Some Leveraging Additional Resources to Meet Needs

The growth in the older adult population has led to an increased demand for nutrition programs to serve them, and some providers told us they faced challenges meeting the nutritional needs of this population. From 2009 through 2018, the population of adults 60 or older grew by 31 percent.⁷⁵ Federal funding for certain nutrition assistance programs serving older adults has not increased at the same rate as the population.⁷⁶ Specifically, during that same time period, federal funding for HHS's congregate and home delivered meal programs grew by 13 percent.⁷⁷ HHS officials told us that with the increased demand for these programs and relatively flat federal funding, some providers have been unable to maintain the same level and quality of service that they have historically provided.

According to state officials and providers in three of the four selected states we visited, the increased demand for older adult nutrition programs has resulted in waiting lists, in particular for the home-delivered meal

⁷⁵The older adult population growth is based on the U.S. Census Bureau's National Population Estimates from July 1, 2009 to July 1, 2018.

⁷⁶HHS reports that states supplement the federal funding provided for the congregate and home-delivered meal programs with other funding sources, such as state and local government funding, fundraising, and direct payments for meals.

⁷⁷HHS provides grant funds to states to provide services under the congregate and home-delivered meal programs; however, these programs are also funded at the state and local levels as well as through voluntary contributions by program participants. The 13 percent increase in federal funding is between fiscal years 2009 and 2018. However, most of that increase occurred after 2017.

program.⁷⁸ For example, state officials in one selected state we visited told us they have large waiting lists in their state for the home-delivered meal programs due to a higher demand for services. They indicated that, in the absence of other changes, they will only be able to serve new people through attrition of current program participants. One provider in the same state said they have a waiting list of more than 12,000 older adults for their home-delivered meal program. Another provider told us they are currently serving about 10 percent of the older adult population in their area, although the need for these services is greater, and they have continually had a waiting list for their home-delivered meal program.⁷⁹

Some providers have leveraged additional funding sources to decrease waiting lists and expand the reach of their congregate and home-delivered meal programs. Specifically, in two of the four states we visited, some providers said they have received additional funding to support nutrition and other services for older adults through a local property tax—called a millage tax.⁸⁰ In one of these states, a local provider told us that the local millage tax provided \$9.8 million for older adult services in 2018. Officials noted that these funds allowed providers to add new meal routes and decrease waiting lists for home-delivered meals, as well expand the capacity of senior centers to serve more older adults through nutrition and other programs.

In three of the four selected states, some providers reported partnering with various entities, including grocery stores, local farmers, and others to obtain food at low or no cost or serve more older adults, which helped them to meet the increased demand for the congregate and home-delivered meal programs. For example, in one state, the area agency on aging that directly provides meals joined a larger consortium of organizations to purchase food at a lower cost from a food vendor. In another state we visited, a provider we spoke with reported that the majority of its food for older adults' meals came from food donations

⁷⁸According to a nationwide evaluation of the congregate and home-delivered meal programs, about one-half (51 percent) of local providers that arrange or provide home-delivered meals reported having a waiting list for potential participants as of 2015. *Process Evaluation of Older Americans Act Title III-C Nutrition Services Program* (Cambridge, MA: Mathematica Policy Research, September 30, 2015).

⁷⁹In order to serve some of the people who were on the waiting list, the provider reduced the number of meals served to participants from 7 to 5 meals per week.

⁸⁰According to area agency on aging officials in one selected state, the local millage tax was approved for a specific time period, and is not guaranteed to continue after that time.

provided by local grocery stores and food banks and through a program in which local farmers dedicate some of their produce for donation. This provider indicated that food donations saved them \$140,000 in food costs in 2018 (see fig.6).

Figure 6: Examples of Food Donations at Congregate and Home-Delivered Meal Program Sites in Selected States

Source: GAO. | GAO-20-18

Note: Food donations to congregate and home-delivered meal programs may consist of fresh fruits and vegetables, such as bananas, oranges, beets, tomatoes, avocados, and other items.

Providers Face Challenges Meeting Needs for Certain Meal Accommodations and Some Lack Information to Help Address These Needs.

Providers we spoke with in the four selected states reported challenges meeting older adults' needs for certain meal accommodations, and both providers and state officials that administer the congregate and home-delivered meal programs as well as the CACFP meal program across the four states reported a need for additional information from the federal agencies overseeing these programs. As previously noted, the majority of older adults in the United States now have more than one chronic condition and older adults may have physical or mental impairments—all factors that may necessitate certain accommodations to ensure meals meet their nutritional needs. Although some providers we spoke with have taken steps to mitigate challenges meeting these needs, some reported

Congregate and Home-Delivered Meal Programs

that they continue to face challenges, such as the lack of skilled chefs and other resources, to make such accommodations.

Providers of HHS's congregate and home-delivered meal programs in three of the four states said they faced challenges making meal accommodations to meet the dietary needs of older adult participants with chronic health conditions. As previously noted, 62 percent of older adults 65 and older had more than one chronic health condition in 2016—the most recent year for which data are available. Eight of the 14 congregate and home-delivered meal providers across the selected states we visited said they do not tailor meals to meet participants' special dietary needs—for example, due in part to limited resources and capacity. For example, four providers told us it is cost prohibitive to tailor meals. At one site we visited that does tailor meals, local officials told us that their vendor charges more for tailored meals because of the additional work involved to customize meals to meet the needs of participants with specific health conditions. Another provider said that some chefs lack the skills needed to prepare such meals. For example, the provider said that although some older adults need mechanically soft or pureed meals because of oral health issues, staff may lack the skills to produce those meals. Federal restrictions on reimbursing liquid meals may make providing such meals cost-prohibitive, according to officials in selected states. For example, state and local officials and a provider in two selected states said that program participants who are unable to chew, swallow, or digest solid foods due to various health conditions, may need such meals, yet these meals do not qualify for federal meal reimbursement. According to HHS officials, while a liquid meal does not qualify for meal replacement, states may use federal funds dedicated to providing nutrition education, counseling, and other aging services to purchase these meals.

Some of these program providers in the selected states used additional funding sources to help them make meal accommodations for program participants with special dietary needs, and HHS also funds awards that can be used for this purpose. For example, an area agency in one selected state we visited received a grant from a local foundation to provide some of their home-delivered meal participants with special dietary meals, including for those with renal conditions and diabetes for up to 3 months. Similarly, another provider used a grant to provide liquid

meals to home-delivered meal participants who needed them.⁸¹ Since 2017, HHS has also awarded grants to support innovative projects that enhance the quality, effectiveness, and outcomes of the congregate and home-delivered meal programs, and some of the projects have focused on providing meal accommodations for certain program participants. For example, a grantee in one state used these grant funds to develop and deliver modified meals appropriate for home-delivered meal participants with reduced dental function. Another state grantee created new medically-tailored meals for program participants transitioning from hospital to home.

According to HHS officials, the department has seen positive preliminary results from the innovation grants, but does not currently have a centralized location that compiles information for congregate and home-delivered meals providers on promising approaches for making meal accommodations for participants with special dietary needs. HHS officials said they have shared some information on the projects through webinars and conferences and provided links to webinar materials on the National Resource Center on Nutrition and Aging website—funded by HHS.⁸² Further, HHS officials noted that they posted additional relevant materials, such as a toolkit focused on lowering sodium in meals, on the Center’s website. However, these materials are not compiled in one location on the Center’s website, which may hinder meal providers’ ability to locate all of the relevant information HHS has compiled. State officials and providers across the four selected states said that federal guidance on accommodating the special dietary needs of older adult program participants is limited and additional support would be helpful. HHS is responsible for collecting and disseminating information on older adults. Providing information on promising practices and available opportunities may help support providers’ efforts to accommodate the special dietary needs of some older adults participating in these programs.

⁸¹State officials in one state told us that donations of liquid meals have assisted their efforts to provide these meals to program participants, and one provider noted they have helped meet the need for liquid meals by offering them at a low cost for participants to purchase.

⁸²For example, the Center’s website includes materials related to a two-part webinar held in October 2018 in which preliminary information about grantee projects was shared. For link to website see: <https://nutritionandaging.org>. Additionally, according to HHS officials, the Center held a webinar on promising practices for tailoring meals in August 2019.

Child and Adult Care Food Program (CACFP)

State and local entities administering USDA's CACFP in adult day care centers in the four selected states reported that they face challenges providing meal accommodations to meet the nutritional needs of program participants. Officials in three selected states said they believe the federally-required meal patterns do not fully address older adults' nutritional needs, including those with special dietary needs.⁸³ For example, milk is a federally-required component of breakfasts and lunches served through the program, though officials from three selected states said that milk can be problematic for older adults because many are lactose-intolerant or do not like drinking milk.⁸⁴ Further, officials in one state said that the meal pattern includes a significant amount of carbohydrates, which is inconsistent with the needs of older adults who have diabetes. Although CACFP requires adult day care centers to serve meals consistent with federal meal pattern requirements or a participant's plan of care, which may include medically-prescribed meal accommodations, state officials reported some older adults face barriers to obtaining medical documentation of meal accommodation needs. Specifically, officials from two selected states said that some participants may not have access to medical providers, and officials from one of those states explained that a visit to a medical provider is sometimes cost-prohibitive for those with limited incomes.⁸⁵

⁸³According to USDA officials, providers of meals served to older adults participating in the CACFP can modify meal pattern requirements to accommodate the specific nutritional needs of older adults. For more information, see CACFP-17-2016, available at https://fns-prod.azureedge.net/sites/default/files/cacfp/CACFP14-2017_SFSP10-2017os.pdf.

⁸⁴According to USDA officials, the Healthy, Hunger-Free Kids Act of 2010 provided the flexibility to substitute fluid milk with non-dairy beverages that are nutritionally equivalent to fluid milk to children or adults with special dietary needs, without the need for medical documentation. For more information, see USDA's memorandum, "Nutrition Requirements for Fluid Milk and Fluid Milk Substitutions in the Child and Adult Care Food Program, Questions and Answers" (July 14, 2016), available at https://fns-prod.azureedge.net/sites/default/files/cacfp/CACFP17_2016os.pdf. Under the updated adult day care meal patterns, which were required to be implemented as of October 1, 2017, a serving of milk is not required in a supper served to an adult, though it is required in both breakfast and lunch. Six ounces or ¾ cup of yogurt may be used to meet the equivalent of 8 ounces of fluid milk once per day.

⁸⁵The CACFP reimburses meals and snacks served to adults enrolled at adult day care centers based upon their eligibility for free, reduced price, or paid meals. For example, participants from households with incomes at or below 130 percent of the federal poverty guidelines are eligible for free meals while participants from households with incomes between 130 and 185 percent of the federal poverty guidelines are eligible for reduced-price meals.

Officials in two of the four selected states said adult day care meal providers have used available federal options that allow older adults to tailor their own meals to meet their nutritional needs, though officials also noted that these options have limitations. For example:

- State officials in one selected state said they encourage adult day care centers to implement the federal “offer versus serve” option. This option allows adult participants, including older adults, to decline, for example, up to two of the five meal components required with a lunch—milk, fruits or vegetables, grains, and meat or meat alternate. According to USDA guidance, this option may reduce waste and give adults more choices.⁸⁶ However, officials in this state noted that making choices is sometimes difficult and time-consuming for program participants with cognitive impairments, such as Alzheimer’s disease or dementia.⁸⁷
- State officials in another state said that the federal family-style meal service option, which allows older adults to serve themselves from communal platters of food with assistance from supervising adults, if needed, also provides older adults with the ability to tailor meals to meet their needs. However, state officials in this state noted this meal service approach also creates challenges with feeding certain older adults appropriately. For example, this approach makes it harder to meet the needs of those with particular dietary or functional requirements, such as those who have specific nutritional needs due to chronic conditions or those with swallowing or chewing issues.

State officials and adult day care providers across all four selected states said that federal guidance for providing meals to older adults in adult day care centers is limited, and providers in two of the states said they lack information on ways to address some of the challenges associated with providing meals that meet the nutritional needs of older adults in these centers. For example, providers noted that information on promising practices for serving the differing needs of older adults in these centers, including those with special dietary needs and those with functional

⁸⁶See “*Offer Versus Serve in the Child and Adult Care Food Program*”, FNS-659 (February 2018), available at <https://fns-prod.azureedge.net/sites/default/files/tn/CACFPOfferVersusServe.pdf>, accessed on August 27, 2019.

⁸⁷USDA guidance indicates that it is the adult’s choice to select or decline a food component under the offer versus serve option, and adult day care centers may not specify what food components a child or adult must select.

limitations, would assist their efforts to meet participants' nutritional needs. State officials or providers in all four selected states said that FNS's efforts to provide guidance and trainings are more focused on the child care component of the CACFP than the adult day care component. USDA officials confirmed their efforts to provide guidance to meal providers have been primarily focused on the child care side of the program in light of the larger number of participants served.

Although USDA provides some guidance and information to address the adult component of the CACFP, some CACFP entities serving older adults may not be aware of these resources, and information on promising practices or other resources to help providers meet the varying needs of older adults is more limited. USDA officials said CACFP guidance and trainings address the implementation of adult meal pattern requirements and existing flexibilities with these requirements, such as allowable substitutions for milk.⁸⁸ USDA also produced a handbook specifically for adult day care centers in 2014 to help assist providers in these centers.⁸⁹ However, USDA officials said that awareness of existing guidance and trainings available may be lacking, in part, because turnover for CACFP providers is high and new providers may not be aware of existing resources. Some providers also said that more information on how to address the special dietary needs and functional limitations of some participants would be helpful, as USDA's existing guidance and trainings focus on standard adult meal pattern requirements. For example, while the 2014 handbook includes information on meal patterns and different serving methods to provide meals, it does not include information specific to meeting the differing needs of older adults in these centers. In October 2019, USDA officials told us that they are in the process of updating this handbook to reflect

⁸⁸For example, some of USDA's materials include meal pattern implementation posters, training slide decks, a Food Buying Guide, a Crediting Handbook for the CACFP, standardized recipes with meal pattern crediting information, and training webinars related to meal pattern implementation, which can be accessed for free at <https://www.fns.usda.gov/tn>, according to USDA officials. These officials added that USDA maintains a cooperative agreement with the Institute of Child Nutrition, which currently offers the CACFP Meal Pattern Requirements Training resources such as face-to-face trainings and online courses that include guidance for older adults and are available at <https://theicn.org/>. In addition, USDA officials said that sponsoring organizations and others participating in the CACFP can sign up to be part of a Team Nutrition Network for CACFP Organizations, where they will have access to new nutrition education and training materials and the opportunity to collaborate with other CACFP organizations.

⁸⁹USDA, FNS, *Adult Day Care: A Child and Adult Day Care Food Program Handbook* (January 2014).

new policies, guidance, and promising practices for addressing the needs of older adults. USDA officials also stated that they are in the process of reviewing a promising practice to address meal accommodations for older adults with varying needs. USDA is responsible for providing training and technical assistance to states in order to assist state agencies with program management and facilitate effective operation of the program. Without awareness of existing resources and additional guidance and information to help adult day care providers address the challenges they face meeting the nutritional needs of the older adults they serve, providers may continue to be limited in their ability to do so.

Commodity Supplemental Food Program (CSFP)

USDA, state, and local officials administering the CSFP said that the federal requirements for foods provided in each monthly food package limit the extent to which providers can tailor or alter the foods provided to accommodate individual participants' nutritional needs; though some approaches and recent changes help address this challenge. For example, two food package providers we spoke with said they use other methods of food delivery along with the food package such as a pantry or grocery store-style model, which allows participants to come to a site and choose from a variety of foods that meet the requirements (see fig. 7). USDA also recently issued updated federal requirements for the type and quantity of foods provided in the food package, which department officials said provide more variety to be more useful to older adults. As previously noted, some regional USDA officials told us that early feedback from states on the changes has been positive, though states have until November 2019 to implement the new requirements. For example, USDA officials in one regional office said states provided positive feedback on the introduction of new food items, such as lentils.

Figure 7: Example of a Grocery Store-style Shopping Model Used by a Commodity Supplemental Food Program Provider in One Selected State

Source: GAO. | GAO-20-18

Providers Also Reported Other Challenges That Hinder Efforts to Meet Older Adults' Nutritional Needs, Though Some Have Taken Actions to Help Address Them

Providers reported ongoing program administration challenges, such as staffing constraints, which to some extent challenge their efforts to meet the nutritional needs of older adults. For example, state and local officials and providers of the congregate and home-delivered meal programs across three of the four selected states said they face challenges finding and retaining a sufficient number of staff for program operations, which could include preparing and serving meals, and delivering meals. Four of the 14 providers of these programs reported that they struggle to offer competitive wages and benefits, which hinders their ability to hire and retain staff.

To help overcome staffing constraints, some providers partnered with various entities. For example, in all four selected states, providers of the congregate and home-delivered meal programs established partnerships with entities such as colleges and local businesses to solicit volunteers to help with program operations. In one state, a provider partnered with a local college's nursing program and students volunteered to assist with assessments for home-delivered meal participants. In another state, staff from a local police department volunteer and deliver meals to home-delivered meal participants in one area. One meal provider said that the efforts of volunteers, who donate their time and cover expenses for gas and vehicle insurance to help provide home-delivered meals to participants, are worth \$100,000 in annual support to their program. This provider noted that they would be unable to operate the program without volunteers. See figure 8 for pictures of volunteers helping to prepare food in selected states.

Figure 8: Volunteers Helping to Prepare Food for Nutrition Assistance Programs Serving Older Adults in Selected States

Source: GAO. | GAO-20-18

Providers of the CSFP food packages and congregate and home-delivered meal programs in three selected states we visited also reported challenges obtaining transportation to bring older adults to meal and food distribution sites and deliver meals and food packages to older adults, though some have found ways to mitigate these challenges. For example, providers in three selected states said a lack of transportation options prevents some older adults from visiting congregate meal sites as well as food package distribution sites, as public transportation is not always available and many older adult participants do not drive. According to local officials in one state, transportation is also a challenge for the home-delivered meal program, particularly in rural areas, because the distance between participants' homes affects the cost of delivering meals. Similarly, officials at one local agency on aging said providers in its area would like to serve more people, but are unable to add additional routes because of transportation costs.

To help mitigate transportation challenges and manage associated costs, some providers in the selected states have adjusted meal services and found alternative ways to transport clients to meal service sites. For example, to help control transportation costs, three providers in two selected states changed from delivering one hot meal daily to delivering

multiple frozen meals once a week to home-delivered meal participants.⁹⁰ In addition, one provider partnered with a local meal delivery service that used FedEx to deliver 10 home-delivered meals every 2 weeks to program participants. To help alleviate transportation challenges that older adults face getting to meal sites, three providers in two states partnered with private companies to provide participants with rides to and from meal sites for a minimal fee. Another provider used grant funds they received from their state to purchase vans they then used to provide older adults with transportation to and from the meal sites.

Some providers also reported challenges accommodating the varied dietary preferences of different groups of older adults, as preferences sometimes vary by age and cultural or ethnic background, and being responsive to these preferences can increase the likelihood that meals will help older adults meet their nutritional needs. For example, HHS officials, as well as local providers in three out of the four selected states said the dietary preferences of adults in their 60s sometimes vary greatly from the preferences of adults in their 90s. Local officials in two states said that providers of congregate and home-delivered meal programs in their states noted that “older old” adults may prefer meals that include meat and potatoes, while “younger old” adults may prefer lighter meals, such as those consisting of soups and salads. In addition, providers in three selected states we visited told us they serve many older adults from diverse cultural or ethnic backgrounds, or with dietary preferences, such as a vegetarian diet, or who do not eat certain foods because of their religious beliefs.

To meet the varied dietary preferences of the older adults they serve, and increase the likelihood that meals will help participants meet their nutritional needs, some providers reported taking various approaches. For example, one congregate meal site we visited offered a lunch entree choice of either meat and potatoes or a sandwich wrap with vegetables. Another congregate meal site offered a hot lunch, plus a soup and salad bar, in a restaurant-like setting. Providers also tried to incorporate certain foods on their menus that reflect the cultural or ethnic preferences of

⁹⁰In our recently issued report on home and community-based services for older adults in rural areas, transportation was also cited as a common challenge for home-delivered meal programs. Selected localities reported delivering frozen or shelf-stable meals to rural older adults, usually once a week or every 2 weeks, to help mitigate this challenge. GAO, *Older Americans Act: HHS Could Help Rural Service Providers by Centralizing Information on Promising Practices*, [GAO-19-330](#) (Washington, D.C.: May 23, 2019).

participants. For example, the adult day care provider and the congregate and home-delivered meal providers we visited in one selected state in the South all noted that their menus aim to include certain foods associated with their regional culture, such as red beans and rice.

Conclusions

By 2060, older adults are expected to make up nearly one-quarter of the total U.S. population. HHS and USDA play important roles in promoting the health of this growing population both through administration and oversight of federal nutrition assistance programs that serve older adults and efforts to update federal nutrition guidelines, which serves as the basis for nutrition requirements in these programs. While federal nutrition guidelines provides broad guidance on nutrition for healthy populations, they do not address the varying nutritional needs of older adults, such as those who have common chronic conditions or face age-related changes. The 2025-2030 Dietary Guidelines update is expected to include a focus on nutritional guidance for older adults, but no formal plan to include this focus has been developed. A plan to incorporate the varied needs of older adults into the dietary guidelines could assist older adults with making their own dietary decisions and help providers of nutrition assistance programs better meet older adults' nutritional needs.

Further, HHS and USDA administration and oversight of the nutrition assistance programs is not fully addressing some of the challenges states and local providers indicated hinder their efforts to meet older adults' nutritional needs. For example, providers we spoke with faced challenges meeting older adults' needs for certain meal accommodations, and information from HHS and USDA regarding promising approaches to meeting those needs is limited or not sufficiently disseminated. Further, both HHS and USDA's efforts to oversee older adult meal programs have limitations that affect information available at the federal level needed to ensure programs are meeting older adults' nutritional needs.

Recommendations for Executive Action

We are making the following five recommendations.

The Administrator of ACL should work with other relevant HHS officials to document the department's plan to focus on the specific nutritional needs of older adults in the 2025-2030 update of the Dietary Guidelines for Americans, which would include, in part, plans to identify existing information gaps on older adults' specific nutritional needs.

(Recommendation 1)

The Administrator of ACL should direct regional offices to take steps to ensure states are monitoring providers to ensure meal consistency with federal nutrition requirements for meals served in the congregate and home-delivered meal programs. (Recommendation 2)

The Administrator of FNS should take steps to improve its oversight of CACFP meals provided in adult day care centers. For example, FNS could amend its approach for determining federal onsite reviews of CACFP meal providers to more consistently include adult day care centers. (Recommendation 3)

The Administrator of ACL should centralize information on promising approaches for making meal accommodations to meet the nutritional needs of older adult participants in the congregate and home-delivered meal programs, for example in one location on its National Resource Center on Nutrition and Aging website, to assist providers' efforts. (Recommendation 4)

The Administrator of FNS should take steps to better disseminate existing information that could help state and local entities involved in providing CACFP meals meet the varying nutritional needs of older adult participants, as well as continue to identify additional promising practices or other information on meal accommodations to share with CACFP entities. (Recommendation 5)

Agency Comments and Our Evaluation

We provided a draft of this report to HHS and USDA for review and comment. In its written comments, HHS agreed with our three recommendations to ACL (Recommendations 1, 2, and 4). In response to our first recommendation, HHS stated that ACL plans to work with the Office of Disease Prevention and Health Promotion and other relevant HHS officials and agencies to document HHS's plans to emphasize the specific and varying nutritional needs of older adults in the 2025-2030 update. HHS also stated that ACL plans to acquire the services of a registered dietician with specialized expertise in older adults' nutritional needs. In response to our second recommendation, HHS stated that ACL's program and evaluation offices will collaborate on the development of plans to ensure state compliance with federal requirements. In response to our recommendation that ACL centralize information on promising practices, HHS stated that ACL will award a contract in fiscal year 2020 for a new National Resource Center on Nutrition and Aging to, among other things, centralize information on promising approaches so

nutrition services providers can access it easily. HHS's comments are reproduced in appendix II.

In oral comments, USDA officials, including the Directors of the FNS Child Nutrition Program Monitoring and Operational Support Division and the Child Nutrition Program Nutrition Education, Training, and Technical Assistance Division generally agreed with our two recommendations to FNS (Recommendations 3 and 5). In response to our recommendation to improve CACFP oversight, FNS officials agreed with the intent of improving oversight of CACFP meals provided in adult care centers. These officials also noted that activities and changes in this area must be consistent with statutory and regulatory requirements, balanced with current priorities given the size of the program, and mindful of resources available to perform additional oversight. While we recognize that the CACFP serves fewer adults than children and that FNS oversight resources are limited, we believe that FNS is in a position to identify the best way to improve its oversight of CACFP meals provided in adult day care centers while taking into consideration the availability of its resources. In response to our recommendation to share additional information with state and local CACFP entities, FNS officials stated that there is existing guidance and information on the adult component of the CACFP, which it communicates through multiple channels. These officials said that some states and localities may be unaware of these resources, in part, because of high turnover among staff who administer these programs. FNS officials acknowledged that they could do more to increase awareness of existing resources, as well as continue to identify and share new practices to help entities providing CACFP meals in adult day care centers address challenges associated with providing meals that meet nutritional needs of older adults. USDA also provided technical comments, which we incorporated as appropriate.

As agreed with your offices, unless you publicly announce the contents of this report earlier, we plan no further distribution until 30 days from the report date. At that time, we will send copies to the Secretaries of HHS and USDA and interested congressional committees. The report will also be available at no charge on the GAO website at <http://www.gao.gov>.

If you or your staff have any questions about this report, please contact me at (202) 512-7215 or larink@gao.gov. Contact points for our Offices of Congressional Relations and Public Affairs may be found on the last page of this report. GAO staff who made key contributions to this report are listed in appendix III.

Kathryn A. Larin, Director
Education, Workforce, and Income Security Issues

Appendix I: Objectives, Scope, and Methodology

Our report examines (1) the relationship of older adults' nutrition to health outcomes and the extent to which federal nutrition guidelines address older adults' nutritional needs; (2) the extent to which federal nutrition assistance programs serving older adults have nutrition-related requirements and how these requirements are overseen; and (3) challenges program providers face in meeting the nutritional needs of older adults. In addition to the methods discussed below, to address all three research objectives we reviewed relevant federal laws, regulations and guidance.

Federal Data

To provide context for all three research objectives, we examined federal projections of growth in the older adult population covering the time period of 2016 through 2060. We relied on the U.S. Census Bureau's projections of the U.S. population by various demographic traits including age, sex, race, Hispanic origin, and nativity.¹ We assessed the reliability of these data by reviewing technical documentation describing the methodology, assumptions, and inputs used to produce the 2017 National Population Projections, upon which the 2020-2060 estimates are based. We determined these data to be sufficiently reliable for the purposes of our report.

To provide context on the federal nutrition assistance programs serving older adults, we examined federal data on expenditures and participation in these programs for the most recent fiscal year available.² For the congregate and home-delivered meal programs, we relied on State Program Report data from fiscal year 2017, the most recent data available at the time of our review, from the U.S. Department of Health and Human Services' (HHS) AGing Integrated Database. These data are submitted on an annual basis by states to HHS's Administration for

¹Jonathan Vespa, David M. Armstrong, and Lauren Medina, "Demographic Turning Points for the United States: Population Projections for 2020 to 2060," Current Population Reports, P25-1144 (Washington, D.C.: U.S. Census Bureau, 2018). The projections in the report are the third series of national population projections based on the 2010 Census.

²In this report, we identified six key federal programs that provide nutrition assistance to older adults that are overseen by the Department of Health and Human Services and the Department of Agriculture. Those programs include the congregate and home-delivered meal programs, Child and Adult Care Food Program, Commodity Supplemental Food Program, Senior Farmers' Market Nutrition Program, and Supplemental Nutrition Assistance Program. Additionally, the target population for each of these programs generally includes those adults 60 or older. For the purposes of this report, we define older adults as those 60 or older.

Community Living (ACL). For program expenditure and participation data for the Child and Adult Care Food Program, Commodity Supplemental Food Program, Senior Farmers' Market Nutrition Program, and Supplemental Nutrition Assistance Program (SNAP), we relied on fiscal year 2018 data from the U.S. Department of Agriculture's (USDA) National Data Bank and submitted through USDA's Food and Nutrition Service (FNS) grantee reports. We also relied on fiscal year 2017 data from USDA's Characteristics of SNAP Households report on the number of older adult participants in SNAP, the most recent year for which these data were available.³ To assess the reliability of these data, we interviewed FNS officials and reviewed relevant technical documentation. We determined that these data were sufficiently reliable for the purposes of our report.

Literature Search

To address our first objective on what is known about the relationship between older adults' nutrition and health outcomes, we conducted a literature search to identify relevant peer-reviewed studies on the relationship between nutritional needs and health outcomes of older adults covering the time period of 2013 through 2018. We searched research databases, such as ProQuest, Scopus, and Ebsco (AgeLine, EconLit, and CINAHL), using search terms such as nutrition and aging and dietary guidelines for seniors. We reviewed the results of the search to identify publications that (1) included a literature review and synthesis of studies on the connection between nutrition and health outcomes for older adults, including the factors that may affect older adults' nutritional needs, such as age-related changes and (2) emphasized the general diet-health relationship among broad populations of older adults. Because these broader studies were most relevant to our objective, we excluded studies that (1) focused on the relationship between a specific food or nutrient and a single health outcome (e.g., salt and cardiovascular disease) or (2) studied a narrow group of older adults (e.g., residents of a single U.S. state or region). We conducted detailed reviews of these studies to assess the soundness of the reported methods and the credibility and reliability of the conclusions drawn by the authors, and deemed them to be sufficiently credible, reliable, and methodologically sound for the purposes of our report.

³U.S. Department of Agriculture, Food and Nutrition Service, Office of Policy Support, *Characteristics of Supplemental Nutrition Assistance Program Households: Fiscal Year 2017* (Alexandria, VA: 2019).

Site Visits

To help inform all of our research objectives and gather information about nutrition assistance programs that provide meals and food packages to older adults at the local level, we conducted visits to 25 local meal and food distribution sites in four states: Arizona (5 sites), Louisiana (10 sites), Michigan (6 sites), and Vermont (4 sites) between December 2018 and March 2019. We interviewed officials from a variety of entities involved in administering these programs in each of the states, including 20 state and area agencies on aging and 20 local providers; observed meal services and food distribution;⁴ and held conversations with older adult program participants.⁵

We selected states and local sites within those states based on a high percentage of adults 60 or older, and to ensure variation across the sites in geographic location, urban and rural location, percentage of older adults in poverty, and program provider and site type.⁶ We visited a wide variety of site locations including, but not limited to, senior centers, community centers, adult day care centers, and senior housing. Because we relied on a nongeneralizable sample of sites and states, the views of the entities we interviewed do not represent the views of all providers of federal nutrition assistance programs providing meals and food packages to older adults or participants in those programs.

Prior to each selected state visit, we gathered information from state and area agencies on aging responsible for administering these programs using semi-structured interview questions. We collected information on state and area agency on aging roles in administering nutrition assistance programs for older adults, federal nutrition requirements in these programs, oversight and monitoring of programs, partnerships to help meet the nutritional needs of older adults, outreach efforts, assistance

⁴During our visits to selected states, we did not assess programs, meals served, or food provided for compliance with federal nutrition requirements.

⁵Throughout this report, references to “local providers” are those responsible for the provision of meal services or food in the various federal nutrition assistance programs that we included in this review. Of the 20 local providers we interviewed, 14 were HHS congregate and home-delivered meal program providers, 3 were Commodity Supplemental Food Program providers, and 3 were Child and Adult Care Food Program providers. The information we collected from those participating at the sites included their perspectives on the food, ease of travel to the site, and access to other sites, where applicable.

⁶In this review, the federal nutrition assistance programs serving older adults are targeted specifically to older people with the greatest economic or social need, with particular attention to low-income adults.

from federal agencies, and challenges in administering the programs and meeting the nutritional needs of the older adult populations served.

At each site, we gathered information from local providers and participants using semi-structured interview questions. We collected information on program provider operations; characteristics of the population served; efforts to meet the nutritional needs of the population served, other nutrition-related services; challenges with meeting the nutritional needs of the population and efforts to address them; outreach efforts; and assistance received from regional, state, and federal agencies. We also collected perspectives on food received and program impacts on health outcomes from those participating at sites. In addition, at each site we observed food and meal delivery and the approximate number of participants and staff operating the site.

Interviews and Reviews of Relevant Documents

To inform all three research objectives, we interviewed officials from HHS's Administration for Community Living and USDA's Food and Nutrition Service in their national office and all of their regional offices. We also interviewed a broad range of national groups, including advocacy, research, and service provider organizations involved in nutrition assistance programs serving older adults. These included AARP, Feeding America, Food Research and Action Center, Jean Mayer USDA Human Nutrition Research Center on Aging, Mathematica Policy Research, Meals on Wheels America, National Academies, National Association of Area Agencies on Aging, National Association of Nutrition and Aging Services Programs, National Association of States United for Aging and Disabilities, National Commodity Supplemental Food Program Association, and National Council on Aging.

To inform our first objective on the extent to which federal nutrition guidelines address older adults' nutritional needs, we reviewed the federal guidance reports that detail the nutrition requirements for Americans, including those reports supporting the 2015-2020 Dietary

Guidelines for Americans and the body of work on the Dietary Reference Intakes.⁷

To obtain information specific to our second objective on how nutrition assistance programs serving older adults are overseen, we reviewed relevant federal program documents on monitoring and oversight of these programs. In addition, we reviewed relevant studies conducted on behalf of HHS that evaluated the impact of its nutrition assistance programs on older adults' nutrition. These studies evaluated program participants' diet quality and nutrient intake, as well as program administration, among other things.⁸ We assessed the reliability of results in these evaluations by interviewing officials responsible for conducting these evaluations.

Appendix II: Comments from the Department of Health and Human Services

DEPARTMENT OF HEALTH & HUMAN SERVICES

OFFICE OF THE SECRETARY

Assistant Secretary for Legislation
Washington, DC 20201

Kathryn A. Larin
Director, Education, Workforce,
and Income Security Issues
U.S. Government Accountability Office
441 G Street NW
Washington, DC 20548

Dear Ms. Larin:

Attached are comments on the U.S. Government Accountability Office's (GAO) report entitled, "*Nutrition Assistance Programs: Agencies Could Do More to Help Address the Nutritional Needs of Older Adults*" (GAO-20-18).

The Department appreciates the opportunity to review this report prior to publication.

Sincerely,

A handwritten signature in blue ink, appearing to read "Sarah Arbes".

Sarah Arbes
Acting Assistant Secretary for Legislation

Attachment

GENERAL COMMENTS FROM THE DEPARTMENT OF HEALTH & HUMAN SERVICES ON THE GOVERNMENT ACCOUNTABILITY OFFICE'S DRAFT REPORT ENTITLED — NUTRITION ASSISTANCE PROGRAMS: AGENCIES COULD DO MORE TO HELP ADDRESS THE NUTRITIONAL NEEDS OF OLDER ADULTS (GAO-20-18)

The U.S. Department of Health & Human Services (HHS) appreciates the opportunity from the Government Accountability Office (GAO) to review and comment on this draft report. The nutrition programs for older adults administered by HHS are a key component of the comprehensive and coordinated system of home- and community-based services that enable many older adults to live in their homes and communities as they age.

The report highlights a critical issue – demand for nutrition services often outpaces the ability of states to meet it. The number of older adults is increasing at an unprecedented rate, and each year states are challenged to meet the needs of a growing, and increasingly diverse, population. At the same time, data that illustrate the direct correlation between adequate nutrition and healthy aging continue to mount. Innovation, efficiency, and evidence-based approaches to meeting the nutritional needs of older adults have never been more important, and HHS is committed to providing technical assistance and program oversight to support states in ensuring the federally-funded nutrition programs meet the varying needs of the older adults they serve to the greatest extent possible.

HHS will take the following actions in response to each GAO recommendation below

Recommendation 1

The Administrator of ACL should work with other relevant HHS officials to document the department's plan to focus on the specific nutritional needs of older adults in the 2025-2030 update of the Dietary Guidelines for Americans, which would include, in part, plans to identify existing information gaps on older adults' specific nutritional needs. (Recommendation 1)

HHS Response

HHS concurs with GAO's recommendation.

Within the Department of Health and Human Services, the process for updating the Dietary Guidelines for Americans is led by the Office of Disease Prevention and Health Promotion (ODPHP). The Administration for Community Living will work with ODPHP and other relevant HHS officials and agencies, to document HHS plans to emphasize the specific, and varying, nutritional needs of older adults in the 2025-2030 update. In addition, ACL is acquiring the services of a registered dietician with specialized expertise in older adults' nutritional needs.

Recommendation 2

The Administrator of ACL should direct regional offices to take steps to ensure states are monitoring providers to ensure meal consistency with federal nutrition requirements for meals served in the congregate and home-delivered meal programs. (Recommendation 2)

GENERAL COMMENTS FROM THE DEPARTMENT OF HEALTH & HUMAN SERVICES ON THE GOVERNMENT ACCOUNTABILITY OFFICE'S DRAFT REPORT ENTITLED - MEDICARE LABORATORY TESTS: IMPLEMENTATION OF NEW RATES MAY LEAD TO BILLIONS IN EXCESS PAYMENTS (GAO-19-67)

HHS Response

HHS concurs with GAO's recommendation.

In 2019, the Administration for Community Living was reorganized to more closely integrate the program oversight and technical assistance roles of the regional offices and central offices. As a result, the central and regional offices of ACL – including both program and evaluation offices – will collaborate on the development of plans to ensure state compliance with federal requirements.

Recommendation 3

The Administrator of ACL should centralize information on promising approaches for making meal accommodations to meet the nutritional needs of older adult participants in the congregate and home-delivered meal programs, for example in one location on its National Resource Center on Nutrition and Aging website, to assist providers' efforts. (Recommendation 4)

HHS Response

HHS concurs with GAO's recommendation.

In FY 2020, ACL will award a contract for a new National Resource Center on Nutrition and Aging. Centralizing information on promising approaches so nutrition services providers can access it easily will be one of several enhancements to the provision of technical assistance required by the contract.

Appendix III: GAO Contact and Staff Acknowledgments

GAO Contact

Kathryn A. Larin, 202-512-7215, larink@gao.gov

Staff Acknowledgments

In addition to the contact above, Rachel Frisk and Theresa Lo (Assistant Directors), Claudine Pauselli (Analyst-in-Charge), Jessica Ard, and Vernetta G. Shaw made key contributions to this report. Also contributing to this report were Priyanka Sethi Bansal, Tim Bushfield, Daniel Concepcion, Kathleen van Gelder, Sarah Gilliland, Isabella Guyott, Serena Lo, Stacy Ouellette, Amber Sinclair, Joy Solmonson, Almeta Spencer, Curtia Taylor, Adam Wendel, and Sirin Yaemsiri.

GAO's Mission

The Government Accountability Office, the audit, evaluation, and investigative arm of Congress, exists to support Congress in meeting its constitutional responsibilities and to help improve the performance and accountability of the federal government for the American people. GAO examines the use of public funds; evaluates federal programs and policies; and provides analyses, recommendations, and other assistance to help Congress make informed oversight, policy, and funding decisions. GAO's commitment to good government is reflected in its core values of accountability, integrity, and reliability.

Obtaining Copies of GAO Reports and Testimony

The fastest and easiest way to obtain copies of GAO documents at no cost is through GAO's website (<https://www.gao.gov>). Each weekday afternoon, GAO posts on its website newly released reports, testimony, and correspondence. To have GAO e-mail you a list of newly posted products, go to <https://www.gao.gov> and select "E-mail Updates."

Order by Phone

The price of each GAO publication reflects GAO's actual cost of production and distribution and depends on the number of pages in the publication and whether the publication is printed in color or black and white. Pricing and ordering information is posted on GAO's website, <https://www.gao.gov/ordering.htm>.

Place orders by calling (202) 512-6000, toll free (866) 801-7077, or TDD (202) 512-2537.

Orders may be paid for using American Express, Discover Card, MasterCard, Visa, check, or money order. Call for additional information.

LGBT AGING 2025:

Strategies for Achieving a
Healthy and Thriving LGBT
Older Adult Community
in Massachusetts

Executive Summary/Introduction

Massachusetts has been a leader on issues of LGBTQ+ equality. We have led the nation in political and legal advocacy, in services for LGBTQ+ people and for people living with or at risk for HIV, and in research.¹ This project, “LGBT Aging 2025: Strategies for Achieving a Healthy and Thriving LGBT Older Adult Community in Massachusetts,” is a visioning project, funded by the Equality Fund at the Boston Foundation, that seeks to answer this question:

If we want to have a thriving, happy and healthy LGBT older adult community in Massachusetts in 2025, what changes in services, health care, and policy should we make now?

We² seek to answer this question through two approaches. First, we conducted a series of nine listening sessions across the Commonwealth, five in-person and then four virtual sessions in response to the COVID-19 pandemic. Some coincided with listening sessions convened by the Massachusetts Special Legislative Commission on Lesbian, Gay, Bisexual and Transgender Aging and the LGBT Aging Project. Others were held at monthly or quarterly congregate meal programs for LGBT³ older adults and their friends, and several of the virtual sessions were LGBT older adult support groups that went virtual after the onset of the novel coronavirus pandemic.

Second, we also looked at data from the 2016, 2017 and 2018 Behavioral Risk Factor Surveillance System survey, generously analyzed and provided to us by colleagues at the Massachusetts Department of Public Health. In addition, we reviewed elder services client data from 2017 to 2019 provided by the Executive Office of Elder Affairs. (We acknowledge these colleagues and others who helped with this research project at the end of this report.)

-
1. Cahill S, Geffen S, Vance A, Wang T, Barrera J (2018, May). Equality and equity: Advancing the LGBT community in Massachusetts. Boston: The Boston Foundation (Boston Indicators Project) and The Fenway Institute. Pages 6-7. <https://www.bostonindicators.org/reports/report-website-pages/lgbt-report>
 2. Sean Cahill, Tim Wang, and Lisa Krinsky worked on this project. Sean Cahill wrote this report.
 3. Many LGBT older adults prefer the acronym LGBT, and do not like the term “queer,” which they associate with experiences of discrimination and prejudice. When describing LGBT older adults we use the term LGBT.

Key themes that came up in the listening sessions were:

- Strong anti-LGBT prejudice in rural Massachusetts, and from age peers across the Commonwealth
- Social isolation and lack of connection
- Mental health needs specific to social isolation during the COVID-19 pandemic
- The need for ongoing services and mental health care for LGBT widows and widowers, especially those on the Cape and in other rural areas
- The need for social activities that create a sense of community and belonging
- Transportation needs, especially in rural Massachusetts
- Anti-LGBT discrimination in assisted living
- Gender-based sexual harassment (deliberate, repeated misgendering of cisgender lesbian women) in businesses and health care facilities in the Berkshires
- The centrality of trauma in people's lives
- The need to address racism within the LGBT community
- A dearth of LGBT-competent and -affirming health care in rural Massachusetts
- Struggling to pay for health care
- Economic hardship in general
- The need for help with insurance options when you reach age 65
- HIV-specific concerns
- The need for LGBT-friendly elder housing
- The need for targeted support groups and services
- The need for assistance with end-of-life planning
- The need for help navigating the health care system
- The need for hardware (computers, tablets), internet access, and technical assistance to isolated, low-income LGBT elders so that they can access virtual support groups and other services during the COVID-19 pandemic

"The senior population is very prejudiced against gay people."

Key findings from the BRFSS data include the following statistically significant differences between LGBT people 50-75 and straight, cisgender people 50-75:

- LGBT elders reported higher rates of fair/poor overall health, and
- Were nearly twice as likely to report ever having been diagnosed with a depressive disorder,
- Were about as likely to be a veteran and to have children in the household, and were
- More likely to have four or more years of college education
- More likely to rent and less likely to own their home
- More likely to report difficulty paying for housing or food in past year
- More likely to report serious difficulty concentrating, remembering or making decisions
- Were nearly twice as likely to fall and be injured in past year
- Reported four times the rate of suicidal thoughts in past year
- Reported three times the rate of lifetime sexual violence victimization

Also, lesbian and bisexual women were more likely to be obese and less likely to be of normal weight than heterosexual women in Massachusetts.

Some 4.5% of adults age 55 to 64 in Massachusetts identified as LGB or “other” sexual orientation, or transgender (LGBT), as did 3.0% of 65-74 year olds and 2.7% of those age 75 and older. There were relatively higher reported concentrations of LGBT people living in Hampshire, Hampden, Middlesex, Suffolk, and Barnstable Counties. Still, it is important to note that LGBT people live in all parts of the Commonwealth, including in rural and suburban areas as well as cities and towns.

Three percent of 65-74 year olds in Massachusetts, and 2.7% of those 75 and older, identified as LGBT.

The Executive Office of Elder Affairs shared data on the sexual orientation and gender identity (SOGI) of older adults accessing elder services from mid-2017 to mid-2019. EOEAs asks SOGI questions when collecting two kinds of data: Information and Referral Assessment Data (I&R), and Complete Data Set Assessment Data (CDS). The I&R data are collected at initial point of contact, most often from a referring party (social worker, health care provider, family member). A referring party may or may not know the sexual orientation or gender identity of the older adult, or may know the individual’s SOGI but not know if the older adult would want that information reported. The CDS data are based on the face to face assessment interview with the older adult herself, himself, or themselves. That older adult may or may not feel safe honestly answering the sexual orientation and gender identity questions at a first meeting.

EOEA’s CDS data indicate that 0.8% of elder service clients identify as LGB, and 0.1% identify as transgender. This combined 0.9% who identify as LGBT is far less than the 2.7% of Massachusetts residents age 75 or older who identify as LGBT, according to the 2016-2018 Behavioral Risk Factor Surveillance System survey (BRFSS).

Recommendations

Recommendations address a number of key concerns raised in the listening sessions and by the Mass. DPH and EOEA data:

- Prevent anti-LGBT discrimination and harassment and enforce state and federal laws
- Provide ongoing clinical support for LGBT widows and widowers to address unmet mental health needs
- Expand support for trauma-informed approaches to care for LGBT older adults
- Fund programming to reduce social isolation and provide accessible socialization opportunities to LGBT older adults
- Creatively address unmet transportation needs
- Address structural racism, including racism within the LGBT community
- Reduce the dearth of LGBT competent health care in rural Massachusetts
- Provide assistance navigating Medicare insurance options and the health care system
- Address income challenges, including food and rent insecurity, and promote home ownership among LGBT people
- Create more LGBT-friendly senior housing across the Commonwealth
- Allow HIV-positive individuals younger than 60 to access home care services
- Assist with end-of-life planning and increase research on end-of-life issues among LGBT older adults
- Provide hardware, internet access, and TA to help LGBT older adults access telehealth and online support services
- Target fall prevention efforts at LGBT older adults
- Implement obesity prevention and treatment interventions with older sexual minority women
- Collect and report sexual orientation and gender identity (SOGI) data in the COVID-19 pandemic
- Improve EOEA SOGI data collection by addressing concerns LGBT older adults have of disclosing their SOGI and being “out” as an LGBT elder receiving elder services

Methodology

First, we conducted in-person listening sessions, many of them in partnership with the statewide LGBT Aging Commission, in five locations across the Commonwealth from June 2019 to February 2020: Barnstable, Pittsfield, Boston, Worcester, and Salem. When the novel coronavirus pandemic hit, we shifted to virtual listening sessions, which we held through online meetings with groups of LGBT elders in Boston, Framingham, Greenfield, and the group LGBT Elders of Color, based in Boston but including individuals from across eastern Massachusetts.

In addition, colleagues at the Massachusetts Department of Public Health provided data from the 2016-2018 Behavioral Risk Factor Surveillance System survey comparing LGBT people age 50 to 75 to heterosexual, cisgender people in the same age cohort. We also analyzed data from SOGI questions provided by the Executive Office of Elder Affairs, which are a component of the agency's Information and Referral assessment and from its Comprehensive Data Set assessment.

Fenway Institute researchers presented preliminary qualitative and quantitative data from the listening sessions and the BRFSS data and received preliminary feedback at a Boston Foundation site visit to Ethos in Jamaica Plain in February 2020, and to two LGBT Aging Commission meetings in March and June 2020, one in-person and one virtual. We incorporated some of this feedback into the recommendations. The recommendations are those of the author and not of the Boston Foundation or the Massachusetts Special Legislative Commission on LGBT Aging.

Key themes from nine community listening sessions held across Massachusetts

Issues raised at the listening sessions are described and synthesized here. We do not identify the speakers, although we may mention if they were an LGBT older adult or a service provider to this population.

Strong anti-LGBT prejudice in rural Massachusetts, and from age peers across the Commonwealth

The senior population is very prejudiced against gay people. You hear straight elderly people using disparaging words

“People think of the Cape and they think of Provincetown,” said a man at the Barnstable listening session. “But the rest of the Cape is not like that. You never see a rainbow flag around here. I love living here, and it’s beautiful, but it still feels a little underground.” Barnstable listening session participants described most of Cape Cod as rural and socially conservative. They also noted that the Cape’s population was disproportionately elderly compared to the rest of Massachusetts.

A similar sentiment was expressed by a Pittsfield participant:

We moved here three years ago and were shocked at the amount of homophobia and transphobia in the Berkshires...the social conservatism of the Berkshires is frightening actually. It’s not a good feeling being dependent on hostile services. Berkshire Medical Center is passively homophobic. They say that there is not enough of a population for them to have an endocrinologist. There are passive homophobes on the [Pittsfield] City Council who struggled last year to affirm transgender equality. It’s puzzling because without the LGBT community the cultural offerings wouldn’t be happening, whether it’s Tanglewood or Jacob’s Pillow.

A gay man who is a Vietnam Veteran told the Pittsfield listening session, “The Commonwealth has two parts, the eastern seaboard and the ‘nether lands’ of the west.”

“The term ‘microaggression’ doesn’t begin to describe what we live with on a daily basis,” said another Pittsfield participant. “There’s no enforcement. There are not a lot of options here. We have to survive in a small community. We can’t make too much of a fuss. We’re defenseless basically and we have nowhere to hide. That’s an extreme picture but that’s what we are up against.”

A Salem listening session participant said, “The senior population is very prejudiced against gay people. You hear straight elderly people using disparaging words about gay people.”

One gay man at the Salem listening session lives in senior housing in Newburyport. He made the mistake of telling someone his sexual orientation (he has a male partner). “I get insults like you wouldn’t believe: ‘What are you doing, queer?’ ‘Cocksucker!’ Younger people [with disabilities] are coming into the senior housing and the insults are getting worse. I tried to talk to the manager about it, but she’s always busy.”

During the Rainbow Elders online listening session from north central and western Massachusetts, one participant said, “In the Berkshires some of the senior centers in the small hill towns will not post information on LGBT senior activities. There’s still a lot of homophobia and social conservatism,” he said. “We give them a flyer and then it disappears.”

One participant in the LGBT Elders of Color virtual listening session said that “there’s a lot of cliques in senior centers, and it can be intimidating to mix with others who may not be very accepting.”

Prejudice exists within the gay community as well. A transgender man at the Salem listening session said that there was “a need for outreach to the LGB community about trans people. Even gay people think we’re scary...We are not aliens. We have human DNA!” he said.

Social isolation and lack of connection

“The more ‘out’ we got and the more free we got the less community we have, which is weird... There’s no central hub.”

LGBT older adults on Cape Cod and in north central and western Massachusetts described a strong sense of social isolation. “We are dispersed” on the Cape, said one woman, “There are pockets of us everywhere.”

An elder service provider on Cape Cod recommended “a friendly visitor program for isolated LGBT seniors on the Cape.” Another participant recommended training real estate brokers in how to serve LGBT clients, including being honest with them about the climate in their area and local LGBT-friendly services.

Listening session participants who are living with HIV noted a high degree of social isolation: “In some ways we’re more disconnected now than we were at the beginning of the AIDS epidemic because then we would see posters,” said one Boston participant.

“I came here [to Worcester] after my partner died hoping to find women friends to hang out with,” said one woman, “but I couldn’t find anyone. Instead now I go to Rhode Island for that.”

Another Worcester participant said:

There’s a ton of gay people, but there’s no community anymore. The one gay bar we have caters more to the younger crowd. There used to be a coffee shop that we used to go to, but he got forced out because of rising rent. I belong to a couple of [gay/LGBT] online grief groups, and people say this is happening around the world. The more ‘out’ we got and the more free we got the less community we have, which is weird...There’s no central hub. You used to have bookstores.

“There are people who don’t have their own car and they are very isolated,” said another Worcester participant.

“I live in a 55+ community. As far as I know I’m the only gay person,” said a Worcester listening session participant. “If there are others it’s unbeknownst to me.”

There was no LGBT-friendly congregate meal program in Berkshire County at the time of the Pittsfield listening session (September 2019). “Rainbow Seniors in Williamstown has a potluck,” said one participant.

“We need a friendly visitor program to visit shut-ins,” said one Salem listening session participant. “A phone call to make the person know you care about them. When you live in high rise buildings, why don’t people knock on the door and check on their neighbors?”

Once the COVID-19 pandemic hit, many LGBT elders felt even more isolated. One woman participating in the Pathways Virtual Coffee Hour said, “The isolation has been tough. I live alone. I’m a widow. She passed around 5 years ago. It’s been hard but it’s even harder at this time.”

One participant in the Rainbow Elders online support group from north central Massachusetts described the dearth of LGBT supportive services and health care in that region: “We need more Rainbow Elders groups throughout Massachusetts. Where I live it’s one and a half hours to Greenfield or one hour to Worcester...It’s 45 minutes to the nearest health center or hospital. By the time I get there, I’m dead.”

Mental health needs specific to social isolation during the COVID-19 pandemic

Participants in the LGBT Aging Project's Online Drop-In Group highlighted "mental health issues" as an acute need. "People are starting to get really depressed" said one participant. The listening session was held May 11, 2020, about two months into the COVID-19 pandemic. Participants spoke of the need to have routines and structure in one's day, especially for those who are retired. "It's important to have some kind of a schedule in your life...," said one man. "Go to bed and wake up at the same time...When you wake up in the morning make your bed."

This man spoke of the need for a daily check-in. He referred to daily phone calls from friends and daily emails from the Somerville Council on Aging that had emotional and exercise tips. "I find that very helpful," he said.

One participant in the LGBT Elders of Color virtual listening session said that older adults need help "dealing with fear." She described tools and resources that she uses to help people deal with fear. "Talking to someone else can help. Reading books."

The need for ongoing services and mental health care for LGBT widows and widowers, especially those on the Cape and in other rural areas

An important unmet need for LGBT older adults on Cape Cod and elsewhere is grief care, or bereavement groups. "People who are left need care," said one widow. "Not just support groups. People need more. They need help with anxiety, depression, PTSD. This is a hidden epidemic. For every three who show up to a group there are 30 more out there [not accessing services]. The people left behind don't know what to do. They don't know what hit them." This woman described experiencing medical and financial challenges after losing her wife, and changes in her sense of identity.

"They need grief care support groups with people who went through this years ago. They need them on Cape Cod on an ongoing basis, so people know when they are going to be held," she said. "A tsunami of grief is coming."

“We need money for bereavement and caregiver groups, and funding to pay for a therapist to run the groups,” said one Cape Cod elder service provider.

One problem is that some grief counseling groups are religious, and can be unwelcoming to LGBT people. “We need secular grief counseling,” said the widow.

Worcester participants agreed: “We should have some kind of [LGBT-friendly] grief group, but there’s none anywhere. People say you can just go to any grief group, but it’s not the same. So I just go to a therapist once a week.”

The need for social activities that create a sense of community and belonging

“There’s a real need for housing and socialization for LGBT older adults,” said a participant in the Boston listening session. “As I get older, the community is farther and farther away from me. There’s a big gap in the older queer community...Elders are looking for things to do and places to be.”

Another Boston participant said, “I wish there were a program for the gay community to be more welcoming. It’s hostile, it’s unforgiving,” he said. “I’ve been in this community for 50 years. I’m astonished at how exclusive it is.”

Worcester listening session participants called for group activities involving recreation, exercise, fencing, going on field trips, for example into Boston or to a museum. “I can find a million things to do, but who do I do them with?” said one participant.

One Worcester participant said that she would like to take free, non-credit classes at a local university, but wanted help with registration, directions for where to park and where to find the classroom. “It’s too stressful to fill out the application, find the building, find parking,” she said.

“People are interested in getting together and sharing their stories together,” said a Greenfield-based elder activist. “Social interaction is important—potluck dinners...support groups. Some widows and widowers don’t know how to go out and meet people.”

“This [a monthly LGBT congregate meal at the House of Seven Gables] is the only LGBT thing to do in Salem besides Pride in June,” said a Salem participant. “The Salem Senior Center has no LGBT programming. We don’t have anything else to do.”

Listening session participants said that senior centers should make it easier for LGBT older adults to tap into the LGBT elder services network. “I had to search hard to find Rainbow Elders,” said one woman. “Senior centers should have a handout with information about LGBT elder services and socializing opportunities,” she said. Another Rainbow Elder participant recommended that every Council on Aging have one LGBT person on its board of directors; several others agreed that that is a good idea.

Transportation needs, especially in rural Massachusetts

Cape Cod residents described needing to get to Boston for specialized medical care: “People need to get to Boston if they have serious cancer. They need a ride,” said one elder service provider there.

Berkshire County residents said that public transportation was limited, and that bus lines generally “run up and down the county,” i.e. north-south, along Routes 7, 8 and 10. “They don’t run east-west” so it’s hard to get to Springfield or the Pioneer Valley. “We try to plan things around the bus schedule. We still have things where people are paying \$50 for an Uber to come to something, so transportation is huge...Bus hours end at 4:30, and there are no buses on Sunday.”

Transportation concerns were not limited to rural Massachusetts. Several Worcester listening session participants described not wanting to drive after dark as a major barrier to socializing. The listening session was held December 11, 2019 at a congregate lunch program. For this reason, “Here in Worcester, it’s difficult to get people out to anything. They just don’t come.”

Salem listening session participants described transportation as a major factor limiting social interaction among LGBT older adults on the North Shore of Boston. “The Ride doesn’t go to many cities, then the ride shuts down, or it doesn’t show up. “Several participants described The Ride, a service of the MBTA, showing up late and only waiting a minute or two before leaving without the person who requested it. “The Ride always says, ‘Somebody cancelled it,’” when this is not the case, one participant said. They described waiting outside their homes for more than an hour so as

not to miss The Ride when it arrived. They also complained about the cost and other obstacles to accessing it:

I was a companion for Greater Lynn Senior Services for 19 years. You take the ride and its \$5-6 each way. You’re talking \$12 a day to get a \$2 meal. That adds up to \$60-\$80 a month and people can’t afford it. That’s everybody’s gripe—all the money we pay for The Ride. Plus you have to call them three days before...and you have to go to Boston to qualify for The Ride.

Transportation needs were not limited to rural areas. Participants in the LGBT Elders of Color listening session, including residents of Boston, Falmouth, and other eastern Massachusetts cities and towns, called for transportation assistance to help elders get to medical appointments.

Experiencing discrimination in assisted living and other housing

One Cape Cod man describe a friend who is a Caribbean lesbian in her 90s who lives in assisted living. “I never leave my room,” she told him. “When I go out into the hallway people turn and won’t look me in the eye. It’s a subtle thing.”

This man called for reforms to make assisted living more LGBT-friendly and -affirming, similar to what we have done with schools through the Safe Schools Program and nondiscrimination laws. “And we have to look beyond trainings, etc.,” he said. “We have to mandate free and open and inclusive requirements for assisted living centers and other congregate facilities.”

One Boston listening session participant asked, “If I go into a nursing home living with HIV, gay and single, how would I be treated? There’s going to be an onslaught soon” of people with HIV entering nursing homes, he said. “Are doctors in nursing homes familiar with HIV clients and with their medications?”

A Worcester participant described negative experiences in her condo complex: “If you live in a condo place, people can be very homophobic...It’s very subtle. They are very standoffish. The neighbor has his dog crap in front of your door every day. It’s very stressful.”

Listening session participants also described an acute need for affordable housing for LGBT older adults. “I have a consumer, he’s been living in his car for 10 years because he has nowhere to go,” said one elder service provider participating in the Salem listening session.

A participant in the LGBT Elders of Color virtual listening session expressed concern about “when we go to nursing homes and need to return to the closet.”

Gender-based sexual harassment (deliberate, repeated misgendering of cisgender lesbian women) in businesses and health care facilities in the Berkshires

Two lesbians at the Pittsfield listening session described experiencing discrimination and harassment in several public settings and in the workplace.

One participant said:

I went to Berkshire Medical Center late one night last spring and filled out paperwork including my gender “female.” At the time I was wearing short hair, no bra, and a shirt and pants. I was in a lot of pain. The receptionist called me “sir,” and I corrected her. She continued to call me “sir” throughout the night although my name was clearly female. When I got a “what kind of service did you receive?” form two weeks later, I filled it in and got no response although I asked for one. The nearest other hospital is over an hour away, and I have not chosen to go to it although I remain uncomfortable about going to BMC.

Another participant related a similar experience. “Being misidentified and harassed in that way is very common and it is why we are fearful,” she said. She reported going up to a teller window at a local bank, and the teller asked her, “Sir, can I help you?” She told him she is a woman, and said, “Maybe you should just say, ‘May I help you?’” The following week she returned to the bank and a different teller did the same thing to her. The tellers laughed among themselves, like it was an inside joke. It happened a third time. She told the bank manager that they needed to train their staff about how to treat customers with respect. “This is illegal activity. I don’t have to put up with this,” she told the manager. She told the listening session participants, “I could have brought this to the Mass. human rights commission [the Massachusetts Commission Against Discrimination], but it would have taken years to get satisfaction. We need more money to go to MCAD because people can with impunity call us all kinds of things, and do.”

[Author’s note: Massachusetts law prohibits anti-LGBT discrimination in public accommodations, including hospitals and banks. Massachusetts and federal law prohibit anti-LGBT discrimination in employment. If you experience discrimination, write down all the details that you can remember, including date, time, location, description of the individuals involved, and exactly what was said and/or done, and do at least one of the following:

1. **Call the GLBTQ Advocates and Defenders helpline Monday-Friday 1:30-4:30pm at 800-455-GLAD (4523).**
2. **Call Massachusetts Attorney General Maura Healy (Civil Rights Division direct line: 617-963-2917) or file a complaint on their website at <https://www.mass.gov/contact-the-attorney-generals-office> (click on File a Complaint).**
3. **Call the Massachusetts Commission Against Discrimination at 617-994-6000 or file a complaint on their website at <https://www.mass.gov/file-a-complaint-of-discrimination>.**

The woman who experienced discriminatory sexual harassment at Berkshires Medical Center also described an experience of workplace discrimination:

I used to work at [blank], a local graphic arts company. I was told there [by a coworker] that I was “an abomination” because I am a lesbian. I asked Human Resources to speak to the graphic artist who said this and was told that he had a right to his religious beliefs. I spoke of the gun rack in his truck, his anger management problem, and his stated belief that “it may be okay to shoot abortion doctors.” I again asked HR to do something about this. They did not. I found a new job and left.

A participant in the Boston listening session called for “stronger enforcement of existing laws by EOEA and Mass. DPH, and the hiring of an ombudsman for the LGBT community.” This last recommendation was made by the statewide Special Legislative Commission on LGBT Aging in 2015, but has not yet been adopted by the state government.

The centrality of trauma in people’s lives

“I have a lot of trauma about systemic homophobia,” said one Cape Cod woman, “from growing up in a time when I was afraid for my life. That is still part of me as I am aging, and I am more susceptible to depression.” A Cape Cod man said, “As life is slowing down a lot of stuff is coming back that I pushed away for many years.”

Several listening session participants talked about their parents’ sending them to ex-gay therapy when they were young. Because of this, one Cape Cod man said, “Mental health providers must reach out affirmatively and say, ‘We will provide good care.’ The same is true of health care and elder service providers. They need to reach out [to LGBT older adults].”

Participants also spoke about racial trauma. One older Black gay man in the Boston listening session said, “Boston and Massachusetts have very complex racial histories. There is a lot of racial trauma. There are people I know who are part of the community who are feeling unsafe” due to racism within the LGBT community. “We need to infuse race and trauma into the work of the [LGBT Aging] Commission.”

The need to address racism within the LGBT community

Participants in the LGBT Elders of Color listening session said it was important to address “internal racism within our own community.” One participant said:

Racism is the ‘elephant in the room.’ We have to talk about it. We may not resolve it, but we will never resolve it if we don’t talk about it. It’s one thing to experience it from the outside [outside the LGBT community]. But when you feel you have a safe harbor and you experience it from within it, it’s disheartening...Let people tell our stories. The result can be that folks finally understand the magnitude of police brutality. We need a discussion of how institutional racism dictates how we have to navigate our lives on a daily basis. First we have to clean up our own backyards before we try to clean up someone else’s.

Other LGBT Elders of Color participants offered resources that white people could use to work through implicit bias and racist beliefs and practices. Another participant recommended that a bill before the state legislature to create a Commission on Structural Racism address the intersection of racism with the LGBT community and the intersectional prejudice experienced by LGBT people of color.⁴

4. Examples of research showing that LGBT people of color experience racism, sexism, and anti-LGBT prejudice intersectionally include: Brenick A, Romano K, Kegler C, Eaton L. (2017 Feb). Understanding the Influence of Stigma and Medical Mistrust on Engagement in Routine Healthcare Among Black Women Who Have Sex with Women. *LGBT Health*. 4(1). Feb 2017. 4-10; Conron K, Wilson J, Cahill S, Flaherty J, Tamanaha M, Bradford J (2015, November 30). Our health matters: Mental health, risk, and resilience among LGBTQ youth of color who live, work, or play in Boston. Fenway Institute. <https://fenwayhealth.org/wp-content/uploads/our-health-matters.pdf>

A dearth of LGBT-competent and -affirming health care in rural Massachusetts

Participants in the Barnstable and western Massachusetts listening sessions reported challenges in accessing health care for the general population that play out in particular ways for LGBT people. A senior center director on the Cape said, “There are not enough paid caregivers on the Cape. This used to be the case on the outer Cape [Orleans to Provincetown]; now it is true for the entire Cape. This affects the LGBT community in specific ways because we are more dependent on formal caregiving, especially women age 60 plus.”

“I’m terrified of moving my health care down here” to the Cape from Boston, said one man. Several participants in the Barnstable listening session spoke of “home care aides who are anti-gay.” “I stay with my wife to make sure people help her with the pain,” one woman said. An elder care service provider said that “many caregivers come from conservative religious and cultural backgrounds. There are concerns about experiencing neglect and abuse at the hands of home care workers,” she said. “The home care department needs more education, for example pronoun usage for transgender clients. It’s sad to hear partners and spouses say, ‘My friend’ when they are talking about their husband or wife.”

One participant in the Boston listening session, representing AgeWell Equality (AWE) called for a number of changes in elder services and other services used by older adults. Based at Ethos, an Aging Service Access Point (ASAP) in Jamaica Plain, AWE’s mission is to effect LGBTQ-friendly systems change within aging and related services. In oral comments and a written submission to the Boston listening session, AWE called for mandatory, ongoing LGBT cultural competency training for all public and private elder care and housing providers as a requirement for licensure.

The AWE spokesperson applauded the Massachusetts state legislature’s recent passage of a law requiring that elder care workers be trained in LGBT cultural competency, and said “this needs a tracking and accountability system.” He also noted that, because “ASAPs don’t provide the vast majority of services but contract with vendors, ASAPs should have to hold accountable vendors for holding trainings of their staff” in LGBT competency. They should be recertified every 10 years by the relevant state government agency based on how well they do this.

Pittsfield listening session participants said that transgender-competent and -affirming health care and social services are especially hard to find in western Massachusetts. “Last week I was trying to find a transgender friendly shelter for someone on the verge of homelessness,” said a Greenfield-based activist. “It was not easy.” “Transgender people have to go outside of Berkshire County to get health care,” said another participant. “If you are trying to see a gender therapist, there are none. If you are an LGBT person who suffers from PTSD, there is no one for that either.” This individual described going to someone in Berkshire County for PTSD treatment only to be told that they didn’t accept their insurance.

A transgender Worcester participant reported that “all of my experiences have been either neutral or positive with the doctors I’ve seen.”

“We need a list of gay friendly doctors on the North Shore,” said a Salem participant.

A western Massachusetts woman said, “I’m starting to have questions about aging in place, issues as an aging lesbian...My regular doctor is not prepared to talk about baseline issues—only urgent care... My health care provider said, ‘You’re over 65. You don’t need a Pap smear anymore.’ She doesn’t want to talk about sex.” A number of Rainbow Elder listening session participants agreed, saying that there is a need for training and certification in LGBT sexual health, especially in rural areas. “We are so mainstream that there are fewer presentations,” said the 67-year-old lesbian. She suggested a panel of older LGBT patients who could educate health care providers about their needs.

While one participant in the Rainbow Elder session recommended “shopping around” for an LGBT-competent doctor the way you would a grocery store (“if you don’t like it you go somewhere else”), another worried that “if you say, ‘I don’t want this doctor,’ you get branded a trouble maker and you get pushed away.” Still another Rainbow Elder participant recommended that health care providers give all patients a hand out that describes their rights as a patient, gives the number for the institution’s social work department and an LGBT-friendly social worker they can talk to if they have any concerns. The handout could also give contact information for the state Attorney General and the Massachusetts Commission Against Discrimination.

LGBT Elders of Color listening session participants called for broader access to telehealth, transportation

assistance to get to medical appointments, and “what about having doctors come to the home...not everybody has a blood pressure machine at home.”

Struggling to pay for health care

Several Worcester listening session participants described struggling to afford their medical care costs. “Every time you get an increase in Social Security, they up the Medicare [cost] by even more,” said one individual. “UMass hospital [UMass Memorial Medical Center] wouldn’t accept my insurance (United Health Care), so I went to Fallon. But the copays for my cataract surgery cost me \$350 per eye. It can add up if you go to the doctor a lot,” said another participant. “The dentist is very expensive. I am using my life saving to pay for the dentist,” said another.

One Worcester participant praised the Program of All-Inclusive Care for the Elderly (PACE) program as “totally accepting. For me it’s the answer to my health care because I have no copays. It’s an ideal situation for me. I’m a veteran and I have the VA but I had copays for the VA. Now I don’t have any copays.”

Economic hardship in general

Participants in the LGBT Elders of Color virtual listening session described a struggle to pay for food and other basic needs. [The session was originally scheduled in-person for early March 2020 but was rescheduled to a virtual session in June 2020 due to the pandemic.] Because elders, and especially elders of color⁵, are disproportionately vulnerable to coronavirus infection and complications if they develop COVID-19, many want someone else to do their food shopping for them. “For people on a limited budget, shopping is a real issue. People have to pay for people to shop for them.” Other participants mentioned Mutual Aid Massachusetts and Jobs For Justice, which offer volunteers who will shop for seniors and people with disabilities.

The need for help with insurance options when you reach age 65

A group of participants in the Boston listening session said understanding insurance options when they near age 65 is very confusing, and that they—many gay men living with HIV—need assistance understanding what to sign up for and what they are eligible for based on their income and assets. “It’s a real difficult process,” one man said. “If you have more than \$1,000 in savings or life insurance or an IRA you’re not eligible” for some kinds of insurance, he said. Another participant said, “We only make a few thousand dollars a year (I make \$16,000), and that’s too much to qualify for MassHealth. You can’t survive on what you’re making, and you can’t get MassHealth because you make too much.”

An EOEA representative recommended that these individuals call the SHINE program (Serving the Health Insurance Needs of Everyone), as there are over 700 highly trained volunteers able to help navigate insurance options.

A number of individuals said that they were getting their insurance through the Massachusetts Insurance Connection (MassHealth) and were suddenly kicked off, along with hundreds of others. “Three hundred long-term survivors [of HIV] were kicked off all of a sudden, without notice,” said one man. “It was very traumatic. Everybody had to reapply.” Another agreed that “[i]t’s very stressful.” Still another said, “We don’t know what’s going to happen next year with the budget, so we live under this cloud.”

The Massachusetts Insurance Connection (MIC) is a health insurance buy-in program administered by MassHealth for individuals with AIDS or HIV. In December of 2019, MassHealth announced that the program would be closed for new enrollees but that individuals enrolled as of December 31, 2019, (and who remain continuously enrolled) would continue

to receive benefits as long they as they remained eligible. MassHealth redetermines eligibility for the program annually and, if individuals are found to be no longer eligible for the program due to being over income or other eligibility factors, they are disenrolled from the program.

Individuals over 65 must meet financial criteria to qualify for MassHealth Standard: an income limit of 100% of the federal poverty line, an asset limit of \$2,000 for an individual, or \$3,000 for a couple. HIV positive individuals under 65 have a higher income limit for eligibility than other adults: 133% federal poverty line. But for over 65 there are just the regular MassHealth coverage types and buy-in programs (Medicare Savings Programs). Senator Pat Jehlen and Representative Ruth Balser, who attended the Boston listening session, said they would follow up and try to identify the issue with the program. Senator Jehlen pointed out that MassHealth is supposed to cover people who earn up to 300% of the Federal Poverty Level.

“There’s a real sense of urgency for some of us out there,” said a listening session participant. Another made the point that, “We’re not in Louisiana or Mississippi. We’re in the Hub of medical care.”

Salem participants echoes these concerns: “We need a workshop to help you navigate through Medicare and the insurance system,” said one. “It’s very complicated. Medicare will send you a book.” Another participant said, “I had MassHealth. Unbeknownst to me, they dropped me from it. I started getting all these bills.”

Another Salem participant said, “You don’t know what the plans are—that’s the problem. The plans are there, but nobody knows how they work. I want to know well before I have to go through this process” of signing up for Medicare when nearing age 65.

The need for help navigating the health care system

One Cape Cod woman said, “My wife and I, we are both health care professionals, and we still have trouble navigating the health care system. People need help getting the best doctors, and home care—that is the biggest issue.”

The onset of the COVID-19 pandemic also led to concerns about accessing a coronavirus test. “It’s really important for seniors to be tested,” said a woman participating in the Pathways Virtual Coffee Hour. “That’s the only way you’re going to get people to visit other seniors.” Several participants concurred that LGBT seniors needed to be able to access testing. LGBT older adults may be more vulnerable to contracting the novel coronavirus, and are more vulnerable to complications from COVID-19 due to higher rates of comorbidities such as asthma, obesity and diabetes, and higher rates of risk factors such as smoking and vaping.⁶ These health disparities are related to experiences of stigma, discrimination, minority stress, and social anxiety.

HIV-specific concerns

At the Boston listening session, one man who said he had lived with HIV for 34 years described falling down and having to go to South Shore Hospital in Weymouth. They were not able to provide him with the antiretroviral medications that he needed for his HIV disease. “This aging activity is happening really fast to me,” he said. “When I go to the hospital next time will it be my last time?”

The AWE spokesperson called for home care and long-term care to be made available to older people living with HIV regardless of age, because “HIV-positive elders tend to age more quickly and are in need of a range of services usually needed by older people.”

A Pittsfield participant described moving home to the Berkshires after living in Ohio and Kentucky. He said he struggled to get insurance, a provider, and his HIV medications. “In the corporate sector you would just go to HR and they would have answers. It’s way too complicated to get info...I spent two months without medication because I couldn’t find the right thing...There are no PCPs [primary care providers] in Berkshire County accepting new patients... I had to wait for a rejection letter from MassHealth and then went two months without my HIV meds.”

The need for LGBT-friendly elder housing

Participants at several listening sessions praised the LGBT elder housing community that is being developed in Hyde Park, a Boston neighborhood. They asked for more federal money to dramatically scale up LGBT-friendly elder housing options across the Commonwealth. “There’s a huge need across the state,” said one woman at the Boston listening session.

A Pittsfield listening session participant decried the fact that big cities were the first to get LGBT-friendly elder housing. “That’s not OK with me,” said the woman. “I moved here from New York City. I want to grow old and die here and I don’t think I can do that without LGBT senior housing.”

6. Cahill S, Grasso C, Keuroghlian A, Sciortino C, Mayer K (2020, September). Sexual and Gender Minority Health in the COVID-19 Pandemic: Why Data Collection and Combatting Discrimination Matter Now More Than Ever. *American Journal of Public Health*. Volume 110, Number 9. Pp. e1-e2.

The need for targeted support groups and services, including LGBT-community led volunteer services as during the height of the AIDS crisis

A number of participants called for a “buddy program” or a “friendly visitor” program for LGBT older adults, similar to that used in the 1980s and early 1990s for people living with HIV/AIDS, who often experienced extreme social isolation. The CEO of Ethos, Valerie Frias, noted that Ethos has such a program.

One long-term survivor talked about how he was diagnosed with HIV 34 years ago, and was given 2 years to live. Despite a number of other health problems, due to the fact that he is here today, “I feel like I won the lottery, because so many others are not here.”

One Boston participant called for Fenway Health to step up as it had in the 1980s, when it created the AIDS Action Committee of Massachusetts:

There’s a responsibility for Fenway Health, like with the AIDS epidemic. People have to have somewhere they can go and die. Fenway was developed to respond to a health crisis.

Another older man living with HIV agreed, saying, “If I call Fenway or the AIDS Action Committee and say what can you do for me, there’s nothing. If I go to GMHC (Gay Men’s Health Crisis in New York) or to a west coast organization, they still have their buddy programs.” Many HIV services are means tested, and people who are not poor enough are not eligible for them. “People still die from AIDS. I’ve had people who can’t deal with the side effects anymore so they stop taking their meds.” He encouraged us to “look at existing programs at churches and synagogues” that mobilize volunteers to care for isolated individuals.

Participants in the Pathway Virtual Coffee Hour referenced a number of existing buddy programs in other parts of the country, such as Mon Ami (www.monami.io), French for “my friend,” which provides volunteer visitors to seniors in San Francisco, and the SAGE Friendly Visitor program in New York (<https://sagenyc.org/nyc/care/visitor.cfm>).

One woman said in Pittsfield, “When the virus hit in the ‘80s we took care of ourselves. The hospitals didn’t. We went in and changed diapers, etc. We can do it again.”

Many also called for intergenerational support groups that allow younger LGBT people to learn about the lived experiences of LGBT older adults, and vice versa. Many leaders of groups present at the listening sessions mentioned that their organizations had intergenerational discussion groups and events. One activist described a large intergenerational gathering that meets at Greenfield Community College.

The need for assistance with end-of-life planning

One Cape Cod man said that end-of-life planning needs for LGBT older adults are different because of estrangement from families of origin. “There is a need for final planning, of funerals and so on, because it’s different for us,” he said. “A lot of us, our families, we love them, but they are not part of our culture, and they are not part of our personal experience as they are for straight people.”

A Worcester listening session participant related how her partner’s children took her partner away from her and placed her in a separate care facility because they did not accept their mother’s same-sex relationship. Had they been married or had a legal power of attorney document, this would not have been possible.

A need for hardware (computers, tablets), internet access, and technical assistance to isolated, low-income LGBT elders so that they can access virtual support groups and other services during the COVID-19 pandemic

Even before the COVID-19 pandemic hit, listening session participants raised concerns about isolated seniors without technology: “We have people that don’t have a computer, don’t have a smart phone,” said one man in Salem.

Once COVID-19 hit, many LGBT elders scrambled to learn how to use Zoom and other videoconferencing technology to be able to access community virtually, as well as access health care through telehealth. “We need funding to teach people how to use Zoom, Google hangout,” said one participant in the Pathways Virtual Coffee Hour. “I spent one and a half hours helping someone. He’s going to be joining by telephone.” Another participant said, “A lot of seniors living alone don’t have wifi. How do you get wifi to folks?”

Other Pathways participants suggested that “tech-savvy volunteers, young people” could help elders with technology issues. “Verizon and other companies could offer reduced rate wifi access and data plans,” said one participant. “Jewish Family Services of Metrowest has ally navigators,” said one participant in the Pathways Virtual Coffee Hour. “They can help people with technology.”

A participant in the LGBT Aging Project’s Online Drop-In Group agreed that there is a need for “access to affordable internet, cable TV services, access to technology, especially cell phone, laptop, and Ipad [tablet]. Seniors also need training and technical support on how to use this technology.” Another said that they needed funding to “purchase a Zoom account” so they could do more than basic things on free Zoom.

Isolated LGBT older adults could participate in online virtual tours of places around the world, and then get together with others online and talk about it. “It’s the book club model,” said one Drop-In Group participant. Others spoke of books downloadable

for free from the Library of Congress and the local library, online cooking demonstrations, and online exercise. “We need options for people to pick and choose,” said the group moderator Lisa Krinsky.

“COVID has changed how services are delivered,” said an advocate from northwestern Massachusetts. “We may have another pandemic in the future. How can people be safe and connected?”

One north central Massachusetts resident said, “There are 22 communities in Massachusetts that don’t have broad band [internet access]. Cell phone service is not available in Ashburnham and other communities.”

LGBT Elders of Color participants agreed that older adults need technical assistance (TA) and hardware to use Zoom video conferencing, telehealth, and other technology. “We assume that everybody has access to the internet,” said one participant. “We assume that every household has a device—a tablet or a laptop. We need a grant to provide folks with access to Zoom, like the Boston Public Schools does with kids.” Soon after the onset of the COVID-19 pandemic, the Boston Public Schools made computers available to any students who needed one.⁷

One participant suggested that lifelong learning programs and senior centers offer training and TA. These programs could use a “train the trainer” model to increase capacity in communities. Two local lifelong learning programs could offer Zoom classes and virtual brown bag lunches in the fall, the Rainbow Lifelong Learning Institute Boston (<http://rainbowliboston.org/index.html>) and the Osher Lifelong Learning Institute at UMass Boston (<https://www.umb.edu/olli>). Another participant noted that some individuals have a fear of using Zoom due to privacy concerns. This needs to be addressed in trainings and TA.

Interestingly, one silver lining of the shift to virtual support groups necessitated by COVID-19 is that some of the most socially isolated LGBT older adults, who may have had mobility limitations, are now less socially isolated, because everything is online.

7. Jung C (2020, March 20). Boston Schools Double Down On Efforts To Get Chromebooks To Students. WBUR Radio. <https://www.wbur.org/edify/2020/03/20/boston-student-technology>

For many older adults, living life as an LGBT person was not as viable an option as it is for younger people today.

Public health data on LGBT older adults in Massachusetts

The Massachusetts Department of Public Health (Mass. DPH) is a strong partner of the Fenway Institute and the Special Legislative Commission on LGBT Aging. Bureau of Infectious Disease and Laboratory Sciences Director Kevin Cranston sits on the statewide commission representing Mass. DPH, and chairs the commission's public health subcommittee. Mass. DPH has been a leader on collecting sexual orientation and gender identity data on statewide surveys since 1993, when it added a sexual behavior question to the Youth Risk Behavior Survey.⁸ Maria McKenna, MMS, MPH, an epidemiologist at Mass. DPH, provided Behavioral Risk Factor Surveillance System (BRFSS) survey data to the Fenway Institute that provide insight into the health status of older LGBT people in the Commonwealth. (The Massachusetts BRFSS has collected sexual orientation data since 2001 and transgender status data since 2009.⁹) McKenna aggregated 2016 and 2018 data for 50 to 75 year olds, and compared LGBT people in this age cohort to heterosexual, cisgender individuals. Most of the differences described below are consistent with findings we have seen previously in Massachusetts BRFSS data and in BRFSS data from other states.

Key findings from the BRFSS data include the following statistically significant differences between LGBT people 50 to 75 and heterosexual, cisgender people 50 to 75. A difference is statistically significant if the p value is 0.05 or less.

LGBT older adults reported higher rates of fair/poor overall health

LGBT people age 50 to 75 in Massachusetts were more likely to report that their overall health is fair or poor. Some 24.0% of LGBT people reported this, compared to 16.8% of heterosexual, cisgender people in the same age cohort (p=0.0144).

LGBT older adults nearly twice as likely to report being diagnosed with a depressive disorder

LGBT older adults were nearly twice as likely to report that they had ever been diagnosed with a depressive disorder: 31.7% compared to 17.5% (p<0.0001).

LGBT older adults were about as likely as their straight, cisgender age peers to be a veteran and to have children in the household

There was no statistically significant difference in veteran status and in having children in the household between LGBT older adults and heterosexual, cisgender adults age 50 to 75. Some 8.6% of LGBT people reported being veterans, compared with 11.0% of heterosexual, cisgender people 50-75 (p=0.2393). Some 12.5% of LGBT people 50-75 had children living in their household, while 16.9% of heterosexual, cisgender people in this age group did (p=0.1624). It may be that heterosexual, cisgender people 50-75 are slightly more likely to be veterans and to be raising children, but the differences between the groups in the Massachusetts BRFSS data are not statistically significant.

These are important findings. For many decades homosexuality was considered incompatible with military service. Don't Ask, Don't Tell was adopted in 1993 and was in effect until 2011. This allowed gay, lesbian and bisexual people to serve but not openly.¹⁰ Under the Obama Administration a policy was launched to allow transgender people to serve openly in the military, but the Trump Administration has reversed the policy and it is the subject of litigation at the moment.¹¹ Despite decades of anti-LGBT policies, LGBT older adults in Massachusetts report being veterans at rates close to those of straight, cisgender older adults.

11. Marimow A. (December 10, 2018). "Trump administration: It's 'extraordinary' judges won't let military restrict transgender troops." *The Washington Post*. https://www.washingtonpost.com/local/legal-issues/president-trumps-transgender-military-ban-is-back-in-court/2018/12/09/56a0c13a-f965-11e8-8c9a-860ce2a8148f_story.html?utm_term=.69317f5fc7c

This is important because veterans are eligible for many services from Veterans Affairs (VA), including health care, job training, housing assistance, suicide prevention, food security assistance, and other services. In Massachusetts some veterans are also eligible for services through the Massachusetts Department of Veterans' Services. Because many LGBT people were dishonorably discharged from the military and/or had bad experiences while serving, including violence victimization and sexual harassment, some LGBT veterans do not seek veterans' services or even know that they are eligible for them. It is important that both state and federal agencies conduct affirmative outreach to LGBT veterans to ensure that they are accessing services that they are eligible for that can help them be healthy and thrive.

The fact that middle aged and older LGBT people in Massachusetts were raising children at about the same rate as straight, cisgender age peers is also significant. For decades religious right advocates and many elected officials portrayed LGBT people and "family" as mutually exclusive.¹² In the 1980s in Massachusetts gay men and lesbians were prohibited from foster parenting.¹³ There continue to be anti-LGBT family policies in many states.¹⁴ It is striking that despite this, LGBT older adults raise children at nearly the same rate as heterosexual, cisgender older adults.

LGBT older adults in Massachusetts were more likely to graduate college

LGBT older adults were more likely to have graduated college than straight, cisgender age peers in Massachusetts: 54.2% versus 38.4% ($p < 0.0001$). LGBT older adults were less likely to have some college (14.0% versus 26.1%) or to have only a high

school education (20.3% versus 26.5%) ($p < 0.0001$ for the distribution by education).

LGBT older adults were more likely to rent and less likely to own their home

Massachusetts LGBT adult residents age 50 to 75 were more likely to rent their home than heterosexual, cisgender age peers. Some 24.0% of LGBT older adults rent their homes, while 75.2% own their homes. Among heterosexual, cisgender older adults, 16.1% rent while 82.6% own ($p < 0.0007$). This greater likelihood of renting rather than owning one's home is likely due in part to the fact that LGBT people are more likely to reside in urban areas than other Massachusetts residents. Housing stock in cities tends to have a higher percentage of rental units.

There were no statistically significant differences in household income between LGBT older adults and straight, cisgender older adults in Massachusetts. However, the fact that LGBT older adults are 49% more likely than their heterosexual, cisgender age peers to rent their home means that LGBT older adults are putting money out the door and not saving by paying a mortgage. Nor are they getting the tax break afforded by being able to deduct mortgage interest. Of course, many older adults who own their home have already paid off their mortgage, and must simply pay property taxes and homeowner's insurance. While this can cost many thousands of dollars a year, it is usually less than rent. This may explain why LGBT older adults struggle more to pay for housing, utilities and food than do straight, cisgender older adults, as described below.

14. Movement Advancement Project (2020). Foster and Adoption Laws. https://www.lgbtmap.org/equality-maps/foster_and_adoption_laws

LGBT older adults were more than twice as likely to report difficulty paying for housing or food in past year

Despite the fact that there were no statistically significant differences in income, LGBT older adults were much more likely to report difficulty paying for housing, utilities, and food. Some 17.5% of LGBT older adults in Massachusetts reported difficulty paying rent, mortgage or utilities in 2017 and 2018, compared to 6.5% of heterosexual, cisgender adults ($p=0.0004$). Nearly one in five LGBT older adults, 19.1%, said that the food they bought didn't last and that they couldn't afford to buy more. Among straight, cisgender older adults, this was only the case for 8.6% ($p=0.0017$). Clearly LGBT older adults were more likely to report struggling financially than their heterosexual, cisgender age peers. This has significant implications for public health and LGBT elder health equity.

LGBT older adults were more likely to report serious difficulty concentrating, remembering or making decisions

LGBT older adults were much more likely to report serious difficulty concentrating, remembering or making decisions. Some 15.3% of LGBT older adults reported serious difficulty concentrating, remembering or making decisions, compared to 9.2% of heterosexual, cisgender older adults age 50 to 75 ($p=0.0156$). This disparity has significant implications for the ability of LGBT older adults to age in place and thrive in older adulthood. It could affect medication adherence and also contribute to social anxiety and other behavioral health burden.

LGBT older adults were nearly twice as likely to fall and be injured in past year

According to data from the 2016-2018 Massachusetts Behavioral Risk Factor Surveillance System survey (BRFSS), LGBT older adults age 50 to 75 are nearly twice as likely as straight, cisgender older adults to report experiencing a fall in the past 12 months and being injured in a fall during the past 12 months. Among LGBT older adults 40.1% reported a fall in the past year, versus 26.3% of heterosexual, cisgender older adults ($p=0.0001$). Some 17.7% of LGBT older adults reported being injured in a fall over the past year, compared to 9.3% of heterosexual, cisgender older adults ($p=0.0031$). Frail elders, especially those in the "middle old" (75-84) and "old old" (age 85+) age groups, are vulnerable to breaking bones and experiencing major health decline subsequent to a fall. The data presented here are for LGBT older adults who are middle age (50-64) or "young old" (65-74). The finding that 40% of LGBT older adults age 50-75 report having experienced a fall in the past year, and that nearly one in five (18%) were injured by a fall in the past year, should be a wake-up call for public health and aging advocates.

LGBT older adults reported four times the rate of suicidal thoughts in past year

As is the case with younger age cohorts of LGBT people, LGBT older adults were four times as likely to report having seriously considered suicide in the past 12 months: 7.7% compared to 1.9% of straight, cisgender older adults ($p<0.0001$). There was no statistically significant difference between the two groups in terms of reported suicide attempt over the past year.

LGBT older adults reported three times the rate of lifetime sexual violence victimization

LGBT older adults also reported three times the rate of lifetime sexual violence victimization compared with heterosexual, cisgender older adults: 32.0% versus 10.7% ($p<0.0001$). Again, this is consistent with research among LGBT people in younger age cohorts.

Older lesbian and bisexual women are more likely to be obese and not of normal weight

Older lesbian and bisexual women are more likely to be obese and less likely to be of normal weight than older heterosexual women in Massachusetts ($p=0.0093$). Some 38.8% of older sexual minority women were obese, compared to 26.8% of heterosexual older women. Only 27.7% of lesbian and bisexual older women were of normal weight, compared to 37.5% of heterosexual women. About the same percentage of older sexual minority women were overweight as older heterosexual women, 32.9% and 33.6%, respectively. These findings are consistent with a number of other studies from across the U.S. that have found higher rates of overweight and obesity among sexual minority women.

Demographic data on LGBT people in Massachusetts

According to BRFSS data from 2016, 2017 and 2018 analyzed and shared with the Fenway Institute by the Massachusetts Department of Public Health, 2.4% to 4.1% of older adults in Massachusetts identify as lesbian, gay, bisexual, or other. Here are the percentages by age cohort:

Percentage of Massachusetts residents identifying as LGBT by age cohort, 2016-2018**
Massachusetts BRFSS, 2016-2018, weighted

** Among those who responded to the age, sexual orientation and gender identity questions

As is evident, older age cohorts have lower percentages of people identifying as LGBT. Still, about 5% of 55-64 year olds are LGBT, 3% of 65-74 year olds, and 3% of people age 75+. There are likely a number of phenomena at play in these data. First, older adults may be less likely to disclose their sexual minority identity on a public health survey. Many LGBT older adults came of age when homosexuality was a crime in all 50 states, and when a broad social consensus viewed it as a mental illness and a sin. For many LGBT older adults, nondisclosure has been a survival strategy. Second, because society is more accepting of homosexuality, bisexuality, and gender diversity, it is likely that more people in younger age cohorts are willing to be out and to live their lives as openly LGBT people. For many older adults, living life as an LGBT person was not as viable an option as it is for younger people today. Finally, many older gay and bisexual men and transgender women were lost to the HIV/AIDS epidemic, especially in the 1980s and early 1990s, and many LGBT people have been lost to other chronic diseases, substance use, suicide, and other issues that affect LGBT people at higher rates than the general population. This could account for some of the lower percentages of LGBT people in older age cohorts.

We can also map the percentage of the adult population in each county that identifies as LGBT, according to the 2016-2018 BRFSS.

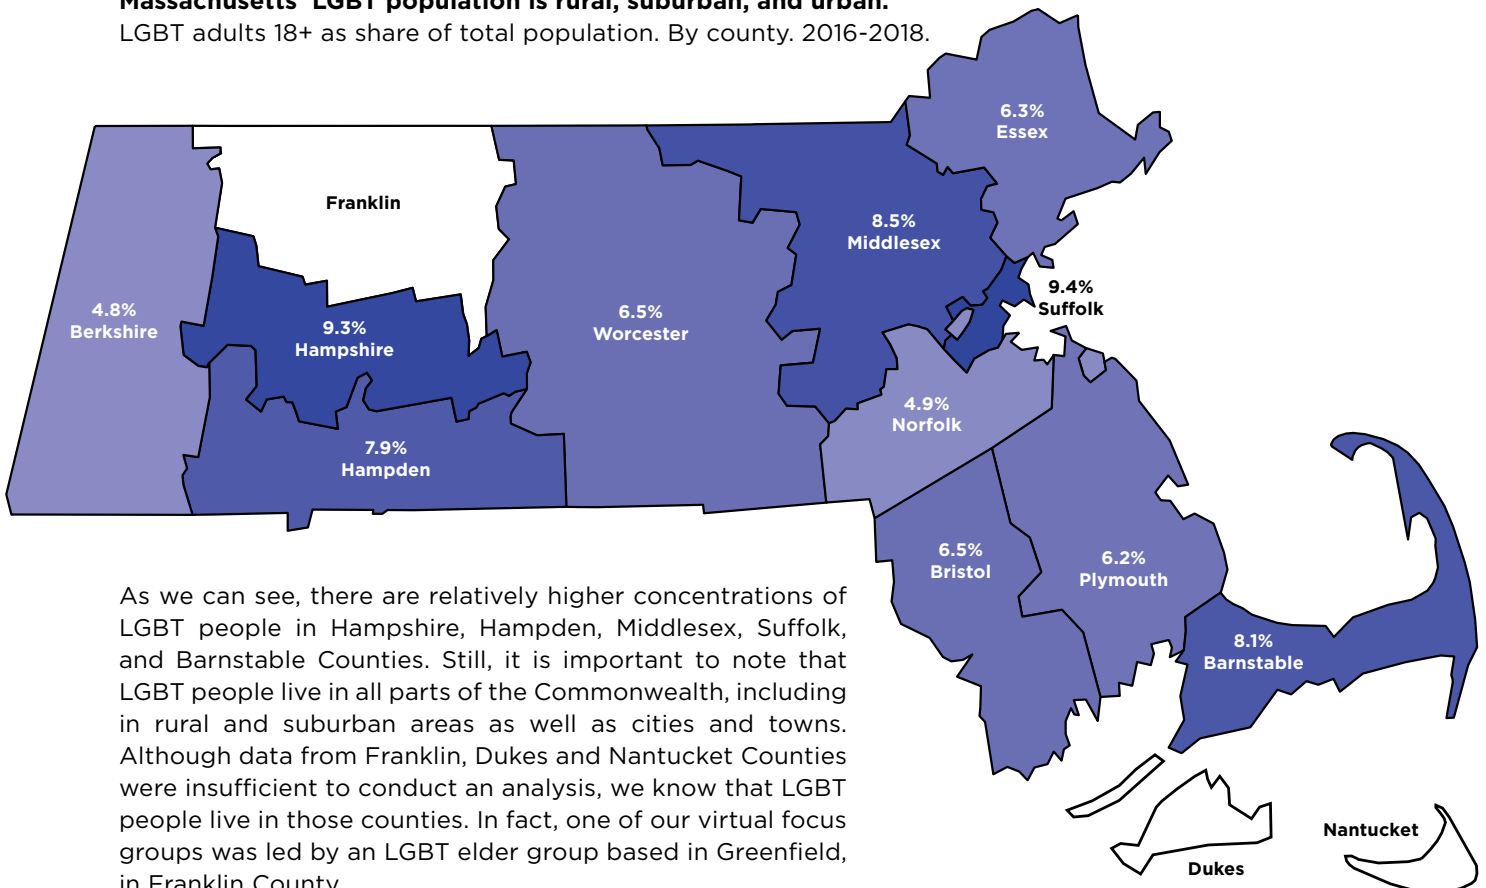

Percentage of MA Adults (18+) Identifying as LGBT by County of Residence, 2016-2018

Barnstable	8.1%	Hampshire	9.3%
Berkshire	4.8%	Middlesex	8.5%
Bristol	6.5%	Nantucket	**
Dukes	**	Norfolk	4.9%
Essex	6.3%	Plymouth	6.2%
Franklin	**	Suffolk	9.4%
Hampden	7.9%	Worcester	6.5%

** insufficient data

Massachusetts' LGBT population is rural, suburban, and urban.

LGBT adults 18+ as share of total population. By county. 2016-2018.

As we can see, there are relatively higher concentrations of LGBT people in Hampshire, Hampden, Middlesex, Suffolk, and Barnstable Counties. Still, it is important to note that LGBT people live in all parts of the Commonwealth, including in rural and suburban areas as well as cities and towns. Although data from Franklin, Dukes and Nantucket Counties were insufficient to conduct an analysis, we know that LGBT people live in those counties. In fact, one of our virtual focus groups was led by an LGBT elder group based in Greenfield, in Franklin County.

Executive Office of Elder Affairs (EOEA) data on LGBT seniors

The Executive Office of Elder Affairs shared data on the sexual orientation and gender identity (SOGI) of older adults accessing services from mid-2017 to mid-2019. EOEA contracts with Aging Services Access Points (ASAPs) to provide in-home care to older adults across the Commonwealth. ASAP staff ask SOGI questions when conducting assessments and collect two kinds of data through Information and Referral assessment data (I&R), and Comprehensive Data Set assessment data (CDS). The I&R data are collected at initial point of contact via telephone or written referral form, most often from a referring party (social worker, health care provider, family member). The purpose of this assessment is to obtain preliminary information about the individuals and their needs prior to an in-depth, in-person assessment. A referring party may or may not know the sexual orientation or gender identity of the older adult, or may know but not know if the older adult would want that information reported.

The Comprehensive Data Set (CDS) data are based on the face to face assessment interview with the older adult herself, himself, or themselves. Responses to questions are self-reported. The older adult's family members or a close friend may be present during the assessment interview and may assist in answering the questions, especially in cases when the older adult has memory issues. That older adult may or may not feel safe to honestly answer the sexual orientation and gender identity questions at a first meeting with an unfamiliar case manager, or with family members or friends present.

The SOGI data in the I&R assessment and CDS assessment are collected at different points in time during the intake and eligibility process. Therefore, a subset of older adults may be counted in both the I&R and CDS data but could have different responses to the SOGI questions.

Here are the data summarized for self-reported gender identity and sexual orientation of older adults receiving home care services from ASAPs contracted with EOEA:

I&R Assessment Data

Gender Identity	FY18		FY19	
	#	%	#	%
Male	1839	4.5	2741	6.6
Female	2887	7.0	4590	11.1
Transgender, Genderqueer, Other Gender Category	12	0.0	10	0.0
Did Not Answer	2124	5.2	3026	7.3
Unable to Ask During Visit	1310	3.2	3557	8.6

Source: Massachusetts Executive Office of Elder Affairs

The usefulness of these data is limited for several reasons. First, the number of cases for which there are no data regarding sexual orientation or gender identity (SOGI) is high, especially for the Information and Referral (I&R) assessment data. In Fiscal Year 2019, sexual orientation data were missing (either because the interviewer was unable to ask, or the response was blank) for 84.5% of individuals, and gender identity data were missing for 74.8% of individuals. The percentage of missing SOGI data in the FY19 Comprehensive Data Set (CDS) Assessment Data is much lower: only 4.9% report gender identity as blank or unable to ask, and 9% report sexual orientation as blank or unable to ask.

We would expect LGBT elders to be less likely to self-identify to an elder service worker questioning them over the phone than on the anonymous BRFSS survey. Still, even just looking at the FY19 CDS data, the percentages are very low: just over three quarters of one percent (0.8%) reporting being LGB, not sure or other, and just one tenth of one percent (0.1%) reporting being transgender, genderqueer, or other gender. According to data from the 2016-2018 Massachusetts BRFSS, about 4.5% of 55-64 year olds identify as LGBT, 3% of those age 65 and older identify as LGBT, and 2.7% of Massachusetts residents 75 and older identify as LGBT.

Since the percentage of Massachusetts adults identifying as LGBT varies by age, older adults served by EOEAF-funded programs may be less likely to identify as LGBT. Among those receiving EOEAF-funded home care services, the average age is 80, and 67% are over the age of 75. Older adults over 75 are slightly less likely to identify as LGB than older adults aged 60-74. But 2.7%--the percentage of people 75+ in Massachusetts who identify as LGBT on the BRFSS--is very different from the 0.9% of EOEAF clients who identify as LGBT. It is also possible that LGBT older adults are less likely to access EOEAF-funded home care services through the ASAP. But given what we know about LGBT older adults from the Mass. BRFSS data, they may be more in need of formal caregiving support, social support, food and housing assistance, and other supportive services. The fact that less than 1% of elders identify as LGBT in the CDS data is worrisome.

In mid-2016, EOEA modified previous gender questions and added sexual orientation questions to both the I&R and CDS assessments. Fenway Institute staff trained EOEA and ASAP staff in a recorded webinar on how to ask SOGI questions and collect these data elements in 2016. EOEA provides ongoing access to the recorded training for ASAP utilization for current and new staff as they are hired and oriented. Annually EOEA reports to the ASAP network SOGI self-reported, collected data on older adults receiving care in the home care program. In 2019, EOEA, through its ASAP contract, included requirements related to LGBTQ diversity in two key areas: 1) ensuring access to services for consumers through LGBTQ awareness training and 2) staff training on LGBTQ awareness.

In 2019, EOEA contracted with the LGBT Aging Project at the Fenway Institute to develop and deliver an LGBT Cultural Competency Training curriculum on (1) the prevention and elimination of discrimination based on sexual orientation and gender identity and expression, and (2) improving access to services for LGBT elders by providing relevant training to their caregivers in furtherance of creating a welcoming and affirming environment for LGBT older adults engaged with EOEA and its contracted providers. Amid COVID-19 the curriculum was completed, and EOEA announced the launch of the online training in September 2020. EOEA should also think of ways to assure LGBT older adult clients that self-disclosing to an elder service employee helps EOEA improve services for LGBT older adults, and that this information will be kept private and confidential.

Recommendations

Prevent anti-LGBT discrimination and harassment and enforce state and federal laws

The Massachusetts Executive Office of Elder Affairs (EOEA), Mass. Department of Public Health, the Attorney General's Office, and the Massachusetts Commission Against Discrimination should work together to develop effective strategies to reduce anti-LGBT discrimination across the Commonwealth, focusing on rural, suburban and urban areas alike. They should educate the public that state and federal law prohibit anti-LGBT discrimination, including systematic, repeated sexual and gender-based harassment such as that experienced by two older lesbians in the Berkshires. Working with GLBTQ Advocates and Defenders and other community-based organizations, they should also make it easier for LGBT people to report such experiences and penalize those perpetrating acts of discrimination and harassment, including those that occur in senior centers, at congregate meal programs, and in senior housing and public housing.

Background: Anti-LGBT discrimination is a barrier to accessing care and has negative mental health sequelae

Discrimination is an important public health issue. Research shows that experiencing discrimination causes LGBT people to not seek access to subsequent health care.¹⁵ It is often the case that LGBT people do not seek health care or do not disclose their identity to a provider for fear of experiencing discrimination. In a study analyzing data from the 2015 National Transgender Discrimination Survey 14% of respondents had experienced enacted stigma (being denied care by a provider), while 39% of respondents reported anticipated stigma (delaying routine preventative care due to fear of discrimination).¹⁶ Another study found that 10% of lesbian veterans in the Veterans' Health Administration had experienced discrimination in care, but nearly 50% felt that they would be mistreated if their provider discovered their sexual orientation.¹⁷ (Mattocks et al., 2015). These two studies tell us that anticipated stigma can be much more widely prevalent in a marginalized community than directly experienced, enacted stigma.

Stigma and discrimination also not only act as a barrier to healthcare, but can also correlate with poorer health outcomes, especially poorer mental health outcomes. One study found that sexual and gender minority individuals experience increased risk of depression due to chronic exposure to stressors, including experiences of discrimination.¹⁸

17. Mattocks K, Sullivan J, Bertrand C, Kinney R, Sherman M, and Gustason C. (2015 Jun). Perceived Stigma, Discrimination, and Disclosure of Sexual Orientation Among a Sample of Lesbian Veterans Receiving Care in the Department of Veterans Affairs. *LGBT Health*. 2(2):147-53.
18. Romanelli M, Hudson KD. (2017). Individual and systemic barriers to health care: Perspectives of lesbian, gay, bisexual, and transgender adults. *Am J Orthopsychiatry*. 87(6), 714-728.

Provide ongoing clinical support for LGBT widows and widowers to address unmet mental health needs

EOEA and DPH should partner to address unmet mental health needs, including ongoing support for LGBT widows and widowers. Individuals struggling with such bereavement identified a need for a therapist to assist those experiencing grief, social anxiety, depression, and post-traumatic stress disorder on an ongoing, long-term basis.

Expand support for trauma-informed approaches to care for LGBT older adults

LGBT older adults have experienced a lifetime of trauma related to societal hostility and stigma to their being LGBT, as well as often related to their race/ethnicity, sex, and other factors, such as sexual violence victimization over the life course. Trauma-informed approaches are being increasingly adopted in health care systems to increase access to care for people with a history of trauma.¹⁹ Elder services providers and systems should incorporate trauma-informed approaches into how they deliver services to increase the ability of LGBT older adults, sexual and gender minority women, and LGBT people of color to access their important services.

Fund programming to reduce social isolation and provide accessible socialization opportunities to LGBT older adults

EOEA and DPH should also fund services to reduce social isolation among LGBT older adults. These should include social activities to assist older adults in developing and maintaining social support networks. Because LGBT older adults live everywhere, including on the North and South Shores, on the Cape, and in central and western Massachusetts, mainstream senior centers across the Commonwealth should offer more LGBT-friendly and -specific programming to engage LGBT older adults. These could include recreational activities, exercise classes, trips to museums and historical places, movies and guest speakers, lifelong learning classes, etc. If they are not sure what kind of programming LGBT older adults want, they should ask them.

Interestingly, because so much shifted online with the COVID-19 shutdown, some older adults who were formerly isolated due to mobility issues are now less isolated, if they are able to access online support services. EOEA and DPH should work with the aging services network in Massachusetts to sustain ongoing virtual socialization activities for all older adults, including LGBT elders and their friends.

Creatively address unmet transportation needs

EOEA should partner with the Department of Transportation and the MBTA to address unmet transportation needs for LGBT older adults. They should work with elected officials and service providers in Berkshire County, on Cape Cod, and in other rural areas to creatively restructure public and other transportation options and offer subsidies to assist older adults on limited income to access transportation options to be able to attend socialization opportunities, including on weekends and at night. This is especially important in the fall and winter, when days are short and nights are long. The state legislature should provide additional funding to the MBTA to allow it to reduce fees to use The Ride. The cost of The Ride was recently increased significantly, making it less accessible to many. This increase should be reversed. The MBTA should ask drivers to wait longer to give elderly requesters time to get out the door. For many, two minutes is not enough time to wait. They need more time. As it is now, many vulnerable older adults stand outside in the cold and rain for an hour or more so that they don't miss The Ride. This needs to stop.

Address structural racism, including racism within the LGBT community

The bill before the state legislature to create a commission to examine structural racism should explicitly address the intersection of racism with anti-LGBT prejudice, in order to address the needs of LGBT people of color. It should also examine racism within the LGBT community. Elder and LGBT organizations should also convene opportunities to address racism within the LGBT community, including the LGBT older adult community, and how this prejudice intersects with ageism, classism, HIV stigma, and other forms of discrimination within the LGBT community.

Background: The intersection of racial discrimination with sexism and anti-LGBT stigma

It is especially important to consider stigma with an emphasis on intersectionality and an understanding that people with multiple marginalized identities may experience many different forms of discrimination in accessing healthcare. For example, older Black lesbians can experience racism, sexism, anti-LGBT bias, ageism, classism, and other forms of discrimination all at once, in health care and in other social settings. Studies have shown that racial discrimination is a major barrier to care for Black lesbian and bisexual women,²⁰ and that anti-Black discrimination is common in White LGBT settings.²¹ Majority White LGBT organizations should prioritize reducing and eliminating racism so that all members of the LGBT community can access their services. A long history of structural stigma and discrimination against Black people in healthcare settings contributes to medical mistrust. Medical mistrust acts as a major barrier to accessing care for Black LGBT people.^{22,23} If we want to reduce and eventually eliminate racial/ethnic disparities in health care, it is important to take steps to reduce and eliminate medical mistrust.

Reduce the dearth of LGBT competent health care in rural Massachusetts

EOEA and Mass. DPH should partner with the Massachusetts Medical Society, the Massachusetts Public Health Association, the Fenway Institute, and other organizations to address and reduce the difficulty that LGBT residents of rural Massachusetts have in accessing quality, affirming and culturally competent care. At our listening sessions, LGBT older adults on Cape Cod, in the Berkshires, in central Massachusetts and on the North Shore described challenges accessing quality, culturally responsive health care. More training of existing providers is needed, and a directory of LGBT-friendly providers should be developed and disseminated to LGBT patients. GLMA and the Human Rights Campaign's Healthcare Equality Index already list and rate LGBT-competent providers and health care institutions. Such information should be made widely accessible by EOEA and Mass. DPH. In addition, as per the recommendation of one listening session participant in western Massachusetts, hospitals should provide information to all new patients about a LGBT liaison, who could be a social worker, to whom they can speak if they have concerns about their care.

Provide assistance navigating Medicare insurance options and the health care system

LGBT older adults, like all patients, need help navigating a complex health care system, and encouragement to advocate for themselves.

EOEA provides counselors through the SHINE Program (Serving the Healthcare Needs of Everyone) to advise Massachusetts residents as they approach age 65 what kinds of supplemental insurance they may need. EOEA, elder service organizations, and other social service organizations must develop creative ways to get this information to LGBT older adults in more effective ways. This could include presentations at congregate meal programs, senior centers, and via online support groups during the COVID-19 pandemic.

LGBT older adults, like all patients, need help navigating a complex health care system, and encouragement to advocate for themselves. During COVID-19, many need help navigating telehealth services. Patient navigators, whether in person or virtual, should be offered to LGBT older patients and all older patients to help them navigate the health care system

Especially during the COVID-19 pandemic, it is important that older adults be able to access quality, preventive care. Today, often symptoms of a commonly occurring disease, such as Lyme disease, are mistaken for COVID-19 symptoms. When a COVID-19 test rules that out, the health care system may not be as responsive as it should be in providing preventive care and screening for other diseases. The health care system must address this now to avoid an exacerbation of LGBT health disparities.

Address income challenges, including food and rent insecurity, and promote home ownership among LGBT people

The Massachusetts Special Legislative Commission on LGBT Aging, EOEA, and other relevant state and local agencies—governmental and nonprofit—should consider the income challenges facing LGBT older adults that are evident in the BRFSS and listening session data and likely worse now due to the economic collapse caused by COVID-19 and our disastrous national response to the pandemic. During the pandemic one approach could be to better promote nutritional support provided by home delivered meals and free grocery delivery services. Another could be to target homeowner initiatives to LGBT people, including older adults but also young and middle aged LGBT people. While many urban dwelling LGBT people may prefer to rent, owning can make more sense in terms of one's long-

term financial health. Over time this could reduce the disparities evident in the BRFSS data in which LGBT older adults struggle more to put food on the table and pay rent and utility bills.

Create more LGBT-friendly senior housing across the Commonwealth

Participants in listening sessions across Massachusetts were excited about the affordable LGBT-friendly senior housing community under development in Hyde Park, Boston. They consistently asked for more options across Massachusetts, as LGBT older adults live everywhere. We encourage EOEA and the Department of Housing and Community Development to prioritize this goal between 2020 and 2025, and create several more LGBT-friendly senior housing communities across the Commonwealth. It is also important that they mandate LGBT cultural competency training for all staff who work in senior housing buildings so that those mainstream housing resources are inclusive as well.

Allow HIV-positive individuals younger than 60 to access home care services

The Massachusetts legislature should lower the age of eligibility from 60 to 50 for people living with HIV who are otherwise functionally eligible to access the state network of elder services. There is a growing body of research that older adults living with HIV may experience some earlier onset of age-related conditions, including cognitive decline. A bill before the Massachusetts legislature (HB624 - An Act relative to Massachusetts home care eligibility) would enable people living with HIV (PLWH) younger than age 60 to access home care. The legislature should pass this bill. EOEA and the LGBT Aging Commission should consider whether there are other elder services for which 50-59 year old PLWH should also be eligible.

Assist with end-of-life planning and increase research on end-of-life issues among LGBT older adults

There are many reasons why providing end-of-life care for LGBT elders may be more difficult. LGBT elders and older adults living with HIV have a number of risk factors that put them at elevated risk of cognitive decline.²⁴ There is also less informal caregiving provided by children and grandchildren compared to older heterosexual, cisgender people. Discrimination in elder care services is common and can lead to recloseting of LGBT elders. As a result of these factors, LGBT elders may experience disparities in elder care.

End-of-life care in general is also based in policy that has traditionally excluded sexual and gender minorities in terms of definitions of “family.” Until the past decade, barriers included policies and laws regarding marriage/spouses, next of kin, and visitation rights. Many LGBT people, especially prior to the legalization of same-sex marriage nationwide, do not have a legally recognized spouse and, due to rejection, lacked a functional relationship with their families of origin.

More research is needed regarding end-of-life care among LGBT people in particular.²⁵ The National Institute on Aging and private foundations should fund research on LGBT disparities in end-of-life care, and how best to reduce these disparities and increase LGBT elder’s access to end-of-life care resources. EOEA and Mass. DPH should partner with the LGBT Aging Commission to educate LGBT older adults about how to plan now for their end-of-life care.

Provide hardware, internet access, and TA to help LGBT older adults access telehealth and online support services

LGBT older adults across the economic spectrum may need technical assistance to use telehealth and online support services. Low-income older adults may need financial assistance to access computers, tablets, or smartphones to be able to access telehealth and online support groups, such as the groups that hosted listening sessions in metropolitan Boston, metro west, and western and north central Massachusetts. EOEAs should look at analogous initiatives with school children in Boston and elsewhere, and seek donations or discount purchases of hardware and internet services from computer companies and internet service providers to allow low-income older adults to access these critical virtual services.

Target fall prevention efforts at LGBT older adults

Preventing falls among older adults is a key public health priority. It is essential to allow older adults to age in place in their homes and not enter into senior living, which is costly and which often correlates with a downward spiral for elders. LGBT elders in Massachusetts were twice as likely to be injured in a fall in the past year compared to straight, cisgender elders. Fall prevention education should be targeted to LGBT elders through the Commonwealth's aging network. EOEAs should view the LGBT Aging Commission and the LGBT Aging Project as potential partners in these efforts.

Implement obesity prevention and treatment interventions with older sexual minority women

Overweight and obesity are major risk factors for chronic diseases such as diabetes, cardiovascular disease, and cancer. Mass. DPH and health care organizations should promote obesity prevention and weight reduction interventions with sexual minority women.

Collect and report sexual orientation and gender identity (SOGI) data in the COVID-19 pandemic

According to 2018 General Social Survey data analyzed by the Human Rights Campaign, LGBT people in the U.S. are almost twice as likely to work in front-line jobs such as retail, food services, health care and education.²⁶ LGBT people are also more likely to be low-income, especially LGBT people of color, bisexual women, and transgender people.²⁷ They are more likely to live in urban areas in multi-unit housing and rely on public transportation. All of these factors make it harder for LGBT people to socially distance, and may make them more likely to contract the novel coronavirus. We also know that LGBT people, especially LGBT older adults, are more likely to have chronic conditions such as diabetes, asthma, and cardiovascular disease,²⁸ as well as risk factors like smoking and vaping,²⁹ that may put them at risk for complications should they develop COVID-19.

For all of these reasons, the Boston Public Health Commission and other local health boards, Mass. DPH, and federal health agencies should take steps to encourage or require the collection and reporting of SOGI data in the COVID-19 pandemic. Several other states—Rhode Island, Pennsylvania, California, and the District of Columbia—have taken steps to do this.³⁰ California is requiring testing labs to report SOGI data along with race/ethnicity and other demographic data.³¹ In June Mass. DPH announced that it was adding SOGI fields to the statewide infectious disease database, MAVEN. This is a good step, but Mass. DPH must do more.

We encourage Mass. DPH to follow California's lead and require, or at a minimum encourage, testing entities to collect and report SOGI data so we can understand how COVID-19 is affecting LGBT people and how this intersects with racial/ethnic and other disparities in the pandemic. All health centers have been collecting and reporting SOGI data to the Bureau of Primary Health Care at the Health Resources and Services Administration since 2016, and hundreds of hospitals and other health practices are also collection SOGI data in Electronic Health Records (EHRs). Even if data are not collected at the testing sites, case reports can be matched to EHR data, as Pennsylvania is doing, to understand how COVID-19 is affecting LGBT people.

Improve EOEa SOGI data collection

EOEA should continue to partner with community groups to better train EOEa staff in how to collect SOGI data from older Massachusetts residents accessing elder services. It is important that more LGBT older adults understand the importance of disclosing their SOGI, and feel safe doing so. We are hopeful that the cultural competency curriculum, developed by the LGBT Aging Project at the Fenway Institute and delivered to EOEa in 2020, will improve data collection. The training includes role playing and positive modeling to improve SOGI data collection and LGBTQ cultural competency. EOEa recently launched the curriculum, and all Aging Service Access Point staff are required to take the training.

Success will mean a much lower rate of missing data, much lower rates of “did not answer” and “unable to ask during visit” responses, and evidence that closer to 2.5-3% of seniors accessing EOEa services identify as LGBT. This would better reflect the older adult population in the Commonwealth, as 3% of 65-74 year olds identify as LGBT, and 2.7% of Massachusetts residents 75+ do as well.

Conclusion

We believe that these proposed changes can dramatically improve elder services and care for LGBT older adults in Massachusetts. There is much work to do on the part of governmental agencies, community-based organizations, elder service providers, and health care providers. The COVID-19 pandemic³² has laid bare the stark risk to lives represented by the striking racial/ethnic disparities we see in the U.S., with Black and Hispanic individuals two to three times more likely to become hospitalized and die from the disease than White, non-Hispanic individuals. Native Americans and Pacific Islanders also experience disparities in the COVID-19 pandemic. LGBT people—especially LGBT people of color, LGBT older adults, and LGBT older adults of color—are likely experiencing striking disparities in the COVID-19 pandemic, but because our local, state and federal public health systems don't systematically collect SOGI data, we can't say for certain how the COVID-19 pandemic is affecting our communities.

Nearly half of all COVID-19 deaths occur in nursing homes and assisted living facilities nationwide; in Massachusetts the figure is greater than 50%.³³ The COVID-19 pandemic has also exacerbated the sorry state of affairs in many of these facilities.

Anyone who has a loved one in a nursing home or assisted living facility knows that care and safety must be improved. Falls are all too common, and residents with mobility issues can wait hours or longer for assistance going to the bathroom, eventually sitting in their own waste.³⁴ Due to the impact of COVID-19 on staffing, things have only gotten worse.

EOEA, the Centers for Medicare and Medicaid Services, and other agencies with responsibilities for nursing homes and assisted living facilities must take immediate action to improve conditions in elder congregate living facilities in Massachusetts and across the U.S.

Local, state and federal policymakers should also examine and fix the larger structural conditions that have driven a worsening of conditions in most of the country's nursing homes—their purchase by corporate raiders who sell off assets, create shell companies, force nursing homes to pay above market rate for supplies and rent, and consequently force them to cut staff, hire unqualified staff, and lower standards of care.³⁵ Nursing homes should not be allowed to become prey to these unregulated market forces. They should be allowed to meet their mission—caring for one of our nation's most vulnerable populations in their final years, months or days—and given the resources and staffing they need to accomplish this critical mission. We specifically ask Attorney General Maura Healy, and a future U.S. Attorney General, to look into and address this shameful reality.

COVID-19 has exposed the need for an elder justice movement in our country. LGBT aging advocates want to support that movement, and join it to advance the needs and desires of LGBT older adults in Massachusetts described herein. In so doing, we can create the conditions that will allow LGBT older adults to thrive in Massachusetts in 2025 and beyond.

Map of LGBT population density by county designed by Dana King, Programmer/Analyst, The Fenway Institute.

Thank you to Maria McKenna, Epidemiologist, Massachusetts Department of Public Health, for providing and analyzing Mass. BRFSS data on LGBT older adults, and to Kevin Cranston, MDiv, Director, Bureau of Infectious Disease at Mass. DPH, for his steadfast support and leadership on SOGI data collection.

The Fenway Institute would like to thank the elected officials who participated in the listening sessions, including legislative co-chairs of the Massachusetts Special Legislative Commission on LGBT Aging, Senator Pat Jehlen and Representative Ruth Balsler, who attended several sessions across the Commonwealth. In addition we were joined at our regional listening sessions by Senator Rebecca Rausch, State Representative Tracy Farley-Bouvier, State Representative Nika Elugardo, Berkshire County District Attorney Andrea Harrington, and Pittsfield City Councilor Peter Marcetti.

We also thank EOEA Assistant Secretary Carole Malone, EOEA Counsel Siobhan Coyle, and other members of the LGBT Aging Commission who travelled to listening sessions across Massachusetts. Special thanks to those who allowed us to join virtual LGBT support groups in April-June 2020:

Julie Nowak, BayPath Elder Services (Aging Services Access Point), Pathways Virtual Coffee Hour, Marlborough (serving communities in Metro West)

Lisa Krinsky, LGBT Aging Project's Monday Zoom Drop-In for LGBT Seniors, Boston

Dave Gott, Rainbow Elders, LifePath (Aging Services Access Point), Greenfield

Paul Glass, LGBT Elders of Color, Boston and eastern Massachusetts

Thank you to Tim Wang, formerly of the Fenway Institute, for his help participating in and taking notes at listening sessions. Thanks to Lisa Krinsky and Bob Linscott of the LGBT Aging Project for reviewing a draft of this publication and helping organize many of the listening sessions.

"LGBT Aging 2025: Strategies for Achieving a Healthy and Thriving LGBT Older Adult Community in Massachusetts" was supported by a generous grant from the Equality Fund of the Boston Foundation.

The research that this report is based on was facilitated by the Massachusetts Special Legislative Commission on LGBT Aging, the Massachusetts Department of Public Health, and the Massachusetts Executive Office of Elder Affairs. The author thanks these governmental bodies for their support of this work. The views expressed in this report are those of the author only, and do not represent the views of the Boston Foundation, nor of the Aging Commission nor the state agencies that provided data for this report.

**ROUNDTABLE: “Ending Hunger in America: Using Technology
to Combat Hunger”**

June 16, 2021

United States House of Representatives
Committee on Rules
Written Statement of Jimmy Chen
Founder and CEO, Propel
June 16, 2021

Executive Summary

Propel builds a free smartphone app that over 5 million households across the country use to manage their EBT cards and improve their financial health. Originally named **Fresh EBT**, we've renamed the app **Providers** - we've heard from our users that nutrition programs and other financial supports enable them to *provide for their families with pride*. Providers is a free app that enables families with limited income to manage their banking and government benefits in one unified place, providing tools and resources to improve their financial health. In this testimony, we will focus on the lived experiences of our users, with an emphasis on nutrition and food insecurity.

Through regular surveys, interviews, customer calls, and reviews, we have learned that technology is an opportunity to meet people where they are - to help them make it through the month and to provide for their families. We've spent the past seven years improving our technology to be responsive to the needs of our users, helping them receive emergency cash grants, apply for jobs, save on utility bills, access broadband, and more. We believe that more innovation around government payments like EBT could be unlocked if EBT data was put on par with financial data.

Propel was founded from the idea that low-income Americans deserve world class technology, too

Diana¹ is a mother to seven grown children and grandmother to 19. She works part-time as a housekeeper and the rest of the time provides “daycare” for her family. She and her retired husband have been receiving SNAP in different amounts, depending on how much she’s working, for the past five or six years. One day she saw her daughter checking her SNAP benefits balance through an app called Fresh EBT. Diana was used to calling the 1-800 number on the back of her EBT card and going through an automated phone system to hear her SNAP balance. With the app, where she could check her balance at any time, it was a relief to not have to call and “sit there and listen to all the blah blah blah and punch in all the numbers and just sit there.” Diana now uses the app at least five or six times a week. Sometimes her husband asks how much they have left, and since an accident has left her with short-term memory loss, she just opens the app to tell him. She always checks her balance before going to the store, and as she’s leaving, to make sure the transaction went through and that she’s budgeting for the month. In addition to the convenience, Diana likes that Fresh EBT doesn’t make her “feel stupid” the way other things online do. (She has tried, unsuccessfully, to use her bank’s mobile app.)

In 2014, as part of a technology fellowship at the Robin Hood Foundation, I set out to apply for SNAP at the Human Resources Administration office in Brooklyn, New York. I joined the line of people waiting to meet a caseworker and fill out the same application. I noticed that people were doing what most of us do when we have an hour to wait— they were on their smartphones, killing time. Here was a tool that almost everyone had and could do what we were all waiting in line to complete with the caseworker. I later found similar challenges when we learned that most EBT cardholders call a 1-800 number in order to check their EBT balance, rather than checking their balance through an app. The problem wasn’t hardware - studies by the Pew Research Center show that not only do most low-income Americans have a smartphone, one in four actually rely on a smartphone as their *only* access to the Internet. And Black and Latinx adults are more likely to rely only on smartphones, and less likely to have access to broadband Internet.² The problem was software. Why weren’t technology companies building the apps and tools to make it easier and faster for people to use their smartphones to access and manage government benefits?

Propel was founded from the idea that low-income Americans deserve the same easy-to-use, modern, user-focused technology that wealthier Americans take for granted. We started with the Supplemental Nutrition Assistance Program (SNAP), and we built the Providers (formerly Fresh EBT) app to modernize the daily experience of SNAP. Providers allows Electronic

¹ All names have been changed. The individual stories included here are from interviews conducted in July 2020.

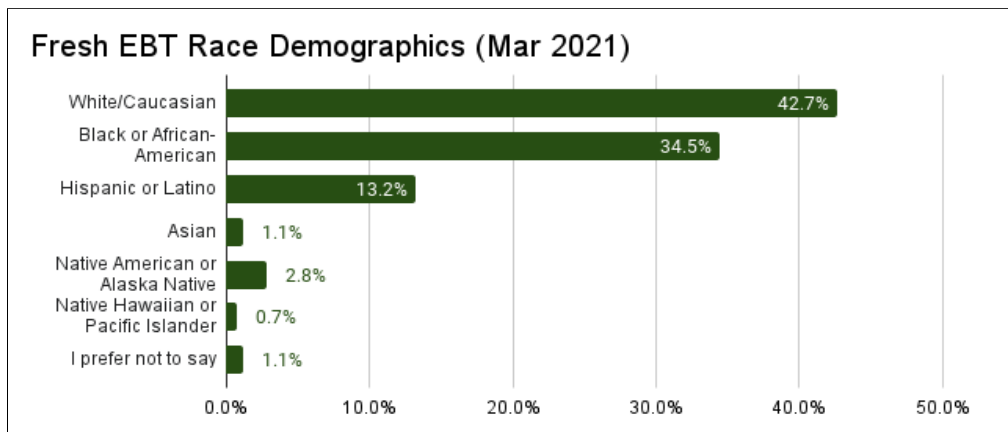

² Monica Anderson and Madhumitha Kumar, “[Digital divide persists even as lower-income Americans make gains in tech adoption](#)” (Washington, DC: Pew Research Center, May 2019).

Benefits Transfer (EBT) cardholders to view their SNAP balance and transaction history instantly, save money via coupons, and earn money through job postings. Providers is available for free in all 50 states and 4 territories and has grown to reach over 5 million households every month, serving roughly one in five SNAP recipients nationally.

To date, Propel’s platform has been used by SNAP households to manage and stretch a limited food budget. But to help families in financial need get back on their feet, we have realized that we need to address the fragmented set of tools that low-income Americans must navigate to make ends meet. In response, Fresh EBT is becoming Providers - a secure, affordable, trusted banking product for users to receive and manage their government benefits alongside their money. The name Providers comes from listening to the people who use our app - they don’t see themselves as EBT recipients. They see themselves as providers.

Who are the families using our app, and what have we learned from them?

Almost half of the families on our platform are Black and Latinx.

Households on our platform live in cities, in suburbs, and in rural areas.

The research we have conducted and our interactions with people using our app paint a picture of families juggling hunger, medical expenses, housing instability, and meeting basic needs. The families we serve are forced to make hard choices to make ends meet with few options for managing complex budgets that include government benefits issued through specialized cards and payment systems.

Data from Propel's monthly Household Pulse Survey.

And while government benefits provide a crucial lifeline to the households who use our app, benefits too often do not reach those who need them most. According to the most recent survey conducted by Propel, 15 percent of households using our app have not received the third Economic Impact Payment despite being eligible. Many Providers families are missing out on much-needed stimulus payments because they do not have up-to-date banking information on file with the IRS. Propel's research reveals that Black and Latinx households

were disproportionately less likely to receive the stimulus payments compared to white households.³

Providers Extends SNAP Benefits by 2 Days Per Month

*Ayisha is from South Alabama, "the hardest spot on the map to see." She has three kids under the age of 6. She first heard about Fresh EBT through her caseworker--well, her second caseworker: "my old caseworker pretty much just said 'here's your EBT card. Have a great day.'" The day Ayisha got Fresh EBT, she called her 70 year old mother ("she's like my best friend") and walked her through downloading it. "She needs something easier than an automated system to get her balance." The last time she looked at it was this morning, while going through her phone after the baby woke her up for a feeding. She'd given her fiancé the EBT card to go shopping yesterday, but never asked him how much he spent. She's not concerned really, except she wants to know how much is left before she goes shopping again. "I don't want to get to the cashier with \$200 worth of groceries and have \$170 to cover it." She's been at the store with a whole basket of groceries and then checked her balance. **"You're praying and you're hoping that you have enough."** Ayisha always has her groceries tallied up--within a dollar range, since the taxes aren't included in the listed prices. Better to know in advance how much she has on the EBT card, and double-check once she's in line.*

The Providers app allows EBT cardholders to view their SNAP balance at any time, in addition to helping them manage their benefits through tracking transactions, saving via coupons, and earning money through job postings. Before we developed the Providers app, SNAP participants had to call a 1-800 number (very likely the most called number in the country, according to our research) to check their balances. The Providers app has transformed the grocery store experience for millions of SNAP beneficiaries across the country.

The app not only makes grocery shopping easier and more convenient, it leads to more tangible benefits as well. An external study found that because households using the Providers app check their EBT balance more frequently than households not using the app, their benefits last longer, reducing the days that they and their families go hungry.⁴ Given that the average SNAP household hits a zero balance on the 21st of the month⁵, even an extra day or two can make a big difference.

Accessing Resources in Times of Crisis

Jennifer is a 40 year-old mother and grandmother living in Missouri. She works at the community college where she earned her Associate’s degree and her daughter was also once a student. She’s been deemed an essential worker but only goes into work once a week. Thankfully, she’s still getting 100% full-time pay. The last time Jennifer received SNAP was about two years ago before she separated from her ex-husband and no longer qualified for the benefits. She also lost Medicaid but at least her youngest child got to keep it. Jennifer applied for Pandemic EBT for her son recently, after her sister told her about it. She downloaded Fresh EBT about two weeks ago, when she got the P-EBT card in the mail, also at the recommendation of her sister. She used her new benefits this past Saturday at Walmart, which allowed her to get more food items--good stuff like vegetables and fruits. At Walmart, she explains, when you're doing a split tender, you have to tell them if it's EBT and you have to let them know how much to charge to that card. “I said \$302 because I also bought nonfood items.” After that shopping trip, Jennifer thought she’d wiped out her benefits but realized she had a few dollars left after checking Fresh EBT. “I thought I’d used them all but I didn’t!”

As a smartphone-based, user-focused platform, Providers can respond quickly and meet people where they are—on their phones—to listen to their needs, share information, and help them respond to crises, often in partnership with nonprofits and other stakeholders.

In 2019, when the government shutdown resulted in EBT cardholders receiving two months of benefits at once, we heard from people using our app that they were concerned about making their benefits last for two months. Propel quickly created an in-app “vault” that allowed users to hide a certain amount of their benefits balance, helping them make their funds last.⁶

Our responses go beyond SNAP, reflecting the needs of the households using our app. Since the beginning of the pandemic last March, 375,000 Americans have enrolled in Lifeline and received a free smartphone through our app; 210,000 have applied for jobs; 14,000 have signed up for discounted home internet; over 4,500 have applied for Medicaid; over 1,000 have applied for a qualified health plan.

When the COVID-19 pandemic led to new or expanded benefits programs, Propel created a feature to communicate these changes to users directly in the app. The “Benefits Update Center” has become the app’s most used feature, viewed by more than 8 million individuals since the onset of the pandemic last year, and expanded beyond just communicating information to connecting users to the actions necessary to access new benefits and protections. For example, over 41,000 individuals submitted the declaration necessary to avoid eviction, and 3.5 million connected with the non-filer tax form to access the Economic Impact Payments (“stimulus checks”).

Perhaps the most powerful example is Propel’s partnership with GiveDirectly, a nonprofit organization specializing in cash transfer programs. Starting in March 2020 we helped to distribute \$1,000 in no-strings-attached cash grants to households across the country. We knew that the families using our app needed aid fast—faster than the government could stand up a program to help. The first \$1,000 cash grants to our users were disbursed on March 22, 2020; many who had just been furloughed that week were able to receive a payment immediately. This initiative, called Project 100+, has since become the largest private cash transfer program in the United States, distributing over \$140 million in cash grants to SNAP participants through our app.

When the COVID-19 pandemic began, Propel understood that our app users would be deeply and quickly impacted by the economic shutdown. To understand how users were being affected, Propel launched a household pulse survey in mid-March 2020 which is still

⁶ The benefits “hidden” by this feature were still completely available for use at any time, just simply not reflected in the current balance displayed in the app.

running on a monthly basis. This survey covers topics such as food insecurity, housing and eviction, access to new social safety net programs (the stimulus payments, Pandemic EBT, unemployment expansions), and open-ended questions. Each month, a randomly-selected cross-section of several thousand SNAP participants complete the survey through Providers. Fifteen months later, these survey results have grown into a robust source of insights into the daily lives of low-income Americans amidst the pandemic. We share these findings with nonprofit partners, the public, and policymakers such as the members of this committee at <https://www.joinpropel.com/learn>.

How the Federal Government Can Support Americans Receiving Benefits

*Akilah is a single mom in California whose 17 year old just got into college. She thinks the SNAP program itself is helpful but "the bureaucrats of the system are horrible." Volunteering in her community, Akilah has learned that they never make it easy for the people using the services. "You go in and wait all day to go to an appointment the next day." When she first found the app, she thought it seemed too good to be related to the government. "They wouldn't have anything to push people forward. They just want you to keep us coming back." Not to mention the awkward moments at the cash register--Akilah has had to try charging multiple amounts and getting her EBT card declined or spending just \$5 to figure out what her balance is. The app lets her get there before reaching the register. **"It gives you the freedom to plan. It gives you the freedom to relax."** To Akilah, not having to call to check her balance makes her EBT card feel like any other card from the private sector.*

In 2017, the Consumer Finance Protection Bureau (CFPB) developed principles to guide user-permissioned access to financial data, the foundation of which was laid in Section 1033 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. **Congress should extend these principles to government benefits like SNAP, establishing that consumers should have the right to use third-party tools like Providers, and creating a clear lane for technology innovation that serves consumer needs.**

Much of the financial technology ("fintech") industry is built on the ability to view your banking information in non-bank apps. Apps like Mint enable budgeting; apps like Venmo make it easier to send money; apps like Acorns and Digit make it easier to save. In financial services, Dodd-Frank made it clear that consumers own their individual banking data, and thus have the right to use any third-party tool of their choice to manage their own money. This has enabled a significant amount of innovation over the last decade. Importantly, much of that innovation hasn't come from the legacy banks - it has come from upstarts focused on addressing a specific consumer need, often creating a layer of software on top of existing banking services.

Extending these principles to government benefits, like SNAP and EBT, would legitimize and promote similar types of innovation. Companies like Propel, which focus squarely on government benefits, will have more clarity to operate and provide services to government benefits recipients. Companies that already build popular financial services products, like the ones mentioned above, could extend their products to support SNAP and EBT. This need not compromise security - to begin, the technology could be read-only (i.e. ability to see EBT balances). The financial services industry has also demonstrated that it is possible to have a rich ecosystem of non-bank products without making banking less secure.

A major victory of the transition from paper food stamps to EBT was reducing stigma around payments. Today, the frontier has shifted; the best way to reduce stigma around safety net programs while simultaneously enabling technology innovation is to ensure consumer control of their own data.

The New Safety Net

By Erine A. Gray

Founder and CEO, findhelp.org / Aunt Bertha, a Public Benefit Corporation

Rules Committee Testimony

Introduction

My name is Erine Gray and I'm the Founder and CEO of Aunt Bertha, a Public Benefit Corporation based in Austin, TX. We created findhelp.org, a publicly accessible website that's used by millions of people in the US and hundreds of thousands of social workers and care coordinators who assist others. findhelp.org allows people to easily search and connect with food programs, housing programs, and hundreds of thousands of free and reduced cost services provided by government and charitable organizations in the United States.

We are fortunate to live in a generous country with a strong safety net, but for most of us, navigating the safety net is complicated. My experience with the safety net began at an early age. I was born in Olean, NY and my first home was at the Martha Avenue Housing Projects until my parents could afford to buy a house. From time to time, our family was able to eat because of the Food Stamp (now SNAP) program, and we were able to eat lunch at school because of the free lunch program.

The name of our company is inspired by my mother, who raised seven kids and took in two additional kids for a period of time because they didn't have a place to live. Although she wasn't a social worker, she was a janitor, she inspired me to dedicate my life to helping others.

Simplifying Navigation

We can't escape this life without having some curveballs thrown our way. Whether it's caring for aging parents, losing someone close to us, or watching someone we love struggle with addiction, many of us don't know where to begin in managing these crises.

The information age has given us some amazing technological advancements. We live in an age where we can order shaving cream while shaving and it'll be delivered securely to our garage the very next day. Yet, finding the nearest food pantry that is currently open and has capacity can feel like, pun intended, an act of Congress. In 2010, our company set out to fix this information problem.

Eleven years later we've helped millions of people find and connect to social services. Our website is used by people looking for all types of services like help paying rent, finding affordable housing or finding the nearest food pantry. Professional care coordinators and social workers from hospital systems, health plans and nonprofits use our website on behalf of the clients they serve every day.

Every one of us has stories of a time in our lives where we looked around and said to ourselves "I don't know what to do." findhelp.org helps people during these moments. Our website is available to any user, anonymously. If someone finds a program close to them that they qualify for, they can just go ahead and connect electronically to the nonprofit or government agency that provides those services. And in many cases, organizations that provide those services can respond quickly giving the person in need the dignity of a yes or a no in a timely fashion.

Our Austin, TX based data operations team continually works to ensure that the programs showing up in the search results are up-to-date by keeping up with the ever-changing landscape of available services. We partner with nonprofits and give them tools to assist their clients. We protect our users' information and do not sell advertisements, nor do we sell their data.

Our vision is to connect all people in need and the programs that serve them — with dignity and ease. In order to solve this problem, we need to get people the information they need in the moments they need them.

Digitization Tells Stories & Then We Can Act

Before the internet, in both small towns and big cities, professional social workers and care coordinators have been doing this hard work each and every day. They still do. But up until now, we were not able to quickly understand where the supply of available social services is meeting the demand for them. In order to figure out which programs to fund, public foundations and governments would spend months or even years using anecdotal information to figure out what's needed.

Now, as this information continues to be digitized, the data tells the story of where supply is not meeting demand in near real-time. For example, when COVID-19 hit, our data showed a dramatic spike in the need for a range of social services, from food programs to housing assistance. According to our data, food related searches increased 326% from February to April. Accordingly, the search for non-emergency health services as a percentage decreased as most people were putting off non-essential healthcare.

Figure 1: Visual demonstration of the increase in searches for food related programs during the COVID-19 epidemic.

By analyzing the anonymized and aggregated search data, we also see a relationship between demand for social services and when the federal stimulus checks went out. Search volume went down as more people had extra money in their pockets and businesses started hiring again.

Digging in further, we can also analyze trends across locations. In the graph below, based solely on search activity on the findhelp.org network, we can identify states that do not provide dental benefits to adults on Medicaid.

Figure 2: Our analysis finds that we see higher volumes of search activity for dental care services in states that do not offer extensive dental coverage for adults on Medicaid.

In the addendum, you will find what may be some interesting trends for the states that you live in based on search activity we are seeing across the findhelp.org network.

A New Safety Net

With new information available we have an opportunity to envision a new safety net built for the information age. The new safety net must be responsive — not just to trends, but to individual people — right in their moment of need. Government alone cannot build this new safety net. We need nonprofits, religious institutions, and the private sector.

Imagine the possibilities of what a new safety net might look like. If we saw a dramatic spike in demand for food because a factory closed down, we could immediately speak with local nonprofits to ask them what they need. Funds could be transferred in moments and they could serve people right away.

A new safety net makes it easy for people to raise their hand and say “I need help.” And those same people deserve to get that help without having to jump through bureaucratic hoops. The good news is that this **can be done**. As a country, we’ve solved far more complicated information and logistical problems in other sectors.

Conclusion

Reinhold Niebuhr once said that: *“Nothing that is **worth doing** can be achieved in our lifetime; therefore we must be saved by hope.”*

Ending Hunger in the United States is one of those things that is **worth doing**. But I differ with Niebuhr on this. I believe it can happen in our lifetime. It'll be hard. It'll take work. And it'll take hope.

Thank you for the opportunity to share my thoughts today.

Addendum

In this addendum, you will find some helpful insights about what your citizens are searching for in aggregate. This is just a small subset of the type of data we are happy to provide as you work towards your vision of ending hunger by 2030.

In the last 3 months in Massachusetts, housing has been the top searched for need, specifically “help find housing.” During this same time frame last year, food was the most searched for need, specifically “food delivery.” We think this is reflective of the population’s general needs, particularly as it relates to the evolution of the pandemic. This time last year many families were struggling to obtain groceries as a result of loss of income as well as panic buying and supply chain disruptions. Many medically vulnerable people were afraid to leave their home due to the threat of the virus, and turned to our platform for help delivering food. Now housing, our typical top searched for service, is the most searched for need as many families struggle to find and afford housing.

The benefit of having realtime data is that it often allows us to identify needs as they arise. In Oklahoma, we can see as we approached summer, “help pay for utilities” quickly became our most searched for term. Below you’ll find a small subset of summary data for each state you represent — illustrating the breadth of our search and needs data.

Alluma's Statement on How Technology Can Help Combat the Poverty that Drives Hunger.

Good afternoon my name is Robert Phillips, I am President and CEO (Chief Excitement Officer) of Alluma, a non-profit social enterprise. Alluma is working to make access to help and support for the 100 million economically insecure people in the United States simple and easy by reimagining the way technology is used to advance race and economic equity. Over the last decade we have help connect over 25 million people (about the population of Texas) to public benefits at the county and state level.

Access to opportunity is not universal in the United States of America. Barriers to real opportunity exist at all levels and is a major reason hunger exists in our country today. These barriers extend to how people in our country can access the needed help and support that public benefits provides – to pay their bills, feed their family, get medical care. At Alluma, we see very clearly how obtaining this support is still an obstacle for many, thanks to a system that often ignores or does not care how people live – or does not believe that people who ask for help are as deserving as everyone else. It is a system that often treats people in need more like undeserving beggars than like people worthy of dignity and respect.

Consider just a few cases in point:

- Families who receive Supplemental Nutrition Program for Women, Infants and Children (WIC) – a program for pregnant women and women with newborns – are not allowed to use their food vouchers for online food purchases and delivery, a service that many of us take for granted and is especially crucial during this pandemic for families with young children. The US Department of Agriculture (USDA) requires recipients to complete their food purchases in a store, in front of a cashier.
- Prior to the pandemic, most recipients of Supplemental Nutrition Assistance Program (SNAP) and other public benefits were needed to go to an agency's office to supply information, sign documents, or be interviewed. This required those who are living paycheck to paycheck must take unpaid time off from their jobs, and pay for childcare and transportation, to conduct activities that can be done virtually or waived when needed. This requirement was more challenging during the pandemic as recipients with compromised health were forced to leave home and take a bus or train instead of sheltering in place to stay safe. Although agencies were given temporary waivers to use telephonic signatures or telephone interviews during the pandemic, these changes have not yet been made mandatory of state agencies.
- Recipients of SNAP benefits often lose their benefits and must re-apply simply because they did not return their renewal form on time – a form that may have been sent to an old address. This is just one example of people being thrown out of the system for procedural reasons – costing the state more money – when it would make more sense to assume that the person's circumstances have not changed and should be given the benefit of the doubt absent information to the contrary.
- The patchwork of programs for nutrition assistance creates confusion and duplicate efforts resulting in eligible individuals not enrolling in programs they desperately need. For example, the application process and rules for the different nutrition programs alone – SNAP, WIC, free or reduced school

lunch- are different. However, each program requires much of the same information to qualify. A family who is eligible for all these programs must provide the same information multiple times often to different agencies and then must keep track of each program's rules of use and renewal of benefits which also varies. Accessing government help just for food is a significant challenge and then add the need to find help with other necessities like income, housing, or health.

Over the last 20+ years we have been engaged in creating the first digital public benefit application with an online signature; developing solutions that determine eligibility for multiple benefit programs with a single application; drafting Section 1561 of the Affordable Care Act, which determines the technology requirements for integrated eligibility and enrollment systems; and advocating for how data-sharing and cross-agency collaboration, which supports increased enrollment. Building on our work many have tried to address these barriers through increased use of technology.

- Client portals: States and counties have made information and services available to consumers through client web portals using:
 - Eligibility screening tools that promote cross-program enrollment by helping people learn they may qualify for programs that they may not otherwise have been aware of;
 - Multi-benefit online applications to guide people through dynamic questions to receive eligibility determinations for multiple programs; and
 - Self-service case management features that enable people to obtain information about and manage their benefits (such as updating case information) through a single point of contact.
- Eligibility systems and business rules engines (BREs): States and counties have enhanced integrated eligibility systems by programming rules for multiple health and human services programs into BREs. These efforts automate calculations and tasks to achieve significant efficiencies for states throughout the eligibility and enrollment process. They also dramatically shorten the eligibility determination process for consumers across a range of programs, in some cases allowing for real-time determinations.
- Call center technology: Advanced call center technologies have allowed states and counties to appropriately route calls to the staff with the skills and ability needed to address people's needs. These technologies have given states and counties the flexibility to make best use of both generalists who can address questions about all programs and specialists in particular programs or types of issues. They have also given states and counties the flexibility to route calls wherever workers are located, allowing for "virtual" call centers with more efficient allocation of staff resources.
- Electronic data matching: Using electronic data matching to verify eligibility factors can save people who apply for multiple programs from having to provide the same paper documents multiple times. Some states have implemented state hubs that combine data from multiple sources, making it easier for workers to access and process the information across programs as needed.
- Document imaging and management: States and counties are using document imaging and management systems to support streamlined processing of paper documents across multiple programs. These systems make it easier for multiple workers to be involved in a particular case as needed over time and across programs, easing handoffs among different programs or units of workers, such as call center representatives and workers in local eligibility offices.
- Data management and analytics: States are examining ways to make better use of health and human services data to improve program operations and outcomes for clients. Data management and analytic tools allow states to merge data from multiple sources (e.g., case records and claims databases) and analyze it at the case, program, or population level to support better decision-making.
- Mobile tools: States and counties are using mobile tools to help people understand, access, use, and keep their benefits. Some states have adapted their client portals for phones and tablets. A number have also developed mobile "apps." Other are working to incorporate mobile tools into their workflow.

Since 2010, a group of nonprofit social technology organizations have created public, direct-to-consumer web, and mobile platforms to increase access to nutrition assistance and other safety-net services. For

example, there are now technology tools that provide eligibility screeners, community-based services referral platforms, rules engines, and other tools that allow people to quickly see if they are eligible for SNAP, WIC, Medicaid, childcare assistance, and other programs. And they can tell people about their eligibility status and connect them directly to these programs in a matter of minutes.

Yet, despite the availability of this technology and the increased usage of these tools and an increased use of technology, food insecurity has only grown and barriers and inequities in accessing safety-net services remain.

To address food insecurity, it is important to look at the both the socioeconomic and racial/ethnic makeup of those who are food insecure to figure out where the systemic problems exist. Consider the following data:

- An analysis of Census Household Pulse Survey (CHHPS) showed that during the COVID-19 crisis, rates of food insecurity among Black households with children were twice as high as they are among White households with children. Rates for Latinx households were 60% higher than they are among Whites. These ratios are like their historical patterns in the Current Population Survey Food Security Supplement (CPS-FSS), which for over 20 years has collected annual data on food insecurity experienced over the past year.
- For rates averaged across April–June 2020 from the CHHPS, estimates of food insecurity doubled for White and Latinx households and increased by 60% for Black households.
- We find that the share of those households reporting “sometimes” or “often” not enough to eat during the last week in the CHHPS has more than tripled for White and Latinx households, and more than doubled for Black households.
- Consistent with the disparities in food insecurity seen, a series of other economic indicators that can be calculated from the CHHPS for unemployment, making next month’s mortgage/rent payment, or buying all the food they need in the next month show worse conditions among Black and Latinx households, and in many cases seem to be part of a worsening trend.

Why do these inequities remain despite the increased use of technology?

Here are a few key reasons:

- 1) Technology alone does not address equity. The former Director of Tennessee’s Oak Ridge National Laboratory, Dr. Alvin Weinberg coined the term “tech-fix” in 1966 to describe a myth—that technology is primarily a problem solver. Although the potential of technology to create opportunities for people who are disenfranchised and locked out of opportunity should be pursued aggressively, there must also be a pragmatic assessment about what it can and cannot do. Technology alone will not level entrenched historical inequities. Said another way, there is not always an app to help people who are poor and experiencing insecurity. Despite the ongoing claims that better, modern technology and technology approaches can work as a “social leveler” with the capacity to “erode the relative power of all kinds of hierarchies structured on the control of information,” significant intervention into the design and deployment of this technology is always required if any of its equalizing tendencies are to be realized. We must always hold that technology, then, is one tool, not “the” answer. Deployed wisely, it can significantly advance important human development goals—like addressing hunger and poverty. Without support to make it equally available, and without integrating it into a more comprehensive solution, it will only aggravate existing inequities. To realize its potential, technology must be combined with other first order resources like food and housing, and second order resources like researching and understanding your people to build ladders out of persistent hunger and poverty.
- 2) Technology success is measured by ability to scale, but solutions to social problems are not easily scalable due to the complexity of people’s needs. “Scaling” is in the DNA of the technologist. Part of what makes digital technology so powerful is that it scales up so easily. Twitter has more than 300

million active users; the user base of Facebook exceeds 1 billion. That kind of scalability does not exist in the social sector. No nonprofit or government agency has the market penetration of Twitter or Facebook. Yet technology tempts nonprofit and government leaders into thinking that scaling up is the only path forward—that they can reach more people by removing the human factor from their work.

- 3) While technology can amplify effective solutions, it can amplify entrenched inequities too. Yet, we have countless stories of technological “silver bullets” missing their target due to a lack of understanding a fundamental truth of technology—it is only an amplifying force. It can only amplify effective solutions, and it can only amplify entrenched inequities. Putting computers in the hands of poor children (as the much-publicized One Laptop Per Child initiative aimed to do) or increasing the availability of online portals and mobile applications (as over 35 states have made available) has not affected the rates of hunger or poverty. While these efforts are not bad, they focus primarily on using tools—tools that do not work in isolation.

Ruha Benjamin’s statement in [Race After Technology: Abolitionist Tools for the New Jim Code](#) talks about how technology drives this dynamic when designed, developed, and implemented without careful analysis and attention to race and outcomes. As Benjamin states:

“Zeros and ones, if we are not careful, could deepen the divides between haves and have-nots, between the deserving and the undeserving – rusty value judgments embedded in shiny new systems.”

How should we use technology to alleviate hunger and address inequity?

Designing, developing, and implementing technology with a lens towards people would reduce help technology take a long step towards contributing to addressing food insecurity.

An important lesson from technology that gets lost when applying technology to social questions is that we are not “that” good at judging people needs/requirements, and that there is a need to separate our beliefs/expectations from people’s actual choice making and behaviors.

A focus on “problem-solution fit” where technology ventures quickly and easily test user’s behavior with their ideas before developing anything is needed. If we can find a method to test our solutions, and to be prepared to change them—quickly—based on deep understanding of people’s situation, behaviors, attitudes, problems, and goals, then technology would be able to really begin to address big social challenges like hunger and poverty. The technology community takes such an approach when it uses “lean and agile” approaches to ensuring the best product/service. If social technology firms can develop similar approaches, then over time we can really address big social challenges, not by following our initial solutions, but by following a test-driven method to addressing challenges.

There are 5 things that can be incorporated into how to design, develop, and implement technology that would address equity and contribute to alleviating hunger:

- 1) Acknowledge that race and class inequality is a core issue to be addressed.**
- 2) Use technology to learn more about the direct experience of people seeking help and incorporate the voices of people of color to make technology work.** Technology, whether it be a website or an app, never exists in isolation. A person using it always has a goal, and your technology is just part of the journey they are on to achieve that goal. Having a deep understanding of people’s situation, behaviors, attitudes, problems, and goals will allow for understanding how your technology fits into with the wider journey people are on. What gets them to the site? How does it link with other parts of other physical services like the food bank or the WIC provider? Where will someone go next to

achieve their goal? Thinking in services means we are always thinking about where people are coming from, where they will go next and how we support them throughout that journey.

- 3) **Ensure the voices of the affected population (particularly communities of color and low-wealth communities) are incorporated and centered in the build of technology solutions.** Before building or designing anything, start by researching and understanding people needs, and keep them involved, not only at the start but with ongoing research and feedback. It will allow technology to meet both people's preferences and behaviors, as well as their 'social' needs. These two needs can sometimes clash, which means thoughtful research-led design is even more important, to ensure the service provided by technology will be both used, and beneficial.
- 4) **Hold technology vendors accountable, who you work with matters.** Intent matters in who public agencies partners and it has a profound effect on government's ability to affect hunger and poverty rates. And there is rarely if ever a conversation about this. For example, many health plans are heavily invested in social referral platforms that are supported by venture capital resources. This financing structure creates a dynamic where scales matter more than help. As a result, in many communities the lack of careful attention to connecting people to help results in food insecure people unwittingly being referred to social services agencies with either low capacity or low willingness to participate. In the worst cases creating a lose-lose-lose scenario

The federal and state governments almost universally contract with private corporations to administer their public benefits programs. Service providers, such as hospitals, also hire private companies to help them maximize payment claims. States then hire more private companies to reduce their payouts to providers and increase their claims from the federal government. Further, the federal government hires the same or similar companies to audit Medicaid, SNAP, TANF (Temporary Assistance to Needy Families), WIC, etc., and review state actions.

Privatization in the implementation space has been preferred for efficiency reasons. Yet these types of public/private partnerships have led to monopolies especially for government IT (Information Technology) projects. Despite billions of dollars spent by government to modernize IT systems, access to safety-net services has only become more challenging (e.g., unemployment benefits), and has not moved the needle on poverty or food insecurity.

There is also a power imbalance between government and private actors because government does not hold private actors accountable and private actors are often able to hold government hostage given the size and amount of government contracts. Although it has the authority to do so, the federal government rarely pursues prosecution against revenue maximization schemes, and these companies rarely face consequences.

Specific suggestions:

- Directly incorporate contracting equity programs into state and local procurement departments to help spread economic development to all communities and allow state and local governments to express their values of inclusion.
- Establish contracting equity policies and programs within state and local procurement departments based on an analysis of the barriers faced by people of color, women, and non-profit business enterprises in a specific geographic target.

5) Increase diversity in vendor procurement. This requires a concerted effort by the public and non-profit sectors to change both who and what they invest in, and how they work together to create the foundation necessary to streamline and simplify access to help. Nonprofit social enterprises and certified B corporations have shown they can be potential partners that bring the technical expertise required for policy implementation while maintaining a shared commitment to advancing equity.

Specific suggestions:

- Streamline the vendor certification process.
- Incentivize and set up goals for a minimum percent of contracts that must be awarded to people of color, women, and non-profits.

Technology alone cannot create the kind of change needed to advance equity. It is merely a tool that must be part of a more considerable effort that includes a human element. In his book [“Geek Heresy,”](#) Kentaro Toyama writes that pushing the integration of technology into the work of policy change is about using “packaged interventions to amplify the right human forces.”

The pursuit of the equity agenda is a marathon. Example after example of social change efforts show this to be true. There will be victories, but there will undoubtedly be setbacks. For goals as ambitious as ending the predictive power of race/ethnicity, gender, geography, generation, and socioeconomic status in connection to economic security and social opportunity, there is a need to focus both on long-term policy targets and on capacity building and learning.

**Written Testimony of Zareena Meyn
Executive Director, mRelief
Before the House Committee on Rules
The Role of Technology in Combating Hunger in America**

June 16, 2021

Chairman McGovern of the House Committee on Rules,

Background

In 2014, mRelief was founded in response to a system-failure. Out of 10,000 families who applied for rental assistance in the city of Chicago, fewer than 10 percent even qualified.

mRelief's founders addressed the needs of those 9,600 families who would otherwise spend a considerable amount of time applying for a service they were not eligible to receive. Moreover, mRelief's founders sought to liberate the capacity of city workers to focus on eligible families. So, mRelief built a basic pre-screening tool for social services to provide families with an opportunity to know if they met basic eligibility requirements before committing to a lengthy application. mRelief soon focused on SNAP for several reasons: SNAP was the highest visited program on our site, SNAP has a high participation gap, and it is an entitlement program, meaning the resource is not limited like housing assistance - anyone who is eligible can receive the benefit.

According to the USDA's latest Household Food Insecurity in the United States report, more than 35 million people in the United States experienced hunger in 2019. Households with children are more likely to experience food insecurity. Before the coronavirus pandemic, more than 10 million children lived in food-insecure households - today, that number is closer to 13 million. SNAP is the most powerful anti-hunger program in the United States. And yet, the Federal Nutrition Service (FNS) estimates that 8,950,829 individuals were eligible for SNAP benefits but not enrolled in 2018. That amounts to approximately \$13,371,991,463 in SNAP benefits that went unclaimed that year. Pandemic-era data has not yet been released, but that number is likely much higher today.

[mRelief](#) is a Chicago-based nonprofit whose mission is to transform access to social services for the inherent dignity of all people. We believe that all people are born with dignity, and further, we believe that access to food is a human right. We have a vision that one day, everybody will be able to access the social safety net without adding to the already stressful circumstance of poverty.

That is why we've developed easy-to-use tools on a mobile-friendly website and through text messaging for people to sign up for SNAP benefits. mRelief has already connected more than one million families nationwide to SNAP benefits since we started this work in 2014. We build our technology on accessibility and empathy, with human compassion at the center.

mRelief's Technology

The process is simple - somebody discovers [mRelief's SNAP eligibility screener](#) through an online ad or a flier. They text FOOD to 74544 and answer a few simple questions over text messaging or through a mobile-friendly website to see if they meet the basic requirements to qualify for SNAP benefits. If they're likely eligible, they are provided with instructions to apply for SNAP benefits in their region.

In regions where we offer application assistance through a trusted community partner, more than 50% of those who use mRelief's services prefer to apply for SNAP benefits with support. Those individuals can schedule an appointment with a caseworker at their local food bank, who will call the client at the time of their appointment and complete an application with them over the phone in about 20 minutes.

Next, the client sends in their required verifications (like their government-issued ID or previous 30 days' pay stubs) by taking a photo of them on their phone and texting it to mRelief, where we securely attach it to their SNAP application.

Finally, mRelief sends text messages with key information about the SNAP enrollment process, and even reminds the client when it is time to recertify. Clients can complete the entire process on a mobile phone without requiring regular access to the internet, a computer, or a smartphone's limited data.

According to the [Pew Research Center](#), in the US, 26% of those who make under \$30,000 a year only access the internet on a smartphone. mRelief offers both users and our trusted community partners a secure, user-friendly solution that eliminates the challenge of internet access by allowing the process of SNAP screening and application to be completed over the phone, over text message, or through a mobile-friendly website.

In many places, the existing process for applying for public assistance is difficult and time-consuming, which results in increased transaction costs that can be a barrier to application completion. Tech innovations can remove these obstacles. However, in some states (Idaho, Alaska), you *cannot* apply for SNAP benefits online. In other states (Florida), you can *only* apply for SNAP benefits online. **We need to make sure access to the internet does not become a barrier to food assistance.** That is why mRelief has developed and tested solutions to make the process easier for every person who is eligible, regardless of their ability to access or use technology.

mRelief's Efficacy

An external analytics firm ran a [randomized controlled trial](#) in Los Angeles County, California, where the fastest method of applying for SNAP benefits is by calling the SNAP office. The study found that **mRelief clients who were given the opportunity to schedule a call with the SNAP office were 18% more likely to complete the required call in order to submit their SNAP applications.**

We have implemented this feature into the mRelief user experience, enabling clients to schedule a call with the staff at one of our trusted community partners. One applicant in Illinois had this to say about that feature, “I received a text with a phone number that my assistance call would come from. The text suggested I add the number to my contacts so I would know who was calling. **This to me was brilliant. They called right on time and I knew it was safe to answer. I only wish the state was as effective.**

Nationwide, any individual can use mRelief’s [SNAP eligibility screener](#) to see if they likely qualify for benefits. In several states (CA, FL, IL, KS, KY, OR, TX) mRelief has developed partnerships with trusted community partners that enable clients to apply for SNAP benefits using our mobile friendly website, or schedule an appointment to apply over the phone with assistance.

mRelief started working in Kentucky in 2019. Five thousand families in Louisville were being evicted each year, and mRelief was funded as a solution to support the ancillary costs related to housing in a region where the eviction rate is more than twice the national average (4.82 percent, as compared to 2.34 percent in the US—[source](#)). The average rent for a two-bedroom home in Kentucky is \$872 per month, which accounts for more than 60 percent of the household income of most vulnerable families. The average SNAP benefit amount in Kentucky is \$247 per month which is 28.3 percent of the average monthly rent. By providing families with assistance to afford food, mRelief’s solution has helped free up resources towards housing stability. Since mRelief started our work in Kentucky, we have helped over 5,000 households enroll for SNAP benefits, potentially unlocking \$8,594,748 in SNAP benefits in the region.

One of the people who used mRelief to apply for SNAP benefits was Helen, a senior in Owensboro, Kentucky, who said that “food stamps made living in Kentucky a little more affordable.” She shared with mRelief that before receiving SNAP benefits, she sometimes had to make the excruciating decision between paying her bills and going hungry. Helen was waiting to receive Section 8 Housing assistance, but was told the waitlist was 2 years long. She maintained that SNAP benefits helped her afford food that was good for her cholesterol, like fruit and fresh vegetables. “It’s just awful hard for me” Helen said, “but the food stamps were a great help.”

The data shows that mRelief’s technology works when the existing systems fail. An independent data analytics firm ran a randomized controlled trial in Louisville, Kentucky, that found that SNAP applicants who were directed to [mRelief’s mobile-friendly and user-centered SNAP application](#) were 30% more likely to apply for SNAP than those who were directed to the state’s web application, which can only be accessed on a computer’s web browser and not a mobile phone.

The Current Landscape

mRelief recognizes a shade of hope in the recent exposure of the grim state of hunger in America due to the pandemic. COVID-19 has forced many innovations in the SNAP space.

Notably, many caseworkers and SNAP outreach providers have shifted to providing application and case support over the phone.

mRelief's proprietary client relationship management tool, called [Johnnie](#), named after the legendary welfare activist Johnnie Tillmon, has been transformational in facilitating SNAP application assistance over the phone. Johnnie was launched in 2020 and has enabled outreach workers at the Catholic Charities of Chicago to increase the number of clients they had assisted by 60%, compared to before they used Johnnie.

Several outreach workers who use Johnnie have shared that applicants are happy to be able to schedule a call with them and not have to come into the office. One outreach worker in Chicago shared, "They're happy because people who are working don't have to ask for the day off. They just call me at their lunch time...I think 80% of my clients prefer to do this over the phone."

Another outreach worker shared, "I love Johnnie, you know I just love it! Boy, it has saved so many hours and has freed up so many dollars and given so many people so much food it is amazing."

In Kentucky, our local community partner shared this about their experience using Johnnie to support their clients:

Sandra S., a single woman in her sixties living on her own and employed at a local school, was assisted with her application by the SNAP Outreach Associate when her employment was threatened by COVID-19 protocols. Saddled with enormous bills and a mortgage left to her by her family for a home she inherited, the client was in great distress when first contacted. Though her case has yet to be fully resolved, the SNAP Outreach Associate has remained in contact to update her with whatever information is available to him. Sandra is not comfortable with a computer and was thankful to receive the assistance on uploading relevant documents to Johnnie along with referrals to agencies that can assist with her immediate concerns. At the time of this writing, Sandra has already been in contact with the Department of Community Based Services and received her first contact from them within a week of completing her application, something that can take at least a month when the application is processed in the traditional manner.

Persisting Barriers

Technology has enabled mRelief's services to be reflexive to the national crisis - filling in the gaps of the existing systems - however, there are still major barriers to enrolling for and receiving SNAP benefits, and to ending hunger in America. At mRelief, we take a strong stance against "automating inequality," the phenomenon in which new technologies serve to further marginalize our poorest communities, which was first identified by professor Virginia Eubanks. Rather, we believe that SNAP can be guided into the 21st century with the introduction of a few simple digital upgrades.

While mRelief's technology has helped clients in the state of Texas apply for SNAP benefits and submit their required verifications in under an hour, clients still face wait times of between 30 and 45 days for their cases to be processed, resulting from a lack of investment in the current SNAP enrollment system combined with catastrophic power outages that impacted millions of residents and businesses in February. The USDA stipulates that states must provide clients with a case determination within 30 days from their application submission - that is currently far from reality in Texas.

In other states, mRelief's technology can provide clients with the tools to apply for benefits for the first time. Still, clients are stuck relying on paper mail to learn about their required interview, or case re-determination, leaving many clients unable to enroll for SNAP or, kicked off of benefits when they fail to recertify because they weren't properly notified. We recently spoke to a senior who lives alone in a mobile home in a rural area with no mail delivery, no internet access, and spotty cellular reception. He had recently applied for SNAP again after food and gas prices began to make his limited social security budget difficult to maintain. He shared that he had previously received SNAP for a while but he missed the call when they called for a phone interview he missed the call. While he tried to call back, they never answered. He would leave a message asking for them to call at a certain time or to text him ahead of time so he could get to a spot with good reception, but they never did. They went back and forth five times and were never able to complete the interview so the office cut his benefits. A simple change like offering call scheduling could have prevented this outcome.

mRelief surveyed one thousand SNAP participants about the impact of having their SNAP benefits shut off without proper warning on their dignity. 69 percent of respondents reported that not having access to their EBT card had a notable impact on their sense of self-worth and health. When asked how they afforded food in instances where their EBT card was lost, nearly 10% of respondents shared that they barely ate or starved. mRelief has introduced a simple solution in some states - providing recipients with text message notifications and the ability to recertify on a mobile-friendly website. We hope to collect and report on this data over the next year as recertification requirements begin to impact the many millions of households who enrolled in SNAP during the pandemic.

mRelief surveyed 7,786 SNAP recipients in a landmark, five-state case study, "An Inquiry on Dignity," examining what factors impact clients' dignity. Specifically, we wanted to learn how it impacted someone when they lost access to their SNAP EBT card - whether the card was damaged, lost, stolen, or the client has been approved and is waiting for their card in the mail. Among respondents spanning Illinois, Kentucky, Delaware, New York and Florida, 59% had difficulty getting food while waiting for their SNAP card to be replaced. A rapid mobile EBT solution - in which the EBT card can be digitally added to a participant's smartphone wallet upon approval - is one solution to support individuals and families who require immediate assistance.

It is also worth noting that mobile EBT supports efficiency and, if publicly adopted on a wide scale, has great potential to reduce costs. In October 2019, on average, Florida issued 110,000 EBT cards, with 22,000 being new EBT cards and 88,000 being replacement cards. Considering

that postage cost is 55 cents, that is an estimated \$580,800 a year in postage just to mail cards that could be instantly replaced digitally. While this is a solution with the potential for broad impact, we recognize not all SNAP recipients have access to a phone with a mobile wallet. Many SNAP recipients may still require or prefer a plastic card. However, we believe that providing this as an additional option will promote access.

Many states still do not allow third party providers, like mRelief and our local community partners - food banks and social service agencies - to submit electronically signed applications on behalf of clients. That means that clients who complete their application over the phone or online still need to wait to receive the application in the mail, sign it, and send it back - practically erasing the benefits of a technology based solution to SNAP enrollment. mRelief has worked with some states to negotiate for a digital signature in place of a wet signature - such as having a client type their name attesting to signing the application and sending it by text message, or prompting them to enter a unique pin onto their phone's keypad while they're on the phone completing the application - both methods are [allowable signatures according to the FNS](#), but have not been implemented in many states.

Finally, the SNAP program is a powerful economic revitalizer - in times of national financial downturn, SNAP has the potential to stimulate \$1.79 in economic activity for every \$1 in benefits that is provided to a household, according to the [USDA](#). Yet, according to a 2020 Food Policy report, one quarter of SNAP recipients are unable to afford the local cost of the Thrifty Food Plan, which serves as the basis for legislated SNAP benefits. Introducing maximum allotments during the pandemic has increased that amount for most households. By providing information about the increased benefit amount on our SNAP eligibility screener, the rate at which mRelief clients applied for SNAP benefits after finding out they are eligible increased from 6.6 percent to 23 percent.

mRelief's Vision for the Future

In the future mRelief envisions and advocates for an opt-out system for SNAP enrollment. This is one where the authoritative and reliable data sources within government are leveraged to inform SNAP departments of those who are eligible. Empowered with this information, these SNAP agencies can automatically distribute benefits and those who would prefer not to access the entitlement can opt-out. The SNAP ecosystem also has multiple states that are piloting opt-out for certain demographics such as seniors who receive social security income, and the pandemic modelled a method for automatic disbursement of funds to households based on their annual income reported to the IRS.

We may be far from this reality, but changes to policy may help to close the alarming participation gap in the SNAP program today.

1. In the near term, maintaining broad based categorical eligibility is crucial for households to be able to access multiple benefits that can lift them out of poverty.
2. Removing the interview process, which at best, tacks on an additional one to two weeks for a caseworker to review a client's already submitted documents and provide a case

determination, and more often simulates an interrogation into a client's private life and hardships, opening them up to judgement and stripping them of their dignity.

3. Increasing benefit amounts so that all households, of all sizes and in all cities can afford to purchase nutritious, sustainable food.
4. Expanding online purchasing to all states, and all SNAP retailers that have delivery options (rather than the limited options of Walmart and Amazon), while removing associated delivery fees, so households can select retailers nearest to them, with affordable and fresh food, without having to use their benefits for delivery & fees.
5. Introducing a smartphone-accessible mobile EBT solution as an option to facilitate immediate EBT card disbursement and secure mobile-phone payment at EBT-accepted retailers.
6. Using tax returns to automate SNAP approvals for qualifying first-time applicants and reducing the time someone has to spend waiting for someone to review their case, interview them, and make a determination.

We know that these upgrades to SNAP are possible because they were previewed this past year. On June 9th, 2021 the USDA withdrew its proposed rule to limit BBCE. In the [2018 Farm Bill](#) (See Sections 4006 (e), 4010; and 4021 (sec 30) as they relate to technology), a provision was added to advance the implementation of the use of mobile technologies for the purpose of accessing SNAP, in particular mobile EBT. The other recommended changes to the SNAP enrollment process were tested throughout the pandemic, a case study in a more human-centered, tech-enabled safety net that helped millions of families in the US afford to eat.

**TESTIMONY OF AMANDA RENTERIA, CEO OF CODE FOR AMERICA
BEFORE THE COMMITTEE ON RULES, U.S. HOUSE OF REPRESENTATIVES
ROUNDTABLE EXAMINING HOW TECHNOLOGY CAN HELP COMBAT THE HUNGER
CRISIS
JUNE 16, 2021**

Opening

Chairman McGovern, Ranking Member Cole, members of the Committee, and all the staff who have helped put this conversation together, thank you. I appreciate the invitation to be here on behalf of the entire team at Code for America, as well as our broader network. We are honored and inspired to be part of such an important conversation about eradicating hunger and view this mission as an important first step to truly unleashing the full potential of our systems and our society. My remarks today will take a broad view of the work we are doing to eradicate hunger directly through food assistance programs nationally and locally, and holistically by improving programs that increase access to tax benefits for low-income communities and removing barriers through automatic record clearance.

Background

Let me begin with the history of Code for America, a nonprofit organization that partners with government and community organizations to improve people's lives at scale. We started more than a decade ago with the simple notion of helping to create "a government by the people, for the people, in the digital age." In our vision, government services—especially services meant to help low-income populations—should be as good as those we are accustomed to in the private sector. They should be simple, easy to use, and fully accessible; outcomes should be measurably better; better can and should cost less; and perhaps most importantly, we believe that government services can and must treat everyone with respect and dignity.

To do this effectively, we center the people we serve as our starting point. We sit at kitchen tables, in living rooms, and in long lines at government agencies to learn how real people interact with government systems. For ten years, we have been listening, researching, and asking questions about people's basic needs, the challenges they encounter, and the barriers they face when accessing government services. From those deep conversations and further research and analysis, we design technology, processes, and policies with administrators and caseworkers on the front lines to create systems that work. Finally, we analyze the data in real time and measure outcomes.

Our team of data scientists, engineers, researchers, product managers, and client experts have been working with hundreds of governments, sharing what we learn, teaching them human-centered practices, and helping measure and understand data to iterate, and continuously improve services. Our end goal is government adoption because we hope to fully modernize systems in preparation for the challenges ahead due to a more volatile, ever changing environment and the opportunities that await in a more tech-savvy, diverse, and socially conscious generation.

Code for America has always known that government and technology are the two best levers we have to change people’s lives at scale. As the country resets post-pandemic, we believe we have a once in a generation moment to partner with all of you to finally create “a government by the people, for the people in the digital age.” This kind of government has the potential to end hunger and truly unleash the country’s full potential.

Five Case Studies for Technology in Government

#1 Food Assistance in the Digital Age

Our work first started in food assistance programs in California in 2013 when we examined the high SNAP participation gap in California, where less than two-thirds of eligible people were receiving food assistance—landing the state’s enrollment rate in the bottom five nationally. The team found that the online application process was a huge barrier for people seeking help; applicants had to answer 200 questions over 55 unique screens, couldn’t save their progress or go back a page, and many of these questions were redundant to those they would later be asked again in an interview. In partnership with county government, we created a “digital assister” that guided users through each step of the eligibility and enrollment process. Utilizing our principals and practices of digital delivery, we guided the state to a more efficient, empathetic, and equitable system.

	Before CfA ...	After CfA ...
1 Discovering + Applying for benefits	<ul style="list-style-type: none"> • Difficult to find out about benefits (word of mouth, flyers, or complicated websites) • Stigma and myths lead people to believe benefits aren’t for them or could be harmful for them • Clunky website (no “apply” button, “help” link broken) with error-inducing, bureaucratic language • Paperwork must be brought in-person, mailed, or faxed 	<ul style="list-style-type: none"> • Digital outreach (SEO, targeted social media, cross-enrollment opportunities) to find them so they don’t have to find us • Clear information about what SNAP is and why it’s helpful, in commonly understood language • Online, mobile-friendly application, with searchable, shareable content • Simple process, with clear guidance, reminders, and live chat and SMS/email support
2 Eligibility notification + Determination	<ul style="list-style-type: none"> • Weeks (or longer) spent wondering about outcome • Notices filled with legal jargon • Notified by postal mail (may miss the notification altogether) 	<ul style="list-style-type: none"> • Fast-track clients to same-day service whenever possible, and proactively notify about remaining steps needed to complete • Plain language; clear if action is needed • Notified via preferred method of communication like SMS, email
3 Using + Maintaining benefits	<ul style="list-style-type: none"> • Additional onboarding hurdles (e.g., signing & returning paper documents) • Have to submit reports by snail mail every 6 months; may not be aware, forget, or miss the deadline 	<ul style="list-style-type: none"> • Able to get benefits quickly and start using benefits right away • When reporting is necessary, also notified by SMS & email, with clear, simple steps • Pre-filled report to send back by phone

In the first year, we assisted 1,000 SNAP applications in one county and then started to expand across the state, focusing on remote populations in the far north, students along the Central Coast, and families in the Central Valley. Partner counties saw online applications grow four times faster than other counties (44% vs. 11% year over year) and total applications grew 10% year over year while they

decreased in other counties. Based on this success, the California Department of Social Services contracted with Code for America to bring GetCalFresh to the entire state in 2019. As of today, GetCalFresh has now assisted with over 2.5 million applications and 250,000 renewals, helping over 6 million people and generating \$5.9 billion in GDP for the state of California.

#2 Integrated Benefits in the Digital Age

GetCalFresh has demonstrated the power of human-centered design in enrollment and retention within one benefits program. As the work evolved, it became clear that if a person is eligible for one safety net benefit, it's likely they are eligible for another. However, getting those benefits requires filling out multiple applications, with lots of duplicative questions, and sometimes traveling to multiple government offices. This isn't just a frustrating experience for the person, it creates mountains of extra paperwork, backlogs, and redundancies for government.

To better understand the national potential for integration, Code for America developed the first fifty-state view of the safety net across the nation using three of the most valuable indicators of whether a system is accessible and usable:

- **Online:** For many users, mail is frequently unreliable, business hours conflict with their work schedules, and field offices are located far from home. Making applications easily available online is one of the most important first steps in meeting users where they are.
- **Easy to complete:** Whether a benefits application is online does not say much about the application itself. One of the best measures of how an application functions is time to completion, which indicates the amount of friction in the user experience, like registration challenges, complexity, and form design. It is important for websites to be mobile-friendly, as one in four low-income households relies on a smartphone for internet access. Other barriers include requiring login and/or Remote ID Proofing, as an estimated 35-54 million Americans don't have enough credit history to be able to verify their identity online.
- **Combined:** If someone is income-eligible for one program, there is a strong chance they are eligible for others, and there is usually considerable overlap in application questions across programs. Combining and streamlining applications is a win-win: for applicants, it raises awareness of other programs and creates a single, simplified experience; for states, it can reduce demands on limited caseworker time and improve cross-agency coordination.

Since then, we have been working with states to deploy human-centered technology and integration tools. A few exciting examples in this effort are:

- **Pennsylvania:** Our team is working to improve outcomes on SNAP enrollment with data analytics, qualitative research, and service design.
- **Minnesota:** We have partnered with the state to build a single, streamlined online application for nine different benefits programs that can be completed in as little as 12 minutes, which is currently live in 16 counties covering 45% of the state population.
- **Louisiana:** We have recently closed out our initiative to help Louisiana residents enrolled in WIC, SNAP, TANF, and Medicaid maintain their benefits with timely and specific text message reminders. But shortly after our engagement ended, Louisiana used lessons from our integrated benefits pilot to deliver services during COVID-19, including text messaging more than 400,000 SNAP clients for continuity of benefits. The state also used emergency provisions to hire clients to form a new advisory and delivery working group.

In a world where technology has transformed almost every industry and aspect of our lives, it's time to utilize those same integration skills and tools for government systems that impact our lowest income families. States are already on their way, but we are just at the beginning of that transformation.

#3 Tax Benefits in the Digital Age

The ability of technology to help in the fight against hunger and poverty goes beyond the safety net. Early last year we launched a tax benefits product called GetYourRefund that brings the experience of working with the government's free, trusted tax filing service the Volunteer Income Tax Assistance (VITA) program online. As in-person VITA offices closed, we rapidly scaled our service to assist dedicated volunteers to help people file taxes online to claim the Earned Income Tax Credit (EITC) and all other eligible tax benefits, including stimulus payments. By the end of the year, we were able to disburse \$62 million in flexible cash in tax credits and stimulus payments, and our breakdown showed that we were able to reach a set of new filers: 35% of clients identified as Black, 22% identified as Latinx, and 25% had a disability. Technology, when built mindfully and intentionally, can have multiple positive outcomes. Our GetYourRefund work is just one example of using technology to help create a more efficient, accessible, and equitable system. This year we have already exceeded over \$250 million distributed in tax benefits delivered with the assistance of more than 7,000 registered volunteers across the country.

It's also important to note this conversation is happening just 30 days before the first monthly payment is disbursed for the new Advanced Child Tax Credit. We are refining our tax benefits tools and systems for eligible applicants and volunteers to assist in the distribution of the new Advanced Child Tax Credit payments. From our work, we know the guidance must be clear and the portal must be simple, accessible, trustworthy, and mobile-friendly to reach all who are eligible. We also know that, for some new filers, they will need guidance and help to reach completion. We are hopeful for the unique opportunity to implement the new Advanced Child Tax Credit using human-centered technology from the start. In that spirit, we hope to partner with Congressional leaders to ensure that one of the most effective programs to end hunger and eradicate child poverty works for all of our kids, now and into the future.

#4 Justice Systems in the Digital Age

Beyond economic programs, we have also seen the promise of technology transform the process of record clearance. In the US today, one in three people have a criminal record that appears on a routine background check, and nearly half of all children have at least one parent with a criminal record. We've seen how a criminal record can be a life sentence to poverty, creating countless barriers to opportunity in jobs, housing, education, and more. In fact, nearly every state has existing laws that allow people to seal or clear their record after a crime free period. However, tens of millions of Americans who are currently eligible for record clearance under existing laws are held back because those laws require confusing and complex legal processes. Today, only 6.5% of eligible people receive relief—which has significant consequences for the success of re-entry, the well-being of communities, and the cost of recidivism for state governments.

Two years ago, Code for America began working with states across the country to design an end-to-end automatic record clearance service. We are currently helping more than 20 governments to move from the petition-based service model to a model where the government provides automatic expungement relief for all eligible records at the moment the record becomes eligible. The technology capability to conduct careful data matching and sync with multiple agencies simultaneously is the key to automatic expungement and successful efforts to reduce incarceration and improve re-entry.

At Code for America, we often say “justice is about getting implementation right,” and our work on automatic record clearance is a step in that direction and a key part of fighting poverty.

#5 Mutual Aid in the Digital Age

As we strive to strengthen our government programs, we also know volunteer community networks play an important role in addressing hunger at the local level. Our volunteer groups, known as the Brigade Network, include more than 25,000 volunteers distributed across over 80 cities nationwide, committed to Code for America's values and dedicated to helping their local governments be responsive, especially during crises. A few recent examples are as follows:

- In partnership with FEMA's crowdsourcing team, we recruited two dozen volunteers from our Brigade Network to help low-income families find food with the World Central Kitchen Coronavirus Food Relief map.
- Open Twin Cities built a digital map for mutual aid efforts in their community called Twin Cities Mutual Aid Project, which helps Minneapolis-St. Paul residents find and distribute essential supplies like food, clothing, PPE, and more.
- Code for Tulsa partnered with public schools, the nonprofit Hunger Free Oklahoma, and the state's department of human services to build a SNAP screener to help families find out if they are eligible for food assistance.
- Code for San Jose worked with their city government to improve accessibility, mobile responsiveness, and user experience with a tool to help people find free food and groceries during the height of the COVID-19 crisis.
- Members of our Brigade Network were also critical in our efforts to rapidly scale our GetYourRefund service in 2020. Hundreds of Brigade volunteers stepped up to help onboard new VITA partners whose in-person tax clinics had closed—providing them with

comprehensive documentation, helping them train their volunteers with a set of video modules, and more. Some volunteers even became VITA-certified themselves so they could directly help filers with their questions and help them claim tax credits.

Over the years, our Brigades have always stepped in during moments of crisis. In addition to all the work above, they have built resources to help people find food and shelter in the aftermath of natural disasters, learn about tenants rights when they've lost income, connect directly with their local government, and more.

The Lessons of COVID

It was only a handful of months ago when record-breaking numbers of people were out of work, families were lining up in parking lots across the country in need of food and basic necessities, and people were completely unable to access a government office for critical benefits. It was the first time since the Great Depression where the entire nation was, at once, in crisis and in desperate need of a government that worked.

But, for us, the pandemic was a window into what we have been seeing for some time now. There is a monthly cadence of regional emergencies: wildfires out west, hurricanes along the coast, tornados mid-country, and, more recently, cyber attacks on critical infrastructure. When they happen, government systems consistently fail. Government buildings close, food pantries run out of food, schools shut down, and too often systems go completely dark and offline for weeks. We simply can't allow that to happen in America, ever. Our government systems must be prepared for a more volatile future and we must ensure that government works to meet everyone's basic needs.

The view of thousands of cars in food bank parking lots across the country is a failure of our system and a reality of the need in America—specifically the need for food.

My intention is not to focus on the past, but to take all we've learned from the last 18 months and do better. In fact, we did see more than just a glimmer of hope. We had a test-run of what is possible with technology as a true partner for feeding America's children.

When COVID-19 hit, the pandemic forced schools to shut down essentially overnight. This meant over 30 million kids living in poverty would no longer have access to the free school meal program on campuses across America. School districts were scrambling to find students; schools didn't have the most updated records; neither did social services, the county, or the state. And if they did have data, there was no distribution mechanism to get resources, or even a simple message of where to find help for kids who were hungry.

Amidst this uncertainty and confusion, Code for America identified an opportunity for states to innovate and together learn how to better serve their constituents. Within weeks, we partnered with a range of government agencies to piece together data with a human-centered approach. We asked where was the best place to communicate with families online, especially those that were hardest to

reach? Who was the most effective, trusted messenger? What was the right message for specific communities? What was the best way to help families get food for their kids?

Together, we created a human-centered product and process with community organizations, modern data matching techniques, and emergency state and federal policy changes. By centering kids and families, Code for America helped states distribute more than \$600 million in resources through Pandemic EBT (P-EBT) to those reliant on school lunch programs. In those handful of months together, governments saw the possibility of a new, more effective and equitable way to design and deliver benefits to families in need.

Closing Thoughts

Now, as states anticipate an infusion of resources from legislative relief packages like the American Rescue Plan, American Families Plan, and the American Jobs Plan, along with directives to reduce child poverty by 50% and expand food assistance through increased SNAP benefits, WIC eligibility and benefit levels, and P-EBT, we have a chance to set in place a new way of delivering services. A system that utilizes human-centered technology to improve reach, efficiency, and equitable delivery of government benefits to end hunger and alleviate poverty.

For the first time in more than a generation, financial incentives and government directives are aligned for states to rebuild stronger, more effective systems to end hunger and poverty in America. We at Code for America stand ready to partner with governments at all levels to achieve that mission.

Thank you.

ACKNOWLEDGMENTS

The Aspen Institute Benefits21 initiative (Benefits21) would like to thank Justin King and Karolina Ramos for authoring this brief; as well as Karen Andres, Joanna Smith-Ramani, Jordan Thomas, Meghan Poljak, and Elizabeth Vivirito for their assistance, comments, and insights. Early research support for this project was provided by Alysha Alani, Sade Bruce, and Myacah Sampson at New America. Benefits21 would also like to thank Rose Afriyie at mRelief, Rey Faustino at Alluma, Dustin Palmer at Code for America, Zoe Blumenfeld at Nava Public Benefits Corporation, Stacy Taylor at Propel, and Sara Soka and Chad Smith at the Beeck Center for Social Impact and Innovation for their insight and assistance in the development of this project. The Civic Tech Field Guide (<https://civictech.guide/>), is an invaluable public resource for understanding Civic Tech, and was a resource for this project. We thank its contributors and curators for their work. Benefits 21 would also like to thank the Mastercard Center for Inclusive Growth for its support of this work. The findings, interpretations, and conclusions expressed in this brief—as well as any errors—are Aspen FSP’s alone and do not necessarily represent the views of its funder.

ABOUT BENEFITS21

Benefits21 is an initiative developed under the Global Inclusive Growth Partnership (GIGP), a collaboration between the Aspen Institute and the Mastercard Center for Inclusive Growth, and in partnership with the Financial Security Program and the Future of Work Initiative. It is a multi-faceted, multi-stakeholder initiative to create an inclusive, portable, people-centric, and interoperable system of benefits that is grounded in what workers need to be financially secure and the critical role that benefits play in ensuring and protecting that security.

ABOUT THE ASPEN INSTITUTE FINANCIAL SECURITY PROGRAM

The Aspen Institute Financial Security Program’s (Aspen FSP) mission is to illuminate and solve the most critical financial challenges facing American households and to make financial security for all a top national priority. We aim for nothing less than a more inclusive economy with reduced wealth inequality and shared prosperity. We believe that transformational change requires innovation, trust, leadership, and entrepreneurial thinking. Aspen FSP galvanizes a diverse set of leaders across the public, private, and nonprofit sectors to solve the most critical financial challenges. We do this through deep, deliberate private and public dialogues and by elevating evidence-based research and solutions that will strengthen the financial health and security of financially vulnerable Americans. To learn more, visit AspenFSP.org, follow [@AspenFSP](https://twitter.com/AspenFSP) on Twitter, or sign up for our newsletter at <http://bit.ly/fspnewsletter>.

Executive Summary

The COVID-19 pandemic wreaked havoc on the financial security of American households and the economy at large. Approximately one in three households lost income in 2020 due to the impact of the virus. In doing so, the pandemic crisis has illuminated the essential nature of public benefits as a tool for supporting financial security in modern America. It has also shown both our safety net policies and the technology that underpins them to be insufficient to the needs of our nation. As we emerge from the crisis, we are faced with the urgent task of reimagining our public benefits in order to support financial security. This work requires that we simultaneously address both the policies and the systems that deliver core benefits to meet people's needs. **We need a system of benefits that puts people at the center.**

The safety net was fragmented and insufficient prior to COVID-19, and the government's response brought those gaps into stark relief. On the fly, Congress rapidly increased the value of benefits for nutrition assistance to help families with suddenly reduced incomes. Red tape that places burdens on households trying to access and maintain benefits was cut. New programs were created to patch over gaps in existing systems, including direct cash infusions and substantial expansions and extensions of Unemployment Insurance (UI). **We need a system that is portable and moves with people from job-to-job and from place-to-place.**

The massive, temporary expansion of the safety net has had enormous impact, even as cracks are evident. One in four workers nationally has claimed UI in the first year of the pandemic, even as millions spent weeks and months in bureaucratic purgatory. Three rounds of Economic Impact Payments (EIPs) ultimately created a major boost to household balance sheets, combining with expanded UI payments to reduce official poverty measures. However, millions faced delayed payments, or missed out on financial assistance altogether because the disbursement mechanisms were not inclusive enough. **We need a system of benefits that is inclusive of all individuals and all types of work arrangements.**

Technology plays a central role in delivering the safety net, and in defining what is possible in public benefits policy. Outdated and insufficient technology for supporting benefits delivery has been a longstanding issue that was deeply exacerbated by the pandemic—as federal and state government systems struggled to keep up with exploding demand and to implement new policies and programs. Inflexible benefits technology has even dictated to policymakers what is possible in their pandemic response, ruling out preferred policy options. These struggles have revealed what has always been true—that policy is impotent without a viable infrastructure and delivery component. **We need a system of benefits that is tech-enabled and interoperable across funding sources and benefit types.**

As the crisis subsides, the task of defining and delivering the safety net for the remainder of the 21st Century is urgently upon us. The temporary patches applied to the safety net have helped mitigate the impact of the pandemic, but also highlight ways in which our public benefits systems fall short in promoting financial security for workers and creating a safety net to protect against economic pitfalls. We are faced with the urgent task of building a coherent system of public and private benefits that supports financial security through policies and delivery mechanisms that are people-centric, portable, inclusive, and interoperable.

Innovators working to build the Tech-Enabled Safety Net (TESN) are showing us what's possible. Multiple efforts are underway across the nation to modernize public benefits in ways that improve access to, experience in, and value of the safety net—both inside and outside of government. In this paper, we analyze this landscape of innovators working and find a common approach—one that pairs technological modernization with new tools and methods of centering the needs of beneficiaries. TESH organizations can distill and leverage a unique and powerful type of evidence—the voice, needs, and expertise of the people who use the safety net most and know its pluses and

pitfalls best. This people-centered, tech-enabled approach paves the way for a comprehensive overhaul of existing public benefits that is designed explicitly to support the vital needs of people working to achieve financial security. Through this lens we can envision a modernized, integrated system that:

- Designs public benefits to boost, not minimize, access and uptake, including through data matching and automatic enrollment;
- Recognizes that workers today rely on public benefits, and designs them accordingly—with limited friction between public benefits and key elements of financial security;
- Supports building inclusive financial systems to smoothly and safely deliver resources, including money, to the most vulnerable people; and
- Encourages and helps workers save for shocks as a complement to benefits, social insurance, and other structural supports.

This paper includes insights for action for:

1. Federal and state policymakers;
2. Public benefits program administrators at the state, county, and municipal level;
3. Philanthropy and investors interested in promoting household financial security; and
4. Social Service organizations and businesses helping people seek access to and receive public benefits.

The State of the Safety Net

The State of the Safety Net

The COVID-19 pandemic wreaked havoc on the financial security of American households and the economy they bolster. According to one national survey, 32.5 percent of households reported losing income in 2020 due to the pandemic.¹ Income loss was greater in low- and moderate-income households (LMI), where 39.4 percent reported experiencing income loss directly related to the pandemic, compared with 26.6 percent of non-LMI households. The pandemic illuminated the essential nature of public benefits as tools for protecting families from financial insecurity and collapse, and cast a bright light on the insufficiency of the safety net as it existed prior to COVID. One year into the pandemic, it is clear to even casual observers that our safety net policies and the technology that underpins them are insufficient to meet our nation's needs. As we emerge from the crisis, we must reform our public benefits system to ensure everyone has the foundational supports needed to achieve positive cash flow and live financially secure, economically dignified lives. A growing field of actors working inside and outside of government has begun the work of modernizing public benefits systems, showing the possibilities of a people-centered, tech-enabled safety net.

Our current safety net offers a patchwork of supports across household needs—including health care, food and nutrition, housing, and income. Yet programs vary in scope, eligibility, duration, and take-up rates. The result is a system that is fragmented, difficult to access, insufficient for households, in conflict with itself and—too often—in conflict with the goal of promoting household financial security.

The pandemic illuminated the essential nature of public benefits as tools for protecting families from financial insecurity and collapse, and cast a bright light on the insufficiency of the safety net as it existed prior to COVID.

Fragmentation and inaccessibility are defining features of the safety net. Participation rates in major programs vary extremely and typically fall far short of full participation:

- Just **25 percent of eligible families** participated in the Temporary Assistance for Needy Families (TANF, the cash assistance program commonly referred to as “welfare”) program in 2016.²
- **51 percent of eligible people** participated in WIC (the Special Supplemental Nutrition Program for Women, Infants, and Children) in 2017, though the rate for infants is substantially higher.³
- **78 percent of eligible people** receive the Earned Income Tax Credit.⁴
- **84 percent of all eligible people** participate in SNAP, the Supplemental Nutrition Assistance Program (the program formerly known as food stamps) but state level participation rates vary from 52 percent to 100 percent.⁵

Although 56 percent of low-income families with children receive multiple public benefits, the majority of those households receive only food assistance and public health insurance alone, and fewer than 20 percent receive other benefits intended for them, such as housing or energy assistance.⁶

Benefit application and enrollment processes differ by state and by program, typically featuring separate eligibility standards and requiring separate applications, yielding unequal user experiences across the country. Though 70 percent of state benefit applications for core safety net programs are available online, coverage varies, and integration is inconsistent.⁷ While all 50 states offer online Medicaid applications, only seven states offer an online application for WIC.⁸ Just 26 states combine their online Medicaid application with an application for SNAP and TANF.⁹ Enrollment time burden also varies significantly across states—even in those with consolidated forms. Of states with combined online applications for SNAP, Medicaid, and TANF, the form completion time ranges from 25 minutes in Nevada to nearly two hours in Connecticut

and Minnesota.¹⁰ Some groups have historically been excluded from some benefits entirely, such as independent contractors and gig workers who have traditionally been ineligible for Unemployment Insurance (UI). People's options for achieving financial security are complicated and limited by safety net features, including asset limits and benefit cliffs.¹¹

//

Of states with combined online applications for SNAP, Medicaid, and TANF, the form completion time ranges from 25 minutes in Nevada to nearly two hours in Connecticut and Minnesota.

As the pandemic unfolded, the government moved swiftly to patch holes in urgently needed benefits. Officials increased the value of food assistance benefits by 40 percent for families with suddenly reduced incomes, and devised an entirely new program, Pandemic-EBT (P-EBT), to supplement food costs for children not receiving meals at school.¹² State agencies cut red tape for households to access and maintain benefits, waiving in-person requirements.¹³ Congress authorized new programs to fill coverage gaps, including three rounds of direct cash infusions through Economic Impact Payments (EIPs), and substantial expansions and extensions of UI. Congress approved an additional \$600 per week UI benefit payment in the initial months of the crisis and created additional expansions of UI, including the specialized Pandemic Unemployment Assistance (PUA) program, which provided up to 39 weeks of unemployment pay for independent contractors and others typically ineligible for UI.¹⁴ The American Rescue Plan created a historic monthly cash infusion for families with children, expanding the Child Tax Credit (CTC) to \$3,600 for children under age 6 and \$3,000 for children under age 18.¹⁵ The CTC expansion is currently authorized for just one year.

This massive, temporary safety net expansion has enormously impacted household financial security. One in four workers nationally has claimed UI in the first year of the pandemic, even as millions spent weeks and months in bureaucratic purgatory, with just 11 states paying benefits to a majority of claimants within two to three weeks of approval.¹⁶ EIPs and expanded UI payments boosted household balance sheets and helped reduce official poverty measures. Absent these expansions, it is estimated that 12 million more people would have been thrust below the poverty line.¹⁷ The expansion of the CTC and other measures is projected to reduce child poverty by half.¹⁸ Payments are also shaping household's ability to invest in their futures and weather potential economic shocks, increasing personal savings rates from 7.6 percent in January 2020 to 19.8 percent one year later.¹⁹

Yet consequential cracks in the system remain. Millions of people, including Social Security recipients, have faced delayed stimulus payments, while some, including college students and adult dependents, were excluded from financial assistance.^{20,21} The virus and its economic fallout have especially devastated Black and Latino communities. One year out from the onset of the pandemic, Black and Latino households were more than twice as likely than White households to report experiencing food insecurity, and renters of color, including 25 percent, 21 percent, and 20 percent of Black, Latino, and Asian renters respectively, are most likely to report difficulties meeting monthly rental payments.²² And while UI systems crumbled under the weight of new applicants in need of supplemental support during the pandemic, their performance prior to the crisis reflects a tool poorly equipped to meet need. In 2019, just 28 percent of unemployed people across the country received UI benefits.²³

Technology's Critical Role

Technology has been central to defining what is possible in public benefits policy. While the pandemic reinforced the power of anti-poverty tools, it also amplified stark shortcomings in both our safety net policies and the technology that underpins them—longstanding vulnerabilities evident before and exacerbated by the pandemic, either barricading or opening the door to financial support. In Florida, the state UI system had been technologically modernized in the years leading up to the pandemic, but had been designed to not serve the needs of applicants. “I think the goal was for whoever designed, it was, ‘Let’s put as many kind of pointless roadblocks along the way, so people just say, oh, the hell with it, I’m not going to do that,’” Florida Governor Ron DeSantis said last year.²⁴ In April 2020, just 6 percent of applicants had received a payment, and the online application portal was so non-functional that for a time the state encouraged people to download paper applications, fill them out, and mail them in.²⁵

In California, the state’s unemployment system was beset with technical challenges. In September 2020 the state’s backlog reached 1.6 million applications.²⁶ These scenes repeated themselves across the nation—six months into the pandemic, just half of all UI applicants had received a payment, with states scrambling to clear claim backlogs and people left scrambling to meet their needs.²⁷ The writing was on the wall for these systems well before the 2020 application surge. In 2010, one state workforce collaborative noted that, despite billions of dollars in state consortium investments, state IT systems were not equipped to efficiently meet growing user demand.²⁸

While the pandemic reinforced the power of anti-poverty tools, it also amplified stark shortcomings in both our safety net policies and the technology that underpins them.

These technological limitations don’t just affect users, they limit policymakers’ policy options. When Congress expanded UI payments in 2020, legislators wanted to cap benefits to 100% of the recipient’s prior income. But aging digital infrastructure could not handle the needed calculations for individual applicants, driving Congress to adopt a universal flat \$600 per week supplement instead.²⁹ Outdated systems also delay payments even after Congressional policy adoption. In February 2021, one month after the adoption of federal UI expansions, roughly one quarter of states had not resumed paying out aid as system programming challenges hindered swift delivery—shortchanging recipients \$17.6 billion in benefits over four weeks.³⁰

KEY SAFETY NET PROGRAMS

SAFETY NET PROGRAM	DESCRIPTION
Supplemental Nutrition Assistance Program (SNAP)	Provides food assistance benefits to eligible low-income individuals and families via an Electronic Benefits Transfer card. This card can be used like a debit card to buy eligible food at grocery stores and other eligible vendors (formerly known as “Food Stamps”).
Medicaid	Provides free or low-cost health benefits to low-income adults, children, seniors, and people with disabilities.
Temporary Assistance for Needy Families (TANF)	Provides cash for a limited time to low-income families. Families may also receive non-cash benefits such as job training.
Women, Infants, and Children (WIC - Special Supplemental Nutrition Program)	Provides federal grants to states for supplemental foods, health care referrals, and nutrition education for low-income pregnant women and new mothers, and to infants and children up to age 5.
Medicare	Provides federal health insurance coverage for elderly people and young people with disabilities.
Children’s Health Insurance Program & State Children’s Health Insurance Program (CHIP & SCHIP)	A partnership between the federal and state governments that provides low-cost health coverage to children in families that earn too much money to qualify for Medicaid.
Tax Credits	Tax credits, including the Child Tax Credit and Earned Income Tax Credit, reduce tax liability for low-income taxpayers and households with children, and when made refundable can provide increased cash resources.
Low-Income Home Energy Assistance Program (LIHEAP)	Assists low-income households with payments for home heating and cooling bills, and offers low-cost home improvements to reduce energy costs.
Child Care	Provides subsidized assistance to low-income families who need child care due to work or education commitments.
Supplemental Security Income and Social Security Disability Insurance (SSI & SSDI)	SSI provides cash benefits to low-income seniors and low-income adults and children with disabilities. SSDI provides cash benefits to people with disabilities and a demonstrated work history.
Unemployment Insurance (UI)	Provides benefits to eligible unemployed workers. Payment amounts and duration vary by state.
Housing Choice Voucher	Assists low-income households in finding affordable private or government-owned rental housing.
Summer Food Service Program	Provides meals at no cost to children and teenagers when school is not in session.
Lifeline	Provides discounted monthly telephone and broadband internet service, including smartphones, to low-income households.

The Path to a Better Safety Net

To fully assume the task of reforming our social safety net, we must simultaneously refine both public benefits policy and the technology that aids its delivery. Temporary patches to the safety net have mitigated the pandemic's impact while illuminating insufficiencies and making clear that policy is impotent without viable delivery components. As we emerge from the crisis and confront pitfalls in our social policy, there is opportunity to reimagine a social safety net rooted in policies and delivery mechanisms that are:

Inclusive, protecting everyone, irrespective of their work arrangement and employment status;

People-centric, ensuring the voice, life, and experience of impacted people are critical and central to the design and delivery of benefits;

Portable, ensuring continued access and funding as workers experience job loss or transition, enter new work arrangements, and piece together different types of work; and

Interoperable, using technology to effectively integrate benefit systems and platforms to ensure seamless access.³¹

For more information on building a coherent system of public and private benefits that supports financial security, read **"A Modernized System of Benefits is the foundation for an Inclusive Economy."** To learn more about Benefits21, visit aspeninstitute.org/programs/benefits21.

Building the Tech-Enabled Safety Net

Recognizing the shortcomings of the existing safety net, a growing field of organizations has begun building tools that apply modern digital technology to the safety net. These organizations are building the beginnings of what we have called the tech-enabled safety net (TESN).³² TESN organizations work in a variety of ways—sometimes directly in partnership with government agencies, sometimes creating third-party tools that enhance the value of a safety net program, or at other times creating workarounds to challenging systems. This growing movement is emerging from overlapping fields (Civic Tech, Public Interest Tech, and FinTech) all focused on applying the tools of digital modernization to public life. As data science, design methods, digital tools, and technology for both organizations and individuals have matured, powerful solutions are emerging that are improving access to, experience in, and value of the safety net.

DIGITAL MODERNIZATION IN PUBLIC LIFE

CIVIC TECH: "A loosely integrated movement that brings the strengths of the private-sector tech world to public entities with the aim of making government more responsive, efficient, modern, and more just." Cyd Harrell, A Civic Technologist's Practice Guide³³

PUBLIC INTEREST TECH: "Public Interest Technology adopts best practices in human-centered design, product development, process re-engineering, and data science to...deliver better outcomes to the public." Public Interest Technology Program, New America³⁴

FINTECH: Any technology that is used to augment, streamline, digitize, or disrupt traditional financial services.³⁵

TECH-ENABLED SAFETY NET: Organizations across civic tech, public interest tech, and fintech applying the tools of digital modernization to improve the experience and value of public benefits and elevate the experience and insight of people using the safety net for systems reform.

TESN organizations are:

- 1 Developing models that increase the integration, efficiency, scale, and reach of public benefits.

Alluma, a nonprofit organization based in Oakland, California, builds technological solutions that allow government agencies and community-based organizations to screen people for eligibility and assist them in enrolling in multiple safety net programs, such as Medicaid, SNAP, TANF, and WIC through one interface. Alluma's solutions are used statewide in Arizona, and by more than 45 counties and community-based organizations (CBOs) in three other states.

- 2 Creating better user experience that promotes access.

Benefit Kitchen, a for-profit company based in Brooklyn, New York, makes a benefit screener that allows people in seven states to answer questions and discover their eligibility for as many as 14 federal programs. The company also builds an application programming interface (API) that can be used by organizational clients to screen people for eligibility for up to 18 safety net programs in all 50 states.

- 3 Developing and applying innovative tools and methods of centering people who use the safety net, people quite often marginalized by policymakers and public systems.

Deploying methods rooted in Human-Centered Design (HCD), including user research, feedback loops, and iterative development, TESN organizations bring a consumer insights perspective to the safety net. Actors in this area are able to distill and leverage a unique and powerful type of evidence—the voice, needs, and expertise of the people who use the safety net most and know it best.

mRelief, a nonprofit organization based in Chicago, Illinois, offers people screening and enrollment support for SNAP in all 50 states by text messaging 10 questions to the person trying to find nutrition assistance. According to mRelief, the questions take less than three minutes to answer. mRelief's co-founder, Rose

The great promise offered by the TESN approach is in simultaneously modernizing public benefits and the technology necessary to deliver it, with both efforts rooted in centering people, understanding their needs, and building systems that work for them.

Afryie, says that interviews with potential users convinced her that web-based applications were inaccessible for too many people. Subsidized Lifeline phone plans have data caps that can render the internet often inaccessible. However, text messages are more commonly unlimited, creating a consistent connection between client and service.³⁶ The organization texts follow-up surveys to users to ensure they received the support for which they are eligible and to inform mRelief products and practices.³⁷

Code for America, a nonprofit organization based in San Francisco, California, has created a website, GetCalFresh.org, that has evolved from a pilot project to become the official statewide portal for online SNAP applications in California. The website features a live chat feature that allows applicants to have their questions answered in real time, and provides feedback that Code for America uses to improve its product and distill lessons for states and others providing access to SNAP.³⁸ At a panel event hosted by Aspen FSP, Lou Moore, Chief Technology Officer of Code for America, called this feature, "probably the most important [feedback] channel" for the organization's work providing access to SNAP, and the one most likely to provide value to policymakers.³⁹

Propel, a technology company based in Brooklyn, New York, offers a smartphone application (app) called Fresh EBT that allows people who receive public benefits like SNAP via Electronic Benefit Transfer card (EBT) to check the remaining balance on their account on their smartphone. Propel expanded its user research during the pandemic, deploying user surveys. The surveys asked questions about household financial security, income changes

and job loss, and access to public benefits. Survey responses provide a rare look at financial hardship and struggle derived directly from people using public benefits.⁴⁰ The company has also used its app to encourage users to engage in public advocacy, [facilitating connections](#) to elected officials on important policy issues.⁴¹

TESN organizations are creating a valuable mix of quantitative and qualitative data that emerges directly from the experience of people using (and attempting to use) the safety net. Policymakers have an extraordinary opportunity to embrace this information as a core component of evidence-based policymaking for program improvement. Directly engaging people who use public benefits about their experiences and needs also opens the door to new forms of participatory policymaking, an approach that centers policy design, implementation, and evaluation on the experiences of impacted individuals. It offers not just the potential for program improvement, but a way to promote inclusion and build the power of traditionally marginalized people.⁴²

Modernizing technology to deliver public benefits can promote efficiency, reach, and scale, with reduced hardship for people in need of assistance and reduced strain on the agencies charged with serving them. However, if technological modernization is not people-centric—anchored in a conception of better service to the end user—substantial harms may be inflicted. This is the King Midas problem, new technology can be shiny as gold, but gold doesn't meet essential needs. If modernization is not paired with policy reforms, it will fail to solve the challenges that inhibit financial security, such as insufficiency, asset limits, and benefit cliffs. This is the Princess and the Pea problem, comfortable mattresses may make parts of the experience easier to bear, but if the underlying problem is the policy, all the technology in the world won't solve it. People currently face a world where benefits too often present them not with opportunities to increase their financial security, but instead with difficult choices, red tape, and no-win situations.

The great promise offered by the TESH approach is in simultaneously modernizing public benefits and the technology necessary to deliver it,

with both efforts rooted in centering people, understanding their needs, and building systems that work for them.⁴³ This approach creates real benefits for governments in the form of greater efficiency and resiliency, along with the economic benefits that accompany having more people experiencing financial security. It offers people the potential of seamless access to services that help support their financial security, processes that meet them where they are and treat them with dignity, and the respect and trust that comes from being listened to.

The Tech-Enabled Safety Net Field Scan

Our research has identified a field of organizations using data science, design methods, digital tools, and technology, and reimagining the social safety net to be more people-centered, tech-enabled, accessible, and effective. In this field scan we identify key organizations and projects, offer a framework for understanding the work that has been done, and create a resource for policymakers, human services administrators, philanthropy, investors, community-based organizations, and businesses—anyone with an interest in seeing the safety net deployed to greater effect.ⁱ

DIGGING DEEPER

A growing community of organizations is exploring the intersection of the safety net and modern technological approaches, and producing research and guidance to advance the notion of people-centered, tech-enabled reform.

- **“Technology, Data, and Design-Enabled Approaches for a More Responsive, Effective Social Safety Net.”**⁴⁴ This “living report” from the Beek Center for Social Impact and Innovation engages organizations working at the intersection of technology and the safety net and distills recommendations such as:
 - » Invest in government technology made of modular, linked software components rather than monolithic systems
 - » Value user research throughout the work
 - » Use text and voice enrollment and recertification options

- **“Modernizing Access to the Safety Net: Lessons from The Rockefeller Foundation’s Grantees during the Covid-19 Pandemic.”**⁴⁵ This report distills lessons from Rockefeller Foundation grantees including Code for America, Benefits Data Trust, and U.S. Digital Response. Recommendations include:
 - » Human-centered design should be standard
 - » Coordinating data use offers big returns
 - » National strategies are needed

A Growing Ecosystem

Increasingly, government is deploying the same methods of data science, human-centered design methods, digital tools, and technology to try to improve the way government serves people and conducts its work. Among others, two flagship government initiatives showcase this approach at the federal level: 18F, housed within the General Services Administration (GSA), and the US Digital Service (USDS) within the Executive Office of the President (EOP). Both link technologists, data scientists, and design specialists to government program delivery, centering modernized, user-driven tools to improve how people and government interact. These efforts, both founded in 2014, signal a shift in federal approaches to design and technology, adding intentionality and commitment to human-centered design in public service. These initiatives are important, as is the critical work done by caseworkers and staff at state and federal agencies that deliver the safety net and who have borne extraordinary burdens during the pandemic. For the purposes of this exploration, we are focused on non-governmental organizations alone.

ⁱ Our complete research findings are available in a separate document. We are certain that this scan is incomplete, that more organizations are engaged in this work and more projects are happening than have been captured here. We are excited to correct errors and learn about organizations and projects that we have missed. Please contact Justin King, justin.king@aspeninstitute.org if you have an addition, question, correction, or critique.

Types of TESN Tools

Our research has identified 21 distinct tools impacting the safety net experience. The TESN projects we've identified differ in scope, scale, and geography. They also vary in which safety net programs they impact, and which points within the benefits lifecycle they occur. We identify five distinct types of tools being built through TESN initiatives. These tools apply technology to existing safety net challenges like inaccessibility and fragmentation, and they improve the experience of people applying for and receiving public benefits as well as government's ability to manage the processes associated with running benefits programs.

Connectors provide information on public (and in some cases, private) benefits availability in a geographic area, and can also serve as a database of social assistance information, such as application portals. **Aunt Bertha**, a public benefit corporation based in Austin, Texas, offers a website that allows users to search any zip code in the US and find information about public and private assistance to meet a wide range of needs, including food and housing assistance.

Screeners allow users to quickly determine or estimate eligibility for public assistance programs. Screeners may be client facing—empowering people to determine whether or not they should apply for a public benefit—or be used by governments, non-profits, and businesses. **Single Stop**, a nonprofit organization based in New York City screens clients for multiple benefits at locations in 10 states. In response to COVID-19, the organization launched its first publicly facing eligibility tool, "**Single Stop Connects**," a website that allows individuals in New York and New Jersey to self-screen for benefits eligibility in five languages.

Enrollers support individuals through the process of applying for and receiving benefits. TESN enrollers may be a state's designated partner for receiving benefit applications, as is the case with **Code for America's Get CalFresh** project—which is the official portal for online SNAP applications in California—or they may operate independently, submitting information on behalf of clients and navigating elements of the application process. Enrollers can also help individuals receiving public benefits maintain their enrollment by supporting them through the re-certification process, such as in LA'Message, a text-based notification project launched by Code for America in Louisiana.

Advisors provide information and tools to help people better manage their resources by providing additional information and tools separate from the direct context of public benefits programs. An advisory tool may provide financial education, budgeting resources, or information on improving nutrition. **Benefit Kitchen's** screener determines likely eligibility for public benefits and offers a budgeting tool to help people better manage their expenses. **Propel's Fresh EBT** provides access to job listings as an additional resource to help workers find better employment situations.

Benefit Managers improve user interactions with their benefits through technology platforms. For instance, the **FreshEBT** app allows users to check their SNAP EBT balance in real time, eliminating the need for recipients to call their benefits agency and navigate a telephone menu to access account information.

Our research shows that Enrollers (17) are the most common tool type, reinforcing the notion that access is a primary challenge in the safety net and a large market exists for tools that improve the often fragmented and difficult process of accessing benefits. Screeners (11) are the second most common tool type, empowering users with greater knowledge about which programs they should apply for. Connectors (3), Advisors (3), and Benefit Managers (2) are less common, but display the potential for technology to offer innovative tools beyond the scope of eligibility and access.

Intended Users

TESN tools target five primary intended users, with some tools engaging multiple users and audiences.

Individuals

Individual users may utilize TESN tools to find information about social services, determine eligibility for public assistance, or enroll for benefits. These users are not yet embedded in the social safety net, but can use tools, such as One Degree’s search tool, to identify programs that can provide needed assistance. One Degree’s tool also offers a combined application for multiple public benefits in California, and provides a referral link to resources not covered by the combined application.

Benefit Recipients

Once individuals have enrolled in a public assistance program, they can use tools specifically designed for benefit recipients. These tools connect people to information and services about their benefits in real time. Code for America’s pilot projects in the Integrated Benefits Initiative offer support in maintaining benefit receipt to people receiving public benefits in Louisiana and Colorado.

Governments

As administrators of public assistance and social programs, federal, state, and local governments are crucial end users of TESN tools. As part of the Integrated Benefits Initiative, Nava Public Benefits Corporation worked with the state of Vermont to provide alternatives to physical, mailed-in documents verification, building a digital tool for document uploads that allowed state service providers to more efficiently process client information.

Social Service Organizations

Some TESN tools are designed for social service organizations to assist individuals navigating the social safety net. While Benefit Kitchen’s web-based app allows individuals to screen themselves for eligibility, the company also offers an API that can be embedded in the computer systems of front-line service providers that allows them to screen clients for benefits eligibility.

Businesses

Similar to social service organizations, businesses can support the financial security of their clients by screening them for benefits eligibility. Aunt Bertha’s search tool is available as an enterprise platform for businesses, including health care providers, to screen customers and make direct referrals to service providers.

Our research shows tools targeted to individuals (16), benefit recipients (15), and governments to be the most common types of TESN tools, with tools for social service organizations (8) and businesses (3) lagging in overall frequency. The development of tools for a broad audience reflects the many intersection points for people and public benefits in the United States, and a tradition of benefits provision that relies on non-governmental actors.

TESN Developers

We identify 12 organizations leading the development of tools and processes and advancing the notion of a social safety net that is more people-centered and tech-enabled.

Alluma*

www.alluma.org

Tagline: “Connecting People to Help Through Policy & Technology”

Signature Project: [One-X-Connection](#), “a cloud-based solution for determining eligibility and for enrolling individuals and families in a wide array of health and social services.”

Aunt Bertha

www.auntbertha.com

Tagline: “A Social Care Network That Connects People and Programs”

Signature Project: [Findhelp.org](#), a free search tool that has connected more than 5.8 million people to free and reduced-cost programs and social services in their area.

Benefit Kitchen

www.benefitkitchen.com

Tagline: “Data Analytics for a Better Life”

Signature Project: [Benefit Screener](#), which screens user eligibility across 18 federal, state, and local benefits in eight states.

Benefits Data Trust

www.bdtrust.org

Tagline: “Transforming Benefits Access”

Signature Project: The use of data-matching to identify and conduct outreach to eligible but unenrolled applicants and provide phone-based benefits enrollment assistance in six states.

Civilla

www.civilla.org

Tagline: “A non-profit design studio dedicated to changing the way public-serving institutions work”

Signature Project: [Project Re:Form](#), which streamlined applications for the five largest assistance programs for 2.5 million Michigan residents into one form—producing an application that is 80 percent shorter and processed in nearly half the time of the original.

Code for America

www.codeforamerica.org

Tagline: “What if all government services were this good?”

Signature Project: [GetCalFresh](#), a web-based “digital assister” for SNAP enrollment. GetCalFresh has reduced the average application time to 10 minutes and has become the official online application for California’s SNAP program.

mRelief

www.mrelief.com

Tagline: “To restore dignity by transforming access to social services”

Signature Project: [mRelief Screener](#), an easy-to-use platform on web, text messaging, and voice for families to find out if they qualify for and enroll in food stamps in all 50 states.

Nava

www.navapbc.com

Tagline: “We believe that government services can be simple, effective, and accessible to all”

Signature Project: The [Vermont Integrated Benefits Initiative](#), which integrates enrollment and eligibility processes for all of the state’s health care and financial benefit programs, including Medicaid and SNAP.

One Degree*

www.1degree.org

Tagline: “Find free, life-improving resources”

Signature Project: The One Degree [search tool](#), which connects people to free services across different categories of need, including housing, food, health, and education, in cities across five states—California, Florida, Michigan, New Mexico, and New York.

Propel

www.joinpropel.com

Tagline: “We’re making America’s safety net more user-friendly”

Signature Project: [FreshEBT](#), a mobile app with over 10 million downloads that allows SNAP, WIC, and TANF recipients to check their EBT balance and transaction history in real time.

Single Stop

www.singlestop.org

Tagline: “A one-stop off-ramp out of poverty”

Signature Project: [Single Stop Connects](#), a benefits screener and referral database to connect people to community service providers and case management in New York and New Jersey.

U.S. Digital Response

www.usdigitalresponse.org

Tagline: “Support for Crisis Response”

Signature Project: Supporting [unemployment insurance systems in Kansas](#), helping the state Department of Labor manage a 5,000 percent increase in traffic to its UI application website and implement Pandemic Unemployment Assistance payments.

*Alluma and One Degree announced a merger in October 2020.⁴⁶

Safety Net Program Involvement

Our snapshot of the field finds 14 safety net programs touched by TESH tools. SNAP is the program most commonly involved (18), with Medicaid (15), TANF (15), and WIC (11) also commonly featured. The frequency of SNAP and Medicaid in particular reflects the prominence and importance of these programs in the safety net landscape and builds on the existing state infrastructure where these programs are more frequently linked than others. Our observations also reflect a growing field, reacting to the extraordinary disruption of the COVID-19 pandemic. The first phase of our scan, conducted in early 2020, failed to detect any TESH organizations building tools to support UI. Since that time, Benefits Data Trust expanded screening for clients statewide in Pennsylvania for UI eligibility, and as appropriate connecting them to official application points. U.S. Digital Response (USDR) as an organization was formed as a response to the pandemic and the need to apply modern technology and associated approaches to improving the function of government, including the safety net. After its creation, the organization began working on UI systems in several states, including Kansas.⁴⁷

“Many Welcoming Doors”: Widening Access to the Social Safety Net

TESN organizations use a variety of tools to enhance, not replace, traditional public benefits and social service delivery. Via mobile-friendly websites, apps, APIs, SMS-based services, telephonic hotlines, and in-person office visits—regardless of how people seek out public assistance—their experience should be equally accessible, functional, and dignified. These processes should also be welcoming and efficient regardless of where individuals are in their journey with the safety net, from seeking information to enrolling and recertifying for benefits.

Adapted from Code for America, “Blueprint for a Human-Centered Safety Net”

— MANY SAFETY NET PROGRAMS HAVE TESH TOOLS, BUT REACH IS UNEVEN —

Gaps in TESH tool coverage reflect a nascent field and the reality that some public benefits are not ready partners for external efforts. SSI and SSDI are comparatively less represented among TESH tools, and more commonly appear as Connectors and Screeners--tools built to advance awareness of public benefits and their access points, but that do not provide assistance in enrolling or increasing the utility of the benefit. Except in rare circumstances,

SSI applications cannot be completed online, and must be filled out in-person with an agency representative. This internal policy has not been adjusted even as COVID-19 has shuttered Social Security offices, leading to a 30 percent reduction in monthly new benefit awards.⁴⁸ Investing in technology that supports benefits access and user engagement remains an area with substantial growth potential.

TECH-ENABLED SAFETY NET TOOLS HAVE UNEVEN REACH ACROSS PROGRAMS

PROGRAM (TOTAL # OF TOOLS)	CONNECTORS (3)	SCREENERS (11)	ENROLLERS (17)	ADVISORS (3)	BENEFIT MANAGERS (2)
SNAP (18)	2	9	15	3	2
Medicaid (15)	2	8	12	2	1
TANF (15)	2	8	12	2	2
WIC (11)	2	6	9	3	2
Medicare (9)	2	8	8	2	1
CHIP (8)	2	5	6	2	1
Tax Credits (7)	3	6	5	2	1
LIHEAP (7)	2	5	5	2	1
Child Care (7)	2	4	6	2	1
SSI & SSDI (5)	3	2	0	1	1
Unemployment Insurance (5)	2	3	1	1	1
Housing Choice Vouchers (5)	2	4	4	1	1
Summer Food Service Program (7)	2	6	5	2	1
Lifeline (4)	2	3	3	2	1

Generating Insights for Systems Reform

One defining characteristic of TESH organizations is a desire and willingness to apply lessons learned through practice, informed by quantitative and qualitative data derived through service provision, user research, feedback, success, and failure. We see a field broadly working to learn and offer those lessons to others in an effort to inform policy design and improve access to and delivery of public benefits. Below is a snapshot of TESH organizations and selected efforts to share information and insight to advance systems reform.

Alluma

<https://www.alluma.org/insights/whitepapers>

In 2017, Alluma partnered with the Center on Budget and Policy Priorities to produce a [paper and interactive online tool](#) exploring ways government agencies can leverage data-sharing to enroll low-income people in additional programs for which they qualify and boost overall enrollment rates. This research considers cross-enrollment best practices, data-sharing capacity, and general practices to streamline enrollment while protecting beneficiary privacy.

Alluma has also done research on applying technology to [improving customer service in health and human services](#) once eligibility enrollment has been largely integrated. Research points to ways to improve client-facing processes, such as submitting forms or requesting information about their case, and methods of using user information to improve performance and outcomes.

Benefit Kitchen

www.benefitkitchen.com

Benefit Kitchen launched BING, the Basic-Income Needs Generator, with the United Way of California in 2015. BING allows users to generate a basic needs budget for families of varying size and shape in every county in California. The project is intended to raise awareness about the tradeoffs and hardships faced by low-income families in the state.

Benefits Data Trust

<https://bdtrust.org/system-change/>

Benefits Data Trust partnered with the Center on Budget and Policy Priorities to conduct research on using data matching and text outreach to [increase WIC enrollment](#) for families with young children. The partnership launched pilots in Colorado, Massachusetts, Montana, and Virginia, using SNAP and Medicaid data to measure how many WIC-eligible participants were not enrolled in the program, and then texting eligible households to initiate enrollment. The research produced critical findings for policymakers seeking to boost program enrollment, finding that data matching across safety net programs could lead to double-digit percentage increases in WIC enrollment across the four states. In Virginia, these strategies could lead to increasing WIC caseloads by as much as 98 percent.

Civilla

<https://civilla.org/insights>

When Civilla embarked on transforming one of the longest benefits application forms in the country into a streamlined, 80 percent shorter enrollment process, staff discovered that [many form requirements were rooted in asset tests](#). Michigan requires that public benefit applicants verify that they do not possess assets exceeding \$5,000 in value—a process requiring several verification forms. As Civilla staff worked to redesign the state's application, they also advocated with the state health and human services agency to simplify asset policies to alleviate applicant burdens. In 2019, the state announced a [revamped policy](#) that harmonizes asset limits across several benefit programs.

Code for America

<https://www.codeforamerica.org/how/practices>

Code for America produces guidebooks and blogs on best practices for [data-driven decision making](#), [open government](#), and [delivery-driven policy](#), seeking to transform how government delivers user-centered policies and programs. In April 2020, the organization released a memo on [SNAP policy and enrollment reforms](#), advocating for a range of federal actions. These varied from waiving interviews and offering flexibility for people unable to provide verifying documents due to employer shutdowns, to easing enrollment requirements for low-income college students. The organization also called for rapid funding and technical support for states to expand digital and text-based client communication services.

mRelief

<https://www.mrelief.com/blog>

mRelief conducts text and online surveys to gather user input on policy changes and economic shocks. In March 2020, mRelief conducted Instagram and Facebook surveys to learn about users' food security, yielding findings which reinforced internal changes to enrollment tools, such as providing users with increased in-app information on Congressional actions impacting SNAP benefits. In August 2019, following the Trump Administration announcement of new income limits for SNAP eligibility, mRelief [contacted 362 California families](#) to seek their thoughts on the proposed policy change.

Nava

<https://www.navapbc.com/services/case-studies/>

Nava contributes its expertise to structural reforms that enable governments to operate streamlined, modernized systems. Products range from a comprehensive best practices and risk management guide on [government use of cloud infrastructure](#), to a [suite of toolkits](#) on form design, user research templates, and crisis response service design. These resources offer actionable guidance for governments to embed human-centered practices in their service delivery.

Nava also has conducted tests on the maximum capacity of digital tools, demonstrating the feasibility of building systems to handle high-volume user periods—and allaying fears of website collapse. Nava's [Billion User Load Test](#) simulated a user load of 1 billion people on HealthCare.gov, successfully processing thousands of requests per second with zero errors. These tests can instill confidence in government and nonprofit agencies that modernized systems can accommodate dramatic increases in usage.

One Degree

<https://medium.com/one-degree/latest>

One Degree uses search data to inform understanding of community needs, and to advocate for the use of [big data in social policy and tech delivery](#). The organization has examined search data to assess changing needs in neighborhoods, such as noting higher search rates for emergency shelters, and to identify resource gaps, such as a scarcity of free or reduced-price diaper resources despite frequent search rates indicating high need among new parents. By anonymizing data to protect user privacy, tech organizations can assess trends in community needs, and communicate to policymakers where targeted interventions are needed.

Propel

<https://medium.com/@JoinPropel>

Propel regularly gathers user input on experiences with food insecurity and other household financial challenges and applies these insights to policy advocacy. Since the onset of the pandemic, the organization has conducted monthly household pulse surveys—publicizing findings from FreshEBT user responses on food access, receipt of stimulus payments, employment, and housing instability—with particular focus on racial disparities. The organization shares these findings with state, federal, and nonprofit partners.

U.S. Digital Response

<https://www.usdigitalresponse.org/resources/>

USDR launched in response to COVID-19, connecting pro bono technical assistance to governments and organizations to help meet the critical needs of the public. After extensive work with state UI systems, USDR produced a report on technical findings and implementation steps for state agencies. The report identified root causes of dysfunctional systems, including cumbersome eligibility determination systems, complex and aging mainframes, and the need for regular human intervention in online systems that are meant to operate without frequent manual processing.

Social Tech Collaborative

<https://socialtech.us/playbook/>

The Social Tech Collaborative, an umbrella group of seven nonprofit TESN organizations (Alluma, Benefits Data Trust, Code for America, Civilla, mRelief, One Degree, and Single Stop) launched in response to the COVID-19 pandemic. The Collaborative has developed a series of “plays”—actionable responses governments and nonprofits can institute to enhance digital service delivery, from benefit form design and targeted community outreach to developing Requests for Proposals for human-centered design work.

Geographic Impact: The Unequal Reach of TESH Tools

TESN tools are currently limited in their geographic reach: five tools are available in all US states, with the majority of services operating at the state level (14), and still others targeted to county and city-level agencies, reflecting the fragmented approach to benefits delivery common in the United States. The geography of TESH tools reveals an emerging patchwork and displays clear opportunities for innovators across

sectors to launch new efforts to improve the experience and value of the safety net through technology and people-centered methods, especially in underserved and high-poverty regions of the country.

TESN organizations are similarly regionally concentrated—of the 12 organizations identified in the TESH database, just one is headquartered in the South—Aunt Bertha in Austin, Texas. By comparison, California and New York are each home to three organizational headquarters.

FIVE TESH TOOLS ARE AVAILABLE NATIONWIDE, AND A PATCHWORK OF TOOLS IS EMERGING IN CERTAIN STATES

The five TESH tools listed above the map are available nationwide, but some states have access to additional TESH tools.

- States with one additional TESH tool
- States with two additional TESH tools
- States with three additional TESH tools
- States with four additional TESH tools

* To see a full list of TESH tools by state, please view the appendix at the end of this paper

Recommendations for Reform

TESN organizations are showing what's possible when modern technology is married to a consumer insights perspective. Policymakers, public benefits program administrators, philanthropy and investors, and social service organizations all have an opportunity to enhance the impact of their role in supporting household financial security by engaging with, learning from, and building on the growing work of organizations employing this approach. The potential exists through these methods to reimagine public benefits and create a safety net that is inclusive, people-centric, portable, and interoperable.

Policymakers at the Federal and State Levels

- As the crisis of the pandemic eases, policymakers have a once-in-a-generation opportunity to reinvent public benefits to better support financial security. Insufficient digital infrastructure limits the options available to policymakers, prevents needed support from reaching eligible people, and damages trust in government and policymakers themselves. It is essential that policy reforms are paired with sustained investments in IT systems and teams to move from patchwork responses to a reformed system of benefits designed to meet 21st century needs.
- Both policy and technology investments need to be based on the real experience of people using those systems in order to meet real world needs and perform as intended. Modernized systems absent continuous user feedback and human oversight can yield worse outcomes for program participants and costly lessons for governments. To design the most effective policies, policymakers need to invest in the development of tools and systems that provide input and feedback from applicants, beneficiaries, and front-line staff.

TESN Tools and Approaches Are Advancing

Developments in 2021 show the growing reach of TESN tools and approaches, and the promise of increasing impact. In early 2021, Wisconsin's Department of Workforce Development announced a partnership to begin a people-centered, tech-enabled modernization of the state's UI system with support from the non-profit USDR, and the federal government's 18F.⁴⁹ 18F also announced the creation of software "making benefits eligibility rules more visible, transparent, and reusable." The non-profit Virginia Poverty Law Center (VPLC) has used these tools to create a screener for SNAP eligibility that is available to anyone in Virginia.⁵⁰ With active participation from the federal government, and more blueprints for partnership between the federal government, states, and social service organizations, we expect to see continued rapid growth in this area.

- A growing field of organizations is working to complement and advance governmental efforts to deliver public benefits, and showing what's possible through:
 - Building tools to make the safety net easier to find, easier to access, and more valuable in pursuit of financial security. These innovations are showing what could be standard practice across the safety net.
 - Building tools and processes that collect and distill user experience as critical evidence for policymaking and program improvement. User surveys, text outreach, and live chat create channels for client feedback and the adoption of a consumer insights perspective, pointing the way toward service delivery improvement and policy innovation.
 - Generating policy and process reform innovations to tackle critical safety net challenges and building a safety net that is inclusive, people-centric, portable, and interoperable.

Public Benefits Program Administrators at the State, County, and Municipal Levels

- TESH tools deliver mutual benefit for users and administrators alike. Streamlined digital tools can save time for case managers and human service agency staff, minimizing the need for error corrections, and maximizing time for direct assistance.
- States are already leading the way on TESH partnerships that improve people's experiences applying for and engaging with public benefits, demonstrating feasibility and offering blueprints for states and localities eager to reform and improve their own systems.
- The development and usage of innovative tools—especially Connectors, Screeners, Advisors, and Benefit Managers—beyond the core function of benefits enrollment and maintenance, show the potential to increase the reach, impact, and value of public benefits programs.
- TESH organizations are building tools and processes that collect and distill user experience as critical evidence for improved program delivery. User surveys, text outreach, and live chat create channels for client feedback and the adoption of a consumer insights perspective, pointing the way toward service delivery improvement and policy innovation.

Philanthropy and Investors Interested in Promoting Financial Security

- The pandemic has exposed the insufficiency and inaccessibility of the existing safety net and exposed the need to rebuild benefits for the 21st century to be inclusive, people-centric, portable, and interoperable. This is an important time to invest in high-quality, innovative tech tools that respond to the growing and changing needs of financially insecure people.

- TESH organizations are building innovative tools and processes to make the safety net easier to access, more valuable, and more responsive to people's needs. However, the geographic impact of this promising approach is currently scattered and concentrated in a few safety net programs, presenting an opportunity for increased investments to spur growth and impact in underserved areas.
- Massive digital engagement rates demonstrate a clear value and need for well-designed, user-friendly, dignified apps and websites that help people access and navigate their benefits. This is a growing sector that can also link a wide user base to other financial tools, services, and supports that can lead to more sustained financial stability.

Social Service Organizations and Businesses Providing Benefits Access

- TESH organizations are building tools and processes that are available to be incorporated into existing systems—allowing for streamlined benefits enrollment processes and increasing the capacity of front-line workers to engage clients and help meet their needs.
- TESH organizations are building tools and processes that collect and distill user experience as critical evidence for improved program delivery. User surveys, text outreach, and live chat create channels for client feedback and the adoption of a consumer insights perspective, pointing the way toward service delivery improvement and policy innovation.

For more information on a holistic exploration of work and public and workplace benefit arrangements, read **“The Complete Financial Lives of Workers.”**

Conclusion

The pandemic forced a reckoning with the insufficient, fragmented, and inaccessible nature of the safety net. The temporary patches applied to the safety net have helped mitigate the impact of the pandemic, but also highlighted ways in which our public benefits systems fall short in creating a safety net that protects against economic pitfalls and promotes financial security. We are faced with the urgent task of building a coherent system of public and private benefits that supports household financial security.

Innovators working to build the Tech-Enabled Safety Net (TESN) offer a path forward. Projects to bring modern technological tools and methods to public benefits in ways that improve access to, experience in, and value of the safety net are happening all across the nation—both inside and outside of government. This approach pairs technological modernization with new tools and methods of centering end users, quite often people marginalized by policymakers and public systems. TESN organizations can distill and leverage a unique and powerful type of evidence—the voice, needs, and expertise of the people who use the safety net most and know it best.

Rather than a framework of fragmented benefits, cumbersome enrollment systems, and aging digital infrastructure, we can deliver a modernized system that is people-centric, portable, inclusive, and interoperable. We can make a system that:

- Designs public benefits to boost—not minimize—access and uptake, creating consistency across state public benefit systems, with streamlined application processes and the potential for automatic benefit enrollment where appropriate;
- Recognizes that workers today rely on public benefits, and designs them accordingly—with limited conflicts between public benefits and key elements of financial security, such as personal savings and consistently positive cash flow;
- Creates inclusive public benefits and financial systems to smoothly and safely deliver resources, including money, to the most vulnerable people; and
- Encourages and helps people save for shocks as a complement to benefits, social insurance, and other structural supports.

**Ending Hunger in America: Local Innovations to Inform a
National Strategy**

July 15, 2001

The Paso del Norte Region of Southern New Mexico and El Paso, Texas

La Semilla Food Center is based in Anthony, NM, and serves the Paso del Norte region, a culturally diverse area rich in tradition, with a population reflecting Mexican, indigenous, Afro-latino and European backgrounds. The Paso del Norte region includes Doña Ana County, the city of Las Cruces, the urban heart of southern New Mexico, and the state's second largest city with 101,324 residents, and crosses the Texas state line to include El Paso, Texas, delineated by the U.S.-Mexico border and Ciudad Juarez 40 miles to the south. Though there are just over 1 million people in the area, the majority of the region is rural. The Paso del Norte region faces a situation similar to many other border communities with low wages (\$15,704 per capita income), 18% of the labor force unemployed, high rates of childhood poverty (31%), and high rates of obesity (31%). Doña Ana County residents reflect this situation, especially for those living in our rural areas. More than half of the county's residents live in unincorporated areas near Las Cruces or small rural communities throughout the county's 3,808 square miles.

New Mexico has long struggled with poverty, hunger, and unemployment, a situation only exacerbated by the global pandemic. New Mexico's unemployment rate sits 8 percent currently. New Mexico continually ranks last in childhood wellbeing measures by *Kids Count* that examines health, economic well-being, education, as well as family and community to measure a state's prosperity. Along with dismal economic and health outcomes, the region is rife with high poverty and low food access areas, with almost 30% of residents in Dona Ana County and 20% in El Paso lacking access to healthy foods. SNAP and WIC are important tools to bridge the gap for many families. Unfortunately, WIC participation is dismally low in the region, with New Mexico only covering 44.8% of eligible individuals and Texas covering 57.5%. SNAP rates of coverage fare better, with 90% of eligible individuals covered in NM and 73% in Texas. However, these numbers don't illustrate the difficulty that people in the region have with accessing healthy foods for purchase due to lack of healthy food access points and grocery stores and significant barriers to transportation in our largely rural area.

In the Paso del Norte region there is a huge unmet demand for fresh, healthy local foods. This "food gap"—nutritious foods, particularly fresh fruits and vegetables, are not available or affordable—obstructs people and institutions in our region from accessing local foods. New Mexico has one of the lowest food security rates in the nation and many parts of the region are considered food deserts. This situation is compounded by the fact that, as Michael H. Schuman's 2010 report "Prospects for Food Localization in New Mexico" observes, nearly all the raw food grown in the state of New Mexico is for export. And very little of this food is converted into value-added goods. Economists have long understood that a region that primarily exports basic commodities usually remains stuck in poverty. Health providers and advocates know that high levels of food insecurity and low access to healthy foods contribute to increasing rates of obesity and diabetes.

Doña Ana County is home to 2,187 farms with 95% of those being small farms—and 1,466 of those farms are less than ten acres. For more than half of those farms, the annual value of sales is less than \$10,000. Not surprisingly, 36% of those farmers work more than half the year in another industry. In recent decades, fewer younger operators are entering the business, resulting in an aging workforce. The average age of a New Mexico principal operator is 61, while less than 5% are under the age of 35 and nearly a third are 70 or older. Continuing issues with access to water and arable land, and the significant cost to starting and maintaining an agribusiness, mean that newly launched enterprises are few and far between. With a total farm acreage of 659,970, only a small percentage (14.2%) of this land is used for crop production and an even smaller percentage

for healthy foods that could be used for local consumption—only 6,700 acres for the production of vegetables compared to the 69,500 used for pecans, forage, corn (for feed), and cotton.

The statistics are stark, but they are only half of the story. The Paso del Norte region is located in the northern reaches of the Chihuahuan Desert where the potential for a renewed understanding of desert foods and ancestral health and wellness traditions carries the possibility of deep community resiliency. We believe deeply in the cultural value of sustainable, localized agriculture and its contribution as a source of community vitality and prosperity for all families.

The solutions

La Semilla delivers high quality, impactful programs that foster a healthy, vibrant, and localized food system in the Paso del Norte region. Our work is rooted in equitable systems change and we ensure that links between multiple food system points are made in each of our program areas. We do this through administration and implementation of activities within our key program areas:

Edible Education and School Gardens: This program offered in over 30 schools in 4 school districts on both sides of the state line empowers students to understand how food is grown, consumed, and impacts our personal, community and environmental health. Professional development activities train teachers in how to use the garden for instruction that integrates with standards and in leading classroom cooking activities tied to garden production. Edible Education students discover fresh food and make healthier food choices, creates school environments where the healthy choice is the easy choice.

Food Planning and Policy Advocacy. La Semilla leads coalition efforts made up of government officials, nonprofit leaders, private business, and community representatives who collaborate to evaluate and improve our local food system and the availability of safe, healthy, and sustainable food at reasonable prices for all residents and foster a link between food, health, and local economic development. La Semilla was instrumental in its inception and establishment as well as passing the Las Cruces Urban Agriculture and Food Policy Plan, the first of its kind in the state.

Community Education. The program serves low-income and limited resource children, youth and young adults, and families from underserved remote rural and underserved urban communities in the Paso del Norte region, as well as other interested community members. Programs include:

La Cosecha—supports the creation of environmentally friendly, long lasting community gardens in food desert communities, where Cultivadores/Promotoras (community members who apply to train as community garden leaders and organizers) lead gardening and cooking workshops designed to teach about where food comes from, culturally appropriate elements of a sustainable local food system, and how our food system has profound consequences for individual and community health.

Raices de Tradicion y Salud—engages youth ages 15-21 in farm-based production and food systems education and is hosted three times a year for 6-8 week sessions, 12-15 youth per session. Participants explore how food and methods of production are intrinsically tied to the health and wellbeing of a community.

Apprenticeships—We host 2 to 4 apprentices at any given time and each apprenticeship term ranges from 3-6 months. This program provides interested youth and young adults

with intensive education and employment opportunities at the Community Farm and with our other programs, depending on career aspirations and interests

Summer Camps - Summer campers engage in activities connecting history, ecology, farming, and cooking and nutrition

The Farm Fresh Mobile Market brings local, fresh healthy produce and staple food items to farmers' markets, neighborhoods, and to six food low-income and limited resource communities in southern Doña Ana County, New Mexico. Farm Fresh helps build relationships between farmers and markets that establish common grounding in the challenges and opportunities for direct market expansion while providing informed market analysis. Produce is sourced from La Semilla Community Farm and from up to 20 partner farmers.

La Semilla Community Farm is an educational and demonstration farm guided by agroecological farming practices for greater biodiversity, livelihoods and food security. The farm serves as a production and demonstration site, embodying practices that restore ecological vitality, produce high quality food for humans and the web of life, and improve small farm viability as livelihoods and pathways for people in the Paso del Norte region. On farm events, workshops, and tours provide farmer and public education opportunities to increase understanding and application of agroecological practices and to build capacity for local food production.

La Semilla Community Farm serves as a training site for food growing and food safety, in addition to carrying out its own agro-ecological production. La Semilla's Farm Fresh Program, the program most involved in this project, provides training, technical assistance, and market support to over 20 small farmers and food producers from underrepresented backgrounds (beginning, small-acreage or landless, low-income, women, and/or Hispanic) operating in Doña Ana and El Paso County. Farm Fresh provides growers with multiple points of market access through the creation and improvements of produce distribution channels and the facilitation of contracts with restaurants and large institutions. Farm Fresh programs also provide technical support to ensure that beginning growers we serve are prepared to grow consistently, have strong food safety protocols in place, and adequate wash and pack infrastructure.

As we continue our work in the region and in New Mexico on the quest to foster a healthy, self-reliant, fair and sustainable food system through increased food localization and microenterprise development, we can achieve an important win not only for our region's food security and health outcomes, but also for new market opportunities and an enhanced local economy aims to promote agriculture and community and address the root causes of hunger and poverty. Many diverse groups in New Mexico regularly work together to address the pressing issues of the state in a highly collaborative and relationship-based process. There are several programs and initiatives that have actual or potential impact on hunger in the state, outlined below. Solutions to hunger must include both federal and state funding and policy initiatives to move the needle towards a more just, healthy, fair and sustainable country.

Tiny but Mighty Federal Grant Programs

Coined by the National Sustainable Agriculture Coalition, the “tiny but mighty” grant programs provide relatively small funding allocations from the Farm Bill but have an outsized impact on communities and food-producing farmers. La Semilla and many other organizations rely on federal grant dollars from programs like the Beginning Farmer and Rancher Development Program, Local Food Promotion Program, Community Food Projects, and Food Insecurity Nutrition Incentives Program. These dollars, exceptionally small amounts in the grand scheme of the federal budget,

As an example, Community Food Project grants range up to \$300,000 over a three-year grant period. With one of these grants and only \$100,000 per year, La Semilla was able to:

- Launch our Mobile Farmers Market bus and wholesale markets, providing a steady and reliable market outlet to small, diversified farmers, with well over \$20,000 in sales yearly.
- Provide shared use infrastructure to over 25 small farmers, including cold storage, refrigerated distribution, and wash and pack facilities. This leads to huge savings for small farmers, most of whom do not have the capital to purchase infrastructure.
- Provide business enterprise training to small and beginning farmers, community members, youth, and others interested in food and farm small business development.
- Hold garden and nutrition education across the region, with over 1,300 hours of educational sessions and over 500 participants in multi-week sessions.
- Provide spaces for increased community cohesion and social interaction, a vital component for the mental and physical well-being in the communities we serve.

The importance and impact of these programs cannot be overstated. The possibilities of impact in communities hardest hit by poverty and hunger with even relatively modest increases in spending is astronomical and the return on investment for these programs is, quite frankly, astounding.

Equitable Food Oriented Development through a Healthy Food Financing Initiative Fund

Through strong, relationship-based coalition development across New Mexico, La Semilla Food Center is working with project partners to establish a state-wide Healthy Food Financing Initiative (HFFI) fund. The fund will create a community-investment vehicle with low interest loans, forgivable loans, and grants to invest in local farmers, food hubs, and healthy food outlets. Utilizing an Equitable Food Oriented Development (EFOD) lens, the fund creates the opportunity to increase access to local and nutritious food, create quality jobs, revitalize local economies, and diversify our state’s economy. The HFFI utilizes the EFOD framework to correct the generations of racial, ethnic, and gender prejudice that still exists today within federal and private sector grant & lending programs. Directly addressing the status quo of inequitable distribution of land and resources in our food system allows all project partners to take giant strides forward in their missions to cultivate healthy farms, economies, and communities in New Mexico. This initiative and coalition development prioritizes BIPOC leadership and food & farm system entrepreneurs to build out an equitable community investment ecosystem with the long-term goal of increased resilience and prosperity in New Mexico communities.

This work utilizes a systems-based approach and focuses on the root causes of inequities and poor outcomes in the state. Using the HFFI as a catalyst, the fund will support organizations, farms, and coalitions from across the state to increase their impact. By building power of BIPOC-led and community rooted organizations and groups, there is a co-creation of a collective that will be able to design the incredibly powerful tool of a community investment initiative to ensure that wealth and capital flow directly to folks most impacted by systemic inequities in our food system and capital deployment systems; specifically, this coalition will ensure that Black, Indigenous, Latinx, other people of color, femmes, and LGBTQ+ folks are centered and are the direct recipients of funding. This coalition and fund will disrupt standard development, lending, and economic development practices and capital deployment decisions that exclude and often harm these communities.

This work incorporates the EFOD framework, a development strategy that uses food and agriculture to create economic opportunities and healthy communities and explicitly seeks to build community assets and wealth by and with systemically marginalized and exploited communities. The establishment of an HFFI fund rooted in EFOD principles will increase the state's capacity to draw in capital to a unique and innovative funding model. It is well documented that the root causes of most of the state's most pressing issues are poverty, systemic racism, and economic inequity. Hence, the HFFI creates a program grounded in intentional wealth creation, acknowledging the effects of decades of discrimination against Black, Indigenous, people of color, women, and LGBTQ+ people in public- and private-sector grant and lending programs, including through redlining and discrimination within USDA lending programs. The HFFI fund will recognize the innovation and expertise of these communities and invest in their farm and food projects.

We approach our role in coalition building and HFFI fund development in a collective and applied manner. By nourishing and amplifying the practice and voices of people already seeding efforts towards economic and food system development, we seek to mobilize resources directly to partner organizations and their communities. We utilize a communal development process, a non-extractive practice that nourishes potential by virtue of being:

- *Relationship-based.* Recognizes true coalition building as ancestral research and communication practices that create and reaffirm meaning and values within and across human beings and systems. Priority is placed on developing and strengthening relationships within ourselves and between organizations and groups state-wide. We are not 'mining' the time and resources of organizations, farms, and groups - we are weaving them to connect points of communal dignity and strength.
- *Responsive.* Addresses emerging needs to the extent possible by leveraging resources and additional relationships (action-oriented).
- *Adaptable.* Responsive to community & natural rhythms. Prioritizing relationships means are protective of community health - particularly of BIPOC communities that bear the brunt of economic and environmental inequity - and we adjust our time frames and expectations accordingly, particularly in these times of global pandemic.
- *Justice-oriented.* Coalition building that centers and uplifts communities of color. It names power imbalances while remaining rooted in grounded connection and collaboration, with the aim of addressing past and present systemic harm.

The HFFI fund development and coalition building is resulting in deeper, more meaningful, and long-term power, resiliency, and prosperity in all New Mexico communities. While the outcomes of an EFOD driven HFFI fund are exceptional in and of themselves, the intentionality of a process rooted in true relationship building with organizations and communities that are BIPOC-led, serving, and rooted multiplies the impact of this project exponentially. Using this unique, collaborative approach rooted in both relationship and community, this project will direct resources into communities and address root causes of hunger and poverty by providing pathways to community and family wealth and prosperity.

With an allocation of \$100,000 from the state of New Mexico, we estimate that this project will be able to fundraise upwards of \$5 million in federal, state, foundation, and private investments. Every program, issue, and solution in this brief is directly linked to hunger and food security. Namely, these projects directly address the systemic issues that cause hunger in our communities. Emergency services are important and necessary - but long-term, systemic solutions are absolutely vital and non-negotiable if our aim is to reduce hunger and poverty in this country. By strongly investing in communities already doing the work of creating strong local food systems and improving community health and well-being, hunger and poverty alleviation can move from a policy talking point to an absolute reality.

“Ending Hunger in America: Local Innovations to Inform a National Strategy”
Statement of Christopher Bradshaw, Executive Director, Dreaming Out Loud, Inc.,
hosted by the Committee on Rules,
United States House of Representatives

July 15th, 2021

Good afternoon Chairman James P. McGovern (D-MA), members of the Rules Committee, and the American people. My name is Christopher Bradshaw, Executive Director of Dreaming Out Loud. We are a nonprofit, cooperative social enterprise located in Washington, DC. Our mission is to create economic opportunity within marginalized communities by creating a healthy, equitable food system. My organization operates farming and regional food hub operations that distribute more than 1,000 weekly shares of our Black Farm Community Supported Agriculture Program to communities across the District, facilitate wholesale sales of socially disadvantaged farmers products into institutional markets, and train marginalized food entrepreneurs. I am thankful for the opportunity to speak before y'all today, sharing the critical work that we are engaged in to bring about comprehensive racial and economic justice, using the food system as our vehicle as our lens and our vehicle.

Hunger. Six letters. A lot to unpack. We so often discuss hunger as a state of being where human beings lack access to food; rather, we need to pivot the talking points to the root causes. Hunger is a racial justice issue. Hunger is an economic justice issue. Hunger is violence. Hunger is not a natural state of being. Hunger is not the result of natural disasters. We must speak to the intentional construction of hunger, the building blocks of which comprise the greatest challenges to the fulfillment of human promise that our country and our world endure today, and seemingly since time immemorial in American history. To fail to name the culprits that work to continually erect new barriers and undergird violent and oppressive systems that perpetuate the circumstances that produce hunger, is to participate in aiding and abetting.

Let me say it again: Hunger is violence. Racialized violence, once upon a time, would have manifested itself as it did in Elaine, Arkansas, in the late hours of September 30, 1919 Black sharecroppers met to establish the Progressive Farmers and Household Union of America to fight for better pay and higher cotton prices. Upon word of these labor organizing efforts, a racist white mob (not unlike that of January 6th, 2021), formed to murder hundreds of sharecroppers. Not only were our folks mass-lynched, survivors were then put on trial and blamed for their own self-defense. Here we have the contours of the current state of “hunger”. Racialized violence. Suppression of labor and wages. Dispossession of land. The denial of the ability to create generational wealth, driving the racial wealth gap. All undergirded by public policy discrimination in housing, labor, agriculture, medicine, banking, the carceral state, denial of full rights to our LBTQI+ community members, and I could go on. And no reparations to level-set, to heal, to undergird life outcomes based on these direct, traceable causes of our people’s challenges. Hunger is systemic, it is structural, and it is tied to this history. Hunger is violence.

While we mark historical events, we must remember that we are constantly in the production of a new history; often one that unmistakably manifests itself in historical cycles of violence. Let me point to a July 12 article in USA Today, where in my home state of Tennessee, “Chief U.S. District Judge Thomas

Anderson issued a national injunction that bars the Biden administration from enacting the loan forgiveness plan approved by Congress in March as part of the American Rescue Plan Act — a \$1.9 trillion COVID-19 relief package.” An attempt to block even a modicum of remuneration for the centuries of historical damage to Black farmers and communities much like Elaine, AR. Unabashed racist actions threaten further Black farmer land loss, driving the inability to accumulate generational wealth and the racial wealth gap, impact communities ability to feed themselves; and in fact drive hunger.

Black folks have been the drivers of local food systems innovations from Booker T. Whatley, the inventor of the community supported agriculture program (the precursor to my organization’s Black Farm CSA) to Fannie Lou Hamer’s social innovation with her Freedom Farm Cooperative in the Mississippi Delta. Each of these ancestors brought new solutions that were met by the width and breadth of structural inequity, racialized violence, and systemic racism that worked to counter their every move. With these historical markers and current acts of white supremacist framing of key attempts to implement reparative and restorative justice solutions, a national strategy must acknowledge the harms and that Black Lives Matter; facilitate comprehensive financial, mental, and spiritual repair; undergird individuals, communities, and institutions with an economic and social floor; and guard against regressive and white supremacist irredentism currently attacking voting rights, use physical violence, and the violence of systems to perpetuate white supremacy for generations to come. Defeating hunger requires defeating white supremacy wherever it manifests: Culturally, politically, physically, and within systems. It requires a latticework of public policies, agencies, allies, and clear definitions of the problem are facing. This is a generational struggle...but we stand ready to feed the fight.

THE PROMISE OF SYSTEMS INTEGRATION

Statement of
Laura Gustin
Director, Monroe County Systems Integration Project

at the
Ending Hunger in America Event Series
hosted by the House Committee on Rules,
United States House of Representatives

ENDING HUNGER IN AMERICA:
LOCAL INNOVATIONS TO INFORM A NATIONAL STRATEGY

July 15, 2021

Thank you, Chairman McGovern, Ranking Member Cole, and distinguished Members of the House Committee on Rules, for hosting this panel on local innovation, and providing me with the opportunity to speak on behalf of my community and our collective, ground-breaking work. My name is Laura Gustin, and I am the Director of the Monroe County Systems Integration Project, a multi-year initiative tasked with creating a transformed, person-centered system of service delivery in New York State that connects Monroe County's health, human service, education, and public sectors.

The Burden of Poverty and a Misaligned “System”

As a matter of introduction and context, Monroe County's narrative mirrors other rust belt communities. Once the booming home of corporations such as Eastman Kodak, Xerox, and Bausch & Lomb, today 15% of Monroe County residents live in poverty. The poverty rate within the city of Rochester, Monroe County's urban center, is 33% - highest in the nation among like-sized cities. Rochester also has the second-highest rate of childhood poverty in our nation at 50.5%. Sixty-eight percent of Rochester's below-poverty households are headed by women. Eighty-one percent of all poor children in the city of Rochester (21,000) live in female-headed households.

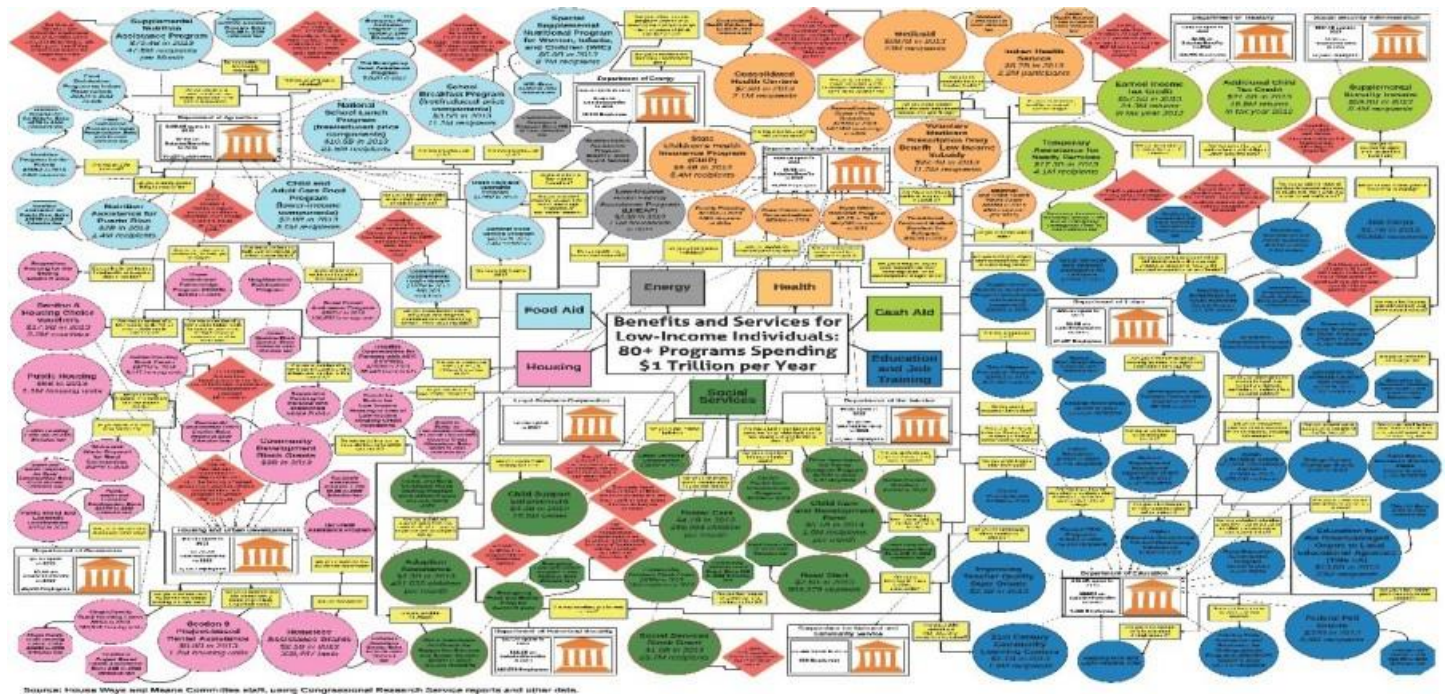

This frame of poverty is essential to the work of Systems Integration, because those with limited financial resources must navigate a complex, irrational, highly prescriptive system of federal, state, and local programs in order to receive basic supports such as food, childcare, affordable housing, adequate education, healthcare, and transportation. Every day, hundreds of individuals and families fall through the cracks, get lost in this “system”, and spin in a perpetual cycle of crisis and vulnerability. This statement is not a reflection of community commitment or expertise, but rather the constant struggle to coordinate and deliver interventions that bridge institutions and sectors. At present, the services provided to those in need are inherently siloed due to decades of isolated funding streams, sector-specific regulation, and an absence of robust digital tools or usable business intelligence that might generate systemic improvements.

In 2015, the House Committee on Ways and Means examined the service delivery system created under Federal safety-net programs (Figure 1). In the words of committee member, Congressman Charles Boustany (R-LA): *This*

system may have started out with good intentions, but it has become a confusing maze of programs that are overlapping, duplicative, poorly coordinated, and difficult to administer. I defy anyone to say this is the best way to address the human tragedy so many of our fellow citizens experience.

Figure 1: Federal Benefits and Services for Low-Income Individuals, 2015

Source: House Ways and Means Human Resources Subcommittee, November 3, 2015.

Our current system is not helping those who need it most. The impact of this broken system is well substantiated by community members. “Falling through the cracks” is a documented norm, not an exception, and many are cycling in and out poverty every five years. Our community in Monroe County is said to be program rich, but outcome poor. For those working every day to serve people in need, this was hard to hear, but it is true. For example, we have dozens of food pantries, curbside markets, and soup kitchens, as well as innovative food distribution and feeding programs, yet in many Rochester zip-codes, 40 percent of the population are food insecure and hunger persists. As abundant as the food programs in our community may be, the barriers to food stability are systematic and multi-sector. Systemic failures are demonstrated in the story of a single mother in

the city or Rochester, who takes two hours and two bus transfers to get to her “local” food pantry, an enormous burden when working two jobs and raising three children.

The reality is that no single program or service can counteract the undue burden caused by a misaligned system. Those who are vulnerable or in crisis require support that simultaneously touches multiple parts of their lives. People don’t operate in silos, and yet we serve them that way. We see situations like this far too often in our community. One example is a “high-risk” Rochester family with six care coordinators, all assigned by different providers, each acting as independent band aids over a misaligned and dysfunctional system.

The Model of Systems Integration

It is with this lens that the Systems Integration Project began in 2017. At the request of Congressman Joe Morelle, over 40 local leaders from Monroe County’s health, human service, education, public, and philanthropic sectors came together to discuss the current state of disconnected services, the poor outcomes that result, and whether a single integrated solution could be both feasible and responsive to community need. Four years later, the Systems Integration Project maintains a robust collaborative, now 300 partners strong, working to implement a common vision for integrated service delivery that was developed using program piloting, community input, and a consensus framework.

The Systems Integration Project includes three core strategies: Cross-Sector Data Sharing, Integrated Service Delivery, and Human-Centered Design. First, to combat misaligned services and programs, we are connecting providers and community by implementing a unified information platform that offers a 360-degree view of an individual’s needs, as well as their interactions with the system. This digital solution, with customizable user privacy controls, will allow a parent to locate the best behavioral health services for their struggling teen, a teacher to see that her student was recently evicted, a pediatrician to know if a child’s schools attendance is becoming abnormally high, and a food pantry worker determine if a family qualifies for SNAP. This technology implementation also establishes a shared language for communicating across a diverse provider network, and a common measurement system that offers new and necessary business intelligence to sustain both integration and system improvement.

Second, in order to build an efficient, proactive, and integrated service delivery system, the Systems Integration Project is designing new, coordinated workflows that transform the way that people move between institutions and sectors. We emphasize the system fully supporting the person, instead of a person adapting to a disconnected system. Key areas of focus include common “front-door” protocols that normalize the experience of entering the system, shared processes for referral management, and journey maps that document how a person navigates the system as they transition from crisis to stable to thriving. Systems Integration is currently deploying pilots in the areas of Eviction Prevention, Youth Behavioral Health, and Employment Pathways. Learnings from each pilot are applied to a growing set of business requirements that we will then use to transform service delivery at scale.

Finally, poverty is most acutely experienced by Monroe County’s Black and Latino residents, who largely reside in urban zip-codes with long histories of racism and suppressed socio-economic opportunities. The status quo was created with little input from these communities, so it is unsurprising that system interactions are filled with mistrust, disconnects, and missed opportunities. For example, one community member recently shared his experience with a local housing provider, who offered him yet another case manager and four unsolicited referrals to additional services. While the provider had good intent, the community member left his appointment feeling like a commodity, used by system to bill for services and make the provider money.

A person-centered system must be trusted by those who use it. The user experience should be exceptional. In response, the Systems Integration Project is committed to engaging community members 10,000 times in our redesign effort. We have robust community engagement and diversity, equity, and inclusion strategies, and have established an Equity Review Board to monitor and provide input into our transformation efforts. In addition, borrowing from the private sector, the Systems Integration Project applies human-centered design to every aspect of our work, and we have just trained over 400 service providers and community members as human-centered design practitioners. As a result, the process of building a data system, developing new workflows, and documenting cross-sector journeys includes constant engagement with system-users via empathy interviews, prototyping, and piloting.

We believe that when individuals and organizations actively use the tools and resources we are creating under the Systems Integration Project:

- Individuals and families will be more empowered to advocate for their wellbeing
- Information will be shared thoughtfully and confidentially, so multi-sector care teams can better and more holistically respond to an individual's needs
- Community trends will be better identified to shape programs and services that are responsive to our local environment
- Services and programs will be more aligned and coordinated across all aspects of our community
- Investments in our community will be better spent, allowing more individuals and organizations to thrive.

Success Story: Eviction Prevention Through Collaboration

The COVID-19 pandemic increased demand for health and human services throughout Monroe County, and the Systems Integration Project supported pandemic response by breaking down silos and improving collaborative workflows to better serve those in need. For example, confronted with the expiration of eviction moratoriums, and knowing that thousands of families could face homelessness, the Systems Integration Project implemented the Eviction Prevention Pilot Initiative (EPPI) in the fall of 2020, in partnership with Monroe County Department of Human Services (DHS), 211, and non-profit human service providers.

Before EPPI, the process of applying for emergency rent assistance was cumbersome, at best. Whether or not they were eligible, community residents had to first apply for services with DHS, filling out a 25-page application for public assistance. Once denied, the applicant could then take the denial-notice to one of many local human service organizations, complete organization-specific application processes, and ultimately be denied again and again until encountering a program with eligibility requirements that perfectly matched their life scenario. We learned from our work with EPPI that this DHS denial requirement was a process assumption and not actually a requirement at all. A roadblock to support was systematized!

Under EPPI, partner organizations created an intake workflow with 211 as its main point-of-entry to the eviction prevention system. Intake data collected at 211 was used to schedule an appointment with the most appropriate community-based program. Once the community member arrived at the community-based program, they worked with staff to complete a digital universal application, which was already started using the intake information collected by 211 operators. If the client was eligible for DHS services, all digital information was forwarded to DHS for follow up. Under this redesigned workflow, the eviction-prevention process was reduced from 8-10 hours to less than 30 minutes. The person-centered application process was transformative in that it removed guesswork and variability, while concurrently improving accessibility to other resources such as legal counsel, financial counseling, and basic needs.

Also, under EPPI, Systems Integration established additional neighborhood-based front-doors to eviction prevention services including churches, barbershops, and the Monroe County Hall of Justice. Staff at these front doors were trained in the universal application process, thus expanding the reach of the program. Ultimately, EPPI helped keep more renters safe from eviction, and minimized COVID-19 hardships being passed on to their landlords. Over a three-month period, all \$4.3M of the CARES Act funding dedicated to direct rent was distributed, preventing eviction for 1,900 households. Today, EPPI is in its second phase, expanding coordinated eviction-prevention services across our community, at scale. Further, based on the success of EPPI, Monroe County DHS is now partnering with the Systems Integration Project to integrate even more public services into community-based settings. As one EPPI service provider noted in the midst of implementation: *This is a small pilot... and it will be rocky the first week or two but I'm confident that this effort will grow! The folks we serve will benefit tremendously from a simpler process with just one front door. No more bouncing around from place to place wondering whether or not they can get help in time!"*

Recommendations for Policy Makers

As this committee works to identify solutions to alleviate hunger, we believe there are several key learnings from the Systems Integration Project that can be addressed at the Federal-level. First and foremost, adopt a systems mindset. Identify opportunities to address broken interactions and behaviors that reside far upstream from their impact. We adamantly believe that it is impossible to simply program our way out of poverty, and we

would argue that the same holds true when combating hunger. Second, champion integration across federal departments and agencies. For example, the federal government should adopt common definitions for hunger and homelessness that can be used as providers communicate across sectors, and federal reporting systems should move towards integration, with common data dictionaries that can be mirrored by local communities. Finally, don't over-prescribe solutions from Washington. Transformation requires time, trust, and flexibility. Systems Integration is funded through 2024 with a project design that allows our community the space to be creative with flexible dollars, local expertise, robust community input, and an agile project management framework.

Concluding Remarks

New York State invested in the Systems Integration Project as a pilot solution for integrated service delivery, which might be scaled to other counties and regions. Systems Integration is innovative in both concept and approach, as it offers a potential model for systemic change at scale, with a particular focus on integrated service delivery across social programs, designed with the input of community, and using digital infrastructure as a tool for connection, monitoring, and improvement. As such, the Systems Integration Project has the potential to be a cutting-edge, replicable path to improved health and wellbeing, while concurrently creating efficiency and cutting cost. Thank you again for the opportunity to share this important work, and we hope you will consider the impact and opportunities for systems transformation as you combat hunger across America.

Ending Hunger in America: Local Innovations to Inform a National Strategy

Statement of David Zuckerman

Executive Director, Healthcare Anchor Network

at the Ending Hunger in America Event Series

hosted by the Committee on Rules, United States House of Representatives

July 15, 2021

Good afternoon, my name is David Zuckerman and I am the Executive Director of the [Healthcare Anchor Network \(HAN\)](#), a national collaboration of more than 65 leading healthcare systems addressing health, economic, and racial inequities. HAN also includes the Anchor Learning Network (ALN) to scale anchor strategy adoption in the area of higher education in collaboration with the Coalition of Urban and Metropolitan Universities (CUMU). I would like to thank the committee for inviting me to share the work of our member health systems and universities as they evolve their efforts to leverage their resources to contribute to healthy and economically vibrant communities via the anchor mission framework.

The Healthcare Anchor Network (HAN) is at the forefront of a growing movement of hospitals and health systems working to deploy their operational activities—like hiring, purchasing, and investment—to address economic and racial disparities by improving residents' financial security and strengthening the local economic ecosystem. As some of the largest employers in their cities and regions, these institutions are uniquely positioned to help lift up their communities by intentionally providing economic opportunities and investing in the improvement of community conditions. At their best, these strategies create stronger communities, provide new agency to individuals and families, and address long-standing disparities.

I would like to share one example of how the anchor mission impacts families and communities. In Cleveland, Ohio, Tymika was a returning citizen from incarceration, and

she needed a job that would support her family. Not only did she land a job with Evergreen Cooperatives Laundry, which looks to hire individuals with barriers to employment, she is also a part owner of the company because its employees are the owners, giving them a unique personal stake in delivering quality and value to clients in the hospitals and other facilities. Her starting wages were 15 percent higher than under the former operator and there is an employee profit-sharing plan. There is also a first-time homebuyer program that helps workers pay off homes within four to six years.

Evergreen Cooperatives was formed through the support of HAN members University Hospitals and the Cleveland Clinic, along with Case Western Reserve University and the Cleveland Foundation. Evergreen Cooperatives is one of many examples of the anchor mission framework in action. In partnership with others, the health systems leveraged their everyday operations to help incubate and then scale a local business that was intentionally focused on creating good jobs, hiring from surrounding disinvested neighborhoods, and advancing environmentally sustainable practices. In this way, locally rooted institutions can develop creative solutions to their business needs while taking a more active role to meaningfully address access to economic opportunity in the underserved communities they serve.

HAN member health systems believe that to improve healthcare outcomes and ensure long-term affordability, they must address the root causes underlying many social determinants of health and invest in strategies that create equitable, engaged, connected, and economically strong communities. The front page of the *New York Times*' Sunday Business Section profiled other exciting impacts of HAN members in "[When a Paycheck is Good Medicine](#)."

Anchor Institutions can Adopt the Anchor Mission to Address Hunger and its Root Causes

Anchor institutions are a critically important and mission-driven economic sector that should be leveraged more intentionally to improve community health and economic wellbeing. Among the largest anchor institutions are the U.S. education and medical sectors which are often the largest private employers in their communities and many

times within their states and regions. They have annual expenditures of over \$1 trillion, have endowments and long-term reserves in excess of \$750 billion, and employ eight percent of our country's labor force. These institutions have significant impacts on the local economy and are powerfully positioned to address inequities and improve the economic ecosystems of the communities in which they reside.

Hospitals are a leading example of an anchor institution—public or non-profit place-based economic engines with an embedded social mission that are inextricably linked to the long-term well-being of their surrounding communities. Anchor institutions can play a key role in addressing inequities within the low-income and historically marginalized communities they serve by better aligning their institutional resources with the needs of those communities. Specifically, they can intentionally leverage their operational resources—like hiring, purchasing, and investment—to improve residents' financial security, strengthen the local economic ecosystem with a focus on making it more economically and racially equitable, and address the community conditions that drive poor health outcomes. This is adopting an “anchor mission” framework.

The anchor mission framework is a key strategy for community wealth building, a systems approach to economic development that creates an inclusive, sustainable, and democratic economy built on locally rooted and broadly held ownership. Community wealth building contrasts with traditional models of economic development that often create a race to the bottom between cities and localities, forcing them to spend scarce taxpayer dollars in ways that often only move jobs from one geography to another without improving quality or creating anything new.

UMass Memorial Health (UMMH) in Worcester, Massachusetts is another example of a health system that has adopted the anchor mission framework. UMMH's Community Health Assessment showed that social factors play a significant role in community health outcomes. The health system considered how it could help tackle poverty and unemployment, housing, access to care, food insecurity, safety and violence, and other upstream factors impacting health. Even as a safety net institution with limited resources that is based in a smaller city and serves rural areas, UMMH demonstrates the potential

of what can happen when an institution leans into addressing the root causes of poor health and limited economic opportunity.

After thoroughly assessing how UMMH could adopt and implement the anchor mission framework at a system level, the health system's Board of Directors voted to proceed with several key anchor mission strategies, including: allocating one percent of its investment portfolio to targeted community investments with an expected return; providing targeted technical training for entry-level positions for current and prospective employees; recruiting trainees from targeted neighborhoods; and building an effective system for local purchasing.

Addressing Hunger through Food Programs and Improving the Local Food System

When people are unable to access or afford healthy food, they are at an increased risk of health issues like heart disease, diabetes, and hypertension. HAN health systems know that food insecurity has ripple effects throughout the community and that anchor institutions need to invest in better food options and confront the root causes of food insecurity in order to improve health outcomes and community wellbeing.

Many health systems are providing their own food programming, such as through the "Food as Medicine" approach to integrate healthy food into patient treatment plans by providing a "prescription" for free healthy food. Health systems also operate farmers markets that showcase local produce and accept WIC and SNAP benefits or help to establish community gardens and "Veggie Mobiles" to deliver the produce.

ProMedica in Toledo, Ohio, prioritizes targeting the foundations of food insecurity with their Ebeid Neighborhood Promise. As part of this program, ProMedica opened Market on the Green, a 6,500 square foot grocery store that offers affordable and healthy food to low-income neighborhoods in Toledo. This grocery store also employs local residents and strives to source food locally.

Addressing Hunger's Root Causes through Local, Inclusive Procurement

Many people who face hunger or food insecurity struggle because of factors like low wages, unemployment, or the lack of affordable housing. The anchor mission approach tackles the root causes of food insecurity by focusing on job training and employment, supporting local, diverse businesses, and investing in disinvested neighborhoods. Anchor institutions are leveraging their substantial economic resources to benefit those experiencing the greatest health and economic challenges.

To increase the income and economic health of local neighborhoods, HAN members are seeking to increase purchasing with local businesses. Anchor mission sourcing or procurement focuses on doing business with small local companies, including minority and women owned businesses (MWBES), that struggle with tapping large, stable contracts and lack access to capital. Even small shifts in a health systems' spending portfolio can make a difference to the revenue of small businesses. Given the severe impact that the pandemic has had on local small businesses, anchor procurement can help local businesses and MWBES stabilize and recover, employ local residents, and provide stable wages.

This local spending also has a multiplier effect, increasing local economic activity beyond the one purchase and ensuring that spending is staying in the local community. Several studies show that the dollars spent on a small, locally owned business recirculate back on the local economy at rates approximately twice as high as with national chains or large corporations. A study in Massachusetts showed that locally owned businesses generate more public revenue than they cost to service.

An example of anchor mission local and inclusive procurement is Evergreen Cooperatives that I previously discussed. The Cleveland Clinic and University Hospitals (UH) source some of their produce from Evergreen Cooperatives' Green City Growers to serve a dual purpose of providing fresh produce to patients and health system workers while also investing in the community. The two health systems also procure laundry services from Evergreen Cooperative Laundry.

Evergreen Cooperatives has been able to thrive and expand from two to five companies and from 18 workers in 2010 to more than 300 with the continued commitment and collaboration from major anchor stakeholders like the health systems that procure laundry services and fresh produce from the company, the Cleveland Foundation, and the City of Cleveland. Evergreen has also launched the Fund for Employee Ownership that facilitates the purchase and conversion of companies to employee ownership by reducing the need for business owners to self-finance the conversion of small and medium sized businesses.

University Hospitals' commitment to harnessing its purchasing power to improve local neighborhoods was built into Vision 2010, a five-year, \$1.2 billion strategic growth plan. UH set goals to procure from local and MWBE businesses and to create new supplier capacity within the city. By 2015, UH was purchasing \$62 million from MWBEs, and \$199 million and \$363 million from Cleveland and Ohio vendors, respectively. This commitment to spending locally was especially important given it occurred during the Great Recession when most economic activity of this nature had been scaled back almost entirely.

Another example is Kaiser Permanente's collaboration with Health Care Without Harm, Emerald Cities Collaborative, FoodService Partners, and other anchors and groups to launch the FoodService Partners' Union City Food Culinary Center, a high-capacity culinary center in San Francisco's East Bay. The creation of the Center has created 150 living-wage jobs and will produce 50,000 meals per day for local hospitals. Kaiser Permanente hopes to buy all of their food locally or from farms and producers that use sustainable practices by 2025. With this local sourcing initiative, the health system is looking to support employment and economic opportunity for low income people, especially local residents who may face barriers to employment.

M Health Fairview in Minnesota has also made a commitment to sourcing locally, such as with their food basket program where they source their food from the Hmong American Farmers Association (HAFA). The Community Supported Agriculture (CSA) program is vital for patients struggling with chronic diseases like diabetes and heart disease. HAFA was created to address economic disparities for immigrant and urban farmers. For

instance, Hmong farmers have less access to land and on average make \$5,000 in sales per acre, compared to the \$8,000-\$20,000 their non-immigrant counterparts make per acre. M Health Fairview has continued to distribute food throughout the community and is now also sourcing from local producers who faced a decline in demand after the closing of restaurants due to COVID-19.

Addressing Hunger's Root Causes through Impact Investing

Healthcare anchors have a unique role to play as place-based investors—leveraging their long-term reserves locally and strategically tapping underutilized assets to fill market gaps in lending and investment. By allocating a portion of their investment portfolios to projects and aligning them with other discretionary funds, they can combine stable returns with social impact and create more sustainable solutions.

In November 2019, more than 10 HAN member hospitals and health systems, including some of the largest employers in California, Utah, and Wisconsin, along with others that are also among the top 20 largest employers in their states, announced a commitment of over \$700 million for place-based investing to create strong and healthy communities.

Some examples of HAN member investing activities include CommonSpirit Health, headquartered in Chicago, Illinois and serving 21 states, which has an investment policy statement outlining that up to 5 percent of its investment portfolio will be allocated for loans to nonprofits that are supporting community health and well-being. The health system's Community Investment Program (CIP) has provided capital investments in Arizona for Phoenix Interactive Children's Museum and Native American Connection for an affordable housing development; in Texas for Avenue Community Development Corporation for neighborhood development and Community Loan Centers to provide affordable payday loan options; in Colorado for the Colorado Enterprise Fund to support small businesses; and in central Los Angeles to construct a transit-oriented complex with 50 permanent and 450 transitional housing units for more than 500 persons experiencing homelessness. Since CIP's inception, CSH has invested \$270 million to support the economic development of low-income, underserved communities. Only recently have other health systems begun to adopt this specific strategy, but the promise is significant.

Through its local impact investing, Intermountain Healthcare, based in Utah with services in Idaho and Nevada, seeks to address the root causes of poor health by investing in upstream, research-based interventions in a way that maximizes social and environmental impact. As of 2021, the health system has deployed \$23 million for local impact investing, and around 80 percent of their investments have been made in affordable housing to help address the large housing gap caused by an explosive population growth in Utah. To align with broader economic development efforts, the program also decided to focus on financial wellness, which entails providing low- and medium-income (LMI) individuals and small businesses with the financial resources that they would not otherwise have access to. By supporting small businesses, the program endeavors to create and sustain quality jobs in the communities they serve.

These place-based investments significantly improve lives and help to stem the often-overlooked costs of poverty. Affordable and healthy housing reduces costs. Hospitals can substantially reduce spending when they connect people to services that address social determinants of health, such as secure housing, medical transportation, and healthy food programs. In Oregon, one study found that providing affordable housing decreased Medicaid expenditures by 12 percent, decreased emergency department use by 18 percent, and increased outpatient primary care by 20 percent. HAN member Bon Secours Hospital's Housing for Health Program generated between \$1.30 and \$1.92 of social return for every dollar spent, representing the broader social, environmental, and economic benefits of investment in affordable housing. Another example is Louisiana HAN member Franciscan Missionaries of Our Lady Health System's (FMOLHS) microlending fund and participation in an innovative advance paycheck program, which has helped members of its workforce avoid \$3.4 million in fees and interest from payday lenders. Similarly, since inception Texas Community Capital has loaned over \$25 million to Texans across the state needing to access credit which has saved borrowers more than \$18 million compared to payday and auto title loans.

Addressing Hunger's Root Causes through Local, Inclusive Hiring

Leading health systems are also leveraging their position as significant employers to create targeted pathways into employment opportunities at their institutions and then to help employees convert entry level jobs into careers, especially for those with barriers to employment and advancement.

University Hospitals (UH) in Cleveland, Ohio is also making inclusive, local hiring from nearby neighborhoods an integral hiring stream for high demand entry level jobs and offers new hires access to career coaching and career ladder opportunities. The health system focuses its workforce development initiatives on connecting community residents to jobs, and then to career ladders within the institution. The external programs focus specifically on six high poverty neighborhoods that surround UH's main campus. UH sets aside a certain number of open positions and interviews from an applicant pool composed of program graduates. As an employer of over 25,000 non-physician employees, UH also has an incumbent worker-training program for current staff, which provides encouragement and support for internal advancement.

UH offers a robust set of literacy building and skills training initiatives, with work supports such as release time built in, and partners with education and training entities that can provide targeted skills development. In addition, employees can apply for job-specific training programs where they will receive paid training to move into a more advanced position on the career ladder. In the first two and a half years, UH hired 111 individuals. That number has increased to 361 as of last year. The one-year retention rate is at 80 percent for pipeline graduates, compared with 66 percent overall.

Fairview Health Services in Minnesota focuses on hiring pipelines and career pathways for employees, students, and community residents. One example is the health system's funding of apprenticeships, on-the-job training and tuition support for four-year degrees and other credentials for 150 nurses and healthcare workers, including recruitment of women and minority groups. Fairview has hired 36 residents through the Cedar Riverside Opportunity Center and 60 students through the Central Corridor College Fellows (CSF) program.

Federal Support for Place-Based Solutions

The anchor mission approach provides practical, demand-driven solutions to some of the root causes of hunger and poor health through anchor institutions intentionally building up the economic ecosystem of nearby disinvested neighborhoods and communities. There are opportunities to infuse the anchor mission model into federal programming, such as by providing grants to states and localities to support anchors collaborating on long-term equitable and sustainable economic development strategies and by better aligning incentives at the federal level for health systems and universities to work to address the upstream root causes of hunger and poverty in this holistic way.

Increased federal funding for workforce development programs can also better align and support this type of place-based hiring strategy and internal pathways development. There is also an important federal policymaking role to support on-shoring of Personal Protective Equipment (PPE) and other critical parts of the healthcare supply chain with an eye towards sustainable and inclusive economic impact. Our nation needs to develop robust, diverse, and resilient supply chains that can ensure a steady flow of PPEs and health systems should have a prominent role to play in this transition.

Finally, federal policies can also support anchor impact investing by providing debt and equity capital to support the growth of innovative forms of community economic revitalization and community wealth building that will keep capital flowing in urban and rural communities alike.

Conclusion

Healthcare and other anchor institutions are uniquely positioned to serve as anchor sectors because of their evolving mission toward more holistically addressing community and well-being, stable role as some of the largest, community-rooted employers, and mostly nonprofit and public status. With so many Americans experiencing avoidable negative health and economic impacts, we need the largest institutions in our communities actively engaged with addressing the root causes of poor health—poverty

and racial inequities. The anchor mission approach provides a practical long-term roadmap to build communities where all can be healthy and thrive.

Ending Hunger in America Event Series
hosted by the Committee on Rules,
United States House of Representatives**

ENDING HUNGER IN AMERICA: LOCAL INNOVATIONS TO INFORM A NATIONAL STRATEGY

July 15, 2021

Introduction

Good afternoon Chairman McGovern, Ranking Member Cole and all the members of the Committee here today. My name is Kate MacKenzie and I am the Executive Director of the New York City Mayor's Office of Food Policy (MOFP). Thank you for inviting me to testify at this important hearing, I am honored to be joining you today.

The right to food is a fundamental human right. I am grateful for this opportunity to share with you the work that my office has been doing to address the current state of hunger across New York City, including our programs created specifically to address the City's emergency food needs created by the COVID-19 crisis, as well as our pathway forward as we transition from emergency to recovery.

In February of this year, my office issued Food Forward NYC, the City's first ever 10-Year Food Policy Plan. This report provides a comprehensive policy framework to reach a more equitable, sustainable, and healthy food system by 2031. At the same time, my office was overseeing the COVID-19 food response, and the experiences of that time made the report even more urgent. We experienced in real time the need for an improved food system - one that aimed to solve hunger, not just temporarily address it with emergency food; a system that ensures food system resiliency, and the need for urban policy to support rural food economies. Not only has food become an important policy issue to strengthen in relation to other priorities in the City, but agriculture has become an important urban issue, thus bringing new attention to regionality and rural producers and communities in the context of resilience and long term food security for New York City.

In this testimony, I will share my perspective along five themes:

- Overview of food insecurity in New York City and the City agencies that touch food – from meals served to water supply, food jobs and wages, health, environment and more.
- Understanding food insecurity as a food system challenge in recovery and planning for resilience
- Impetus for Food Forward NYC and lessons learned
- Importance of the region and the rural food economy to City food policy
- Lessons learned from COVID-19 in Food Forward NYC and recommendations to align city and federal policy

To truly have a transformative impact on the food system, partnerships at all levels of government are needed. The success of transforming the country's food landscape depends on the partnership of everyone involved in the food system. Food businesses large and small, community-based organizations and advocates, philanthropies and academic institutions, regional partners and the state and federal government all have a critical role to play. As the City seeks to implement its 10-Year Food Policy Plan, we will work with partners to make the policies and strategies in this document their own and to implement them in ways that reflect their vision for their communities.

And together we can push for change in federal, state, and local policy, leveraging all of these tools together under a single strategic framework, in partnership with the many players in the food system, including yourselves - we can transform the food system.

Food Insecurity in New York City

We know that food insecure New Yorkers come from all over - they are school age kids, college kids, seniors, and working adults - they are all of us. While the long-held approach has been to focus on traditional solutions such as food pantries, soup kitchens and SNAP, we know that these programs are not reaching all food insecure New Yorkers. A Columbia University study from 2018 found that of New Yorkers facing severe food hardship, only 1 in 4 use food pantries and only 1 in 2 are enrolled in SNAP. While this is one study, I am emphasizing it because when we think about food insecure New Yorkers, we should think about helping them get food where they are: in their local bodegas or grocery stores, on their way to work, prepared food as well as groceries. This integrative, cross-systems approach that focuses on individuals' experience of the food system, not simply thinking program by program, is a hallmark of Food Forward NYC.

Even before the pandemic, New York City had more than 1.1 million food insecure individuals. That number swelled to roughly 1.6 million at the height of the pandemic. Fortunately, that number is starting to decline in large part due to the Federal Stimulus payments to families. Feeding America is now projecting that 1.39 million New Yorkers are food insecure in 2021.

Not unlike other parts of the county, our food workers often experience food insecurity themselves. We have hundreds of thousands of food workers here in the City - it is hard to provide a precise estimate because of the many undocumented workers, as well as delivery workers categorized as independent contractors, but it is safe to say it is more than 400,000 individuals. We also have many food businesses; one out of six businesses in NYC is a food business, and over 70% of NYC's food businesses have fewer than 10 employees. The experience of the past 18 months has shown us that these businesses are truly essential, and that these essential food workers deserve good wages, fair working conditions and career pathways. Food Forward NYC assumes that supporting food workers and businesses is the pathway to not only a stronger food system, but also to a more economically and racially equitable NYC.

Planning for Resilience

On average, 19 billion pounds of food comes into the New York City annually through a highly fragmented distribution system. The implications of this are vast. From an environmental perspective, there are the carbon emissions from food production and the use of pesticides and runoffs. Our food spends a lot of time sitting in polluted, refrigerated units, whether located in trucks standing in traffic or as sitting in distribution areas. The air pollution from these units and other elements of the food supply chain is disproportionately concentrated in communities, such as Hunts Point in the south Bronx, that also suffer from a disproportionate burden of respiratory ailments. And if the human costs were not

enough, the inefficiencies of our system impose costs on food businesses and the City overall, contributing to congestion and noise. The plan therefore for the first time in a City document ties together these threads and offers a policy framework for the food system that looks at our local, regional, and in some ways national food infrastructure through a lens of sustainability and resiliency.

A resilient food system is also one that can depend on short supply chains if necessary. A resilient food system can also connect multiple food suppliers of differing sizes and offering types to many different end-users, ensuring adaptability in the case of changing circumstances. At the start of the pandemic, we closely monitored the food supply chain to spot any disruptions. While there were some initial disruptions largely because of panic buying and workforce disruptions, we fortunately did not experience anything that caused widespread issues to our food supply. As a precautionary measure, Mayor de Blasio called for the creation of a food reserve to provide immediate access to sufficient, nutritious food supply to support emergency feeding operations resulting from the COVID-19 response in the event of supply chain disruptions, extreme increases in demand, or another emergency event.

The most distinct feature of this program is that it intentionally sourced produce from our region. Many of the producers who sold to restaurants or other large institutions saw their markets evaporate. To help the industry, we sought to source from the region. Since September of last year, the City has distributed over 6.7M pounds of fresh produce via the Pandemic Food Reserve Emergency Distribution (P-FRED), along with over 7.6M pounds of high-quality shelf-stable food. It is encouraging to see the Federal TEFAP program mirror this type of operational change.

Building a stronger regional food system

As a direct consequence of taking the resilience of New York City's food supply seriously, regionality of the City's food policy has become a greater priority. The food supply shock effect of the pandemic has taught us that we need to be more deeply engaged in improving regional coordination, including by increasing procurement of regional food, advocating for regional food infrastructure, and developing additional partnerships with regional actors. This is an important area for coordination between City, State and national government as many programs are limited to either rural or urban applications. What is needed are integrated urban-rural policies that serve to integrate food and agriculture programs. We also want to support increased urban food production, including removing regulatory barriers from urban agriculture and promoting innovation in technology and use of space.

For the City to address the intersection of challenges to provide stable and high-quality food related jobs, ensure the security of the City's food supply even in the midst of shocks to the food system, and to provide healthy and affordable food access while supporting a climate-friendly, diverse, scaled up agricultural landscape requires a holistic and collaborative approach to the Northeast region's food system. The City's levers of food systems change extend beyond its borders in numerous ways, impacting production systems, distribution and processing, market access, waste management for nutrients, and more. The challenges are complex and multi-faceted, which is reflected in the approach taken to create the first 10-

year food policy plan for New York City that also embraces regionality for the first time in a serious manner.

FOOD FORWARD NYC: A 10-Year Food Policy Plan

Food Forward NYC emphasizes the importance of both equity and choice - enabling a food system where everyone should be able to access the food, they want wherever they may want it. To enable this choice, we need to support both our food workers and our food businesses. To strengthen the sustainability and resiliency of our food system, we need to rethink our food infrastructure and deepen our connections with the region. This plan was also deeply influenced by the collective lessons learned throughout the pandemic as well as the work of the Taskforce on Racial Inclusion and Equity convened by the Administration last fall. As the City seeks to implement this long-range and ambitious plan, we are continuously working with our partners both within government and outside of government, urban and rural, to make the policies and strategies in this document their own and to implement them in ways that reflect their vision for their communities

NYC's food system is complex, both influenced by and influencing the built and natural environment and people's lives in multiple ways. In Food Forward NYC, we are addressing all phases of the food supply chain; from production, to processing, to distribution, to retail, to consumption, to post consumption.

When we were developing this plan, we were very mindful that the implicit charge of a 10-year food policy plan was to re-set food policy in NYC and provide a systems approach. We needed to move away from a program by program, agency by agency approach and plan for food at the same scale that New Yorkers interact with food. Accordingly, despite operating during an emergency - and running several emergency programs - we took engagement for the plan very seriously. We engaged with 300 individuals from all across the food sector, including food workers and business owners, experts in infrastructure and sustainability, academics and advocates - people from all over the City representing many different communities, and many people with experience thinking about economic democracy projects such as coops and land trusts. We also built on existing expertise at the Mayor's Office of Food Policy and across a variety of city agencies that touch food systems. We also utilized community engagement lessons learned from the City's Take Care New York and insight gained from the Mayor's COVID-19 Task Force on Racial Inclusion and Equity.

One question we heard a lot while working on the plan was given that the food system is highly fragmented, privately owned and dependent on food coming from outside the City, the State, the Country - how can the plan have an impact? Well, we know that the City has many levers for changing the food system. We can shape how federal benefits, programs like SNAP and WIC, are administered. We can use our status as one of the largest food purchasers in the country to reshape markets. The City's regulatory policies and investments in infrastructure can be leveraged to support the food sector. We can support minority and women-owned businesses. We can leverage the power of convening and fostering partnerships. We can push for change in federal and state policy, leveraging all these tools together under a single strategic framework, in partnership with the many players in the food system, including yourselves - we can transform the food system.

And of course, City government on its own has an extraordinary role to play. New York City has dozens of City agencies that engage in food. Some agencies directly provide food for New Yorkers - a total of half a billion dollars annually, while some agencies such as my office set the City's food policy and others agencies support the City's food supply in myriad ways - from the City's Small Business Services to the Department of Environmental Protection.

By providing a systems approach - a unified framework for City government, Food Forward NYC represents a sea change in MOFP and City Hall's approach to food policy. The plan is organized along the following categories five overarching goals with sub strategies and actions. As this is a long-range policy plan, the types of actions in the plan vary greatly. Some are actions that we have already launched or are about to launch. Others require studies or longer-term planning efforts to determine an implementation study. Yet other actions are partnerships we are interested in exploring or depend on the results of long term federal and state advocacy.

The first goal is: All New Yorkers have multiple ways to access healthy, affordable, and culturally appropriate food. We want to move away from the traditional focus on emergency food and emphasize that all New Yorkers, including food insecure New Yorkers, deserve dignity, choice, convenience, health, affordability. Let me give you some highlights from this goal - going forward, I'll be highlighting strategies that I think might be of particular relevance for this audience, but I should stress that there are 71 actions in the plan and I will not be reviewing them all. We are reiterating in the plan our sustained focus on transforming the emergency food system. The work we are doing now is really revolutionizing the emergency food system, bringing more equity and efficiency as well as improving the actual food offerings. We are committed to continuing this good work. We are interested in pushing forward ways to instill similar principles in farmers' markets. How do we make sure that we create sustainable and equitable supports for farmers markets that serve the communities that need them the most? There may be interesting lessons to learn from the work we are doing on the emergency food system and we see a clear role for federal funding and innovation here. We are also looking to launch a new food program that starts addressing specific unmet needs revealed by the pandemic - the needs of people who cannot leave home, and/or are not eligible for SNAP for whatever reason and still need food assistance. We also identified infrastructure as a major barrier and will discuss it further under goal 3. We want to find new ways to improve access to space and particularly cold storage in underserved communities to reduce costs and operational burden of fresh, high quality food. We also want to study the viability of food hubs that expand public schools' access to cold storage, processing space, and preparation capacity.

The second goal is: New York City's food economy drives economic opportunity and provides good jobs. The recent crisis really demonstrated the need to support both our food workers and our small food businesses. In fact, one of the most interesting things that emerged from our engagement was that supporting both small businesses and workers together was necessary - there was no antagonism but a spirit of collaboration. First and foremost, we want to strengthen the ways in which we protect food workers, improve their pay and benefits. Some key ways of doing this are strengthening enforcement of worker rights within the City and, leveraging City procurement to support food workers that serve New

York City. We are also interested in increasing supports for worker cooperatives and innovative social enterprises. One of the things I'm particularly excited about is exploring innovations such as portable benefits. That's a good example of a potential win-win for workers and small businesses. We also want to sharpen our focus on supporting small food businesses by streamlining both regulations and enforcement and making it easier to operate in the City. New York is a tough city to do business in and we want to help them. We also want to explore ways we can assist food businesses and customers to reclaim their data. Another way to provide win wins for both workers and businesses is to invest in worker training. That includes developing career pathways in the food sector, training around food and technology, as well language training opportunities.

Goal three is that the supply chains that feed New York City are modern, efficient, and resilient. To be able to provide healthy, affordable food to New Yorkers and leverage the food sector as an engine of economic opportunity, we need more space and infrastructure within the City that is dedicated to food and we need to strengthen our regional connections. We really need to start thinking more like urban and regional planners - and asking urban and regional planners to think of themselves as food policy people. Firstly, we want to strengthen the City's food infrastructure, including continuing to modernize Hunts Point Market, investing in neighborhood and borough-based distribution facilities. We will be working very closely with NYC Economic Development Corporation on this issue. We are also excited to explore ways in which zoning - a powerful regulatory tool, if used right - can help us protect and expand the available space for different types of food uses. Regionalism is core to every element of this plan. Sourcing regionally not only reduces food miles but improves accountability and strengthens connections between the City and the region it is located in.

Goal four is that New York City's food is produced, distributed, and disposed of sustainably. As part of that we will work to integrate sustainability and animal welfare into City food programs, including City food procurement, integrating sustainability criteria into commercial waste contracts, and increasing composting. We also seek to reduce the environmental burden and carbon footprint of the food system by making the transportation and cold storage systems more efficient and increasing electrification. This ties directly to the space and infrastructure issues that I mentioned in Goal three, we see it as important that we minimize the environmental impact of food distribution within the City. We will also seek to promote community and business innovation around food and sustainability. One area we are excited about that emerged as a strategy as part of our engagement is bolstering community-owned waste management initiatives.

Finally, Goal five is about supporting the systems and knowledge to implement the 10-year food policy plan. This really is about our collective capacity - not just MOFP, not just the City but the whole food world to deliver the plan. Currently, few systems are in place, whether in City government or outside of it, that have the capacity and the knowledge to alone implement a comprehensive food policy. Some of the and of course there are many other dimensions of the food system we might want to explore. We committed to being proactive in looking for ways to partner with the non-governmental sector to maximize community participation in food policy decision-making. In the longer term, we are also interested in exploring the creation of a food justice fund.

Good food purchasing (GFP) is a major theme across the plan and there are multiple recommendations related to it under every goal. For those of you not familiar with this framework, it provides a methodology to quantify the impact of the food an institution purchases along five core values - no matter where across the country the food comes from or how complex the supply chain. The five core values are: local economies, nutrition, valued workforce, environmental sustainability, and animal welfare. The City is working to implement the framework across several dimensions: first, whenever legally possible, we are working to include GFP into current City contracts. We are also working to create the governance to support the program - whether it is legislative change or procurement centralization. We are also working to invest in City government-owned food infrastructure, starting with a shared commercial kitchen for providers serving older New Yorkers. Finally, as mentioned before we are embracing regionalism by strengthening our connections with the region and eventually our food sourcing.

We talked a lot about the “what”. This is the “how” we are going to implement. First, we will work with City agencies to identify near term implementation priorities. We will partner to develop funding sources for food programs. We also need to expand the capacities of the MOFP and improve our data collection. We will continuously partner with advocates to identify community engagement opportunities around food and - frankly - advocate for the plan’s implementation. In 2023, we will be releasing our first two-year progress report. With that being said, so much is already happening right now. We are working on including developing a new food program, transforming the emergency food network, and continuing to implement Good Food Purchasing.

Lessons Learned

Food Forward NYC

The creation of Food Forward NYC relied heavily to only on the decades of work on food policy that took place in New York City but also relied on the relationships the City built during COVID-19 with communities, advocates, businesses and regional partners. These pre-existing relationships and the deep knowledge that we gained from the crisis allowed us to work well together on the development of this 10-year strategy.

For those seeking to develop a similar strategic plan, I want to share some lessons that my team and I learned while developing Food Forward NYC:

- Food plans differ in important ways from other plans such as land use plans or transportation plans – they do not rely on a centralized implementing power, but rather the collaborative and creative implementation of policy levers and partnerships. For that reason, we recommend that at the onset of planning be sure to set the clear expectation that other strategies will naturally emerge while some may fall off– as new policy is set, and new opportunities take shape. We see Food Forward NYC as a living document, one that adjusts to new and changing markets and political landscapes.

Food Policy

- Next, planning is important, but it should not get in the way of releasing a report that sets a path forward. Many government documents take years to develop, and by the time they are released, the food landscape has already shifted. While I strongly recommend engaging with as many key stakeholders as possible, it would be advantageous to keep a tight focus on charting a shared vision and strategies, rather than detailed implementation plans, in order to keep stakeholders engaged and momentum going.
- Be thoughtful in the language you use. For example, in New York City we have a historically black-led community gardens movement which grows food, as well as a newer trend of indoor agriculture start-ups. The term urban agriculture is seen as exclusionary by some, so we preferred to use the term urban farming to acknowledge the full range of urban food production activities.
- One challenge we faced was that consistent data about the food system is fairly scarce. This can make planning difficult, in that it can be a challenge to turn a need stemming from food insecurity into a detailed operational plan. Data should not, however, be a limiting factor in developing a plan. The focus should be on developing sustainable, scalable solutions for food insecurity. That said, going forward, a national effort to improve the data on the needs of food insecure individuals and the availability of different foods can greatly aid in maximizing the efficiency and success of future initiatives.

Urban-Rural Policies

I also want to strongly recommend a greater focus on urban-rural policies. New York City successfully launched an NYC-Regional Food Working Group, which serves as a forum for exchanging information and developing solutions. This group was invaluable in providing feedback for Food Forward NYC, and we hope to sustain it going forward. However, currently, it is sustained on a voluntary basis. Generally speaking, while there are many programs with either a rural or urban focuses, few programs support urban-rural collaboration, and those that do so do not provide consistent capacity to the wide range of organizations need to make it a success. Given that, I recommend integrated urban-rural policies, including the following:

- Consistent funding for convening and relationship building between multiple urban and rural partners, governmental, NGOs, institutions, and the private sector, at the regional scale.
- Investment in the entire length of the supply chain, from rural production and processing to aggregation, transportation, and finally distribution at the urban scale.
- Support for innovative programming that connects urban farmers and rural farmers

Conclusion

Again, I am grateful for this Committee's focus on ending hunger nationwide. Thank you for your time, and I will be happy to answer any questions you may have.

FOOD FORWARD NYC: A 10-YEAR FOOD POLICY PLAN

The City of New York
Mayor Bill de Blasio

NYC

Friends,

In seven years, we have come a long way in making New York the most livable big city in America, and every day, thousands of workers rise to the challenge of making our home safer, fairer, and healthier.

It should go without saying that in a truly great city, no one should ever go hungry. But beyond tackling hunger, we are also committed to ensuring that all New Yorkers have the information, tools, and access to eat healthy food and learn about nutrition; to lift up food workers and reduce food waste; and to back local businesses and urban farming, among a host of other responsibilities.

New York's free school lunch program, a budget increase to the baseline of the Emergency Food Assistance Program, and unprecedented rally to feed vulnerable New Yorkers amid the COVID-19 pandemic all speak to our commitment to sound food policy. And that kind of policy requires constant and careful review and strategizing, which makes this 10-year food policy plan such an invaluable tool.

From the inception of a regional food working group and a new food access program in low-income areas, to concerted efforts to reduce red tape and increase transparency and accountability in the City's food procurement, the Mayor's Office of Food Policy is working on a host of ideas that build on an already solid foundation.

Thanks to these measures, more and more New Yorkers will have access to healthy, affordable, and culturally appropriate food; supply chains will become even more modern, efficient, and resilient; food production, distribution, and disposal will become more sustainable; and the post-pandemic recovery of our world-famous food economy will drive economic opportunity and generate good-paying jobs.

On behalf of 8.6 million New Yorkers, I thank Director Kate MacKenzie and the Office of Food Policy for their tireless and innovative work in putting together this plan and, every day, helping keep our city well-fed and healthy.

Best,

MAYOR BILL DE BLASIO

Dear fellow New Yorkers,

There is no time more important than now to issue Food Forward NYC, the City's first ever 10-year food policy plan. At this moment in 2021, the city is in the grips of the COVID-19 pandemic, which has resulted in extraordinary levels of food insecurity. Yet, through these harrowing months, we have deepened our understanding of how essential our food workers are to our food system. From the farm workers who grow our food, to the drivers and store clerks who ensure our grocery stores and bodegas remain stocked, the delivery workers who bring food to our homes, the cafeteria workers who keep our students fed, the volunteers distributing food at pantries – we see you and we thank you.

Within City government, our understanding of these interconnections has become much stronger in the last 10 months, informing our strategy and approach. From federal benefits to infrastructure to waste to workforce development, the breadth of City agency involvement in food policy is remarkable. This plan takes that work even further by laying out the City's first strategic framework to guide us as we build a more equitable, sustainable, and healthy food system over the next decade. Food policy is no longer just about the food on our plates, but about the entirety of the food system.

Food Forward NYC is not simply a government roadmap. It will require participation from academic and health institutions, private for-profit and philanthropic partners, community-based organizations, labor organizations, advocates, and everyday residents. Through this collective effort, we will advance food democracy.

To advance the plan, the Mayor's Office of Food Policy will issue a report every two years outlining the progress made on each goal. We are committed to working with partners across the food system to identify appropriate indicators of success.

I want to thank Mayor de Blasio, all of the Deputy Mayors, the many City staff, and the hundreds of community voices that helped shape this plan.

Now, let's roll up our sleeves and get to work!

Best,

KATE MACKENZIE MS, RD
DIRECTOR, NYC MAYOR'S
OFFICE OF FOOD POLICY

EXECUTIVE SUMMARY

Food Forward NYC is the City's first ever 10-year food policy plan, laying out an ambitious inter-agency policy framework to reach a more equitable, sustainable, and healthy food system by 2031.

Food matters. Access to affordable, high-quality food is a fundamental human right and New York City's food system is foundational to its economy. While the City's food system delivers a vast array of foods that cater to every possible culture, dietary need and preference, it also faces many challenges. The fragmented nature of the food system means that too many people lack access to affordable, healthy foods; food businesses and other organizations struggle to operate profitably; food workers face challenging labor conditions; and the supply chains that feed New Yorkers are opaque and inefficient.

In Food Forward NYC, the Mayor's Office of Food Policy (MOFP) is putting forth an ambitious yet achievable plan to address these challenges. Just about every strategy in the plan will require creative collaboration between multiple stakeholders to bring forth real change. Some of these collaborations - such as the implementation of Good Food Purchasing - are already underway. Others will take additional work to launch.

Racial equity is central to this plan, deeply influenced by the work of the Racial Inclusion and Equity Task Force convened as a result of the COVID-19 pandemic. The implementation of the Good Food Purchasing Program - a national initiative that brings transparency and equity to institutional food purchasing - is also an impetus behind many strategies in the plan.

Finally, and perhaps most importantly, MOFP heard repeatedly from stakeholders about how much they valued more transparency and participation in government decision making. Hence, setting new governance mechanisms and enhancing democracy is a critical pillar of the plan.

Food Forward NYC at a Glance

This plan is organized around 5 goals and 14 strategies that confront today's challenges and seize opportunities to improve the food system:

GOAL 1

All New Yorkers have multiple ways to access healthy, affordable, and culturally appropriate food. Nearly 1.6 million New Yorkers - one in five - are facing food insecurity. All New Yorkers should have multiple ways to access healthy, affordable, and culturally appropriate food, whether it is at school, at their local grocery store or bodega, using farmers' markets or getting online food delivery. Strategies include:

- A.** Expanding food benefits to reach more New Yorkers in more places, including being able to use SNAP online and partnering with health systems.
- B.** Distributing food more equitably including expanding cold storage in low served areas and increasing supports for breastfeeding parents.
- C.** Reconfiguring how the City sources food including seeking legislative change to incorporate social policy goals into food procurement and exploring purchasing innovations such as shared kitchens.

GOAL 2

New York City's food economy drives economic opportunity and provides good jobs. New York City's extraordinarily diverse food system depends on tens of thousands of small businesses and the hundreds of thousands of workers who work in them. To truly transform the city's food system, both food workers and food businesses deserve better support systems. Strategies include:

- A.** Strengthening protections for food workers, exploring innovative ways to improve pay and benefits, and supporting business conversions to worker ownership models.
- B.** Supporting small food businesses by streamlining regulations and enforcement processes and supporting innovation.
- C.** Training the next generation of food workers for high-quality jobs that offer career paths in the food sector.

GOAL 3

The supply chains that feed New York City are modern, efficient, and resilient.

Foundational to the success of the food policy plan is the creation of infrastructure for sustainable and equitable food production and distribution. This means both strengthening the city's own food infrastructure, including not only food distribution but also farming; and both acknowledging and strengthening regional connections. Strategies include:

- A.** Investing in infrastructure by supporting the development of borough and neighborhood-based food hubs and strengthening the city's Industrial Business Zones.
- B.** Improving regional coordination and sourcing and promoting the creation of regional food aggregation centers.
- C.** Supporting increased urban farming including new spaces for urban farming.

GOAL 4

New York City's food is produced, distributed, and disposed of sustainably.

The city's vast food system impacts local, regional, and global environments and has profound influences on animal welfare. The plan recognizes that addressing these impacts would require interventions at every stage of our food's lifecycle and includes strategies and partnerships to intervene at every step of the way. The strategies also address the unequal environmental impacts the food system imposes, particularly on communities of color in New York City. Strategies include:

- A.** Integrating sustainability and animal welfare into City food programs, including incorporating sustainability into commercial waste zone contracts and exploring ways to integrate sustainability and animal welfare into City food procurement.
- B.** Reducing in-city air pollution and greenhouse gas emissions from the food system, and reducing unequal environmental impacts, by focusing on cleaner transportation and improving cold storage.
- C.** Promoting community and business innovation around food and sustainability.

GOAL 5

Support the systems and knowledge to implement the 10-year food policy plan.

A defining piece of the plan is its emphasis on expanding knowledge and systems support across the City. Both increased awareness of the food system and dedicated support need to be in place to ensure that the plan's policies are implemented successfully and achieve impact across multiple dimensions. Strategies include:

- A.** Strengthening community engagement and cross-sector coordination around the development and implementation of food policy including launching a NYC-regional food working group.
- B.** Creating and sharing knowledge about the food system, including the development of enhanced food insecurity measures and the sharing of City procurement data.

To truly have a transformative impact on the food system, the City cannot go this alone. The success of this plan depends on the partnership of everyone involved in the food system. Food businesses large and small, community-based organizations and advocates, philanthropies and academic institutions, regional partners and the state and federal government all have a critical role to play. As the City seeks to implement this plan, it will work with partners to make the policies and strategies in this document their own and to implement them in ways that reflect their vision for their communities.

CULTIVATED LAND IN THE NEW YORK REGION

WHY FOOD POLICY MATTERS

New York City's food system touches the life of every New Yorker every day. The choices we will make about our food system over the next 10 years will be critical to building a more equitable, sustainable, and resilient New York City.

The essential role that food plays in the life of our city is manifold:

FOOD IS CULTURE.

Food is so often how families and friends connect with one another, how cultural experiences and values are transferred across generations, and what animates the "New York experience" for residents and visitors alike. Food is an important tool for community building and for creating cultural and environmental awareness and acceptance.

FOOD IS HEALTH.

Access to nutritious food is foundational to physical and mental health. Common chronic health conditions such as hypertension and diabetes are strongly associated with an unhealthy diet and with lack of access to healthy, affordable foods. The stresses of food insecurity also impair disease management. Additionally, the transportation of food can also impact health. The vast majority of food in NYC is moved by truck, resulting in air pollution that contributes to asthma and other ailments.

FOOD CREATES JOBS.

NYC's food economy supports an estimated 500,000 jobs, from line cooks and warehouse packers to street vendors and delivery workers. It also supports more than 40,000 businesses, the vast majority of them small and independently owned. Working in the food sector and owning a small food business have long been important ways for immigrants to gain employment and build wealth. Food businesses are also vital to the broader economy, serving as a draw for residents, workers, and visitors alike, as well as activating commercial corridors.

THE CONNECTION BETWEEN FOOD AND HEALTH

Across New York City, rates of obesity, diabetes, and hypertension – conditions strongly tied to the consumption of unhealthy foods and beverages – correlate closely with indicators of food access, including rates of food insecurity, the ratio of bodegas to full service grocery stores in a neighborhood, and the consumption of fresh fruits and vegetables.

New York City's food system also faces significant challenges in the next decade. These challenges underpin the strategies and initiatives the City will prioritize through a coordinated 10-year food policy plan. They include:

FOOD INSECURITY.

Nearly 1.2 million New Yorkers were food insecure as of early 2020, according to estimates by Feeding America. As a result of COVID-19, that number swelled to 1.6 million food insecure New Yorkers, including school children, seniors, parents, and working adults. Notwithstanding the importance of food pantries and soup kitchens, food insecure New Yorkers also eat at restaurants and schools and shop at bodegas, grocery stores, and farmers' markets. Central to food insecurity is the high cost of food in New York (the average cost per home cooked meal in 2018 was 30% higher than the national average); deeper economic insecurity including low wages; and poor access to healthy food options in low-income communities. NYC's food policy must first and foremost make sure all New Yorkers are food secure. Every New Yorker must have reliable access to enough affordable, nutritious food to sustain them.

RACIAL INEQUITY.

The current structure of the food system often deepens racial disparities. Communities of color in all five boroughs have less access to affordable, healthy food than white communities and they are disproportionately impacted by diet-related health diseases. While many food businesses are owned by people of color and workers in the sector are substantially people of color, low business margins and low wages often result in limited economic mobility. Furthermore, many distribution hubs and waste facilities are located in communities of color, therefore placing additional disproportionate environmental and health burdens on them. At the same time, many of the biggest innovations in food policy in New York City, from local farms to cooperative ownership models, have emerged from communities of color. NYC's food policy can support these successes and turn the food system into a source of health, wealth, and sustainability.

ECONOMIC INSECURITY.

Despite the importance of the food sector to NYC's economy, most food businesses and workers struggle to survive. Profit margins for food businesses are razor thin (as low as 1 to 2 cents per dollar of revenue), and food businesses face complex regulatory requirements that are costly and time consuming. Most food workers earn low wages with few or no benefits; the average grocery worker earns \$30,845 annually, the average restaurant or bar worker earns \$33,703 annually, and the average manufacturing worker earns \$41,550 annually, as compared to \$94,393 across all industries. Delivery workers typically earn even less and lack basic benefits and protections. NYC's food policy can help ensure that all food jobs are good jobs and that food businesses provide real economic opportunity.

CLIMATE RISK.

Rising sea levels and extreme weather caused by climate change will continue to both disrupt the global food system and threaten NYC's essential food infrastructure, including the Hunts Point Food Distribution Center and other waterfront distribution sites. The local and global food system also contributes to climate change, ecosystem degradation, and human health impacts. Food scraps make up as much as 20% of all household and commercial waste, and contribute a majority of methane emissions released from landfills. Moreover, pollution resulting from growing, transporting, and refrigerating food disproportionately impacts low-income communities of color. Nationally, the agricultural sector, including farms and livestock production, accounts for 10% of all carbon emissions, not including processing, transportation, cooking, and selling food for consumption.

BY THE NUMBERS

1.6 million New Yorkers are currently food insecure.

Two in three food businesses in NYC have fewer than ten workers.

Nearly half of NYC's food travels to grocery stores, restaurants and schools from locations outside the city.

10% of carbon emissions nationwide result from agriculture.

Without forward planning, climate change will significantly disrupt the city's food supply. NYC's food policy can protect our infrastructure from climate risk while reducing our food system's negative impacts on our planet.

TECHNOLOGICAL CHANGE.

The rapid development of new technology in the food sector poses several near-term challenges. To name a few: on-demand delivery services have crowded streets and increased pollution; delivery apps

have created new costs for businesses and raised concerns over both data rights and worker rights; and the march toward automation threatens employment especially in retail and manufacturing jobs. Yet technology also presents opportunities: to expand access to food assistance, to better coordinate transportation and reduce waste, to create more humane meat substitutes, and to create new jobs and growth sectors that provide economic opportunity. NYC's food policy can seek to accelerate and leverage positive technological change while mitigating the risks of rapid change.

THE COVID-19 PANDEMIC

As this plan is released, New York City continues to battle our worst public health and economic crises in recent history. While this plan takes a 10-year view, its priorities and strategies are informed by today's crises, both by the vulnerabilities exposed and by the historic efforts – citywide and grassroots – to get relief to the New York's residents, workers, and businesses.

The pandemic cast a glaring light on the fragility of our food system. As stay-at-home orders and a decline in economic activity drove up unemployment, an estimated 400,000 additional New Yorkers experienced food insecurity. Meanwhile, nearly a third of food pantries closed as volunteer staff, particularly older adults, were advised to stay home. Restaurants and bars were devastated as revenues declined, with one-third to one-half of businesses at risk of permanent closure and more than 100,000 workers unemployed. This shock reverberated across the supply chain, as distributors and growers accustomed to

serving restaurants had to pivot to meet growing grocery demand. Most urgently, higher mortality rates among New Yorkers with preexisting medical conditions such as diabetes and heart disease pointed both to the importance of nutrition and the deep health disparities among Black and Latinx New Yorkers who are more likely to lack access to affordable, fresh food and have borne the brunt of Coronavirus cases and deaths.

One positive element to emerge from the pandemic was the way New Yorkers came together to assist one another. Houses of worship and community centers became food pantries and storage sites overnight. Caterers and restaurants donated hot meals and partnered with organizations like Rethink Food NYC and World Central Kitchen to distribute meals to emergency workers and their families. More than 50 volunteer-led mutual aid groups delivered groceries and supplies to neighbors. Dozens of community fridges emerged, offering free fresh food from sidewalks across the city. Organizations ranging from

health nonprofits to community foundations set up helplines and directories to connect New Yorkers in need with available aid. This rapid mobilization, and the power of community-led efforts to coordinate food networks, inspired numerous strategies in this plan.

The City needed to innovate, as well. In March 2020, the Mayor's Office mobilized to distribute free meals to all food insecure residents and to secure the food supply chain. The City funded emergency support to shore up the pantry network, set up grab & go free meal pickup sites at more than 500 schools, and recruited out-of-work for-hire vehicle drivers to deliver meals to homebound New Yorkers, altogether delivering more than 2 million meals per day. Agencies worked with businesses to interpret public health guidelines, secure protective equipment for staff, and safely serve customers; established outdoor dining and open streets programs in mere months; and monitored the virus' spread around regional food hubs, responding quickly to outbreaks to prevent supply

chain disruptions. The lessons from this unprecedented effort also inform our understanding of both the investments needed in the food system and what we know is possible with coordinated and collaborative action.

MAYORAL PHOTOGRAPHY OFFICE

NEW YORK CITY'S FOOD SYSTEM

Approximately 19 billion pounds of food flow through New York City every year. This flow is the product of a complex global supply chain that grows, processes, and distributes food, and a rich local food economy that prepares food for purchase and disposes of food waste. The workings of this supply chain affect the daily life of every New Yorker. Yet, unlike NYC's other essential systems – our road, water, and electrical networks, for example – our food system has no centralized design or management. Our food system is a “distributed” system, made up of tens of thousands of large and small businesses and nonprofit organizations - local, regional, national, and global - and millions of consumers, interacting largely independently to match food supply and demand.

NYC's food system is unique in two major ways. First, our city's ethnic diversity necessitates multiple complex supply chains that source products from across the region and the globe to cater to the distinct tastes and needs of New Yorkers. Second and relatedly, the majority of food businesses, from grocery stores to restaurants to distributors, are small-scale and independently owned, rather than national operations. This varied and nimble business landscape is well suited to serve NYC's unique needs and supports both economic opportunity and food system resilience, but it also poses risks, including coordination challenges and the general vulnerability associated with small-scale, independent businesses.

NYC's food system can be broken into six discrete phases:

PRODUCTION consists of the growing, raising, and harvesting of fruits and vegetables, grains, animals, and any other raw materials for food. The vast majority of this activity happens outside of the five boroughs because of the large amount of arable land required. Exceptions include vertical indoor farms, rooftop farms, oysterculture and fishing, and community gardens that use a mix of conventional, hydroponic, and aeroponic growing techniques to produce food locally.

PROCESSING consists of any value addition that happens to those initial raw ingredients, whether the milling of grain into flour (primary processing), the baking of flour into bread (secondary processing or manufacturing), or the packaging of bread for sale (packaging). Most processing also occurs outside of the five boroughs. However, local food manufacturing has expanded in recent years, with NYC jobs in the subsector increasing by 27% from 2005 to 2015. Food businesses such as butchers and live animal markets, packing companies, and restaurants and caterers provide additional, though relatively small-scale, local processing capacity.

DISTRIBUTION refers to the storage, transport, and delivery of any food product from one place to another. The food that eventually reaches NYC consumers must be stored in warehouses (often with refrigeration, or “cold storage”), reorganized or repackaged for smaller-scale distribution to retailers and manufacturers, and delivered from the warehouse to the final “last mile” destination, usually a restaurant or grocery store. The majority of this process occurs outside the city. Even in the case of the last-mile distribution, only about half of deliveries originate from within the city. The city’s food distribution system therefore relies on bridges and tunnels to reach their consumers, as 99% of the last-mile distribution is by truck.

Essential to the City’s food distribution system is a series of major food hubs, the largest of which is the Hunts Point Food Distribution Center in the Bronx, which dispenses over 4.5 billion pounds of food each year and supports 8,500 direct jobs. Hubs also exist in Maspeth in Queens and Sunset Park and the Brooklyn Terminal Market in Brooklyn. These hubs receive food by truck, rail, and barge. John F. Kennedy International Airport also plays a role in food distribution, particularly for high-value and perishable products that arrive by air.

Feeding New Yorkers requires, in some cases, vastly different supply chains for different cuisines. Nationally, many large grocery stores rely

on a handful of national distributors, which in turn rely on a small set of major manufacturers and processors that source food from their own industrial-scale farms and processing facilities. Supply chains that cater to Chinese and Southeast Asian consumers, however, have largely distinct supply chains that source from farms in New York, New Jersey, Florida, and Central America. They use smaller trucking and distribution networks that store goods in smaller warehouses in hubs like Chinatown, Sunset Park, and Maspeth, selling to both restaurants and consumers out of hybrid retail-warehouses. Caribbean food markets import products through the ports of Elizabeth, NJ, and Kennedy Airport, and both warehouse and process much of their produce in markets in eastern Brooklyn.

RETAIL is the final point of sale for food, where it reaches the customer. There are two types of outlets. The first is prepared food sellers, including restaurants, caterers, vendors, soup kitchens, and food pantries, and institutional cafeterias at schools, hospitals, and large employers. There are approximately 24,000 restaurants and bars in the city and thousands of additional prepared food sellers. The second type is packaged food and produce sellers, including full service grocery stores and bodegas, which sell food directly to consumers for off-site consumption. There are about 14,000 grocery stores and bodegas. As noted above, many of these businesses are small-scale: 64% of restaurants and 84% of grocery stores and bodegas have fewer than 10 employees. Retail food businesses are traditionally an area of employment and asset building for NYC immigrants.

CONSUMPTION is the point at which New Yorkers purchase, or otherwise obtain, and consume food. The vast diversity of palates and incomes of New York means that consumption varies drastically across the city. Food access also varies across the city. Owing to both a lack of historic investment in communities of color and clustering of low and high income New Yorkers, some neighborhoods have access to a range of grocery options and restaurants with fresh, nutritious food at accessible prices; in others, residents’ access to affordable, healthy food, especially fresh fruits and vegetables, is limited or nonexistent. In these neighborhoods, fast food outlets, convenience stores, and liquor stores often outnumber healthy food outlets.

POST-CONSUMPTION, finally, refers to how the byproducts of food and food packaging are dealt with. Household food scraps and packaging is collected by the City whereas food waste from businesses and institutions is collected by private waste hauling companies. After it is collected, it is trucked or barged to privately run waste management

facilities, many of which are outside of the five boroughs.

For most of human civilization, food waste was typically used to add nutrients to soils or for animal feed, both of which helped produce more food. We no longer use this circular system, instead sending food waste to landfills. Today, nearly a third of household and commercial waste consists of biodegradable food scraps, which could be used for fertilizer or animal feed as our ancestors did, or as an energy source. When separating organics from other waste, we now have the technology to capture the methane created by decaying food and use it as a renewable energy source. Therefore, the City has launched several efforts to segregate and manage the processing of organic waste so as to close the loop on the currently linear food supply chain.

The region plays a large and growing role in this food system. Since the 1970s, a citywide network of farmers markets have strengthened connections between the region's farms and urban consumers. Today, hundreds of farmers' markets, farm stands, and community-supported agriculture (CSA) drop-off points dot the five boroughs, and NYC restaurants and grocery distributors provide a critical market for many of the region's farmers. The region is also where much of the processing and distribution activity that the City relies on occurs. Northern New Jersey is a critical food hub serving New York, home to regional distributors and national food service companies that distribute about one-quarter of the food that is distributed to point-of-sale outlets. The Lehigh Valley of Pennsylvania is another important cluster for last-mile distributors, as are upstate New York and Long Island.

In line with broader efforts by the City to strengthen regional partnerships, this plan both acknowledges the region's central role in food policy planning and seeks to deepen coordination with regional governments, businesses, and other partners.

FOOD POLICY IN NYC TODAY AND IN THE FUTURE

City government's role in the food system dates back more than a century, starting with the distribution of pasteurized milk to address infant mortality in the early 1900s to the first school lunch programs during the Great Depression to the rollout of food stamps in the 1960s.

Today, the City influences the food system in multiple ways:

1. The City **administers and provides funding to critical food assistance programs** that provide a lifeline to food insecure New Yorkers, dispensing over \$2 billion in SNAP, operating the largest school feeding program in the country, and funding the City's Emergency Food Assistance Program.

2. The City **regulates food businesses**, directly through permits and licenses and indirectly by setting policy for land use, transportation, and labor practices. In this way, the City has multiple tools to support restaurants, producers, distributors, street vendors, and other businesses. The City also offers services such as loans, grants, training, and technical assistance to food businesses that meet certain criteria.

3. The City **manages critical food infrastructure**, including the Hunts Point Food Distribution Center in the Bronx as well as vital industrial sites in all five boroughs that house supply chain businesses and the road network on which most food businesses rely.

4. The City is a **major food purchaser**. We spend about \$500 million annually on food across all departments, from schools to public hospitals to senior centers, making up about 2.5% of total food sales.

5. The City **has a unique power to convene, plan, and advocate**. Because our food system is so complex and distributed, no single entity has a complete picture of what's needed or a platform to plan ahead. The City can play an important role in convening experts, sharing data and knowledge, leading efforts to change state and federal policy, and setting an ambitious agenda around which communities, businesses, institutions, philanthropies, and regional partners can work together.

6. The **Mayor's Office of Food Policy** is now enshrined in the City Charter with a mandate to lead City food policy and coordinate multi-agency initiatives. This provides the City with the structures to leverage all the tools mentioned above and pursue ambitious, multi-sectoral policy.

WHO DOES WHAT IN CITY GOVERNMENT ON FOOD POLICY?

Virtually every agency in City government interacts with the food system in one way or another. This chart is a high level representation of the major functions of the City that make and implement food policy. It is not, however, an exhaustive list.

ENTITIES THAT SET POLICY, PROVIDE OVERSIGHT AND MANAGE SYSTEMS

AGENCIES THAT SERVE FOOD AS PART OF THEIR PROGRAMMING

AGENCIES THAT SUPPORT THE CITY'S FOOD SUPPLY

In recent years, the City has launched efforts to expand food access, strengthen the food sector, and address inequity in NYC's food system.

Example efforts include:

School Food:

Since September 2017, every public school student has access to free lunch, and starting in 2015, schools began rolling out Breakfast in the Classroom – now available in nearly 600 school buildings. Schools also launched “Meatless Mondays” and “New York Thursdays,” celebrating local produce.

Get the Good Stuff:

New Yorkers enrolled in the Supplemental Nutrition Assistance Program (SNAP/EBT) now earn an extra dollar in rewards points for every dollar they spend on fruits, vegetables, and beans at participating NYC grocery stores. The benefit (up to \$50 per day) can be used for the next purchase of eligible produce.

Shop Healthy NYC:

As of March 2020, more than 1,800 food retailers, including bodegas and grocery stores in neighborhoods with high food insecurity, have pledged to increase their stock and promotion of healthy foods.

Workers' Rights:

Through City advocacy and legislation, New York City's minimum wage increased to \$15 per hour and food workers enjoy expanded protections, including paid sick leave and control over shifts. An emboldened Department of Consumer and Worker Protection also expanded its enforcement and advocacy efforts to protect workers.

Hunts Point Resiliency:

The City is making investments to mitigate flood risk, provide backup power, and reduce emissions at this regional food hub, in a project that will also protect and build social resilience for the broader Hunts Point neighborhood.

Food at NYCHA:

Launched in 2015, the Food Business Pathways program has provided training and assistance for resident entrepreneurs to launch 189 food businesses to date. Farms at NYCHA, part of a broader effort to improve health outcomes in 12 neighborhoods, now has six farms in operation.

EDWIN J. TORRES/NYCEDO

GOOD FOOD PURCHASING

The **Good Food Purchasing Program (GFPP)** is a framework that helps institutions better understand the source of the food they purchase and provides a methodology to quantify the impact of the food along five core values.

The program offers unprecedented transparency and accountability to an issue rarely discussed by governments, institutions, businesses, or individuals: the true cost of the goods we consume. When low cost is prioritized over social and environmental values, there are inequitable impacts on the health and wellbeing of people, animals, and the environment. Through this framework, large-scale food purchasers like City agencies are able to adapt and leverage their spending and contracting for positive impact.

Launched in Los Angeles in 2012, the program has expanded to 53 institutions or agencies across 20 cities, with 14 formal policy adoptions, and more than \$1 billion in annual food spend leveraged. In 2017, subject to legal restrictions on the City's ability to engage in "social policy" purchasing, the Office of School Food & Nutrition Service enrolled in the program. In 2019, the program was expanded effectively citywide across six additional agencies, making NYC one of the few municipalities to adopt GFPP values across all food programs. In doing so, City agencies will act as leaders in the regional food system and offer proof points for broader application of good food purchasing.

The core values guiding the program are:

- **Local Economies** - Support small, diverse, family and cooperatively owned, and mid-sized agricultural and food processing operations within the local area or region.
- **Nutrition** - Promote health and wellbeing by offering generous portions of vegetables,

fruit, whole grains and minimally processed foods, while reducing salt, added sugars, saturated fats, and red meat consumption, and eliminating artificial additives. Improving equity, affordability, accessibility, and consumption of high quality culturally relevant Good Food in all communities is central to our focus on advancing Good Food purchasing practices.

- **Valued Workforce** - Provide safe and healthy working conditions and fair compensation for all food chain workers and producers from production to consumption.
- **Environmental Sustainability** - Source from producers that employ sustainable production systems that reduce or eliminate synthetic pesticides and fertilizers; avoid the use of hormones, routine antibiotics, and genetic engineering; conserve and regenerate soil and water; protect and enhance wildlife habitats and biodiversity; and reduce on-farm energy and water consumption, food waste and greenhouse gas emissions; and increase menu options that have lower carbon and water footprints.
- **Animal Welfare** - Provide humane care for farm animals by improving overall wellbeing through better rearing practices and/or reducing total numbers raised.

While all the plan's strategies relate, in one way or the other, to the five values above, certain strategies are directly in service of the implementation of the program and you can identify them with 🍌. For more information, visit nyc.gov/GFP.

THE VOICES THAT SHAPED THIS PLAN

Food Forward NYC builds on decades of work, thought, and learning by communities, food policy advocates, and City staff, and was shaped by what the City heard directly from New Yorkers about how they want their food system to work for them.

We are indebted to the more than 300 individuals who contributed their time and policy recommendations in workshops, briefings, and individual conversations carried out over the fall and winter of 2020 – including representatives of food businesses, workers, community-based organizations, advocates, and philanthropy. These discussions were essential to the development of plan priorities, as were the contributions of the members of the NYC Regional Food Working Group.

This policy plan also draws on insights from two recent community-based engagement efforts: “Take Care New York,” which included dozens of community workshops on health equity, and the COVID-19 Taskforce on Racial Inclusion and Equity, which surveyed hundreds of community organizations. Supplementing this outreach was an extensive review of policy recommendations and plans developed in NYC over the past two decades and best practices from around the world. City staff from dozens of agencies also contributed to the development of the strategies included in the policy plan.

Finally, the policy plan builds on the goals and strategies articulated in NYC’s strategic long-term plan, OneNYC, which seeks to promote equity, sustainability, resiliency, and growth and is premised on the notion that these four themes cannot be achieved alone but are mutually dependent. This is the spirit that animates Food Forward NYC.

New York City’s food system faces serious challenges over the next decade. The 10-year food policy plan lays out 5 goals and 14 strategies to confront these challenges while seizing related opportunities.

Goals for NYC’s food future

GOAL	DESCRIPTION	PAGE
1	<p>All New Yorkers have multiple ways to access healthy, affordable, and culturally appropriate food. The city faces an unprecedented food insecurity crisis, affecting nearly one in five New Yorkers, that requires a focus beyond traditional emergency food systems. NYC will:</p> <ul style="list-style-type: none"> A. Expand food benefits to reach more New Yorkers in more places. B. Distribute food more equitably. C. Reconfigure how the City sources food. 	27
2	<p>New York City’s food economy drives economic opportunity and provides good jobs. NYC’s extraordinarily diverse food system depends on tens of thousands of small and micro businesses and the hundreds of thousands of workers who make them run. NYC will:</p> <ul style="list-style-type: none"> A. Protect food workers, improve pay and benefits, and support ownership. B. Support small food businesses by cutting red tape, protecting data, and promoting innovation. C. Train the next generation of food workers for high-quality jobs. 	41
3	<p>The supply chains that feed New York City are modern, efficient, and resilient. The plan is committed to securing and improving our critical infrastructure and recognizes that strengthening regional connections is critical to that end. NYC will:</p> <ul style="list-style-type: none"> A. Strengthen the City’s food infrastructure. B. Improve regional coordination and sourcing. C. Support increased urban farming. 	51
4	<p>New York City’s food is produced, distributed, and disposed of sustainably. Our food system has profound impacts on the local, regional, and global environment, as well as animal welfare. NYC will:</p> <ul style="list-style-type: none"> A. Integrate sustainability and animal welfare into City food programs. B. Reduce in-city air pollution and greenhouse gas emissions from the food system. C. Promote innovation around food and sustainability. 	61
5	<p>Support the systems and knowledge to implement the 10-year food policy plan. Few systems are in place, whether in City government or outside of it, that have the capacity and the knowledge to alone implement a comprehensive food policy. NYC will:</p> <ul style="list-style-type: none"> A. Strengthen community engagement and cross-sector coordination around the development and implementation of food policy. B. Create and share knowledge about the food system. 	69

GOAL

1

All New Yorkers have multiple ways to access healthy, affordable, and culturally appropriate food.

BACKGROUND

New York City's flavor palate is as diverse as its population, weaving traditions from Black, Indigenous, and immigrant food cultures. From kosher markets in Borough Park to Indian groceries in Jackson Heights, from street food vendors to large cafeterias, accessing food looks different for every New Yorker. New York City's food system needs to provide multiple ways for its residents to access healthy, affordable, and culturally appropriate food, including in ways that encourage building community and connection.

However, many New Yorkers still struggle to get the food they need. As of fall 2020, there were 1.6 million food insecure New Yorkers, according to estimates by Feeding America.¹ This challenge is exacerbated by the fact that food costs in New York City are very high. The average cost per meal (the cost of grocery ingredients, not prepared foods) in 2018 was \$4.08, over 30% higher than the national average.² Furthermore, the burden of food insecurity is not distributed equally. Food insecure New Yorkers disproportionately belong to communities of color - reflecting historic discrimination and structural disadvantages and further deepening existing racial inequalities.

Food insecure New Yorkers are all of us - schoolchildren, seniors, parents, working adults - and have varying food needs. Some New Yorkers observe restrictions on the food they eat guided by faith, values, or health. This includes but is not limited to kosher, halal, vegetarian, vegan, or gluten-free meal patterns.

While much attention is often paid to the emergency food system - food pantries and soup kitchens - many food insecure residents get their food in many different ways, including at schools, grocery stores, farmers' markets and restaurants. One study looking at New Yorkers facing food hardship found that only 25% of New Yorkers who face severe food hardship and only 17% of New Yorkers who face moderate food hardship typically use the emergency food system.³

For all New Yorkers to get the food they need and want, they need multiple ways to access healthy, affordable, and culturally appropriate food that meets them where they are. The plan embraces that food intersects with New Yorkers' health and the broader economy in multiple ways, and not simply with regard to hunger; that food is important as an expression of cultural identity and as a way to connect with family and friends; and that food can bring tremendous joy.

The strategies are also anchored in the recognition that the food system's failure to provide healthy, affordable, and culturally appropriate food disproportionately impacts communities of color. To help redress that, the plan places a particular focus on solutions that make it easy for the people living in communities that have faced the burden of these disparities to access the food they want where they want it.

Food Hardship in New York City

Severe food hardship: Often running out of food or worrying that food would run out before there was enough money to buy more.

Moderate food hardship: Sometimes running out of food or worrying that food would run out before there was enough money to buy more.

No food hardship: Not running out of food or not worrying that food would run out before there was enough money to buy more.

STRATEGIES

- NEAR TERM
● MEDIUM TERM
● LONG TERM
- ✓ LEGISLATIVE ACTION
🍊 GOOD FOOD PURCHASING PROGRAM

IA. Expand food benefits to reach more New Yorkers in more places.

Launch a new food program to address food security issues exacerbated by the pandemic ●

The COVID-19 pandemic has both shed a light on and exacerbated food insecurity challenges in New York City. As a continuation of the City’s work on its Emergency Food Delivery program, the City will launch a new healthy food benefit that helps fill the gap in SNAP access and grocery delivery. The program will enable the use of SNAP online and will allow for the participation of small, independent grocery stores.

Expand “Get the Good Stuff” ●

In 2019, the City launched Get the Good Stuff, a program that offers a dollar-for-dollar match on fruit and vegetables purchased with SNAP at participating grocery stores. The program helps make fruits and vegetables more affordable for New Yorkers with low incomes by increasing their purchasing power and ability to choose healthy foods. It

NYC DOE

also provides an opportunity for neighborhood grocery stores to expand their customer base and sell more produce. The City will expand this program to more low-income neighborhoods and pursue philanthropic support to reach every low-income neighborhood by 2030.

Include whole families in summer meal programs permanently ●✓

As part of its emergency response to COVID-19, the City has allowed whole families—adults in addition to children—to access its free, no-questions-asked, grab & go meal service in schools. The City is committed to continuing this approach and will advocate to the federal government to make summer meals for families a permanent program, as well as remove the congregate meal requirement. The City will also explore ways that summer meal programs can support local food businesses, building off of the success of the Pandemic EBT program.

Pursue federal and state action to expand and improve SNAP and other food benefits ●✓

SNAP is an essential program for feeding New Yorkers and expanding and improving it is foundational to any efforts around food insecurity. The City will pursue federal and state action to increase maximum and minimum SNAP benefits and expand the list of eligible foods to include prepared foods. The City will also push for improving access to SNAP online, including simplifying the process for smaller retailers to gain access to SNAP online, allowing SNAP dollars to be used for delivery fees, and protecting users from predatory marketing. The City will advocate for expanded federal funding for initiatives that leverage SNAP to incentivize healthy foods, and will push for integration of demonstrated approaches that improve nutrition and preserve choice without limiting access or reducing benefits from federal assistance programs. The City will also pursue changes to the WIC program, including extending WIC benefits up to age 6, increasing WIC benefits to \$35 dollars per month, and developing new strategies to address food insecurity in youth and college students by providing reimbursable meals and extending access to food benefits programs.

Make it possible to leverage healthcare coverage for medically tailored meals ●✓

The City will pursue state and federal action to make it possible to leverage healthcare coverage for medically tailored meals. This will include providing Medicare/Medicaid coverage for medically tailored meals.

EVERYONE SHOULD
BE ABLE TO ACCESS
THE FOOD THEY WANT
WHEREVER THEY MAY
WANT IT.

Pursue federal and state change to expand the reach of produce prescription programs ●✔

The City will pursue state and federal action to fund and expand the reach of produce prescription programs and make them a standard service offer for the populations Medicare and Medicaid serve. This may include funding and requiring the promotion of of Produce Prescription Programs through Medicare Advantage (Medicare Part C) Value-Based Insurance Design Model (VBID), encouraging Medicaid Managed Care Organizations to cover Produce Prescription Programs through their “in lieu of” services, value-added services, and supporting innovations such as the GusNIP Produce Prescription pilot. Additionally, the City will advocate to ensure that these programs are designed so that they can be fulfilled by small businesses and food non-profits located in the communities served.

Partner with health systems to increase access to healthy foods ●

Health insurers, hospitals, and other healthcare providers are increasingly exploring investments in healthy foods to improve the health outcomes of their clients. The City will accelerate this process by advancing partnerships with health systems such as piloting a grocery store within a City hospital or creating new healthy food benefits.

I B. Distribute food more equitably.

Transform the emergency food network ●

The City is eager to improve equity and resilience in NYC’s emergency food system, particularly considering the historic spike in food insecurity wrought by the pandemic. To achieve this, the City will build more overall capacity to distribute food, especially in neighborhoods in highest need of emergency food. These capacity enhancements will focus on key vulnerabilities of the pantry system - from physical infrastructure needs, to technology, to innovative methods of food distribution. The City will enhance EFAP (Emergency Food Assistance Program) and ensure it is more equitably distributed. Through these efforts, the emergency food system will be transformed so that it ensures an equitable distribution of nutritious resources, aligned with food-insecure New Yorkers’ nutritional needs, and delivers a resilient network of programs that operate efficiently, safely, and with dignity even during a crisis.

Enable food businesses to utilize more outdoor space ●

To enable restaurants to continue utilizing outdoor space, the City will work to make the outdoor dining program permanent, including working with the City Council on the regulatory changes necessary. Additionally, the City will explore the creation of temporary markets that include the sale of food with a particular emphasis on increasing economic activity and expanding access to fresh food in areas with limited food access.

Evaluate options to limit exposure to unhealthy food and food marketing ●✔

A healthy food environment is, among other things, one where there is limited exposure to unhealthy food marketing as well as unhealthy foods. The City will review its own policies to identify potential actions to limit New Yorkers’ exposure to advertising, marketing, and promotion of unhealthy foods, and will explore ways to limit availability of unhealthy foods by, for example, eliminating sales of sugary drinks in City vending machines. At the same time, the City will push for state and federal policies that support reduced intake of over consumed dietary components like added sugars and sodium.

Explore new ways to expand farmers’ markets and other programs that bring fresh fruits and vegetables to underserved communities ●

The City will explore new assistance programs that will allow sustainable expansion of farmers’ markets, farm stands, community-supported agriculture (CSA) programs, and similar models in underserved communities. For example, mini-grants can support capital and operating expenses and provide technical assistance to producers and providers. The City will do this through partnerships with philanthropic entities and community-based organizations and by advocating for state and federal policy changes that get more fresh foods from local farms to low-income communities. Additionally, the City will strengthen the NYC Green Cart program. The program was introduced in 2008 as a way to increase access to fresh fruits and vegetables. To increase business viability, the City will expand the types of healthy foods Green Cart vendors are permitted to sell, allow vehicles to be used in addition to carts, and will explore other ways to support vendors (for example, new technology to accept EBT).

Support breastfeeding parents in hospitals, workplaces and community settings ●

In order to protect, promote and support breastfeeding in the long term, the City will partner with hospitals, birthing centers, employers, and community partners to increase the number of Baby-Friendly maternity facilities in NYC. We will also encourage the development of community and workplace supports for breastfeeding by conducting professional lactation trainings, providing lactation education and support to new parents, offering technical assistance to employers, schools, child care centers, and other community partners to expand lactation programs and spaces, and promoting family-friendly policies such as paid family leave. These changes are expected to have the most lasting impact in communities of color and groups with traditionally low breastfeeding rates.

Pursue federal support for businesses and nonprofits that provide fresh fruits and vegetables in underserved communities ●👍

To expand the range of businesses and nonprofits that provide fresh produce in underserved communities, the City will pursue the creation of new federal programs that will offer capital and operating subsidies to qualifying businesses and nonprofits that offer such services. The City will ensure that such subsidies apply to various cooperative models as well as more traditional business models.

Study ways to improve access to cold storage in underserved communities ●

The City will conduct outreach, stakeholder engagement, and research to better understand the cold storage infrastructure needs and constraints facing both small-scale food businesses such as bodegas and non-profit food pantries, with a focus on the unique challenges faced by those operating in underserved communities. This study may include investigating refrigeration, electrification, freight access, access to capital, and other challenges. Potential policy solutions may include a “cash-for-clunkers” refrigeration trade-in program, low-cost loans for improving or expanding cold storage space, shared off-site cold storage facilities, and others that may arise through the engagement process. The City will then work with industry, philanthropic, and State and federal partners to provide resources to businesses seeking to improve or expand their cold storage capacity.

Improve cafeteria culture in public schools ●

As part of its strategic planning process, the Office of Food & Nutrition Services (OFNS) at the Department of Education (DOE) will develop an action plan that encourages principals and school kitchens to create a physically attractive, caring, and calming cafeteria environment allowing meals to be more enjoyable. Potential strategies include: scheduling adequate time to eat during appropriate hours, preparing fruits and vegetables that are easier to consume, and creating more efficient and sustainable cafeteria practices such as offering grab-and-go style service and composting uneaten food.

Explore ways to increase the amount of freshly prepared meals in public schools ●👍🍎

Access to healthy, whole foods is a priority for NYC public schools, as such meals provided to our students should be cooked from a primarily scratch menu. All City schools should aim to serve fresh meals made from ingredients in their most basic form, prepared at or near the site of consumption, as often as possible. The City will explore ways to ensure that that a citywide menu includes more fresh fruits, vegetables, and healthy grains, less meat, more locally accessed food, and increased access to safe drinking water. The City will conduct a landscape analysis to identify facilitators and barriers related to infrastructure, labor, ingredient availability, communication, and community input related to scratch-cooking. The City is committed to increasing access to fresh, whole foods for its students and will advocate for state and federal policy changes and increased support that will allow more fresh fruits and vegetables and scratch-cooked meals in schools.

Explore new partnerships with schools around food access ●

School kitchens can act as critical food infrastructure in low-income communities. The City will explore pathways for using school kitchens for other food uses during times in which they are underused. For example, community-based organizations could serve holiday meals using the kitchen space. Additionally, the City will explore expanding the food and nutrition offerings available through community schools, whether it is expanding the food pantry program to schools that currently do not have a food pantry or providing other programming to address food insecurity.

1C. Reconfigure how the City sources food.

Create a shared commercial kitchen for providers serving older New Yorkers 🍏

The NYC Department for the Aging (NYC Aging) is partnering with Citymeals on Wheels to create a first-of-its-kind commercial kitchen available for use by various DFTA-contracted providers. Food service providers, particularly under-resourced providers, can use this commercial-grade kitchen to safely prepare, cook, and store food and equipment without having to own and maintain the facility themselves. While priority will be given to providers that cater meals, the kitchen will also provide opportunities to prepare and store meals for emergencies.

Push for changes in state procurement law 🍏🍏

State procurement laws and legal precedents restrict the ability of the City to incorporate social policy goals such as labor conditions, sustainability, or animal welfare into its food procurement criteria. The City will pursue changes to state procurement law that will enable the City to better integrate the Good Food Purchasing values into its food procurement processes while maintaining accountability and fiscal responsibility.

Explore new ways to centralize and improve City food procurement 🍏

The City will study additional ways to centralize and streamline food operations, including additional kitchens, central warehousing, and centralizing more of the City's procurement. Additionally, City agencies will continue to prioritize the procurement of more wholesome foods that are minimally processed.

Study the viability of food hubs that expand public schools' access to cold storage, processing space, and preparation capacity 🍏🍏

Schools often lack the space to store, process, and prepare many of the fresh ingredients needed to scratch cook; however, retrofitting every school cafeteria would be very difficult given space and budget constraints. The City will study the viability of food hubs as a tool to help schools overcome barriers to scratch cooking by providing cold storage, processing space, and preparation capacity. The City will also explore ways to secure federal funding for such investments.

GOAL 2

**New York City's food economy
drives economic opportunity and
provides good jobs.**

BACKGROUND

The city has over 40,000 food businesses that employ hundreds of thousands of workers. The precise number of workers is difficult to calculate because there is not reliable data on the many “gig economy” workers employed in food delivery. These workers and businesses are essential to the health and wellbeing of New Yorkers. The food industry is an important source of employment and asset building for communities of color and immigrant communities (79% of food workers who live in NYC are people of color, including 43% Latino and 21% Asian).⁴

The restaurant industry is also vital to the city as a major draw for residents, workers, and visitors, underpinning many other industries such as office employment in the central business districts and serving as a draw for tourists. Indeed, the restaurant industry is key to making New York City the compelling place that it is. Its economic contribution is also large. In 2019, the industry made nearly \$27 billion in taxable sales.⁵

However, working or owning a business in the food sector can be extremely challenging. Businesses in the food sector typically operate on low profit margins, a particular challenge considering the high costs associated with operating a business in the city. About 99% of the city’s food businesses are small businesses, with fewer than 100 workers, and 70% are micro-businesses with fewer than 10 workers.⁶

Furthermore, food workers are typically paid low wages, lacking job security and mobility opportunities. In New York City, the average worker in the grocery industry earns \$30,845 annually, the average worker in the restaurant and bar industry earns \$33,703 annually, and the average worker in the manufacturing industry earns \$41,550 annually. This is far lower than the average wage across all industries in NYC, \$94,393.⁷ Many delivery workers - a growing element of the food sector - are considered independent contractors and do not have access to the same protections and benefits that employees have.

The strategies below recognize that, if the City wishes to improve the food system, this starts with supporting both food workers and food businesses, and that supporting both is not mutually exclusive but in fact reinforcing. The strategies also look to the future of food businesses, including supporting new ownership models aligned with the principles of economic democracy and anticipation of technological change.

Size of Food Business by Number of Employees

● 1-9 Employees ● 10-99 Employees ● 100 or more employees

SOURCE: COUNTY BUSINESS PATTERNS, 2018.

STRATEGIES

2A. Protect food workers, improve pay and benefits, and support ownership.

Enforce fair scheduling laws in fast food ●

The City will rigorously enforce its fast food fair scheduling laws, so that fast food jobs in New York City are good jobs with stable, predictable schedules and pay. Strong enforcement will ensure that fast food workers are scheduled fairly and provided with additional income when their schedules are changed at the last minute. Enforcement will also ensure that fast food workers can combine regular shifts to create a pathway to full-time employment in a notoriously high-turnover industry.

Create financing and technical assistance plans to support worker-owned cooperatives ●

Cooperative models have a long history in the food sector. Worker-owned cooperatives in particular can be a powerful tool to build assets and address the wealth gap in NYC. The City will align existing assistance programs aimed at supporting cooperatives such as Employee Ownership NYC to the needs of food businesses and explore the creation of new financing and technical assistance programs specifically tailored to the needs of food businesses. Where the City may not be best suited to interface directly with businesses, the City will explore ways to work with community-based organizations, business improvement districts (BIDs), and merchant associations to support cooperative incorporation efforts in all five boroughs.

Push for state and federal changes that improve the condition of workers in the food industry ●✓

The City will push for a range of state and federal actions to improve the condition of workers in the food industry. This will include:

- (i) Ensuring that all federal and state benefits programs for workers are accessible to food workers across the industry.
- (ii) Removing laws that restrict employers' liability for failing to protect the health of their workers.
- (iii) Changing state regulations on tip pool sharing to expand the list of employees who can participate in the tip pool, allowing non-tipped back of house workers to receive a portion of tips.

- (iv) Establishing hazard pay for essential food workers during emergencies.

Support the workers who supply the City's food programs ●🍊

The City will work to support the workers who supply the City's food programs. In keeping with limitations on its purchasing power pursuant to current law, the City will initially focus on ensuring that its vendors comply with current applicable laws related to labor as well as collecting more information from its food vendors on labor-related issues. Additionally, the City will pursue changes to applicable law to permit the City to leverage its food procurement power to prioritize excellence in working conditions.

Explore ways to expand the City's existing childcare programs to include night care for children of food service workers ●

During the COVID-19 crisis, the City recognized food service workers as essential employees and provided access to childcare through the Regional Enrichment Centers and childcare programs around the city. As the City moves toward recovery, it will explore ways to expand existing childcare programs or create new programs that include evening and weekend hours, when childcare is most needed and least available. Access to evening and weekend childcare would afford parents greater flexibility to work and reduce costs in what is often an evening and weekend industry.

Conduct a feasibility study on ensuring basic social safety net benefits ●✓

The City will conduct a feasibility study on ensuring basic social safety net benefits to cover food workers, wherever they work. The study will explore potential partnerships with food workers, businesses, community-based organizations, and financial institutions. The program will ensure food workers have benefits such as retirement savings and health and other insurance. The City will also push for federal action to ensure adequate and equitable social safety net benefits for all workers, regardless of employer, place, or nature of work.

2B. Support small food businesses by cutting red tape and supporting innovation.

Push for a NYC Small Business Recovery Tax Credit for small businesses including food businesses ●✔

The City will push for state legislation to enable the creation of a NYC Small Business Recovery Tax Credit for small businesses including food businesses. Eligible businesses with gross revenue below \$1 million will be eligible for a tax credit equal to 6% of their calendar year 2021 rent, up to maximum credit of \$10,000.

Streamline regulations and enforcement processes related to food businesses ●

The City will review regulations and enforcement processes governing small food businesses, including street vendors, to identify opportunities for streamlining. The City will identify potential efficiencies and expand consolidated permitting and inspection services, allowing for streamlined approvals for new and existing small food businesses. The City will also expand outreach and engagement opportunities around all matters related to food businesses, partnering particularly with immigrant organizations.

Support NYCHA food entrepreneurs ●

The City will collaborate with businesses and community-based organizations to expand NYCHA Food Business Pathways. The business accelerator program was created to empower residents of NYCHA public housing developments and New Yorkers holding NYCHA Section 8 vouchers to start and grow food businesses.

Advance initiatives that protect food business and customer data ●

Having a successful food business operation increasingly depends on access to data-driven business services provided by third-party providers. However, food businesses frequently lack the specialized knowledge or capacity to undertake these services under terms that are beneficial to them and may be unable to access critical information such as their own customer data. The City will leverage its convening power to bring together multiple stakeholders to advance initiatives that protect food businesses and customer data such as a “data bill of rights” for food businesses and customers.

Push for expanded and new state and federal programs that support the needs of food businesses and cooperative efforts

The City will convene stakeholders in the food sector to identify and design new programs that meet the unique needs of food businesses and nonprofits. The City will then push the state and federal government to implement them. This may include developing new financing and technical assistance programs to small food businesses that wish to form cooperative arrangements with each other and to support worker-owner cooperative efforts.

Make it easier for vendors to participate in City procurement

The City will make it easier for potential food vendors to negotiate the City procurement process. PASSPort, the City’s digital procurement portal, will roll out new features that will improve the City’s procurement process. This includes simplifying the solicitation process, assisting in speeding up invoicing, and more generally increasing transparency and interagency collaboration. In addition, the City will explore strategies that increase the number of bids on City food contracts by leveraging matchmaking tools and group purchasing strategies; expand technical assistance in navigating the procurement process; provide process navigators who can assist small vendors through the procurement bid process; and explore opportunities to streamline the M/WBE application process.

2C. Train the next generation of food workers for high-quality jobs.

Launch a Food Community Hiring initiative

In alignment with the City’s current HireNYC program and expanded hiring requirements through proposed Community Hiring state legislation, the City will identify good entry-level jobs across its food purchasing including food production, distribution, transportation, and related jobs. The City will connect existing and new training programs as referral sources for the City’s vendors and establish goals requiring vendors to provide interviews and offers of employment to qualified low-income individuals from these referral sources. The City will also partner with anchor institutions to expand the number of good entry-level jobs available across food purchasing, with a special focus on anchor institutions in underserved communities.

Support training for food technology careers

The City’s food and beverage and manufacturing and industrial industry partnerships will continue to remain attuned to technology changes in the industry. These partnerships will advise the Department of Small Business Services (SBS) on the development of customized workforce training programs in new technologies for incumbent workers. This will ensure that the workforce stays ahead of technological shifts and that incumbent workers learn new skills on the job, rather than being fully replaced by new technologies.

Support the creation and expansion of career pathways in the food sector

The City will ensure that jobs in the food sector – from warehouse workers to back-of-house restaurant staff – are in fact pathways to professional and wage growth. This will include expanding apprenticeships and developing additional training, certification, and entrepreneurship programs for food workers. These efforts will take the form of:

- (i) Expanding commercial kitchen training and entrepreneurship programs such as First Course NYC and Food Business Pathways.
- (ii) Providing English as a Second Language (ESL) services targeted at food workers.
- (iii) Exploring DOE Career and Technical Education programming for food production, manufacturing, storage, distribution, in partnership with industry.
- (iv) Connecting youth training programs with career pathways in industry.
- (v) Exploring options to develop the NYC Health Department’s Health Academy, a workforce development hub where offerings can include food safety trainings for food workers.

Create workforce development programs for school food workers

Serving the healthiest and freshest food possible to our city’s students requires a well-trained workforce. The City will partner with academic and private sector partners to develop an intensive and comprehensive training curriculum for all school food managers. Training topics may include, but not be limited to, leadership skills, storage and organization, knife skills, tool and equipment use, basic cooking techniques, menu planning, and food preparation. The City will also analyze training programs already in existence to see if they could be scaled up.

GOAL **3**

The supply chains that feed New York City are modern, efficient, and resilient.

BACKGROUND

The food that nourishes New Yorkers originates from all over the world. New Yorkers checking the labels on their food may see the names of states from coast to coast and countries on multiple continents. While certain elements of the supply chain work well, the current lack of overall planning and coordination within the food system results in some components negatively impacting the city. A clear example of that is “last-mile” transportation - the last leg of the supply chain where goods are brought to a final destination - which occurs nearly exclusively by truck transportation that adds to congestion and air pollution.

The long distance the city’s food travels can make it harder for policymakers and New Yorkers generally to understand where their food comes from, understand the food system’s vulnerabilities, and promote a fairer, more sustainable food system. For example, meatpacking plants have been host to some of the largest hotspots for COVID-19 infection in the nation. As workers fell ill, the supply of meat was disrupted. The City had few tools to anticipate the problem, to help identify alternative foods, or pursue better conditions for the vulnerable meatpacking workers who bore the brunt of the crisis in their industry.

Furthermore, the COVID-19 pandemic is a harbinger of future crises that the food system is likely to face. Under any scenario, climate change is expected to have a major impact on the global food supply,⁸ and the City must prepare for it. Other disasters may strike - an extreme weather event, for example - and will test the city’s food system yet again.

Creating a more modern, efficient, and resilient food system will require moving more of the food supply chain within New York City, as well as the greater region, in such a way that increases food access in underserved areas and creates more opportunities for food producers to aggregate and operate more efficiently. This includes increasing the

city’s food distribution capacity as well as producing and processing more foods in other parts of New York State and neighboring states, such as New Jersey, Connecticut, Pennsylvania, Vermont, and Massachusetts. It also includes strengthening urban farming within the city, not simply for the food it can produce but also because of the educational value and the transparency that in-city food production creates in the food system.

MAYORAL PHOTOGRAPHY OFFICE

STRATEGIES

	NEAR TERM		LEGISLATIVE ACTION
	MEDIUM TERM		GOOD FOOD PURCHASING PROGRAM
	LONG TERM		

3A. Strengthen the city's food transportation and distribution infrastructure.

Continue to implement FreightNYC ●

FreightNYC is the City's strategic freight infrastructure plan, outlining near- and long-term investments needed to secure a well-functioning and sustainable goods movement system. This includes new and improved marine terminals, enhanced rail freight capacity, and modernization of distribution hubs across the five boroughs. The City will implement this plan incorporating lessons learned from the pandemic on needs related to the food and health sectors.

Continue to modernize Hunts Point ●

The Hunts Point Food Distribution Center (FDC) comprises over 155 public and private food wholesalers, distributors, and manufacturers, and accounts for 12% of the last-mile food distribution in the city. The City will continue to support the modernization of the FDC by implementing resiliency measures throughout, supporting a variety of freight transportation options, and supporting tenant redevelopment plans.

Strengthen the city's Industrial Business Zones ●

As the city's economy has expanded and diversified, maintaining a supply of space for all necessary uses in NYC has become increasingly challenging. A failure to sustain enough space for industrial and logistics functions would have the potential to disrupt industrial supply chains, inflate the price of industrial space, and threaten the viability of other industrial businesses and the jobs they provide. The City will build on the commitments contained in the 10-Point Industrial Action Plan to protect and strengthen industrial business zones, including limiting hotel and self-storage facilities and not supporting private applications for residential zonings in Industrial Business Zones (IBZs), to support the availability of the space and real estate stability food businesses need to operate and thrive. Strategies such as those described in the City's North Brooklyn Industry and Innovation Plan, including increased floor-area ratio and more flexible parking and loading requirements, may help support stability and growth in IBZs or other industrial areas experiencing rising demand for space.

Pursue development of critical food supply chain facilities ●

The City will prioritize a range of tools to encourage the retention, development, and expansion of the following types of supply chain investments in NYC: co-packing facilities, meat and dairy processing facilities, rentable shared cold storage facilities, and urban production of niche produce. The City will leverage its own properties to ensure that key food hubs across the five boroughs, such as Hunts Point, Brooklyn Terminal Market, Sunset Park, and Maspeth have the resources and capacities to support the packing, processing, cold storage, and manufacturing activities required by food businesses.

Support federal funding for infrastructure ●✓

The federal government has historically played an important role in funding infrastructure, including freight infrastructure. The City has been consistently advocating for an increase in federal funding and local authority for critical infrastructure investments in order to meet the challenges of climate change, promote equitable growth, and improve public health. In supporting a clean infrastructure agenda we can ensure that distribution networks for food are resilient and can help support local plans for food distribution, such as through the development of food hubs and maritime terminals.

Support the development of borough and neighborhood-based food hubs, starting with the Central Brooklyn Food Hub ●✓

The City will explore ways to develop neighborhood-based food hubs to expand fresh food access in high-need areas and reduce traffic congestion. These food hubs will foster a hub-and-spoke model for connections with neighborhood food retail businesses but be at different scales and will emphasize different elements of food distribution, depending on neighborhood needs and development opportunities. To facilitate more flexible food spaces, the City will explore zoning tools that may enable a more flexible mix of retail, food distribution, and food processing to permit the development and operation of small-scale distribution spaces in or near residential or commercial areas, as well as regulatory support and incentives for low-intensity vehicles to facilitate last-mile connectivity, including electric bicycles, e-trikes, and other small cargo vehicles. Additionally, the City will support the proposal to the State to develop a neighborhood food hub in Central Brooklyn.

A STRONGER FOOD SYSTEM REQUIRES INCREASING FOOD DISTRIBUTION CAPACITY WITHIN THE CITY.

3B. Improve regional coordination and sourcing.

Partner on a regional institutional food demand analysis ●

Regional farmers and food producers may have capacity to meet much of the regional demand for food, but it can be hard for them to compete with large agribusinesses. One way to help level the playing field is by increasing transparency around institutional demand for food so that regional farmers and producers can work together to meet that demand. To that end, the City will publicly share information about its own food procurement needs and will partner with other major institutions in the city and the region to do the same, creating a more detailed picture of institutional food demand that can support regional food planning.

Increase the share of regional food the City purchases ●✔🍏

In the next 10 years, the City will aim to significantly increase the share of food it purchases directly from local or regional sources. First, the City will seek to expand the share of food it purchases from the New York region consistent with applicable law. The City will also work to share information on upcoming bids across the region to increase the number of bidders on City food contracts. In the longer term, the City will explore legislation that will allow it to prioritize regionally produced food. Finally, the City will partner with other institutions in the region that have already committed to implement the Good Food Purchasing Program to encourage more institutions and governments in the region to implement the program.

Promote the creation of regional food aggregation centers ●🍏

To enable NYC-based consumers to gain access to more regionally produced food, the City will work with its regional partners to promote the creation of regional food aggregation centers. Regional food aggregation centers will allow small-scale farmers to aggregate their supply and compete for large-scale food purchases. It could also help increase the number of qualified bidders for the City's own food contracts, including New York State bidders.

Advance educational and other partnerships between NYC institutions and regional farms ●

The City will promote educational and other partnerships to directly connect large NYC institutions such as hospitals and universities with farms across the region. These partnerships will prioritize farms that are

accessible to transit and that employ Black and Indigenous staff and integrate culturally rooted farming practices. Examples of programmatic support may include tours of farms, workforce development training for those interested in gardening, farming, and food business entrepreneurship, and “meet the farmer” events at schools, public housing campuses, libraries, and other City-operated sites.

MAYORAL PHOTOGRAPHY OFFICE

3C. Support increased urban farming.

Remove barriers to urban farming ●

The City will launch a review of existing laws, regulations, and policies to identify opportunities to streamline processes and remove regulatory barriers related to the operation of urban farming and organic waste processing on lands that are not public parks. This may include reviewing regulations related to land use and exploring different nonprofit and for-profit operating models and mechanisms to distribute micro-grants more efficiently. The City will also seek to work with the U.S. Department of Agriculture (USDA) and other stakeholders to support urban farmers to complete the Census of Agriculture, helping connect urban farms with federal resources.

Explore new spaces for urban farming ●

The City will explore creative ways to identify more land for urban farming. In the near term, the City will explore new and existing models to leverage City assets to establish new urban agricultural opportunities. Specifically, the City will focus on neighborhoods with limited access to fresh and affordable produce, and where new and innovative urban farming initiatives may help address food insecurity. In the longer term, as land use may change, the City may explore additional sources of land, such as the use of floodplain areas that are intentionally kept fallow and small or irregularly-shaped lots not suitable for developable uses. The City will also advocate for productive green roof requirements on new commercial developments receiving State tax subsidy.

Expand Farms at NYCHA ●

Since 2013, NYCHA has partnered with the Mayor's Office, Green City Force, and other public and private partners on this cross-cutting initiative that expands healthy food access, provides youth workforce and leadership development, and helps create more sustainable public housing communities. Through partnerships, NYCHA will expand the number of farm sites from 6 to 15, ensuring there are at least two farms in each borough within five years. NYCHA will expand work with backbone partner Green City Force and collaborate to explore new farm models, including those that incorporate entrepreneurship, composting, and greenhouses. Working with citywide and local farm partners, NYCHA will identify sources of sustainable funding to enrich and preserve this internationally-recognized network of farms built by and serving low- and moderate-income New Yorkers.

Pilot innovations in urban farming technologies ●

To support the technological advances in vertical farming and hydroponics that make possible the highly space-efficient cultivation of produce in industrial and other indoor spaces, the City will partner with researchers, philanthropy, and industry stakeholders to pilot opportunities to bring down the cost and energy intensity of these technologies to make their deployment and operation more feasible, equitable, and sustainable.

MAYORAL PHOTOGRAPHY OFFICE

MAYORAL PHOTOGRAPHY OFFICE

GOAL 4

New York City's food is produced, distributed, and disposed of sustainably.

BACKGROUND

The food system that feeds New Yorkers has a huge impact on the environment. In the United States, the agricultural sector, including farms and livestock production, accounts for 10% of carbon emissions.⁹ The growing, processing, transportation, cooking, and packaging of food contributes to pollution in the air, water, and soil; depletion of natural resources and ecosystems;¹⁰ and overuse of antibiotics, leading to increases in antibiotic resistant bacteria.¹¹ Too much food waste and food packaging ends up in landfills, with some single-use plastics taking over 1,000 years to break down.

These negative impacts are disproportionately felt by communities of color. For example, migrant farm workers are often exposed to high levels of pesticides and other agricultural chemicals.¹² Hunts Point, a largely Hispanic/Latinx community with one of the largest youth populations in the city, has some of the highest adult and child asthma hospitalizations of any neighborhood in New York City. It also has very high rates of air pollution, in part due to truck traffic feeding one of the world's largest food distribution centers.¹³ Across the United States, commercial hazardous waste facilities like waste processing and transfer stations are much more likely to be built in predominantly Black and Latinx neighborhoods.¹⁴ All of these systems extract wealth, nutrients, value, and health from communities and the planet.

A sustainable food system is regenerative rather than extractive in nature. It allows natural ecosystems and human cultures and communities to thrive. It helps us achieve carbon neutrality by 2050 while acknowledging and addressing environmental injustices. For a dense, urban environment, a sustainable food system must also create meaningful connections between New York City's residents and the communities and ecosystems that feed them. The following strategies will build on existing City and community efforts to ensure that New York City's food is produced, distributed, and disposed of sustainably.

SOME OF THE CITY'S MOST IMPORTANT AREAS FOR FOOD DISTRIBUTION ALSO HAVE SOME OF THE HIGHEST RATES OF AIR POLLUTION

Annual Average

Fine Particles (PM_{2.5})

STRATEGIES

	NEAR TERM		LEGISLATIVE ACTION
	MEDIUM TERM		GOOD FOOD PURCHASING PROGRAM
	LONG TERM		

4A. Integrate sustainability and animal welfare into City food programs.

Include sustainability criteria in commercial waste zone contracts ●

In October 2019, the New York City Council passed the Commercial Waste Zones bill, which divided the city into zones served by up to three private waste haulers, which manage non-residential waste. Once in effect, private waste haulers vying for a zone will be required to submit business proposals that will be evaluated by the City. The City will leverage this opportunity to encourage private haulers to adopt more sustainable practices by including criteria such as cleaner trucks and organic waste collection targets in the proposal review process. Given that small businesses pay more per pound for waste collection today, this new program will also consider ways to have the largest waste producers pay their fair share.

Explore ways to integrate sustainability and animal welfare into City food procurement ●🍌

Initially, in accordance with the limitations placed on it by law, the City's focus on reducing greenhouse gas emissions and nutrition and food quality standards may have incidental and indirect impacts on animal welfare and other environmental issues. In the longer term, the City will explore legislative changes to allow the City to directly address a broader range of environmental and animal welfare challenges through its food procurement and pursue increased budgets where ethical and environmentally friendly practices lead to higher costs.

Pursue federal dietary recommendations that consider environmental sustainability in the 2025-2030 Dietary Guidelines for Americans ●🍌

Every five years, the federal government publishes the Dietary Guidelines for Americans, which establishes the standard for Americans' diet. Previous guidelines have not included sustainability criteria, despite the impacts of the food system on long-term sustainability. The City will pursue the inclusion of dietary guidelines on sustainability in the next version of the guidelines, covering 2025-2030.

Collect 90% of citywide organic waste by 2030 ●

To support the City's goal of reducing the amount of waste it sends to landfills by 90% by 2030, the City will mandate the source separation and recycling of organic waste within all city institutions and schools by the year 2025 and in all residential buildings by 2029. The City will also expand the number of commercial establishments that are required to recycle their organic waste to include all businesses with a significant production of food waste. Additionally, the City will work with the design community and environmental justice advocates to find ways to improve and support new and existing infrastructure and procedures to support sanitary source separation of organics and recyclables with special focus on communities that are disproportionately burdened by waste infrastructure, NYCHA developments, affordable and shelter housing, and public schools.

4B. Reduce in-city air pollution and greenhouse gas emissions from the food system.

Explore ways to make cold storage locations more energy efficient ●

Cold storage is essential for a healthy and functioning food system and can reduce food waste by keeping items fresher for longer. However, refrigeration is incredibly energy intensive. The City will work with property owners and organizations with high refrigeration needs to make their buildings and appliances more efficient, invest in low-cost renewable energy, and reduce operating costs. By sealing leaks and cracks and adding insulation, refrigerated spaces need less energy to keep cold. Installing solar panels and battery storage on warehouse and grocery store roofs can reduce energy costs and provide back-up power in case of an outage. These efforts will help build supply chains that are affordable for businesses to maintain, resilient, and beneficial to the health and well-being of NYC's communities.

Plan for a cleaner, more efficient, and more resilient food transportation network ●

To reduce the environmental impact of food transportation, the City is implementing Freight NYC, which will assist in increasing the share of lower-emission rail and maritime freight. The City will also work to reduce the environmental impact of trucks. To achieve this, the City will need to expand electric charging infrastructure for trucks and smaller vehicles and re-envision the street and curb space to create room for clean micro-mobility options for last-mile delivery. The City will build on the success of

A SUSTAINABLE FOOD SYSTEM IS REGENERATIVE RATHER THAN EXTRACTIVE IN NATURE.

its cargo bike program for the last mile of food deliveries through strategic partnerships, and engage with electric vehicle and micro-mobility industry stakeholders, utilities, and large institutions in NYC to strategically expand charging infrastructure, centering on the needs of environmental justice in communities.

Partner with utilities to incentivize electrification and improve air quality ●

To achieve carbon neutrality by 2050, most of the city’s energy will need to come from electricity, not fossil fuels burned on-site. The City will work with utilities to find ways to incentivize homes to switch from gas cooking to clean induction cooking, which can improve indoor air quality.¹⁵ The City will also focus on transport refrigeration units (TRU), which are trailers that are often parked outside food distribution centers burning diesel fuel to keep their contents cold. It will work with utilities to survey TRU usage in the city, assist with connecting to the electric grid, and ensure financial support for the transition to electricity. The City will also help establish relationships between wholesalers, grocery stores, and other large food businesses and the electric utility in order to increase uptake of utility electrification incentives.

4C. Promote innovation around food and sustainability.

Advocate for the inclusion of local seafood and seaweed in the New York State Grown & Certified program ●✓

The New York State Grown & Certified program is a program that makes it easy for consumers to identify local, safely-handled, and environmentally responsible agricultural products. The City will advocate to expand the reach of the program to include sustainably and locally harvested seafood and seaweed. Products like oysters and kelp have numerous sustainability and resiliency benefits, as they can help clean the State’s waterways, sequester carbon, and reduce the impact of coastal storms.

Create national research-informed standards for expiration dates on food products ●✓

Expiration date labels are not standardized and may not consistently or accurately indicate whether a food item is safe to eat. This results in large quantities of unnecessarily wasted food,¹⁶ the costs of which are borne by consumers. The City will push for the creation of national, data-informed

standards for expiration dates on food products that will limit food waste and save consumers money.

Explore ways to reduce use of single-use items in food service ●

The City will pursue public-private partnerships, legislative pathways, and City procurements to test innovative strategies to reduce single-use items without putting undue burden on small businesses or on diners, particularly people with disabilities. To better understand the magnitude of the issue, the City will model how many single-use items are being used and thrown away or recycled per year to identify potential pathways to reduction. The City will also explore partnerships to pilot a standardized take-out/delivery container and utensils that can be used and exchanged or recycled at a variety of food service establishments, while working with the Department of Health to maintain the highest health and safety standards. In addition, City agencies serving food will also consider strategies to reduce single-use items and packaging in City-provided meals.

Pursue legislative action to reduce the impacts of packaging and single-use items ●✓

The City will work with the State and the City Council to introduce legislation that addresses single-use items in food service holistically, rather than by individual item. Legislative options could include expanding Extended Producer Responsibility to food packaging manufacturers and fossil fuel companies.

Bolster community-owned waste management initiatives ●

The City is responsible for ensuring that waste is collected and managed citywide, including mitigating any burdens the waste system imposes, particularly on communities of color. However, the City also has the opportunity to bolster community-led waste management initiatives that meet the unique needs of communities. The City will provide technical support to groups that divert waste from landfills while creating local regenerative food systems on their own terms. In addition, the City will aim to identify and address barriers to community-level salvage operations or businesses, composting, regenerative agriculture, micro-digesters, and other community-level and community-owned waste management solutions. Particular attention will be given to groups operating within NYCHA and other communities that have suffered from historical disinvestment and environmental burdens. The City will learn from models in other cities, such as Chicago’s Green Era community biodigester, which will serve as a brownfield remediation resource, community food access hub, education and training facility, source of renewable energy, and regenerative farm site.¹⁷

GOAL **5**

Support the systems and knowledge to implement the 10-year food policy plan.

BACKGROUND

New York City's food system is highly distributed and fragmented, made up of many small parts that interact with each other in complicated ways. In fact, the system is so complex that even people who have spent years working in one sector of the food system often have little to no knowledge of how the rest of it works. It is not surprising that it can be extremely hard for anyone who plays a role, from policymakers to food workers to advocates to food consumers, to understand what levers to push for systemic change. This complexity also makes meaningful community engagement and decision making around food very challenging.

In order to implement the 10-year food policy plan, many stakeholders from different parts of the food system will need to work together in ways they have never done before. They will need opportunities to connect with and learn from one another. They will need to be able create and share new knowledge and data about the food system. And of course, they will need to have access to different pathways to make decisions about the food system.

The following strategies will expand the range of tools and knowledge available for all New Yorkers to participate in the food system. The City's ability to coordinate multi-sectoral food policy will help foster partnerships with advocates and residents on all food matters.

STRATEGIES

	NEAR TERM		LEGISLATIVE ACTION
	MEDIUM TERM		GOOD FOOD PURCHASING PROGRAM
	LONG TERM		

5A. Strengthen community engagement and cross-sector coordination around the development and implementation of food policy.

Deepen regional engagement through a NYC Regional Food Working Group ●

The City has launched a NYC Regional Food Working Group, bringing together stakeholders from across the region to discuss regional food policy. This group will serve as an opportunity for the City to report to the region on its food policy and hear back from regional stakeholders. It will also serve as an opportunity to develop a shared policy agenda that members can advocate for together and tangible partnerships to realize that agenda. This will include developing shared federal policy priorities around food, particularly around the 2023 farm bill.

Partner with the non-governmental sector to maximize community participation in food policy decision-making ●

Public engagement on food presents unique challenges given the many interactions of food with residents' daily lives and the difficulty in knowing what opportunities there are for residents to engage with the food system. To develop a durable and effective long-term engagement strategy that promotes equity, the City will work with food advocates to launch a shared working group focused on engagement. The working group will help to map out City processes and identify both immediate and long-term opportunities for engagement. The City is committed to modeling such a strategy through its work with the Good Food Purchasing coalition.

Launch a Public Housing Food Leadership Innovation Lab ●

In recent years, NYCHA has worked in collaboration with a diverse set of partners to activate projects at the intersection of food access, food production, food waste management, community building, leadership development, and entrepreneurship. NYCHA will seek to formalize this through the establishment of a Public Housing Food Leadership Innovation Lab that will serve as a base from which projects (many of which are directly connected to and aligned with other goals in the plan) can be tested, refined, scaled, integrated, and positioned for sustainability. The lab's primary values will be equity and sustainability. Core functions will

include activity that serves to test, refine, and scale successful partner-based projects; activate partners with aligned missions and capacity to serve public housing communities; maintain consistent metrics and tracking; and advance knowledge transfer with other public housing authorities, cities, and additional relevant stakeholders.

Explore the creation of a food justice fund ●

Cities across the country are developing food justice funds, utilizing participatory processes to allocate funding to community driven food projects. The City will partner with food stakeholders and philanthropy to explore the possibility of creating a food justice fund, including identifying potential funding sources and developing equitable and transparent criteria for the distribution of the funds.

5B. Create and share knowledge about the food system.

Improve and share the City's food procurement data ●🍊

As part of its commitment to the Good Food Purchasing Program, the City will work to collect better data and information on its own food procurement. This will include collecting full data on its direct food purchases, developing ways to collect data about the food purchased through third-party service providers, and sharing the information collected publicly.

Conduct a regional food flow study and enhance stakeholder engagement for emergency management ●

To mitigate future hazards to the City's food supply chains, including natural and human-caused risk, the City will conduct a food flow study that will identify different sources of food and vulnerabilities in the City's food supply. Using the study, the City will continue to refine and update its emergency preparedness plans in coordination with key stakeholders in the food sector and create new systems and structures that can be activated during an emergency to address these hazards. The City will also deepen its engagement with the food sector around emergency management.

Develop measures that capture multiple dimensions of food insecurity ●

New Yorkers' food needs are highly unique, depending on cultural preferences, religious and dietary needs, medical requirements, and

STAKEHOLDERS FROM DIFFERENT PARTS OF THE FOOD SYSTEM WILL NEED TO WORK TOGETHER IN WAYS THEY HAVE NEVER BEFORE.

personal values. Furthermore, the ways in which New Yorkers access food vary greatly depending on their specific circumstances. Successful interventions to reduce food insecurity need to consider these many dimensions, yet existing data on food insecurity tends to be very high level, making it harder to design and evaluate policy interventions. To fill this gap, the City will work with community organizations and the academic sector to develop new publicly available measures of food insecurity that will be incorporated into the City's annual Food Metrics Report and that will inform new policies.

Partner with the private and civic sectors on food education campaigns around sustainability and nutrition ●

A major challenge in advancing food policy in New York City is the lack of a shared knowledge base around food, resulting from the complex and fragmented nature of the system. To address this challenge, the City will leverage its convening power to encourage broader food education around a variety of areas related to food. In the sustainability field, opportunities may include convening private sector partners to develop sustainable food campaigns (such as an "ugly fruit" campaign) and support and expanding opportunities for climate and sustainable food literacy, including in K-12 schools. On nutrition, the City will continue to combat predatory food marketing practices targeted at youth, support breastfeeding parents through public campaigns, and advance school-based health education, including nutrition education and wellness policies. Additionally, the City will push the State to develop school curriculum development covering food, agriculture, and climate change and fund sustainable food education projects that bring together urban and rural populations.

Strategy	Action	Legislative	GFPP
NEAR TERM: IMPLEMENTATION STARTS 2021-2022			
1A	Launch a new food program to address food security issues exacerbated by the pandemic		
	Expand "Get the Good Stuff"		
	Include whole families in summer meal programs permanently	✓	
	Pursue federal and state action to expand and improve SNAP and other food benefits	✓	
1B	Transform the emergency food network		
	Enable food retailers to utilize more outdoor space		
	Evaluate options to limit exposure to unhealthy food and food marketing	✓	
2A	Enforce fair scheduling laws in fast food		
	Create financing and technical assistance plans to support worker-owned cooperatives		
2B	Push for a NYC Small Business Recovery Tax Credit for small businesses including food businesses	✓	
2C	Launch a Food Community Hiring Initiative		🍊
3A	Continue to implement FreightNYC		
	Continue to modernize Hunts Point		
3B	Partner on a regional institutional food demand analysis		
4A	Include sustainability criteria in commercial waste zone contracts		
5A	Deepen regional engagement through a NYC-Region Food Working Group		
	Partner with the non-governmental sector to maximize community participation in food policy decision-making		
5B	Improve and share the City's food procurement data		🍊
	Conduct a regional food flow study and enhance stakeholder engagement for emergency management		
MEDIUM TERM: IMPLEMENTATION STARTS 2023-2024			
1A	Make it possible to leverage healthcare coverage for medically tailored meals	✓	
	Pursue federal and state change to expand the reach of produce prescription programs	✓	
	Partner with health systems to increase access to healthy foods		
1B	Explore new ways to expand farmers' markets and other programs that bring fresh fruits and vegetables to underserved communities		
	Support breastfeeding parents in hospitals, workplaces and community settings		
	Pursue federal support for businesses and nonprofits that provide fresh produce in underserved communities	✓	
	Study ways to improve access to cold storage in underserved communities		
1C	Improve cafeteria culture in public schools		
	Create a shared commercial kitchen for providers serving older New Yorkers		🍊
2A	Push for changes in state procurement law	✓	🍊
	Push for state and federal change that improves the condition of workers in the food industry	✓	
2B	Support the workers that supply the City's food programs		🍊
	Explore ways to expand the City's existing childcare programs to include night care for children of food service workers		
2B	Streamline regulations and enforcement processes related to food businesses		
	Support NYCHA food entrepreneurs		
	Advance initiatives that protect food business and customer data		
	Push for expanded and new state and federal programs that support the needs of food businesses and cooperative efforts	✓	

Strategy	Action	Legislative	GFPP
MEDIUM TERM: IMPLEMENTATION STARTS 2023-2024			
2C	Support training for food technology careers		
	Support the creation and expansion of career pathways in the food sector		
	Create workforce development programs for school food workers		
3A	Strengthen the city's Industrial Business Zones		
	Pursue development of critical food supply chain facilities		
3B	Support federal funding for infrastructure	✓	
	Increase the share of regional food the City purchases	✓	🍊
3C	Remove barriers to urban farming		
	Explore new spaces for urban farming		
4A	Expand Farms at NYCHA		
	Explore ways to integrate sustainability and animal welfare into City food procurement	✓	🍊
4B	Pursue federal dietary recommendations that consider environmental sustainability in the 2025-2030 Dietary Guidelines for Americans	✓	
	Explore ways to make cold storage locations more energy efficient		
4C	Explore ways to reduce use of single-use items in food service		
	Advocate for the inclusion of local seafood and seaweed in the New York State Grown & Certified program	✓	
	Create national research-informed standards for expiration dates on food products	✓	
5A	Pursue legislative action to reduce the impacts of packaging and single use items	✓	
	Launch a Public Housing Food Leadership Innovation Lab		
5B	Develop measures that capture multiple dimensions for food insecurity		
	Partner with the private and civic sectors on food education campaigns around sustainability and nutrition		
LONG TERM: IMPLEMENTATION STARTS 2025 +			
1B	Explore ways to increase the amount of freshly prepared meals in public schools	✓	🍊
	Explore new partnerships with schools around food access		
1C	Explore new ways to centralize and improve City food procurement		🍊
	Study the viability of food hubs that expand public schools' access to cold storage, processing space, and preparation capacity	✓	🍊
2A	Conduct a feasibility study on ensuring basic social safety net benefits	✓	
2B	Make it easier for vendors to participate in City food procurement.		🍊
3A	Support the development of borough and neighborhood-based food hubs, starting with the Central Brooklyn Food Hub	✓	
3B	Promote the creation of regional food aggregation centers		🍊
	Advance educational and other partnerships between City institutions and regional farms		
3C	Pilot innovations in urban farming technologies		
4A	Collect 90% of citywide organic waste by 2030		
4B	Plan for a cleaner, more efficient, and more resilient food transportation network		
	Partner with utilities to incentivize electrification and improve air quality		
4C	Bolster community-owned waste management initiatives		
5A	Explore the creation of a food justice fund

Salad Team 4 and Chef Coach Ann
Ahmed test recipe concept at Cooks of
Crocus Hill's donated kitchen space.

2021 IMPACT REPORT

**"Food is a great way to introduce a
community to the best of itself."**

- Ruth Reichl

June 2021
Salad Team 6 preps salads at Saint Dinette's donated kitchen space for delivery to Regions Hospital's front-line staff.

Food connects us.

This year, ROOTS youth realized the power of that concept, seized the opportunity to share their food with more people, and experienced the value (and enjoyment) they could create in the community by doing so.

2021 HIGHLIGHTS

2020's adjustments = 2021's new game plan.

Serving more communities.

Born out of a desire to continue to serve the community, as they had during COVID-related challenges last year, ROOTS youth expanded their salad service to others. They gained more experiences, more skills, and more fans from their creativity, leadership, and hard work.

Back at the Ballpark.

Youth were excited to be back at Target Field serving their salads to Twins fans.

13,764

Number of ROOTS salads prepared and distributed in 2021.

"I love telling youth about the great reactions their salads have been getting."

— April Bogard, Senior Director of Programs, Open Arms

NEW! COMMUNITY PARTNERSHIP

Youth chose 10 community organizations to receive their garden fresh mixes.

95% of youth want to continue preparing and sharing their salads with neighbors in need next year, as well as run their SaladUP! business at Twins games.

Salads were prepared weekly for:

- Regions Essential Workers
- Open Arms Clients
- Urban Research & Outreach Engagement Center
- Summit Academy
- Hospitality House
- Cora McCorvey Center
- Green Garden Bakery youth, families, & staff
- Urban Roots youth, families, staff
- Sumner Library staff
- Phyllis Wheatly Center

67% of participants say they would like to take on a leadership role within ROOTS next year.

Support us at www.rootsforthehometeam.org

ROOTS youth continue to discover and stretch their abilities through real-world work experience. They build upon their own strengths to create the future they want.

LEADERSHIP DEVELOPMENT

In 2021 Youths' Voice and Influence Grows.

11 young people were selected for significant leadership roles within ROOTS, becoming mentors and advisors to the program and participants.

Youth Advisory Council.

These young people advise ROOTS board of directors and staff on program content, connections and community pursuits. Experts from the University of Minnesota's Leadership Studies program co-created, with the youth, the structure and framework for the Council.

Youth Trainers learn their skills in remote workshops in 2021

Youth Trainers.

Four ROOTS alums received training from the University of Minnesota's Youth Development faculty on how to co-facilitate our workshops. They will help lead 2022's programming.

ENTREPRENEURIAL MINDSET

Youth create new products & find new ways to support each other.

Every ROOTS participant is invited to be curious, inventive and share their interests and what they see as needs in the "world." Their ideas become the building blocks toward new ROOTS initiatives.

Salad Creation Day

The food cultures familiar to our young people were expressed through their salads. Their innovative ideas connected the Twin Cities community in many delicious ways.

Peer support

Youth Leadership recognized that navigating 2020-2021's difficulties caused an acute need for self-care for fellow ROOTS participants. They designed and sent wellness gift baskets to all, filled with items to support their wellbeing.

Roots opportunities become pathways toward personal hopes and dreams.

Youth say 2021's opportunities helped them:

-  Gain experiences that taught them more about themselves.
-  Think about their future and what steps they can take to get there.
-  Discover they indeed are leaders, what their personal leadership style is and how to use those strengths for career pursuits.
-  Gather resources and networks for their future.
-  Grow.

Spark Projects

Every participant is invited to choose something they are curious to learn more about. Roots finds opportunities in their areas of interest and offers stipends to the youth to explore and ignite that spark of interest.

Strength-Based Leadership

Youth learn 5 personal strengths and how to use them, along with their leadership style, to propel them from where they are to where they want to be.

"ROOTS has helped me reach my goals and try new things while having the support to do so."

— KH

"My favorite part was being able to learn not just kitchen skills, but life skills."

— EF

The Honorable Jim McGovern
Chairman, Committee on Rules
U.S. House of Representatives
H-312 The Capitol
Washington, DC 20515

Dear Chairman McGovern:

Please find my brief testimony below as part of my appearance this coming Tuesday at your roundtable focused on hunger and food security in the U.S. territories. It is my honor to be able to join you in that conversation.

Testimony before the House Rules Committee Jon Fernandez, Superintendent Guam Department of Education July 20, 2021

Hafa Adai, and good evening! My name is Jon Fernandez, Chief State School Officer and Superintendent for the Guam Department of Education (GDOE). Thank you for the opportunity to appear before you today to discuss the issues of hunger and food insecurity in our communities.

For context, Guam has a population of just under 170,000 residents. In March of this year, the island reported a 16.5% unemployment rate with 38,359 individuals (13,547 households) participating in the Supplemental Nutrition Assistance Program (SNAP). The poverty rate on island is estimated to be over 20%. Within this broader setting, GDOE consists of a unitary public school district with over 28,000 students attending 41 traditional public schools. There are also over 1,700 public charter school students and just under 6,000 private school students on island. While our educational mission is centered on the academic progress of students, I hope you will agree that schools also play (or have the potential to play) a critical role during emergency response and recovery efforts to support the needs of our students and families, especially in the area of food insecurity.

There are four critical ways in which GDOE has worked in recent years to address food insecurity here on Guam and in our public schools, including during the past 18 months of the

COVID-19 pandemic. These include our full adoption of the Community Eligibility Provision authorized by the Healthy Hunger-Free Kids Act of 2010 (P.L. 111-296), full use of the Seamless Summer Option flexibility through the National School Lunch Program, expanded efforts under The Emergency Food Assistance Program (TEFAP), and the implementation of the Pandemic-Electronic Benefits Transfer (P-EBT) program.

As a GDOE is a participant in the National School Lunch Program (NSLP) under the U.S. Department of Agriculture (USDA), our department elected to take full advantage of the Community Eligibility Provision (CEP), which enables schools in high-poverty areas and who meet a minimum direct certification threshold (i.e. 40%) to serve all school meals at no cost to students. In School Year 2014-2015, GDOE piloted CEP at 21 of our 41 schools (14 elementary, 4 middle, and 3 high). We increased the number of schools from 21 to 27 in School Year 2015-2016, to 36 in School Year 2017-2018, and then to all 41 GDOE schools in School Year 2018-2019. Now, all 28,000 of our public school students have access to school breakfast and lunch meals at no cost. This has increased participation in our meals programs, streamlined the administrative processes, and removed the stigma associated with free and reduced meal participation. It is our hope that CEP will continue and further expand as a critical support for food access in schools.

While the CEP has enabled us to increase school meal participation, the pandemic and the resulting shutdown of our schools and entire government in March 2020 created a tremendous challenge in continuing to feed our kids. Our island shut down officially on March 16, 2020, and by March 18, 2020, we submitted a request to the Western Region Office of USDA to be able to implement a “Grab and Go” drive-thru school meals distribution program for our students. Because of our participation in the NSLP, GDOE was automatically eligible for the Seamless Summer Option, which is a program that makes it easier to feed kids during summer and long vacation periods. In this case, we sought the ability to exercise this option to prepare school meals during unexpected school closures to be distributed to families in a drive-thru arrangement on our campuses, and then allowing the meals to be taken off-campus to be consumed. We received USDA approval within 48 hours, and, on March 23, 2020, we began a daily drive-thru school meals distribution at 12 school sites that lasted through the rest of School Year 2019-2020 and through the summer for all children 18 and below. For School Year 2020-2021, with the broad extension of the Seamless Summer Option waiver for all states, we were able to modify our school meals “Grab and Go” program to be able to distribute non-perishable food items at all 41 of our school sites every Friday to families with children 18 and below. Each child received five days’ worth of school breakfast and lunch food items each week. Through this flexibility and modification, GDOE was able to serve over seven million school meals between March 2020 and July 2021. We ended this program on July 16, 2021, and are now preparing for the full reopening of schools in August of this year.

The third support that we have used to address food insecurity and which became a crucial component of our island response and recovery effort this past year was The Emergency Food Assistance Program (TEFAP), which GDOE administers as the state food agency. GDOE’s operation of TEFAP typically involves a twice-weekly distribution of commodities to eligible households out of a warehouse in a central part of the island. When the pandemic first started, in order to avoid the unnecessary congregation of people at the warehouse, we distributed TEFAP

commodities through our non-profit partners, senior citizen centers, and our village mayors for the month of April 2020. In May, with the accelerating and increasing volume of commodities available as part of federal relief, we piloted a “Food to Trunk” distribution at our warehouse and eventually at several larger regional sites. Unfortunately, demand far exceeded our expectations, as cars lined up as early as 2:00 a.m. on the morning of distribution, and traffic remained congested for hours. By September, we had worked out a plan with our village mayors to establish a rotating village-based distribution schedule that enabled us to expand the manpower to assist our operation while expanding the food supports to more families around the island. From April 2020 to present, we have distributed over two million units of non-perishable and frozen food commodities to our community and will continue to do so as long as food commodities continue to flow to the island.

Finally, we are appreciative of the Pandemic-EBT (P-EBT) program that was also approved by Congress to assist with food support for students who have been impacted by school closures during the past school year. Guam recently received approval from USDA for our P-EBT plan which will provide \$36.7 million in food support to approximately 27,900 children based on school closures from August 2020 to May 2021. This includes students who receive free and reduced school meals and were enrolled in Department of Defense Education Activity (DoDEA) schools during the past school year; this also includes all students enrolled in GDOE public schools. P-EBT cards are scheduled to be distributed to families in late August and loaded in increments through the end of September for a total value of over \$1,200 per GDOE student and approximately \$334 per DoDEA student. The amounts reflect the length of time that GDOE and DoDEA schools remained closed to full-time face-to-face instruction. Guam’s application for the additional Summer P-EBT benefit is pending submission and review.

While Guam and GDOE have worked hard to leverage available federal programs, especially pandemic relief, to address food insecurity on island, it is a concern that, once the pandemic subsides, that food supports will also go away. To help sustain our efforts to address hunger and food insecurity, we would ask for support in the following areas:

- (1) **Support for higher school meal reimbursement rates for Guam, given the high cost of food and transportation associated with our location in the western Pacific.** This would help sustain high-quality nutritious meals to the maximum number of students possible.
- (2) **Continued authorization of the Community Eligibility Provision with consideration for longer renewal cycles and higher reimbursement rates.** This would help support higher school meal participation, allow districts to sustain food access, and support high-quality nutritious meals to the maximum number of students possible.
- (3) **Support for non-profit organizations to assist with ongoing food commodity warehousing, manpower, and transport.** This would help by allow GDOE to work with more community partners to provide expanded and more frequent access to food commodities for families across the island.

- (4) **Support for non-profit organizations to provide after-school and summer programs for children and youth in order to provide more avenues for food support during the times in which schools are out of session.** GDOE has been promoting the involvement of more non-profit organizations in “learning recovery” activities over the summer and after-school as we look ahead to the next two to three school years. As part of these programs, food support could continue to be an option for participating students.

Thank you again for the opportunity to be here today and for shedding light on a very important issue for our children, families and communities here in the Pacific region.

Senseramente,

A handwritten signature in black ink, appearing to read "Jon J.P. Fernandez". The signature is fluid and cursive, with the first name "Jon" being particularly prominent.

JON J.P. FERNANDEZ

**U.S. VIRGIN
ISLANDS
DEPARTMENT
OF HUMAN
SERVICES**

**KIMBERLEY CAUSEY-GOMEZ, MSW
COMMISSIONER**

**HOUSE RULES
COMMITTEE**

Tuesday, 20 July 2021

**REPRESENTATIVE
JIM P. MCGOVERN, CHAIRMAN**

1 Good afternoon Representative Jim McGovern, Chairman of the House Rules Committee, other
2 Committee members and Representatives, my esteemed colleagues from the other islands and
3 Territories, the listening and viewing audience. My name is Kimberley Causey-Gomez, and I am
4 the Commissioner of the Virgin Islands Department of Human Services (DHS). Thank you for the
5 opportunity to appear before you today to testify on the importance of ensuring that everyone
6 can afford and has access to nutritious food, they need to thrive each and every day. And most
7 importantly, how collectively, we can end hunger now.

8
9 What I have observed in my 30+ years in the career of social work and through my role as the
10 Commissioner of Human Services in the U.S. Virgin Islands, in times of crisis, existing inequalities
11 in access to federal benefits, employment, food and other needs intensify and become more
12 visible. Those living in poverty and facing vulnerability feel it most, and their food insecurity
13 increases. Low income, debt, unemployment, disability, homelessness, food price increases, age,
14 and environment all can play a role. In addition, food insecurity is experienced differently across
15 race and ethnicity identities. The COVID19 Pandemic has only intensified this need.

16
17 The goal of ending hunger in America should be inclusive and I am encouraged that the Virgin
18 Islands is at the table to talk about how our needs may be similar to other places in the world,
19 but also emphasizing there are a few challenges we may experience differently. We are unique
20 because although we are one Territory, we have four separate islands in which you must either
21 take an airplane or boat to get to each one. We do not have the comfort or access in evacuating
22 to another state or territory in times of disaster, like hurricanes or earthquakes. In 2017, the Virgin
23 Islands experienced, not one but two Category 5 hurricanes within a matter of two weeks.
24 Disaster recovery is long-term and not a simple overnight fix of not only our infrastructure of
25 buildings but our homes of our people. We still have a lot of "blue roofs", which means people

26 were not able to afford to repair their homes and therefore they still have a tarp on it. In order
27 to obtain sustainable food and commodities, most everything must be shipped or flown in daily,
28 weekly, or monthly. This added cost of shipping is then added to the consumer. If we did not
29 have some of our federal programs, like Head Start, SNAP or Meals on Wheels, people would be
30 hungry.

31
32 DHS is entrusted to serving our most vulnerable populations throughout the Territory. Our
33 ultimate goal is to assist our constituents, from our littlest people to our oldest, in achieving self-
34 sufficiency through one or more of the 80+ programs and services we offer. The VI has a
35 population of approximately 104,000 people. Although the numbers of people we serve varies
36 by program, our Medicaid Program alone currently serves 33,561 members, which is 31% of the
37 population of the VI. Our Head Start Program continued to provide nutritious meals and snacks
38 for our students. We increased our Meals on Wheels services to serve more seniors through
39 Pandemic federal funds. In fiscal year 2021, 26,776 individuals (39% of the VI population). DHS
40 has completed two rounds of issuance of the Pandemic Electronic Benefits Transfer (PEBT) and
41 began issuing the third round of benefits this month.

42
43 The hunger crisis varies in our Nation and each individual community is affected differently. If
44 food alone were the answer to this crisis, we probably would have solved it by now. I think it is a
45 bigger, broader solution that involves the food system from start to finish. To making sure people
46 have access and that they can afford the food. I believe it ties into poverty. I do not know if we
47 can solve one without solving the other. The second part is much more complex as we would
48 need to target the root causes of generational poverty and break that cycle.

49

50 The Virgin Islands government faces many challenges ahead. It is a balancing act to address the
51 toll on major industries like tourism, navigate limited fiscal revenues, supporting increasing
52 needs due to loss of livelihoods, all while managing a COVID-19 response that protects the
53 health, safety, and the wealth of the community. The availability of vaccines represents a positive
54 development in the fight against the spread of the virus with hopes of a return to a sense of
55 normalcy.

56

57 As a proud mother to active-duty U.S. Marine Corps Lance Corporal Antonio Gomez and to
58 college student Gabriella Gomez, as well as the Commissioner of the Virgin Islands Department
59 of Human Services, I am continually inspired by our community members and agencies who are
60 doing amazing work, especially during the pandemic. I am truly thankful to our federal partner
61 agencies who continue to support the efforts in the U.S. Virgin Islands. I also extend gratitude to
62 our dedicated Virgin Islands Department of Human Services team of professionals, the continued
63 support of Governor Albert Bryan, Jr. and Lieutenant Governor Tregenza Roach as DHS continues
64 to be committed to our motto, ***“Working Together to Make a Difference”***. And thank you,
65 Chairman McGovern for making this effort to identify solutions to decrease food insecurity a
66 priority.

Puerto Rico Department of the Family

Ending Hunger in America: Examining Hunger in U.S. Territories

Secretary, Carmen Ana González Magaz

Puerto Rico's Secretary of the Family
Honorable Carmen Ana Gonzalez Magaz

Statement on Ending Hunger in America: Local Innovations to Inform a National Strategy

Puerto Rico is not only the biggest territory of the United States but also the most populated. The one hundred eleven point five (111.5) miles long by thirty-nine point eight (39.8) miles wide Island located in the Caribbean, has a population of 3.2 million American Citizens. From this total, 43.5% live below the poverty level (1.47 million out of 3.2 million people). This total represents more than three (3)times the US National level which is 14% . The largest demographic group living under these poverty levels are females between 25 and 34 years old, followed by females between 35 and 44 years old, and females between 55 and 64 years old.

On September 20th, 2017, Puerto Rico was devastated by a category 5 hurricane which caused \$43 billion dollars in damages Island-wide. This natural disaster had a huge economic impact on most of the population causing loss of employments, food scarcity and insecurity, mental and health issues, absence of utilities (electricity, water, communications), and a lack of basic necessities. Today, almost four years later, Puerto Ricans are still surviving the aftermath of this natural emergency. Two (2) years and four (4) months later, on January 7, 2020, Puerto Rico was struck again, but this time by a 6.4 magnitude earthquake occurred across parts of the South region of the Island. This has been the most devastating earthquake in more than one hundred-two (102) years. This major disaster destroyed eight thousand (8,000) residences leaving the occupants homeless, sheltered at tents provided by the US Army and the government. This event caused a major economic impact on the south region of Puerto Rico, affecting employments, businesses, schools, hospitals, and utilities, among others.

On March 12, 2020, only three (3) months after these earthquakes struck the Island, Puerto Rico was locked down for 90 days as a mitigation effort to stop the spread of the COVID 19 virus. This endeavor summed to the social distance, created a variety of unique situations and conditions for workers, businesses, employers, public transportation, and community support services, among others. Consequently, a large part of the population was temporarily unemployed and unable to afford basic necessities. During this time were processed more than 200,000 unemployment claims and 280,000 families requested NAP benefits because did not have resources to purchase food.

A recent study conducted by the Institute of Youth Development (IYD) in Puerto Rico is forewarning of a significant increase in the level of child poverty in Puerto Rico due to the COVID-19 pandemic. This increase in the number of youths living in extreme poverty is not limited to places like Puerto Rico. Poverty and hunger among children across the globe, including the United States, have now reached levels without modern precedent.

According to the authors of the IYD study, **“Los efectos del Covid-19 en la niñez de Puerto Rico: Vulnerabilidades, proyecciones y recomendaciones,”** in the absence of significant measures to

mitigate the trend, the percentage of children living in extreme poverty in Puerto Rico is likely to rise this year **from 58 percent to a 65 percent**. The study underlines that within the first four (4) months of year 2020, an additional 244,000 residents of Puerto Rico fell below the federal poverty line, including 43,000 children.

Before the pandemic, Puerto Rico, was whirling from an economic recession that has lasted over a decade. This resulted in a depleted labor force participation and a public debt crisis that has caused years of severe sternness policies. These economic conditions, in addition to the natural disasters that have affected the Island between 2017 and 2020, have triggered a migration of approximately 500,000 people. A significant number of those that left Puerto Rico were in their prime working age, causing a demographic shift in which people aged 60 and older now represent 26 percent of the population. Approximately 40 percent of the elderly in Puerto Rico also live below the poverty line.

Working families in Puerto Rico were already facing elevated levels of economic and food insecurity as well as associated health risks when the pandemic struck. The high percentage of single-parent households and workers susceptible to layoffs due to economic closure are additional factors that have intensified the social impact of the pandemic.

It is important to highlight that according to the Consumer Price Index Summary included on the US Bureau of Labor Statistics website, April saw the largest monthly increase in food prices since February of 1974. This increase in food prices is taking place amid the mass dumping of groceries while scores of people go hungry. For this same period, the cost of food increased 52%.

When you add all these factors together, an economic recession, the pass of devastating hurricanes one behind the other, the unannounced earthquakes and the sixteen months of the COVID- 19 pandemic, you come to realize how vulnerable we are to these unexpected, unplanned circumstances that could impact every citizen, without discriminating about your economic or social status.

Puerto Rico has gone through more than a decade of an economic hardship that has impacted the whole population, one way or another. During the last ten years, Puerto Ricans had experienced the fear of food insecurity, either transitional or permanently. The fact of being a **US territory** and **an Island** have a big part in building this insecurity. In addition to the fact that Puerto Rico families and individuals that have an urge for food support, receive NAP instead of SNAP benefits. Under the NAP program individuals and households' benefits are significantly less than any SNAP participant in the US mainland or territory, putting them in disadvantage with the rest of the Nation. These factors together, have been key in delaying food support and other type of aid during emergencies putting at risk their individual and families' health and wellbeing.

In order for Puerto Rico to receive emergency support or additional funds from the federal government needs written approval from the agency. Furthermore, as an US territory-Island there are federal laws and regulations that need to be applied, like the Jones Act, established in 1900, in order to receive emergency supplies from the US mainland through a sea vessel. Puerto Rico in

NOT allowed to receive any supplies or cargo if it is not transferred from Florida and transported in a US vessel. This process delays the emergency distribution of supplies and food putting the people at risk of running out of these necessities. This law establishes that anything transported by sea to Puerto Rico needs to be managed by a US mainland port and vessel. The sea route to send products between the US mainland and Puerto Rico is governed under the Merchant Shipping Act which establishes that any cargo sent between two (2) US ports (US territories and possessions included) has to be ruled by this act.

These two (2) main steps necessary during a declared disaster, delay food support coming to the Island, causing insecurity among the population. A clear sample of this transpired right after hurricanes Irma and Maria in September 2017 and during the beginning of the COVID-19 pandemic when people had to wait three (3) months before the food support benefits were approved. On the other hand, food retailers and distributors ran out of supplies because of the delay in transporting the goods to Puerto Rico. This summed to local business economic dearth which got even worst after the disasters hindering their capacity to not pay the port's duty taxes once the merchandise arrived at Puerto Rico docks. Regardless of these aggravations, Puerto Ricans would have never been able to overcome their need for food during this past decade without the federal support.

FEDERAL PROGRAMS THAT PROVIDE FOOD SUPPORT IN PUERTO RICO

Different from the federal food support programs in the US and other territories, Puerto Rico's funds are capped through a block grant. The benefits issued to participants are distributed among all the participants, instead of being issued by participant.

Nutrition Assistance Program (NAP)

Puerto Rico's low-income families receive NAP as a supplement to the US mainland and territories food benefit program, which is SNAP. There is a significant difference in income benefits received per individual/families when compared to the rest of the US Mainland, Hawaii, Alaska, and other territories. In addition, PR NAP funds are capped and use strictly for food support benefits. Also, SNAP participants with similar characteristics receive more than twice the benefits than NAP participants. The chart below compares the NAP with the SNAP received in the US Mainland, Alaska, Hawaii, and territories.

Persons in Family/ Household	Continental States and DC	Alaska	Hawaii	Guam	Virgin Islands	Puerto Rico (NAP)
1	\$194	\$368	\$354	\$287	\$250	\$112
2	\$357	\$675	\$650	\$526	\$459	\$216
3	\$511	\$966	\$931	\$753	\$657	\$315
4	\$649	\$1,227	\$1,182	\$957	\$835	\$410
5	\$771	\$1,457	\$1,404	\$1,136	\$991	\$499

6	\$925	\$1,749	\$1,685	\$1,364	\$1,189	\$599
7	\$1,022	\$1,933	\$1,862	\$1,507	\$1,315	\$679
8	\$1,169	\$2,209	\$2,128	\$1,723	\$1,503	\$776
Each additional member	\$146	\$276	\$266	\$215	\$188	Variable Add \$22 for elderly
Population	306.7 million ¹	737,438	1,420,491	165,718	104,914	3,400,000
Families	19,154, 194	37,928	82,343	15,631	13,384	655,746
Participants	37,914,073	84,575	160,334	44,936	27,069	1,217,596
Poverty Level	14.6%	10.2%	10.3%	22.9%	22.4%	36%
Average Benefit/pp	\$125.25	\$169.72	\$239.09	\$197.24	\$220.65	\$118.17

The main purpose of the NAP is to assist low-income families so that they can supplement food needs. In addition to the benefits issuance, this program provides nutrition education to participants and promotes the proper use of benefits issued by guiding the selection and preparation of healthy and nutritious foods. 100% of the benefits are directed to the purchase of eligible food in certified establishments.

Currently in Puerto Rico, 44.5% of the population lives below the poverty levels, being women, older adults, and families with several children the most affected groups. This percentage has been increasing consistently. As of May 13, 2021, we have provided nutrition assistance services to 1,538,525 participants out of a 3.3 million population. Of these 56.65% are women and 43.35% are men, which represents a slight decrease in the demographic profile by gender in females when compared to the previous fiscal year when the ratio of women to men was from 57.05% to 42.95%.

Temporary Assistance for Needy Families (TANF)

The Temporary Assistance for Needy Families program (TANF) is also capped and is limited to assist just one (1) unemployed parent, instead of two (2) unemployed parents as the rest of the US.

The TANF program provides services to **one** (1) unemployed parent within a household with children. As of May 2021, the program has served **45,548** participants, of whom **28,179** (61.87%), are **women** and **17,370** (38.13%) are **men**. Of these participants, an average of **7,467** (16.39%) are **minors**; **17,266** (37.91%) are persons aged **65 years or older**; **12,426** (27.28%) are **disabled**; **214** (0.47%) are **homeless** and **260** (.57%) are **post-secondary or vocational students**.

These numbers represent a 22% growth towards the low-income males, when compared to previous years, that revealed a proportion of **62.10%** of **women** and **37.91%** **men**. The data indicates important characteristics of the populations living under poverty levels.

¹ Based on 2020 Census Data.

Temporary Emergency Assistance Program (TEFAP)

The program distributes nutritional food, bestowed by the Federal Department of Agriculture, to low-income families eligible under NAP and TANF participants under all its categories (elderly, blind, disabled and single parents with minor children), living in sectors of extreme poverty and in public housing projects. From **July 2020 to April 2021**, the program served **92,768 families**. The **total** amount of food distributed to these families was **4,690,268.41 pounds**, which represents **\$5,287,852.65 dollars**. This program has aided families from **336 communities** and **310 public housing projects** throughout the Island. As a result of the **COVID-19 pandemic** which has caused a great demand for food, we established an additional food distribution collaboration agreement (besides the Food-Bank agreement) with a non-profit organization called Marc Ministry. As a result of this arrangement, we were able to **distribute 749,718 pounds** of food, which represents approximately **\$963,107.43**, between July 2020 and March 2021.

Commodities Supplement Food Program (CSFP)

The CSFP program works to improve the health of low-income seniors 60 years of age and older by supplementing their diets with nutritious USDA foods. In Puerto Rico, the CSFP was established as a Pilot Program which began in January 2019 in the Bayamón Region. Through this program participants receive a box of food monthly. The program's initial budget was \$57,090.00. Currently, eleven (11) centers for older adults have received benefits representing 995 participants. Aware of the big demand for food surrounding this population, the Food and Nutrition Service (FNS) authorized an increase of 995 additional participants, which allows us to serve a total of 1,990 participants under the CSFP program.

Soup Kitchen Program

The Soup Kitchen is a sub-program under the **TEFAP Food Distribution** program whose purpose is to distribute food to non-profit institutions that serve prepared meals for homeless people, abused children and women, drug addicts, HIV-positive people, and AIDS patients, living temporarily at these institutions. From September 30, 2020, to May 2021, services have been offered to **one hundred thirteen** (113) centers /institutions, distributing a total of **751,191 pounds** of food.

The Department of the Family has a collaboration agreement with the **Puerto Rico Food Bank** to distribute food to non-profit entities that do not receive SOUP Kitchen benefits. A total of **63,290,000** pounds of food have been donated to the Food Bank, estimated in **\$336,620.00** between July 2020 and March 2021.

Family Markets

The Family Market Program provides the Nutritional Assistance Program (NAP) participants access to farm markets to purchase locally grown fresh products directly from the farmers. The program gives priority to fresh fruits and vegetables, minimally processed, that guarantee a balanced

nutrition. In addition, it promotes community self-management and economic development by providing employment opportunities to NAP participants during bountiful harvests without affecting their NAP benefits.

By year 2019 the Family Markets were held island wide. After a temporary halt of several months due to the COVID-19 pandemic, which started in March 2020, the Family Markets program resumed operations in November 2020, implementing a drive-through modality to comply with our government COVID-19 mitigation standards. Family Markets budget is \$62 million dollars (\$62,143,223.00) and it comes from a 4% NAP benefits set aside in their EBT cards. During this year (2021), after receiving an emergency funds allocation from the Consolidated Appropriations Act of 2021, the Family Markets participants received an increase of approximately 2% in addition to the pre-established 4% to purchase locally grown farm products.

Pandemic EBT

Puerto Rico started receiving PEBT benefits in February 2021. Through this program, eligible school children received temporary emergency nutrition benefits loaded on EBT cards that were used to purchase food while studying virtually from their homes. To be eligible for this program, children had to be part of the free or reduced-price meals program under Puerto Rico's National School Lunch Program (NSLP) prior to the pandemic. In addition, the schools had to be closed or operating with reduced hours or attendance for at least 5 consecutive days. Since Puerto Rico's public and private schools were closed for the whole 2020-21 school semester and classes were offered virtually, all children under the NSLP were eligible for receiving PEBT benefits. In addition to students from k to 12, the PR PEBT program served child care children from 0 to 6 years old. Also provided benefits to cover the summer of 2021 for both, child care and K to 12 eligible students.

The total funds that were distributed under the PEBT programs were \$737 million dollars which impacted 338,100 students from K to 12 grades and 80,253 children in child care island wide.

The detailed description of the funds received to assist our people during a decade of emergencies, are just temporary. In less than a year, Puerto Ricans who received these additional benefits will go back to receiving their basic benefits or not receive them at all. This situation will worsen needy family's economic situation and take them back to food insecurity as a result of the increase of the cost of living, specially, after the COVID-19 pandemic.

Solutions to End Hunger in Puerto Rico

To ending hunger requires more than just giving people a meal today. Addressing the root causes of hunger — primarily poverty — is just as important. As long as people do not have the economic resources to put food on their table, hunger will continue. Food security also works for policy reforms to ensure economic self-sufficiency over the long-term. Development assistance programs are intended to reduce poverty and encourage economic growth. They include programs for agriculture, health, education, the environment, among others.

When disasters like the ones lived by our people strikes, hunger often follows. These emergencies resulting from pandemics, or from climate or economic conditions slowly build into food shortages, deficiencies, and conflict. These emergencies often have devastating side effects including gender-based violence and situations that can quickly go from bad to worse if we do not respond quickly enough, they could end in food insecurity, poor health, and extreme poverty.

We have to recognize the importance of linking short-term emergency response and long-term development assistance. Even though our communities have seen immense progress including how weak economies could grow stronger, and people moving from hunger and poverty into more stable lives these hard-won gains can deteriorate quickly in humanitarian emergencies, especially if we do not act fast.

Even though Puerto Rico received the federal assistance described throughout this document, there is imperative that a conversion from the NAP benefits program to SNAP takes place. This will not only increase the participants regular benefits level significantly, but also will provide for additional funding for job training and placement, as well as other funding flexibilities that do not exist under the NAP program. The disparity of benefits' levels between both programs impedes that the neediest sectors of Puerto Rico's population, 1.5 million American citizens can have a better nutrition and quality of life.

There are many situations that could be prevented if actions are taken faster. The employment stability improves the food quality in our families, it has been demonstrated that low paid jobs and unemployment leads to bad nutrition. Families that do not receive food support need to select between paying the rent or utilities rather than a balanced and health nutrition.

Equal food assistance benefits, health programs, better paid jobs, and more education and training opportunities can help us better prepare our people and prevent future food insecurity and extreme poverty.

Hunger Initiative Testimony

I, Thomas A. Tebuteb, hereby submit this testimony as the Secretary/Officer-in-Charge of the Empty Vessel Ministry Foundation (EVM). Our organization is a 501 (c) (3) non-profit organization founded in the state of Washington in 2004 and incorporated in the Commonwealth of the Northern Mariana Islands (CNMI) in 2006. Our mission is to spread the word of Christianity, empower youth and women and help find sustainable local solutions to poverty.

EVM has been active in assisting the needy and impoverished families since its inception in the CNMI with clothing, educational supplies and food donations. EVM was most especially active after the two super typhoons--Soudelor in 2016 and Yutu in 2018—devastated our islands. And when the Covit-19 pandemic hit, EVM has remained active with its food distribution program in assisting our needy throughout the Saipan villages. Since the aftermath of the natural disasters, including the ongoing pandemic, EVM has assisted approximately five-thousand (5000) needy individuals with food donations.

Manned by non-salaried officials and volunteers, our organization relies mainly on monetary and in-kind donations from the federal and local government as well as from individuals and the private business establishments. As an example, EVM received fifty-thousand (\$50,000) dollars, in three phases, with 98% for food, from the Emergency Food & Shelter Program (EFSP) for the past three years which will be expended by September 2021.

While we periodically schedule food distribution on a monthly basis, we provide lesser food amount than other organizations who received more funds. To illustrate, for the past two months we provided food (frozen chicken, canned goods, drinks, noodles and vegetables) to four hundred people at a cost of six-thousand (\$6000).

EVM has periodically assisted Marianas Health Center Care Services via its Social Worker Gail Labatete (670) 284-1977) who oversees the visiting nurses work with those in need of health care and food in the patients' homes.

Our clients also include a lady named Feng who is a widow with no siblings. Her struggle for food, like others, is being curtailed with the twice a week bread and pastries donation to EVM from one of the bakeries on island, the Great Harvest Bread Company. A couple of other clients include Himaya (670) 785-3631 and Linda (670) 788-2228 who depict the struggles that many of those we help have to endure. The many we help were employed in the hotels but were terminated due to the pandemic, so their reliance on finding odd jobs and seeking to put food on the table is a constant struggle.

In that light, our organization fully supports this Hunger Initiative and praise the proponents of this worthy undertaking.

Respectfully submitted,

A handwritten signature in black ink, appearing to read 'Thomas A. Tebuteb', with a large, sweeping flourish extending from the end of the name.

July 13, 2021

Dear Members of the House Committee on Rules,

At the request of the Committee staff, I have excerpted and summarized an article I wrote, *Territorial Exceptionalism and the American Welfare State*, recently published in the Michigan Law Review. Thank you for the opportunity to present my research.

Federal law excludes millions of American citizens from crucial public benefits simply because they live in the United States territories. Excluding territorial Americans from SNAP, not to mention Medicaid, Supplemental Security Income (SSI), and other crucial public benefits, has left a gaping hole in the American safety net. This status quo has significant implications for any future anti-hunger efforts in the United States.

Background on Poverty in the Territories

Five times as many Americans live in the territories than in the District of Columbia. Roughly as many Americans live in the territories as those in Alaska, Delaware, Hawaii, and Wyoming combined. While the federal government excludes these Americans from the official poverty measurements for the country, what data we have on poverty levels paints a stark picture. The Census Bureau estimates that the poverty rate in Puerto Rico in 2018 was 43.5%, compared to 11.8% in the fifty states and the District of Columbia. Adults living in the U.S. Virgin Islands are two and a half times more likely to lack health insurance than those in the fifty states.

SNAP and the Nutritional Assistance Block Grants in the Territories

The Food Stamp Program had previously operated in Puerto Rico, putting its food stamp program on the same footing as the states' programs. As part of the Omnibus Budget Reconciliation Act of 1981, President Reagan and Congress removed Puerto Rico from the national food assistance scheme and created a separate program, the Nutrition Assistance Program (NAP). NAP was permanently authorized in 1985 and continues to be how American citizens in Puerto Rico, American Samoa, and the CNMI receive food assistance. While the block grant is referred to as NAP in each of these territories, the rules vary across each.

The NAP block grants and SNAP share the same purpose: "to provide low-income households with access to a nutritious diet through increased food purchasing power." However, the programs differ in many ways, some of which disadvantage residents of the territories. The maximum monthly food assistance benefits for these territorial residents are roughly 60% of the maximum monthly benefits under SNAP. For instance, a three-person household in one of lower 48 states can receive up to \$535 in food assistance. In Alaska and Hawaii, the amounts are higher (\$659 to \$1,024 and \$986)

respectively. The three territories excluded from SNAP have lower benefit amounts. A three-person household in Puerto Rico can receive up to \$315 in food assistance. In American Samoa, the benefits are up to only \$127 per person. Compare CNMI's \$541 benefits per household to the U.S. Virgin Islands (\$688) or Guam (\$789).

As a result, the food assistance programs in American Samoa, CNMI, and Puerto Rico are unable to provide sufficient assistance in the face of natural disaster and recessions because, unlike SNAP which operates under the entitlement structure, it cannot serve all applicants that meet eligibility requirements. Thus, these three territories are disadvantaged with respect to household food assistance. Unlike the rest of the United States citizenry, Americans who live in these three territories do not have access to a food assistance program that can expand and contract to accommodate changing need.

Excluding Territories from Disaster SNAP (D-SNAP)

By excluding these three territories from SNAP, federal law also excludes them from Disaster SNAP (D-SNAP). This exclusion has had disastrous consequences, and it will only get worse. The five U.S. territories are particularly vulnerable to the ravages of climate change. Those who live there will face increasingly tenuous living conditions due to extreme weather events made more frequent and more intense by a warming planet. In 2018, American Samoa suffered through Cyclone Gita and the Northern Mariana Islands withstood Typhoon Yutu—the most powerful storm to hit the United States since 1935. Two Category 5 hurricanes struck the U.S. Virgin Islands within a two-week period in 2017. One of them, Hurricane Maria, also decimated Puerto Rico. Due to the increased need following Hurricane Maria and the lack of additional funds from the federal government, Puerto Rico cut its nutrition assistance spending by \$100 million per month. Precisely when territories need additional resources to recover from the rolling disaster that is climate change, federal law fails them.

The Supreme Court Will Weigh in Soon

The Committee should be aware, if it is not already, that this coming term, the Supreme Court will hear a related constitutional challenge to the exclusion of an American citizen from SSI simply because he now resides in Puerto Rico. That case, *United States v. Vaello-Madero*, is worth describing in detail here.

José Luis Vaello-Madero was born in Puerto Rico—a U.S. citizen by birth. Thirty years later, he moved from Puerto Rico to New York. Nearly thirty years after that, in 2012, Vaello-Madero began to receive federal disability benefits through the Supplemental Security Income (SSI) program. In 2013, Vaello-Madero moved back to Puerto Rico. A few years later, the Social Security Administration informed him that it would discontinue his SSI benefits, dated retroactively to his return to Puerto Rico. In its notice, the Agency stated that Vaello-Madero had been “outside of the U.S. for 30 days in a row or more” since 2014. The Agency noted that it “consider[ed] the U.S. to be the 50 States of the U.S., the District of Columbia, and the Northern Mariana Islands.” Of course, Puerto Rico has been a United States territory for 122 years.

Roughly a year later, the United States sued Vaello-Madero to recover the allegedly improper disability benefits over that two-year period, for a total of \$28,081. An investigator employed by the Social Security Administration got Vaello-Madero, who was without counsel at the time, to sign a stipulated judgment, which the federal government promptly filed in federal court in Puerto Rico. The

district court appointed counsel for Vaello-Madero who raised as an affirmative defense that excluding Vaello-Madero and other Puerto Rican residents from SSI benefits violated the Constitution's equal protection guarantee. On cross-motions for summary judgment, the district judge agreed, and the First Circuit affirmed, holding that excluding Puerto Rican residents from the SSI program violates equal protection. The Supreme Court granted the government's petition for certiorari last March. While the issue in the case involves a different public benefit program, it could have significant implications for nutrition assistance in the territories. How the Supreme Court decides it could bless, or alternatively, upend the status quo of territorial welfare administration, including nutrition programs.

Moreover, *Vaello-Madero* is not the only case that's worth watching. In *Peña Martínez v. U.S. Department of Health and Human Services*, nine Puerto Rican residents sued the federal government on the grounds that excluding them from SSI, SNAP, and Medicare Part D subsidies violates the Due Process Clause of the Fifth Amendment's equal protection guarantee. The federal district court granted summary judgment for the plaintiffs. In doing so, the district court detailed how "[t]he federal safety net is flimsier and more porous in Puerto Rico than in the rest of the nation." Americans in the territories will continue to challenge their exclusion from crucial public benefits in the courts unless and until Congress acts.

Congress Has Made Progress on This Issue

Fortunately, in the last decade or so, Congress has repeatedly provided supplemental funds to the American territories to help shore up the public benefits pro-grams. Often, Congress has acted in response to a rolling series of crises: the 2008 financial crisis, several storms that have struck the islands, and, most recently, the COVID-19 pandemic. In both the Families First Coronavirus Response Act and the American Rescue Plan Act, Congress provided increased funding for nutrition assistance in the five territories. This recent activity in Congress to shore up funding for food assistance in the territories suggests that structural reform could be on the horizon. My law review article explains how it could do so.

Conclusion

Federal law denies certain Americans protection from hunger, sickness, and disability because they live in the country's territories. Put short, it will be impossible to end hunger in America if federal law continues to exclude millions of Americans from SNAP simply because they live in the Commonwealth of the Northern Mariana Islands (CNMI), Guam, or Puerto Rico.

Hunger in the Virgin Islands: America's Struggling Paradise

ON JULY 23, 2020 WORLD NEWS

SEATTLE, Washington — The Virgin Islands are home to tropical marine life, famously blue waters and vibrant culture. They are located in the Caribbean about 1,000 miles southeast of Miami, Florida. The islands are separated between the U.S. and U.K. with the three main U.S. Virgin Islands being St. Croix, St. John and St. Thomas and the British Islands being Tortola, Anegada, Virgin Gorda, and Jost Van Dyke. Although these islands are divided between two countries, they all share a similar culture and lifestyle that is drastically different than that of the U.S. or the United Kingdom. The population of the U.S. Virgin Islands is less than [110,000 people](#). Yet, 22% percent of that population lives under the poverty line due to a 13% unemployment rate. As a result, many islands struggle to receive basic necessities including food, leading to hunger in the Virgin Islands.

Poor Economic Structure Contributes to Hunger

One of the main contributors to poverty is the Virgin Island's poor economic structures. Since the U.S. Virgin Islands are a territory rather than a state, they receive minimal funding from the Federal government. Thus, the economy of the islands relies [heavily on tourism](#). Citizens of the United States do not need a passport to visit the U.S. Virgin Islands which is why it is often called, "America's Paradise." Without tourism, the island would only have its limited agriculture revenue and minimal funding from the U.S. government to survive.

Limited Agricultural Capabilities

While these tropical islands are home to a few farms, there is not enough land or proper soil to feed all of the islanders. Therefore, another lead contender for why there is hunger in the Virgin Islands is the extremely limited agricultural capabilities. Agriculture in the Virgin Islands typically consists of [growing tropical fruits](#) such as coconuts, mangos and papaya. They also sometimes raise cows.

Due to the lack of sufficient food production, islanders must import about 97% of their food. This leads to higher grocery costs and limited supply. Global shocks and constantly changing product prices also affect the availability of imported food to local islanders. Although these factors create constant stress on islanders and their ability to receive food, the threat of hurricanes also looms over the islands.

In 2017, the Virgin Islands experienced the largest hurricane in Caribbean history known as Hurricane Irma. As if the damage from this storm was not detrimental enough, Hurricane Maria followed along the same path only two weeks later. These hurricanes eradicated the island's natural beauty and left hundreds of people homeless.

It is common knowledge among islanders that the aftermath of a hurricane is much more detrimental than the hurricane itself. The storm took away large portions of the islands' infrastructure and food became even more scarce than before. Ships were unable to come to the islands as a result of the storm, leaving islands with only the food they had. Although these hurricanes made a historical dent in the Virgin Islands' economy, the constant threat of smaller hurricanes continues to affect food supply.

The Impact of the Ridge to Reef Farm

Shelli and Nate Olive are both proud islanders and farmers that are doing their part to alleviate hunger in the Virgin Islands. The couple began the [Ridge to Reef Farm](#) in 2010 and have fed thousands of people. Their farm is the only USDA certified organic farm in the islands and they are recognized for their compliance with the Green Globes Standards for sustainable tourism.

The farm's most notable success is its Farm to School Initiative. The Ridge to Reef Farm is responsible for feeding kids in schools all across the islands. Hunger in the Virgin Islands is a continuous problem that plagues the islanders as a result of poor economic structure, limited agriculture and the constant threat of hurricanes. With the help of federal funding and resilient locals such as the Olives, the Virgin Islands will climb the stairs to hunger alleviation.

Dear Chairman McGovern:

DEPUTY DIRECTOR

Programs & Services

Josephine G. Lutali

Thank you so much for inviting me to submit written testimony to the Rules Committee on ways to end hunger and food insecurity in American Samoa. I am honored to join you and the distinguished members of the Committee in this conversation. Enclosed is my written testimony.

We also appreciate your decision to include the U.S. territories in this important series of Roundtables to examine ways to end hunger in America and for allowing our voices to be heard from the southernmost territory of the United States south of the Equator. Please let me know if you require additional information.

Sincerely,

U.S. House of Representatives
on
Ending Hunger in America: Examining Hunger in the U.S. Territories

Submitted by:
Muavaefa'atasi John Edward Suisala, Director
American Samoa Department of Human and Social Services
Pago Pago, American Samoa 96799

July 30, 2021

Talofa lava, Chairman McGovern, Ranking Member Cole, and distinguished members of the Committee. Thank you so much for inviting me to submit written testimony to the U.S. House Rules Committee on the issues of hunger and food insecurity in American Samoa. I am honored to join our esteemed Congresswoman, Honorable Uifa'atali Aumua Amata Coleman Radewagen, in this very important discussion to share with you our unique circumstances in respect to the need to achieve equity in accessing food assistance for our needy and vulnerable populations as well as ensuring that our food remains affordable, is constantly available, and safe.

At the outset, I would like to echo the sentiments and appreciation relayed by Congresswoman Radewagen for your tremendous support of additional funding for nutrition assistance for American Samoa following the devastation caused by Tropical Storm Gita in February 2018. Your support of this amendment allowed for the passage of an \$18 million appropriation that was authorized through the Additional Supplemental Appropriations for Disaster Relief Act of 2019 that enabled our department to establish and implement the American Samoa Disaster Recovery Food Assistance Program (ASDRFA). The ASDRFA provided one year of critically-needed disaster food assistance in the form of food coupons of \$139 a month for the first family member and \$104 for each additional family member for 5,181 families or 17,738 individuals from October 2019 to September 2020. Although the ASDRFA was a disaster food assistance program that was limited only to low-income families that were verified by the American Samoa Department of Homeland Security, FEMA, and the SBA to have been impacted by the disaster, this was in itself very significant in that it was the first time we received funding for a long-term food assistance program for low-income families to purchase and put food of their choice on their tables. Before the passage of the \$18 million appropriations in 2019, the USDA awarded in September 2018 a \$500,000 grant for a short-term disaster relief food assistance program that served 903 families or 2,325 individuals in December 2018 who received a one-time allotment of \$185 in food coupons. Because of limited funding, this program targeted the neediest of the needy or families and individuals at or below 50% of the maximum gross income eligibility table.

I thank Congresswoman Radewagen for articulating and highlighting the important issues and challenges relating to American Samoa's food security and food safety as well as cultural considerations in the

delivery of federally-funded services for our elderly and vulnerable populations. With those issues covered, I would like to focus my testimony on the need to 1) address American Samoa's food insecurity by expanding our Nutrition Assistance Program (NAP) to achieve equity for low-income families in the territory in accessing food assistance similar to low-income families in the 50 states, the District of Columbia, Guam, Virgin Islands, Puerto Rico, and Commonwealth of Northern Mariana Islands (CNMI), and 2) to provide parity in the maximum allotment amounts issued to our NAP recipients similar to SNAP recipients residing in Alaska, Hawaii, Guam and the U.S. Virgin Islands outside of the 48 contiguous states.

As you know, American Samoa is a small remote U.S. territory located in the South Pacific 2,600 miles southwest of Hawaii and 4,800 miles from California. Our territory consists of five volcanic islands and two coral atolls with a combined land area of 76 square miles and a population of 55,519 according to the 2010 U.S. Census. Our 2018 estimated population is approximately 58,000. We have the highest poverty rate of any state or territory so most of our people live below the poverty level. For decades, our minimum wages have been below the statutory minimum wage in the United States and other U.S. territories due to a weak economy that continues to depend on the territorial government and the tuna canning industry. Almost all of our food (95 percent) is imported with the majority from the U.S. mainland mostly by ocean freight that takes 14 days or more to arrive. Our limited natural resources and remote location pose a constant challenge to food security. The COVID-19 pandemic has exacerbated our vulnerability because of food shortages around the world and constant shipping delays that result in empty wholesale warehouses and empty shelves at local grocery stores.

The American Samoa Department of Human and Social Services (DHSS) that I head plays an integral role in the delivery of food assistance through the American Samoa Nutrition Assistance Program (ASNAP) that serves low-income elderly, blind, and disabled individuals and the American Samoa WIC Program that serves pregnant women, nursing and postpartum mothers, infants and children up to age 5. The two programs serve over 10,000 residents each month. DHSS also provides a wide array of services through eight divisions that include the Behavioral Health Services Division, Children and Family Services Division, Child Care Division, Developmental Disabilities Planning Council, Program Integrity and Tobacco Licensing and Enforcement Division, and the Special Projects and Community Assistance Division. The National School Lunch Program that is administered by the American Samoa Department of Education serves free meals to close to 16,000 school-age children from Head Start to public and private elementary and secondary schools and young children in child care facilities. The Territorial Administration on Aging also serves congregated meals three times a week to 3,724 elderly recipients. We are also awaiting approval by the U.S. Department of Agriculture of American Samoa's Pandemic EBT State Plan for the School Year 2020-2021 and the summer of 2021.

The ASNAP is funded through the Consolidated Nutrition Assistance Block Grants for Puerto Rico and American Samoa under Title 7, Chapter 51, Section 2028, where the Secretary of Agriculture is authorized to use 0.4 percent of the funds made available to Puerto Rico each fiscal year for payment to American Samoa to pay 100 percent of the expenditures by American Samoa for a nutrition assistance program. For Fiscal Year 2021, this amounts to \$8,185,000. This means we receive from the federal

government a very limited fixed level of annual funding that is less than one-half of one percent of the annual funding for Puerto Rico for food assistance regardless of need. As a result, we cannot expand our program to meet emerging needs during times of economic uncertainties or meet emergency and disaster relief/ recovery needs when a natural or man-made disaster strikes or during public health state of emergencies. Since NAP is separate from the Supplemental Nutrition Assistance Program (SNAP), American Samoa does not qualify for disaster SNAP benefits or D-SNAP and NAP does not have an automatic mechanism to provide disaster benefits. The additional funding of \$500,000 and \$18 million that we received in 2018 and 2019 for disaster relief and recovery benefits following Tropical Storm Gita was contingent on support from USDA and congressional action respectively. Without access to D-SNAP, we hope that you and your distinguished colleagues in the U.S. Congress will offer the same level of post-disaster support in the future similar to the tremendous support we received from you in 2019 in the aftermath of Tropical Storm Gita.

Like everywhere in America, those living in poverty are more vulnerable to food insecurity. This includes unemployed individuals, people with disabilities, the elderly, low-income families, families who are homeless or at risk of homelessness, and families in debt, just to name a few. However, individuals and families living in poverty in American Samoa are even more vulnerable to food insecurity because of our lack of access to food and cash assistance programs that similar individuals and families have access to across America and in the other four territories.

For a start, America's largest anti-hunger program, SNAP is accessible to needy families in the 50 states, the District of Columbia, Guam, and the U.S. Virgin Islands while the NAP block grant is accessible to needy families in Puerto Rico and the Commonwealth of Northern Mariana Islands. However, American Samoa's NAP serves only low-income elderly, blind, and disabled individuals but not needy families. And, while all the 50 states, the District of Columbia and CNMI participate in the Special Supplemental Income (SSI) program and Guam, Puerto Rico, and the U.S. Virgin Islands participate in the predecessors to the SSI —namely the Old Age Assistance for the Aged (OAA), Aid to Permanently and Totally Disabled (APTD), and the Aid to the Aged, Blind, and Disabled (AABD), American Samoa receives no federal funding whatsoever to provide cash assistance for our needy elderly, blind and disabled population. On top of that, we do not participate in the Temporary Assistance for Needy Families (TANF) program and other safety-net programs for those living in poverty and facing vulnerabilities.

In the late 1980s and in 1990, American Samoa's Congressman Faleomavaega Eni F. H. Hunkin pursued the extension of the SSI program to American Samoa to provide cash assistance to our low-income elderly, blind, and disabled population. Unfortunately, the biggest hurdle in extending SSI to American Samoa and the insular areas is its exorbitant cost, which was estimated by the General Accounting Office (GAO) to increase federal outlays 27-fold. According to a September 1987 GAO report titled, "Welfare and Taxes - Extending Benefits and Taxes to Puerto Rico, Virgin Islands, Guam, and American Samoa", "Had SSI been fully extended to the areas in 1984, federal costs for serving the aged, blind, or disabled would have increased by an estimated \$425.4 million, or 27-fold". The GAO estimate includes about 980 persons who would have been assisted by SSI in American Samoa. According to GAO's area-by-area analysis of the effects of extending the SSI program to the insular areas in 1984, the greatest estimated

cost would occur in Puerto Rico at \$425.86 million. The estimated federal cost if the SSI had been fully extended to Guam would be \$8.37 million; the U.S. Virgin Islands would be \$3.74 million and \$3.36 million for American Samoa.

When it became clear in 1991 that it was impossible to extend the SSI program to American Samoa, I recommended to Congressman Faleomavaega and he approved that we pursue the extension of a modified food stamp program as a replacement for SSI. When Governor A. P. Lutali took office in 1993, he gave the green light for us to work with the U.S. Department of Agriculture to pursue the extension to American Samoa of a modified food stamp program to serve our low-income elderly, blind and disabled population. The ASNAP was approved by USDA and extended to American Samoa in 1994 and as Program Director, I was very happy to join Governor Lutali and First Lady Susana in opening the program and issuing our first NAP allotments to our low-income elderly, blind, and disabled population in July of 1994. The program is governed by a Memorandum of Understanding between the U.S. Department of Agriculture and the American Samoa Government that is negotiated annually. Although the target population for the ASNAP is the same as the population served by the SSI, ASNAP benefits are issued in the form of food coupons with a maximum monthly benefit amount of \$139 per person, whereas the SSI issues monthly cash benefits at a much higher rate to provide a guaranteed minimum income to adults who have difficulty covering basic living expenses due to age or disability and who have little or no Social Security or other income.

Since its inception in 1994, the ASNAP has been an incredibly important resource for thousands of low-income elderly, blind, and disabled individuals in putting food on their tables and in reducing their risk of facing food insecurity. Unfortunately, their family members do not have access to the same benefits. ASNAP recipients usually spend their monthly benefits right away so it provides quick support to our local economy, which is significant as it helps generate economic activity.

To address food insecurity for our needy families and communities, we must expand American Samoa's NAP to achieve equity for low-income families in the territory in accessing food assistance similar to needy families living in the 50 states, DC, Guam, Virgin Islands, Puerto Rico, and CNMI and to bring parity in the maximum allotment amounts similar to SNAP recipients residing in Alaska, Hawaii, Guam and the U.S. Virgin Islands outside of the 48 contiguous states. We cannot expand our food assistance program at this time so long as our funding allocation is tied to Puerto Rico's annual funding and at less than one-half of one percent of their NAP appropriation. As it is now, we issue five levels of monthly allotments of \$56, \$71, \$89, \$111, and \$139 to our recipients depending on their income because our funding allocation under the current mechanism cannot sustain a maximum monthly allotment of \$139 for all recipients who are considered households of one. It is prudent that the current law is amended to separate American Samoa's NAP funding appropriation from Puerto Rico and keep the existing language that the funds are, ". . . for payment to American Samoa to pay 100 percent of the expenditures by American Samoa for a nutrition assistance program".

It is also important to note that addressing inequities for SNAP recipients across states is very different from addressing inequities for low-income families in American Samoa. The issues of SNAP inequities

for low-income families living in the states have a lot to do with issues and policies affecting eligibility and benefit amounts such as utility costs where differences in SNAP utility allowances mean that similar households living a few miles apart across state lines could receive significantly different benefit amounts. However, the issue of inequity for similar families living in American Samoa simply has to do with having no access to SNAP or NAP because American Samoa's NAP serves only low-income elderly, blind, and the disabled, and those receiving NAP benefits receive substantially less than the maximum allotment amounts for those residing outside of the 48 contiguous states. Thus, to achieve equity for American Samoa's low-income families, we propose to expand our NAP to serve low-income families, while maintaining eligibility for low-income elderly, blind, and the disabled and granting American Samoa's qualified families the SNAP maximum allotment amounts for Alaska, Hawaii, Guam, and the US Virgin Islands.

Moreover, instead of extending SNAP to American Samoa, we would like to maintain NAP so we continue to have the flexibility to design our program to meet our unique needs and circumstances. The expanded NAP that we propose describes and defines needy households to include the following individuals or groups of individuals:

1. An elderly who is 60 years of age or above
2. An individual who is blind
3. An individual with a disability
4. An individual living alone
5. An individual or group of individuals living with others, but customarily purchase food and prepare meals for home consumption separate and apart from others, or
6. A group of individuals who live together and customarily purchase food and prepare meals together for home consumption.

Moreover, with almost all of our food imported from the U.S. mainland, Samoa, Fiji, New Zealand, Australia, Southeast Asia, and the Far East, we must 1) maintain the constant availability of food by keeping regular sailings to and from our main trading ports and 2) maintain the affordability of food by having sufficient inbound and outbound cargoes to ensure overall lower freight rates. To achieve this, the U.S. Congress needs to keep the American Samoa Economic Development Credit (ASEDC)/Section 30A of the Internal Revenue Code to keep our last remaining tuna cannery from relocating to a foreign country and taking with them thousands of jobs and millions of dollars in economic activity. Section 30A is designed to encourage investment in the U.S. insular areas and create jobs by reducing federal taxes on income earned by qualifying corporations and helps offset some of the competitive disadvantages faced by the tuna canning industry. Keeping StarKist Samoa in the territory will ensure that we maintain regular sailings from the U.S. West Coast where most of our food comes from with two container ships a month on a 14-day interval carrying inbound supplies for the cannery and outbound tuna, which helps keep freight rates lower for inbound cargo including food. This translates into reasonable and affordable food prices on the shelves of local grocery stores. The same applies to food imported from our trading ports in Asia and the South Pacific as StarKist Samoa also imports raw fish, equipment, materials, and supplies from Samoa, Fiji, New Zealand, Australia, Southeast Asia, and the Far East where

some of our foods are imported. Moreover, maintaining Section 30A will also provide incentives to attract other food manufacturers to American Samoa to build up local food production to minimize our dependence on imported foods.

Finally, an automatic mechanism must be built into the NAP so disaster benefits can immediately kick in without having to submit a request with a comprehensive plan on the use of funds for USDA approval or having to go through the U.S. Congress for appropriate congressional action — both of which can significantly delay the process in getting the assistance to those who need it right away.

In closing, I want to share that food security and food safety are top priorities for Governor Lemanu P.S. Mauga and Lieutenant Governor Talauega Eleasalo Ale's administration. A Cabinet meeting was convened earlier this week to focus on this very issue. Governor Lemanu announced during the meeting that a Food Security Task Force will be constituted with representatives from the government, private sector, and community to make recommendations to achieving food security where we have consistent and reliable access to safe and nutritious food. The pandemic has highlighted the critical need to address food security and food safety as we see more interruptions in transportation with shipping delays, border closures, and disruptions to the supply chain worldwide.

I want to thank our federal partners, particularly the Food and Nutrition Service of the U.S. Department of Agriculture in both the Western Region and National offices for their continued commitment and support of American Samoa's food assistance needs through the NAP, the National School Lunch and Breakfast and WIC programs. These programs are making a huge impact in helping our vulnerable populations access quality and nutritious food. We can do more by expanding this opportunity to benefit our low-income families. I call on all members of the Committee and your colleagues in the U.S. Congress for your unwavering support to end hunger and food insecurity for our people by expanding NAP and keeping Section 30A of the Internal Revenue Code for American Samoa.

Thank you again for the opportunity to submit my testimony to illustrate American Samoa's unique circumstances and inequity in accessing food assistance and how we can strengthen and expand an existing program to help end hunger and food insecurity in American Samoa.

Soifua ma ia manuia.

Re: Food Insecurity – Guam USA

Dear Congressman McGovern and Members of the House Rules Committee:

Buenas yan Hafa Adai. Catholic Charities of the Diocese of Agana, commonly known as Catholic Social Service (CSS), is privileged to provide this testimony relative to concerns and issues of food insecurity on our island territory of Guam.

As background, CSS is a large non-profit organization that administers eighteen programs at twenty sites and in the community, providing services and shelter to elderly, individuals with disabilities and those terminally ill, victims of child abuse, domestic violence and sexual assault, and the homeless. On average, CSS interacts with approximately 500 individuals monthly, with approximately 200 individuals within the direct care of CSS on a daily basis through our shelters and affordable housing. Our primary focus is on the provision of basic needs of food, clothing and safe housing as we work with individuals to address barriers to housing stability and hunger insecurity. We are an administrative unit within the Archdiocese of Hagatna and a member under the umbrella of Catholic Charities USA.

CSS operates a food pantry which is open five days a week, Monday through Friday, from 8:00 am to 5:00 pm. Pre-COVID, we averaged five to ten walk-in requests per day for food. During COVID, the number increased to an average twenty per day with food drop-offs added to elderly households, households with individuals with disabilities, and families with young children who lacked transportation. CSS' operations evolved during COVID to a food bank site for USDA commodities, boxed food items, and corporate bulk donations, and extended to coordinating with other non-profit organizations and government social services for distribution and delivery to shut-ins and isolated households.

"Respecting The Dignity Of The Human Person Through Service"

Pre-COVID, CSS' target populations were those vulnerable populations of victims and unsheltered homeless who have the highest risk for experiencing hunger and food insecurity. During COVID, as most government services and private sector operations were suspended and employees were furloughed without pay, and prior to the onset of federal COVID financial assistance, there was an increase in the intake for food assistance and requests for food delivery.

Although federal COVID assistance is implemented and currently on-going, most households remain on the pantry rolls due to other issues and barriers which are outlined herein.

1. Housing instability is the most critical factor leading to hunger and food insecurity with unsheltered homeless experiencing the highest level of food insecurity. Despite being eligible and/or receiving SNAP benefits, most of our clients lose assistance due to failure to recertify their assistance, or who lose their card which then results in dormancy and eventual termination.
 - a. Unemployment is a key factor to housing instability and eventual homelessness. Mainstream cash assistance is subsistence level and wholly insufficient to cover market rent.
 - b. Overcrowded households, often consisting of multi-generational households, are a result of unemployment of its younger members or inability to pay fair market rent amounts. Such economic impact extends to the high cost for non-food supplies, including children and adult diapers and nutritional supplements.
 - c. Availability of natural supports is challenged as the island shifts or has shifted from an extended family system to a more nuclear family system. Stress and conflicts among family members, resulting in estranged relationships, further limit the capacity to maintain and strengthen supports. Most individuals and families look to government services to meet this resource and often demand exceeds available resources.
 - d. Emergency homeless shelters are maximized and at full occupancy, with a wait-list that may be greater than 30 days for admissions.
2. Lack of transportation results in failed appointments and if gainfully employed, results in tardiness to work resulting in adverse action. Despite the island size of approximately 35 miles long, transportation from point to point is not helpful in its current design and time availability. Although there are new transportation strategies being implemented at the public mass transit level, it is far from providing a reliable resource if a household is not able to afford purchase of its own vehicle.
3. Undiagnosed and untreated mental health issues and substance use disorders is a growing factor leading to both food insecurity and housing instability, especially in households with young children.

4. Reliance on imported food products and fast food meals contribute to incidences of multiple chronic medical conditions which affect the wellness of individuals, especially those who comprise the main workforce population. Specifically, the serious effects of diabetes that result in multiple amputations impact the individual's capacity to obtain or maintain gainful employment. Additionally, there is no incentive for individuals and households to sustain themselves with small gardens or raising livestock.

5. Lastly, the effects of the compact treaty entered in to between the United States and the former Trust Territory nations in 1986 has added to the numbers of those with high risk of food insecurity, particularly among citizens of the State of Chuuk. These citizens comprise the majority population in mainstream benefits, child welfare services, homeless shelters and correctional institutions. Unemployment and high alcohol use are common characteristics among this population receiving various social services, including among women, and are hard-to-serve cases that often require multiple agency intervention. Although in-migration was effective since 1986, it is not clear why these individuals are not able to adapt and adjust to a new environment and become self-reliant.

We hope that our information provides a snapshot of the challenges we experience 'on the ground,' and look forward to improving actions that strengthen individuals and families' capacity to be self-sustaining and self-reliant in the most dignified manner.

Thank you for this opportunity to provide input.

Put Respetu,

Diana Calvo

U.S. HOUSE OF REPRESENTATIVES
Committee on Rules

**ROUNDTABLE: “Ending Hunger in America: Food
as Medicine”**

September 1, 2021

Testimony, as prepared by Barbara J. Petee, Executive Director, The Root Cause Coalition and Chief Government Relations and Advocacy Officer, ProMedica

Given on September 1, 2021 to the U.S. House of Representatives Committee of Rules

Good afternoon Chairman McGovern, ranking Member Cole, and Members of the Committee. My name is Barbara Petee and I serve as both the Executive Director of The Root Cause Coalition and the Chief Advocacy and Government Relations Officer for ProMedica; a health and well-being organization based in northwest Ohio, with a national footprint in senior care and healthy aging, as well work that spans the nation in addressing basic needs that, when lacking, contribute to poor health; commonly referred to as the social determinants.

Six years ago, The Root Cause Coalition was founded by ProMedica and the AARP Foundation to address the social determinants of health – such as nutrition and housing insecurity, isolation and economic hardships - by working with cross sector organizations from around the nation. Today we are nearly 100 member organizations strong, representing healthcare, insurance, business, education, faith communities, social services, local government, foundations, food banks and food assistance organizations; large and small. We come from different backgrounds but share a common goal – to achieve health equity for all. In fact, it isn't just a common goal – it is our mission. And as we all know now, now more than ever, these issues are staring us straight in the eyes.

It is a pleasure and distinct honor to be with you today to discuss one of the Coalition's central principles: that *hunger* is indeed a health issue, and that nutrition insecurity has deep implications for our individual and public health. It goes without saying that these insecurities broadly contribute to any host of diet-related chronic conditions and skyrocketing healthcare costs. As such, recognizing and acknowledging the vital framework that *Food Is Medicine* plays in combatting these inequities is critical to achieving our common goal.

COVID-19 has underscored and laid bare that our playing field isn't level. The marginalized and those who struggle daily to make ends meet – many of whom we've come to know as essential or frontline workers – remain in the margins because the way in which we address these issues has been through a patchwork of programs.

To be sure, many organizations – hospitals and health insurers included – have developed incredible programs and models that address the nutrition needs of their patient and clients that, in turn, improves overall health.

Many of those organizations are members of Root Cause, including ProMedica, Common Spirit Health, Presbyterian Health System, RWJ Barnabas Health, Adventist, Methodist LeBonheur, Metro Health, Ascension, OSF Health, Loma Linda, Kaiser Permanente, Blue Cross & Blue Shield, Humana, and Care Source, to name a few.

But all the individual programs – collectively – cannot do what comprehensive national health policy could do to appropriately ensure that access to nutritious food for all becomes a part of our nation's health care delivery model.

There are slightly varying estimates, but Bread for the World puts the nation's cost of hunger at \$160 Billion – that's with a B – annually. We've heard some significant figures since the onset of the pandemic, so a Billion may not resonate as it once did. But if you consider the implications of the \$160 Billion and what it means in lost productivity, lost wages, medical costs – to the individual as well as the industry – for conditions that could have been addressed through nutritious food, as well as the shame and stigma that hunger brings, it seems obvious that it is well beyond time to admit *hunger is a health issue and we can address this issue with food as medicine policies and programs.*

In fact, recent research from The Root Cause Coalition shows that there is public will to address it – over three-quarters of Americans say they support hunger as a policy priority; we need the political will, as well.

Our current health care delivery model is at an inflection point; born in a post-World War Two era that spurred the building of hospitals and clinics, and accelerated the development of medicine, treatments and technology that made advancements we could not imagine just 75 years ago was – and is – remarkable.

But along the way we lost our footing and our focus to ensure individuals – our patients, our neighbors, our fellow citizens – had access to the most basic needs that impact health, including nutritious food. We have put less focus on access and *prevention*, and it's led us to a point where on any given day, in cities across our country, the most amazing advances in medicine can save lives, while too many others wither and experience unimaginable consequences – even death – due to lack of nourishing food and other basic necessities. And so often, access to these basic necessities is tied to income, education and race. It should not be the case that your ZIP code determines your health and how long you live. That's wrong.

You'll hear from others on the panel this afternoon about the work they are doing in their organizations, across communities and across the nation – and how the lives of hundreds of thousands of individuals have been improved because of their thoughtful approach to addressing hunger.

I've had the great privilege to work with most of them and some are also members of The Root Cause Coalition. Our Coalition is rich with examples of how members are addressing hunger and nutrition in the communities and states in which they serve.

For example, ProMedica built a grocery store in a food desert to ensure equitable access to healthy food for residents who live in an inner-city neighborhood. A 'veggie mobile' serves both the inner city and rural communities, and our food clinic has proven to reduce readmissions and improve the overall health of those who are given a 'prescription' for food to supplement their diet – reducing the need for medicine as well.

ProMedica, Presbyterian Health System, and so many hospitals across the country screen their patients for food insecurity and make the appropriate community connections to ensure that needs are met.

Insurers are equally committed. For example, Kaiser Permanente is one of the insurers that is taking a closer look at how interventions promoting food as medicine can improve health outcomes and decrease costs. They are actively evaluating interventions, such as medically tailored meals and produce prescriptions, to understand what works, and under what conditions.

I encourage the committee to engage with *all* insurers to understand their current efforts, questions and challenges they may face.

And our non-clinical members – especially food banks – who work in communities with hospitals, insurers, schools, and other organizations are helping forge the way. But we can't fix our nation's healthcare model one pilot or program at a time.

One of our key priorities as a Coalition is to advocate for the reforms that include metrics and new payment models in Medicare and Medicaid that address health inequity, and ensure payment to care providers and non-clinical community-based organizations for demonstrated value related to addressing the social determinants. That's the model we can and MUST build – together.

So much research and study has gone into this area and we know much more than we did just a few years ago. We know that many American adults are suffering from at least one chronic, diet-related health condition, and if we are going to truly address the root causes of health inequities, we must address health outside of traditional Medicine –we must address health *before* medicine, because Food is Medicine.

In closing, I would like to thank Chairman McGovern, Ranking Member Cole, and every member of the committee for your focus on this issue. As we all know, the American people have been through so much, but The Root Cause Coalition shares your sense of obligation and understands that any healing from this period cannot be a return to normal. The 'normal' that was pre-COVID was not acceptable. We must do better. Collectively, we believe we can.

###

**Testimony for the Rules Committee Democrats Roundtable
September 1, 2021
2:00-3:30 pm EST**

**Karen Pearl
President & CEO, God's Love We Deliver
Chair, The Food Is Medicine Coalition**

Thank you for the opportunity to address the role of medically tailored meals in helping resolve our national predicament of food insecurity, poor health outcomes and rising healthcare costs. I am grateful to the Chairman for inviting me and to all of you for the honor of presenting here today.

I will begin by laying out the following proposition: We will never reach our healthcare goals of improving outcomes, lowering costs and creating equitable access without fully integrating the medically tailored meal intervention into healthcare.

I know that's bold, and I'll tell you why.

First, let me introduce myself. I am Karen Pearl, President & CEO of [God's Love We Deliver](#). God's Love is a nonsectarian, nonprofit provider of medically tailored meals – or MTM - in NYC and surrounding counties. Each year, we deliver more than 2.5 million meals to 10,000 people living with over 200 different critical illnesses like HIV, cancer, cardiovascular disease, renal failure and more. We support families by feeding the children and caregivers of our severely ill clients and we deliver to our community with the help of 17,000 volunteers. Our signature difference is nutrition, with 8 registered dietitian nutritionists on staff. We partner with many healthcare plans and hospitals to integrate this life-saving intervention into the care continuum.

I am also the Chair of [The Food Is Medicine Coalition \(or FIMC\)](#), a national coalition of nonprofits delivering medically tailored meals, nutrition counseling and education. Last year, FIMC agencies cooked and home delivered 11 million meals to over 48,000 people across multiple states and the District of Columbia Today, I speak from the God's Love AND FIMC perspectives.

History

The impact of the medically tailored meal model has gained much attention recently, but the concept is not new. God's Love We Deliver started over 35 years ago at the height of the AIDS pandemic, when one woman delivered groceries to a man who was dying of

AIDS. She came back the next day and the groceries were still on the counter. She had an epiphany. People in this state of illness did not just need food, they needed nutritious meals, prepared for their unique medical circumstances and home-delivered to their doors. For this population, a meal is the difference between life and death. Thus, a movement was born.

Nutrition science has been a focus of our mission since the beginning when we started our Nutrition Department, staffed by Registered Dietitian Nutritionists, that helped clients combat wasting, manage medication and side effects and eat right for their other diagnoses. In 2001, seeing the need in our community, God's Love expanded our mission to serve people living with all severe and chronic illnesses. Today, most of our clients are living with multiple diagnoses – 42% live with 4 or more illnesses at once. Clients have complex dietary restrictions and medical conditions that make it impossible for them to take advantage of traditional emergency food support systems. **For the acute population that is driving so much of the cost of healthcare today, adding something as fundamental as a meal tailored for their specific medical circumstances – can turn their situation around.**

Medically Tailored Meals are more than a meal, they are an intervention. Designed by RDNs and chefs and recommended in partnership with healthcare providers, the intervention includes a rigorous dietary assessment and individualized medical nutrition therapy. Meals are cooked from scratch in our kitchen, with no preservatives, starters or fillers, blast chilled and flash frozen to preserve flavor, and then home-delivered to clients. Our meals have to be delicious and visually appealing as appetite is one of the first things to go when people are sick. As our Executive Chef says, "Our food is medicine, but it doesn't have to taste like medicine."

The Evidence

While access to food is a social determinant, MTM is an evidence-based proven intervention, with robust research behind it. **The value proposition for MTM is pretty simple.** MTMs are associated with:

- Reduction in ED visits by 70%
- Reduction in hospital admissions by 52%
- Reduction in admission to nursing facilities by 72%, and
- A 16% net decrease in health care costs

Policy

It is because of these types of outcomes that early on in the HIV Epidemic, The Ryan White HIV/AIDS Program chose a whole person approach, including food and nutrition services alongside medical and pharmaceutical support. **Ryan White remains the only dedicated federal funding stream for MTMs, yet still does not cover all those who come to us in need.** Access to MTMs is largely funded through private philanthropy across the country, resulting in system-wide gaps.

Healthcare Innovation

MTMs are not generally a reimbursable benefit for enrollees in state Medicaid programs, and Medicare covers only a small portion of enrollees at the discretion of plans. Yet, because of the compelling research results, some states and managed care plans have begun to use waivers and regulatory flexibilities to pilot coverage of MTMs.

All of this – pilots and research – are demonstrating that MTM and medical nutrition therapy work. And they work in different settings, with different illnesses and with all demographics.

While much success has been seen in these pilots, they remain on the margins of innovation and fall short of establishing the widespread coverage needed to ensure equitable access across the U.S. **Changing healthcare policy to fund, deliver and explicitly evaluate the MTM intervention in Medicare and Medicaid would solve this issue.**

MTM Demonstration Pilot Act

Last year, Mr. McGovern and other members of the Bipartisan Food Is Medicine Working Group introduced the Medically Tailored Home-Delivered Meal Demonstration Pilot Act of 2020 (H.R.6774). The bill would establish a multi-state Medicare pilot program that would ensure that medically vulnerable people get access to lifesaving medically tailored meals in their home, while providing the outcomes data we need to build a more resilient and cost-effective health care system. The pilot would provide a multi-state project which will allow expansion of services to more geographies and a testing of effectiveness in different regions. Thoughtful policy changes such as this are steps in the right direction.

The time is now to change the healthcare landscape and to make MTM a recognized benefit in all health care plans, including Medicaid, Medicare, and private insurance. During the Covid pandemic, the gaps in equity and access for people who need quality food and nutrition services was laid bare. A person's diet often has life and death consequences. When people are severely ill, good nutrition is one of the first things to deteriorate, making recovery and stabilization that much harder, if not impossible. Early and reliable access to medically tailored meals helps individuals live healthy and productive lives, produces better overall health outcomes and reduces health care costs. It is a solution that improves population and individual health, reduces healthcare inequality, improves the experience of care, and has been proven to reduce costs.

I hope you will join in the effort to ensure that MTM are part of the solution to improving health, lowering healthcare costs, and ending hunger in America.

PRODUCE PRESCRIPTIONS

A POWERFUL TREATMENT AND PREVENTION OPTION FOR HEALTHCARE PROVIDERS

Statement of:

Michel Nischan

Co-Founder and Executive Chairman, Wholesome Wave

Ending Hunger in America: Food As Medicine

Roundtable, House Committee on Rules

September 1, 2021

855 Main Street
Suite 910
Bridgeport, CT 06604
P (203) 226 1112

Good afternoon Chairman McGovern and distinguished members of the Committee on Rules. My name is Michel Nischan, I am the co-founder and Executive Chairman at Wholesome Wave. Thank you for holding this event and for inviting all of us to participate in this important roundtable discussion on food as medicine, I am honored to be here.

Has your doctor ever told you to eat more fruits and vegetables? Probably. I know mine has. But until now, doctors could only provide the advice, without the resources to act on it. This is a huge distinction, especially if you're struggling with low income.

When the late Gus Schumacher and I founded [Wholesome Wave](#) in the basement of my restaurant, we aligned on one simple belief, and that is the power of fruits and vegetables to change and improve lives. As simple as that sounds, it is absolutely true. As a chef and a father of two children with Type 1 Diabetes, I've learned about that power and really wanted to make the lifestyle changes that were accessible and meaningful to my family, like choosing and eating more fruits and vegetables, available to all families regardless of struggles with low income or poverty. Our core value, and core belief, is that everybody, regardless of race, ethnicity, age, or income, has the right to feed themselves and their families well. And they want to.

Wholesome Wave has been working on nutrition security and learning these things to be true through nutrition incentive programs tied to SNAP since 2007. Our focus on food as a powerful prevention option in healthcare began in 2010, when I learned about an initiative in Ypsilanti, Michigan, where a health center was offering \$5 "Fruit and Vegetable Prescription" vouchers to be redeemed at the local farmers' market with an aim to increase low-income community members' access to local fruits and vegetables.

We believed the power of food as medicine was very real, so we started engaging with, iterating, and nationally expanding these program models to really help highlight that connection, and achieve a proof of concept for good nutrition as a form of diet-related disease prevention and management. We've reached thousands and thousands of patients in dozens of states and territories, from Codman to Crenshaw, Skowhegan to Chicago, and Washington, DC to the Navajo Nation. The one thing that we've learned in all of these places regardless of urban or rural or territorial, they work.

Today Wholesome Wave continues to address **nutrition** insecurity by developing and deploying programs, platforms, and seed funding to support community-rooted health organizations in their efforts to address this horrible lack of affordability and lack of access to healthy food across the

country. The outcomes of this work and the evidence derived are essential considerations for both food and health policy.

Our programs also prove that good food is good health *and* good business. The redemption of the healthy food prescriptions at farmers markets and local grocers have increased sales and income for both farmers, retailers, their support service supply chain partners, but also provide a robust full-community engagement at these vital neighborhood markets, so that the markets actually look like the entire community, instead of just for those who could afford to participate.

In the years since, we've launched numerous programs across the country. We've expanded the model to be *delivered* at Federally Qualified Health Centers, hospitals, community-based clinics, and more. We have expanded options for *redemption* options to include large-scale grocery stores, Community Supported Agriculture (CSA) programs, mobile produce markets, even online food order and delivery. This approach is now a real movement, spearheaded by innovative healthcare and community-based leaders, in rural, urban, and tribal communities alike.

To-date we have identified over 100 active programs at several hundred sites across the country, many of which are represented by our [National Produce Prescription Collaborative](#). The NPPC is an organized collective to support and leverage Produce Prescription programs and practices as prevention & intervention for diet-related disease through policy and by further embedding these models into healthcare and community food systems.

As my colleagues on this panel will confirm, the impacts of these programs have been impressive and warrant serious consideration by all who wish to improve the health and the lives of vulnerable Americans in a cost-effective way. These programs have been the subject of over 30 studies in peer-reviewed scientific and economic journals just in the last 5 years. These articles have consistently reported on the power of Produce Pprescriptions to improve intake of fruits and vegetables, improve overall dietary consumption, reduce the gap between actual consumption and the national daily recommendations, lower weight, lower blood pressure, and lower Hemoglobin A1C — the key biometric indicator used in diagnosing diabetes and its preconditions. What does not show up in these studies, but my colleagues know to be true, is the joy and the dignity factor that these programs create.

With the rapid uptake and promising results of these programs across the country, our priority is to establish the body of evidence that demonstrates the value of Produce Prescription programs and medically-tailored meals in improving health outcomes, customer experience, and improving

855 Main Street
Suite 910
Bridgeport, CT 06604
P (203) 226 1112

the overall healthcare system. We spend a hundred thousand dollars per patient just on dialysis for one year. Three hundred and seventy seven thousand Americans will be on dialysis this year, at a cost of \$49 billion dollars. That's a LOT of fruits and vegetables.

In this vein, we support a CMMI pilot at CMS which includes Produce Prescriptions as a treatment lever in an innovative value-based care model. CMS continues to seek ways to better understand how to systematically identify and respond to the health-related social needs of Medicare and Medicaid beneficiaries in order to reduce total healthcare costs and create better health outcomes. Our experience confirms that Produce Prescriptions help facilitate and accomplish these goals in a cost effective way.

Additionally, we would like to see Produce Prescriptions integrated into federal programs such as Medicare and Medicaid in a sustainable and consistent way. Specifically by providing a Produce Prescription benefit to cover produce and services for members with diagnosed diet-related conditions who have challenges accessing nutritious and affordable food.

Again, Chairman McGovern and members of the Committee, we appreciate your tremendous work and commitment to our country, and for covering this important and powerful issue — I look forward to a fruitful discussion.

Some Peer-Reviewed Fast Facts About Produce Prescriptions in 2021:

- A pooled sample of 13 studies showed a 22% increase in F&V consumption, equivalent to 0.8 servings/day, a 0.6kg/m² BMI decrease, and a 0.8% HbA1C decrease. To further advance and scale, there is a need for well-designed, large, randomized controlled trials in various settings to further establish the efficacy of healthy food prescription programs on diet quality and cardiometabolic health.
 - [Advances in Nutrition, May 2021](#)
- Participants enrolled in a program in North Carolina not only increased their fruit and vegetable purchases but also decreased their sugar-sweetened beverage purchases.
 - [JAMA Network Open, August, 2021](#)
- A program within a primary care clinic in a community-based hospital saw a clinically important reduction in HbA1C equivalent to adding a new medication to their treatment regime. Investigators also found that HbA1C reductions were associated with voucher redemption in adults with Type 2 diabetes.
 - [Journal of Nutrition Education and Behavior, August, 2021](#)
- Just \$10/week for 8 weeks was enough to show a significant reduction in HbA1C in a cohort with diabetes. [HbA1C is associated with substantial costs of care.](#)
 - [Preventive Medicine Reports, May 2021](#)
- A small cohort in Georgia “reported significantly increased total intake of fruits and vegetables, knowledge of fresh fruit and vegetable preparation, purchase of fresh fruits and vegetables from a farmers market, and significantly altered food purchasing practices compared with the control group.”
 - [Health Promotion Practice, June 2021](#)
- In a study reporting on a program in North Carolina, the authors noted that “Produce Prescription Programmes can increase healthy food purchasing among food-insecure people, which may improve chronic disease care.”
 - [Public Health Nutrition, April 2021](#)
- Programs have shown success in changing (improving) attitudes towards fruits and vegetables.
 - [Cureus, March 2021](#)
- Programs have promise for pediatric participants as well, according to the authors “The current study provides evidence that fruit and vegetable prescriptions, easily ordered through EMR systems and provided to all pediatric patients, may have a significant influence on food insecurity and dietary patterns of children living in a low- income, urban community.”
 - [Nutrients, July 2021](#)

**Written Statement of Dr. Steven Chen, M.D.
Chief Medical Officer
ALL IN Alameda County
Before the
House Rules Committee
United States House of Representatives
“Ending Hunger in America: Food as Medicine”
September 1, 2021**

Chair McGovern, Ranking Member Cole, and distinguished members of the Committee, thank you for the opportunity to address you today regarding Alameda County’s ALL IN Food as Medicine Program. My name is Dr. Steven Chen, I am a family medicine physician and the Chief Medical Officer of [ALL IN Alameda County](#) in California, where I lead a local Food as Medicine initiative called [Recipe4Health](#) which is an expansion of a pilot program I started at Hayward Wellness Center, a Federally Qualified Health Center (FQHC) in Hayward, California in 2015.

My story as a physician is not unique. I started medical school 26 years ago and can break up my story in three 8-year spans. I spent the first 8 years training to become a doctor. I received zero training on how to use “Food as Medicine” to help my patients. I spent the next 8 years trying to apply what I learned in residency to the front lines of day-to-day care of my immigrant patients in Oakland’s Chinatown. I saw the limitations of how we cared for our patients in time pressured one-on-one 15-minute visits. My patients wanted alternatives to taking a pill every day. They had many questions about using food to treat their conditions, for which I had few answers. Like many primary care doctors, I flirted with burn out, with frustration, with a sense of helplessness. So, I made a shift. I spent the next 8 years as a Medical Director designing different ways to care for patients, creating a Food as Medicine model that connected an urban farm to my clinic, seeing patients in group medical visits instead of 15-minute one-on-ones, integrating food insecurity screening into the electronic health record, and getting strong initial health outcome results. This early success led to the opportunity to replicate and strengthen this model across Alameda County and beyond.

In the following written testimony, I define a category of interventions collectively referred to as Food as Medicine; describe Alameda County’s Food as Medicine model called Recipe4Health; review Recipe4Health patient outcomes; and conclude with a discussion of challenges and opportunities as we look to expansion and long-term sustainability of Food as Medicine, which has the potential to lower healthcare costs and improve population health.

Food as Medicine

Food as Medicine is based on the idea that we should think about food as a type of medicine that can prevent, treat, and reverse disease to improve overall health. Using food in a clinical setting helps the healthcare system address food and nutrition insecurity, chronic disease, racial and health equity, and the intersections between them. A landmark 2018 study demonstrated that an unhealthy diet is the leading cause of death in the United States, surpassing tobacco use, high blood pressure, and obesity, and causing more than half a million deaths per year in the United States.¹

Whereas unhealthy diet is the leading cause of mortality in the United States², healthy food can improve health outcomes^{3,4,5,6} and reduce healthcare costs,^{7,8,9} two important healthcare system goals. Individuals consume approximately 100 bites a day, which equates to about 2,000 pounds of food a year. If healthcare systems are able to influence the food people eat, and the food system around them, we would see health outcomes improve and our food economy change. Chronic disease causes suffering and costs society money that could be spent elsewhere. Currently 133 million Americans are affected by chronic diseases,¹⁰ and 86% of United States healthcare costs are spent treating patients with those diseases.¹¹

Further, there are intersections between, chronic disease and food insecurity; food insecurity increases the rate of diabetes by 200%.¹² The [Alameda County Community Food Bank](#) found that for the households they serve, 20% include at least one person with diabetes and 39% include someone with high blood pressure.¹³ Finally, we know that food insecurity and chronic disease disproportionately impact low-income communities of color. In Alameda County, as across the country, there are clear racial and ethnic inequities in food insecurity: 25%¹⁴ of those reporting food insecurity in the County were African-American (though they represent 10% of the County population) and 30% were Hispanic (though they represent 23% of the County population).^{15,16} Furthermore, we know that this high-level data can hide inequities within populations: local neighborhood research found 61% food insecurity within the indigenous Guatemalan Mayan community compared to 39% within the broader LatinX population.¹⁷

ALL IN Alameda County

In 2014, on the 50th Anniversary of President Johnson's War on Poverty, Alameda County Supervisor Wilma Chan, who has led forward looking health policy in government for over 25 years, launched ALL IN Alameda County (ALL IN) through a Board of Supervisors resolution to address issues of poverty across the county. Within four years, ALL IN transitioned from a community initiative within Supervisor Chan's office to a formal business unit within the County Administrator's Office.

ALL IN actively collaborates with community members and leaders, county agencies, industry, and community-based organizations on issues such as food insecurity, community engagement and empowerment, workforce and economic development, school readiness, and ensuring children, youth, and families have adequate supports for equitable and sustained health and wellbeing. Since 2015, ALL IN has raised over \$5.1 million in philanthropic and governmental funding to implement strategies addressing issues of poverty.

More information about ALL IN is available in the [ALL IN Alameda County 2021-2024 Strategic Plan](#).

Recipe4Health Origin Story

Recipe4Health, grew out of a combination of two earlier Food as Medicine programs, one starting in January 2015 at Hayward Wellness under Dr. Steven Chen and another started by the late Dr. Bertram Lubin, pediatrician and former Chief Executive Officer of [University of California, San Francisco \(UCSF\) Benioff Children's Hospital Oakland](#), following a visit to the Boston Medical Center. Dr. Lubin was excited by what he saw in Massachusetts, including an onsite Preventative Food Pantry to provide fresh produce and other healthy food to those patients who were food insecure and with medical conditions that would benefit from an ongoing healthy diet. As a result, he immediately asked his hospital's Center for Community Health and Engagement (now the [Center for Child & Community Health](#)) to research how Children's Hospital Oakland could launch a similar program.

In 2015, Dr. Lubin partnered with Alameda County Supervisor Wilma Chan to fund a study to evaluate the outcomes of providing weekly produce boxes also known as community supported agriculture (CSA) boxes to patients with diabetes and related health conditions. Simultaneously, and coincidentally, Dr. Chen was working with his team to build an on-site Food Pharmacy and Behavioral Pharmacy Group Medical visits to support clinicians to address food/nutrition insecurity and chronic disease. This was the beginning of Food as Medicine programs in Alameda County, which have also included pop-up monthly food pharmacies at clinics in addition to the clinically integrated Recipe4Health model.

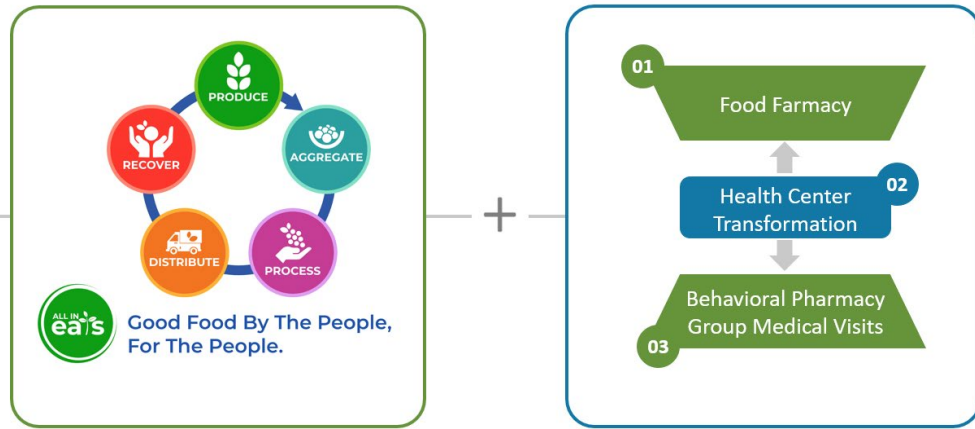

Recipe4Health Model

ALL IN Alameda County's Recipe4Health initiative is an integrative model for healthcare that addresses the social determinants of health (specifically food insecurity and social isolation) and chronic disease. This model advances health and racial equity by transforming the healthcare system's capacity to increase access to and utilization of affordable, nutrient-rich, whole medically supportive food¹⁸ and to provide ongoing behavioral change support to improve the health of individuals, families, and communities. Alameda County's FQHC network of clinics serve over 280,000 patients with over 1.57 million visits per year.¹⁹ The majority of those patients (89%) are people of color.²⁰

Recipe4Health integrates with the circular food economy²¹ by sourcing food from local farms that use regenerative growing practices, meaning they improve soil health, human health, and planetary health with an equity lens. Through clinically integrated sites, Recipe4Health works to address food and nutrition security and treat, prevent, and reverse chronic disease, which has been shown to reduce emergency department visits,²² hospitalizations,²³ and medication usage.²⁴

Circular Food Economy

Recipe4Health

The clinically integrated Recipe4Health model builds three important pieces of innovative infrastructure with clinics:

1. Food Farmacy: Where a traditional prescription is filled at a pharmacy, Recipe4Health’s produce prescriptions are filled by a “food farmacy” or farm stand typically physically located in the clinic. Healthcare staff refer food/nutrition insecure and/or patients with a diet-sensitive chronic condition for a free 16-week prescription of fresh produce, with each week’s dose including approximately 16 servings of vegetables. The food has a value of \$10/bag and has been provided through delivery to patients’ doorsteps since the start of the COVID-19 pandemic. Delivery has increased the amount of produce going directly to individuals, regardless of transportation or mobility.

Sample bag of food provided weekly through the Food Farmacy (16 servings)

The prescription is “filled” by the [Alameda County Deputy Sheriffs’ Activities League’s](#) social enterprise [Dig Deep Farms](#), an urban farm utilizing regenerative practices to fortify the soil and grow nutrient-dense food. Further benefiting the community, Dig Deep Farms creates green economy jobs for formerly incarcerated or returning citizens to work as “farmacists,” farmers, and delivery drivers.

Dig Deep Farm’s urban agriculture provides the vegetables for the Food Farmacy

“I really like the vegetables. They’re consistent, and they’ve helped me to make a change in the things that I eat and what I keep at home.” – Previous Recipe4Health Patient

2. Behavioral Pharmacy: Group medical visits (GMV) bring together patients with various medical conditions to “move, nourish, connect, and be” through weekly visits that include physical activity, healthy meals and nutrition education, social connection, and stress reduction. This four-month “Behavioral Pharmacy” group medical visit program teaches patients how to make fruits and vegetables a regular part of their diet. GMVs meet once a week to learn about smart shopping, cooking skills, movement, mindfulness, and more. All GMV patients receive a produce prescription, and sessions include nutrition education based on produce distributed that week. Further the GMV is held in coordination with a clinic provider (e.g., MD or NP), to provide chronic disease management and address food insecurity.

The Behavioral Pharmacy Group GMVs are the result of a partnership between each community clinic and [Open Source Wellness](#), a local not-for-profit community based organization. The Behavioral Pharmacy GMVs are currently delivered virtually and occur weekly (approximately 48 weeks a year) per COVID-19 regulations. New patients can join monthly reducing the time between a patient’s referral and participation. Group size is ideally 12-24 patients per session, and the groups intentionally accept patients with different medical conditions ranging from diabetes to depression in one universal group. This is different than traditional single disease specific groups like a diabetes group or a hypertension group. The Open Source Wellness model is based on a proven behavior change model that capitalizes on the power of community.

Group Medical Visit patients engaging in physical activity together

“When I leave the group [medical visit], it’s good. Like when a child is given a toy and goes out with that smile and joy, I feel the same as that child. You come out of the group with more energy and positivity. The group nourished your soul, gave you more strength, as if they tell you: You still have a lot to give; you come back to life.” – Previous Recipe4Health Patient

3. Provider Training: Providers and healthcare staff receive state-of-the-art trainings on how to use “Food as Medicine.” ALL IN trains clinical teams at clinics on the latest science and develops their confidence to implement nutrition interventions in a clinical visit with diverse patients. Staff also receive training on implementing universal food insecurity screening, improving Supplemental Nutrition Assistance Program (SNAP) referrals (known as CalFresh in California), and referring to the Food Farmacy and/or the Behavioral Pharmacy.

In addition to these three components, Recipe4Health is part of a larger local systems change effort that includes farming, employment, and food recovery to promote wellness, improve food security, and address climate change referred to as the circular food economy.

Finally, ALL IN provides significant operational support for each clinic to launch Recipe4Health, ongoing capacity building, and planning towards sustainability. This includes, but is not limited to coordinating between the clinic, Dig Deep Farms (food source), and Open Source Wellness (behavioral health program); developing workflows in coordination with clinic teams; training new staff and GMV providers; identifying funding; working with clinics on partner agreements (e.g., Memorandum of Understanding) to ensure data sharing; and more.

Recipe4Health Funding

Currently, Recipe4Health is funded through a combination of public and private funding. Federal funding from the [United States Department of Agriculture, National Institute of Food and Agriculture, Gus Schumacher Nutrition Incentive Program](#) supports the clinic food pharmacy and food prescription delivery, as well as the Behavioral Pharmacy, provider training, evaluation, and program operations. Recipe4Health receives local foundation/private funding from managed care health plan [Alameda Alliance for Health](#), the [Stupski Foundation](#), and the [Hellman Foundation](#) to support all key program elements including the Food Pharmacy, Behavioral Pharmacy, provider training, evaluation, and program operations. In addition, local funding from Alameda County supports personnel and program operations.

To support expansion of the Recipe4Health model, ALL IN leverages funding raised to cover the cost for participating clinics through the first year which includes food sourcing from Dig Deep Farms and Behavioral Pharmacy operations from Open Source Wellness. ALL IN's funding also covers the necessary staffing and operational support for training and technical assistance to participating clinics. ALL IN works with each clinic on lessons learned during that first year with the goal to create a longer-term plan for funding and sustainability.

Recipe4Health Population Served

Recipe4Health currently operates in four Alameda County FQHCs which provide primary care services in underserved areas that are largely communities of color. Between January 2020 and July 2021, Recipe4Health clinics have provided produce to over 1,300 patients resulting in the provision of nearly 20,000 bags of vegetables (over 300,000 servings). The Behavioral Pharmacy has served 165 patients.

Recipe4Health Intervention Results

Recipe4Health's preliminary results are based on participants enrolled in the combined Behavioral Pharmacy GMV and Food Pharmacy and indicate improvements in health outcomes, mental health, health promoting behaviors, and food/nutrition security. The following data were collected during the pandemic when physical and mental health were worsening nationwide.

Physical Health Outcomes

1. *Blood Pressure*: GMV patients (n=23; p<0.01) showed a 16-point reduction in systolic blood pressure.²⁵ A 20-point elevation in systolic blood pressure is associated with twice the risk of death from a heart attack or stroke.²⁶

2. *Illness*: GMV patients reported decreased illness and improved overall health. Recipe4Health uses the standard 4-item set of Healthy Days core questions (CDC HRQOL- 4)²⁷ to capture self-reported physical and mental health (range of 0-90). Preliminary results (n=50; p<0.001) show a reduction of 13 points.

3. *Hospital and Emergency Department Visit Days*: Patients participating in the GMV (n=49) had 77% fewer hospital and emergency department (ED) visit days in the 6 months after participation in the GMV compared with 6 months prior (p=0.14),²⁸ as shown by the charts on the next page. Fewer hospital and ED visits results in cost savings for the healthcare system as well as improved quality of life for patients.

Mental Health Outcomes

1. *Depression:* Patients participating in the GMVs showed a change from moderate depression to mild depression. Depression data represent a subsample of patients with elevated depression at baseline (n=22). Depression improved from pre-test to post-program participation, showing a reduction of 35% based on the Patient Health Questionnaire-9 (PHQ-9)²⁹ with scores reduced from 13.8 to 8.9 (p=0.01). The PHQ-9 has a range of 0-27, with 5, 10, 15, and 20 as cut points for mild, moderate, moderately severe, and severe depression.

2. *Anxiety:* Patients participating in the GMVs showed a change from moderate anxiety to mild anxiety. Anxiety outcomes represent a subsample of patients with elevated depression at baseline (n=19; same subsample as the depression analysis). Anxiety improved from pre-test to post-program participation, with a reduction of 38% on the Generalized Anxiety Disorder-7 (GAD-7)³⁰, with scores reduced from 12.7 to 7.8 (p=0.01). The GAD-7 has a range of 0-21 with 5, 10, and 15 as cut points for mild, moderate, and severe anxiety.

3. *Social Isolation:* GMV patients saw a decrease in loneliness, despite dramatically increasing isolation and loneliness during the pandemic. Based on the UCLA 3-item loneliness screener,³¹ social isolation (n=22) decreased 12.5% among GMV patients from 6.4 to 5.2 (screener ranges from 3-9) during a pandemic year mandating social distancing (p<0.01). Social isolation has an equivalent impact on mortality as smoking 15 cigarettes/day, and a greater impact than physical inactivity or obesity.³²

“Well I felt like I wasn't alone, I wasn't the only one going through something. And it kind of uplifts your spirit hearing other people respond to what you say.” – Previous Recipe4Health Patient

Health-Promoting Behaviors

1. **Exercise/Physical Activity:** Weekly minutes of exercise increased among GMV patients from 71.5 minutes/week to 134.8 minutes/week (n=87; p<0.001) during a pandemic year which often was associated with decreases in exercise. Federal guidelines recommend 150 minutes of exercise per week,³³ which is associated with lower diabetes, hypertension, and incidence of cancer.

My husband sees that I'm going to do Zumba, and I tell him: Let's do Zumba, come on everyone. And we do Zumba as a family and that's what I like.” – Previous Recipe4Health Patient

2. **Fruit and Vegetable Consumption:** Based on a 2-item fruit and vegetable intake screening,³⁴ daily servings of fruits and vegetables increased by 25% among GMV patients (n=88) from 4.4 servings/day to 5.9 servings/day (p<0.001). An increase of 1 serving (1/2 cup) of fruit and vegetables per day decreases all-cause mortality by 5%³⁵ and could save 30,301 lives across the United States per year.³⁶

“People who have never eaten vegetables in their life before, are now eating vegetables.” – Clinic-Based Recipe4Health Staff Person

Food Security

Food insecurity status decreased among GMV patients (n=88; p < 0.001) with reduction of 25%, from an initial 61% down to 34%,³⁷ as shown on the charts on the next page. This was significant given that the United States population as a whole experienced a doubling in overall food insecurity from 12% to 23% and tripling among households with children – the most vulnerable of all groups during this last pandemic year.³⁸

“Now eating well is not about money. The food is delivered here. I cook it up the same day it arrives, so we have the greens and carrots at every meal. Better food choices are available to me now.” – Previous Recipe4Health Patient

Recipe4Health Case Study

Mr. X is a 56-year-old Mexican-American man diagnosed with high blood pressure, diabetes, and who was morbidly obese. His doctor prescribed him a produce prescription through the Recipe4Health Food Pharmacy. Each week, he received a bag of regeneratively grown vegetables, delivered to his home, along with a recipe on how to prepare the food. Mr. X’s doctor also prescribed the Behavioral Pharmacy Group Medical Visit to provide nutritional and behavioral coaching to strengthen the effect of the food prescription. Mr. X regularly attended the weekly Group Medical Visits.

By the end of his four months of participation in Recipe4Health, Mr. X increased his fruit and vegetable intake by 2 servings per day to 5 servings per day. This is likely to have long-term impacts on Mr. X’s health, by reducing his likelihood of mortality from any cause.³⁹ Further, his high blood pressure dropped 16 points, reducing his risk of heart attack or stroke. His diabetes, which had been poorly controlled, moved to prediabetic ranges. Finally, by the end of the program he went from a sedentary lifestyle to exercising 4.5 hours per week and lost 60 pounds.

As this case study demonstrates, produce prescriptions, plus nutritional and behavioral coaching has the potential to support improvement in a person’s health, well-being, and healthcare utilization.

Challenges and Opportunities

Federal Grant Funding – In 2019, ALL IN received a 3-year \$507,258 produce prescription grant from the United States Department of Agriculture Gus Schumacher Nutrition Incentive Program (GusNIP). GusNIP allows grantees the opportunity to demonstrate and evaluate the impact of produce prescriptions and

of nutritional education opportunities on fruit and vegetable consumption, food insecurity, and healthcare usage and associated costs. Due to limited sources of funding for implementing Food as Medicine initiatives, federal grant programs such as GusNIP remain essential to support program costs, identify best practices nationally, and build organizational capacity.

Public Insurance Innovations – Following states like Massachusetts, North Carolina, and Oregon, California has recently taken an important step to integrate Food as Medicine into the healthcare system through the [state’s Medicaid waiver](#), which is currently pending approval by the Centers for Medicare & Medicaid Services (CMS). If approved by CMS, California managed care plans will have the option to offer medically supportive food and nutrition and other services that address basic needs which impact health outcomes “in lieu” of traditional healthcare services beginning January 2022. This includes a broad spectrum of interventions such as produce prescriptions, food pharmacies, healthy food boxes, and medically tailored meals. To secure the benefits of this spectrum of services, they must be fully integrated into the medical system from screening and referral through medical billing and invoicing. Transitioning Food as Medicine services beyond Medicaid waivers to fully covered reimbursable public health insurance benefits would impact many more lives.

Circular Food Economy – Recipe4Health integrates with Alameda County’s [circular food economy](#), also known as ALL IN Eats. ALL IN Eats is a public/private collaborative launched in 2020 to increase food security, reduce health disparities, promote environmental sustainability, and provide food entrepreneurship and living wage employment opportunities for vulnerable populations, including those who are formerly incarcerated. ALL IN Eats partners like Dig Deep Farms, grow the nutrient-dense food provided to Recipe4Health patients – the first part of the circular food economy. Building out a local food economy requires substantial up-front capital commitments for essential infrastructure such as the land on which to grow food, and food hubs which offer commercial kitchens, large-scale refrigeration, and space to process, aggregate, cook, and distribute meals, produce, and recovered food to the food insecure and/or those with chronic, diet-related diseases.

ALL IN Eats van filled with recovered apples

Evaluation – ALL IN has built a strong data management architecture in partnership with [Stanford University](#), the [University of California San Francisco](#), and the [Community Health Center Network](#) to conduct a robust evaluation of Recipe4Health. The evaluation will feature process and outcomes evaluations, using a rigorous mixed methods design (i.e., both qualitative and quantitative analyses) to examine program effectiveness and inform future implementation and dissemination. The process evaluation will document implementation and operations processes, challenges, and successes, and identify opportunities to improve future implementation. The outcome evaluation will examine effectiveness of Recipe4Health to increase fruit and vegetable consumption and on measures related to healthcare utilization and health outcomes. In addition to continuing prospective analyses such as this, there is an ongoing need for analyses evaluating the long-term health impacts, cost effectiveness, and cost savings of Food as Medicine interventions.

Training and Capacity Building – Despite increasing national recognition, food as medicine is still largely a new concept to many healthcare providers and clinic staff, not regularly covered in medical education programs. Further, implementing food/nutrition insecurity and other social determinants of health screenings in the exam room or the clinic is new for many clinicians and clinics. ALL IN has developed a robust training and capacity building technical assistance program to support successful implementation of the Recipe4Health model into healthcare settings. ALL IN provides evidence-based training on clinical nutrition topics including, but not limited to: eating patterns (e.g., Mediterranean, Whole Food Plant Based, Ketogenic, DASH, etc.), insulin resistance and inflammation as root causes for illness, food interventions specific to particular conditions (e.g., hypertension, chronic kidney disease, depression, etc.), organic vs. regenerative food vs. GMO foods, whole vs. refined grains, how to read food labels, and practical tools for use in a primary care setting. Further, ALL IN trains clinic staff, including Medical Assistants on how to administer food insecurity screenings. Further work and funding support is needed to better integrate Food as Medicine concepts into graduate and continuing medical provider education.

Partner/Funder Acknowledgement

This work would not be possible without our programmatic partners listed below. Our partners have persisted through a global pandemic to deliver healthcare services and Food as Medicine initiatives to patients throughout Alameda County. We deeply extend our gratitude for the time and energy of clinic staff and healthcare leadership who work to implement Recipe4Health in their clinics. ALL IN also thanks the Recipe4Health evaluators, Alameda County agencies, funders, and policy partners.

Misters Chairmen, members of the committees, and members of Congress, thank you very much for the invitation to speak with you today. My name is Santana Diaz, the Director of Culinary Operations and Innovation / Executive Chef for Food & Nutrition Services at UC Davis Health.

Good food is...

Good medicine

Good health

Good for the local economy

Good for the environment (it encourages/supports sustainability)

At UC Davis we are approaching food as medicine from multiple angles: Investment, Food Integration, Behavioral Change, Sourcing from regional farmers. UC Davis has been transitioning to a farm to fork model over the last 4 years. It has been a collaborative effort that we have been testing and piloting. Food Nutrition Services has partnered with our Center for Precision medicine, Center for Precision Nutrition, Center for Healthcare Policy and Research, Health Equity Diversity and Inclusion, and many more to implement. Data is recorded by Precision Medicine and we are using data to adapt our effort and gauge our effectiveness. This collaboration and multi-prong approach is necessary to make change happen.

Food touches every human. Nutrition security is about clean, healthy food.

Good food is good medicine -- The traditional blanket approach to meal preparation in hospitals is to feed everyone the same, motivated by cost and labor. So regardless if someone is in the hospital for a broken arm, they get the same low sodium diet that is meant for the 45% of patients who require it. The stigma of hospital food is that it is bland, colorless and tasteless. Food that tastes bad goes to waste and creates waste.

Patients hospitalized at UC Davis Medical Center are today getting the best, most nutritional food possible, with the freshest ingredients, because it complements the great care we provide and enhances healing. Food that is natural, not manufactured, not processed, and without preservatives has best nutritional value, to provide the body with tools it needs to heal.

Healthcare facilities can use the inpatient meals experience to educate and introduce healthy food as medicine over the average of 6.1 days patients are in care. Using fresh food that provides nutrients and not just filling.

Good food requires food requires awareness -- Good food does at times require an open mind and awareness, and what some call "food literacy." Part of our role in Food and Nutrition Services is to offer an array of delicious and nutritious food items, which can help people develop an appreciation for fresh, healthy – *and tasty* – ingredients. Our goal is to show people food can taste good, be healthy, and be satisfying without a lot of processing. Raising awareness and a taste for good food among our employees, students, visitors and patients is an important way to increase the desire for healthy eating at home, too.

Our hope is that the information they take back home will help reach others without having to become a patient.

Good food is a good investment and good for the local economy -- Food waste is not sustainable and its expensive. Using fresh food that tastes good is benefits our patients, our business, our local farmers and environment.

As a business issue when we spend X amount on the 2.4 million meals that go into the garbage, we need to address that. Not only is it a menu engineering issue, but also a labor model structure issue.

Buying from local growers and ranchers – especially at UC Davis Health’s scale – helps provide the economic security that individual farmers in our local region truly need to survive in this day and age. We need to recognize the importance of growing our own food, California alone, loses 50,000 acres per year of a land and about 39k of that to urban development. We’ve built relationship with growers, encouraging some to try new and different crops that are unique and exciting for menu planning and variety. It also helps the farmers forecast planting. These local connections help ensure that we can provide healthy foods for our patients, employees and visitors. This approach also helps keep food prices lower for everyone, because farmers know they have already sold a significant portion of their crops before they even harvest. It’s a win-win for everyone and a model that other communities can find inspiring.

Good for the environment--UC Davis Health has prioritized sustainability by reducing food waste and food packaging, and buying locally to reduce fuel usage, emissions, and transportation costs. What we’re doing IS good for people and the environment.

Thank you for allowing me to be with you today.

COMMUNITY HEALTH CENTERS AS FOOD OASIS PARTNERS:

Addressing Food Insecurity for Patients and Communities

.....

**THERE'S NOT FOOD THAT'S
FRESH AND AVAILABLE
WITHIN 5-10 MILES, AND
IT CAN BE EXPENSIVE TO
HAVE HEALTHY FOOD.**

—Sophie Birdwell, Nutrition Services Coordinator, North Texas Food Bank

FOR OUR PATIENTS IT COMES DOWN TO:

'I've gotta' pay the rent or have heat, vs. I've gotta' have food,' so they buy things that are cheap and fix it in a cheaper manner, which turns out to be fast food, fried foods, fatty foods that aren't beneficial to their health.

—Van Breeding, MD, Mountain Comprehensive Health Corporation

Executive Summary

FOOD INSECURITY, defined as difficulty in accessing affordable nutritious food, affects approximately 14% of our nation's population and is linked to poor health and economic outcomes. Acute problems like hunger, anemia and poor school attendance are connected to food insecurity. Chronic health problems like diabetes, obesity, heart disease and pediatric developmental delays are also related. Like other disparities, food insecurity affects people of color, immigrants, homeless populations, farmworkers and the urban poor more than others.

Millions of people receive their primary care from the national network of America's Community Health Centers. Since their inception in the 1960s, health centers have recognized the important role they can play in identifying and addressing food insecurity as an integrated component of patient care, and have taken their own steps to help. Increasingly, these health care organizations are screening for social determinants of health, including identifying hunger as a basic "vital sign." Screening models such as the Protocol for Responding to and Assessing Patients' Assets, Risks, and Experiences (PRAPARE) tool¹ have been tested to include food insecurity with other health indicators. As health centers learn more about the problems of food insecurity within their communities, they are more frequently offering unique solutions to help.

The "Community Health Centers as Food Oasis Partners" initiative has identified and documented interventions at health centers that are responsive to food insecurity problems and present opportunities for replication and expansion. With funding from the Medtronic Foundation, the National Association of Community Health Centers (NACHC)

queried health centers around the country to analyze their food security efforts and document how they may help to reduce health disparities. Responses from 67 health centers show a substantial variety of interventions (with 98 types of programs identified). From these questionnaires, 14 centers were selected for in-depth case studies highlighted in this guide and three sites were chosen to be featured in a video. NACHC also interviewed national and regional organizations working to reduce hunger for possible collaboration with health centers.

This guide offers promising practices and features partnership opportunities for successful food security programs at and with health centers. These examples take place in urban, rural, homeless, immigrant and migrant settings. Model interventions range from culturally specific community gardens, farmers markets, groceries, cafes, kitchens, food prescriptions, mobile markets and more. The collection offers exciting ideas and resources to initiate and refine food assistance efforts at health centers nation-wide, with tools to evaluate the health impact of these efforts and validate their importance.

¹The PRAPARE tool is a national standardized patient risk assessment protocol designed to engage patients in assessing and addressing social determinants of health. The tool was developed by the National Association of Community Health Centers (NACHC), the Association of Asian Pacific Community Health Organizations, the Oregon Primary Care Association and the Institute for Alternative Futures. For more information, visit www.nachc.org/prapare.

Background on Food Assistance Activities

THE NATIONAL ASSOCIATION OF COMMUNITY HEALTH CENTERS (NACHC) began the “Community Health Centers as Food Oasis Partners” initiative with an online questionnaire to learn how health centers are addressing food scarcity within their communities. Sixty-seven (67) health centers responded “yes,” they are engaged in food program interventions. Among these 67 centers, 98 food insecurity programs were identified.

The chart to the right summarizes some of the overall findings.

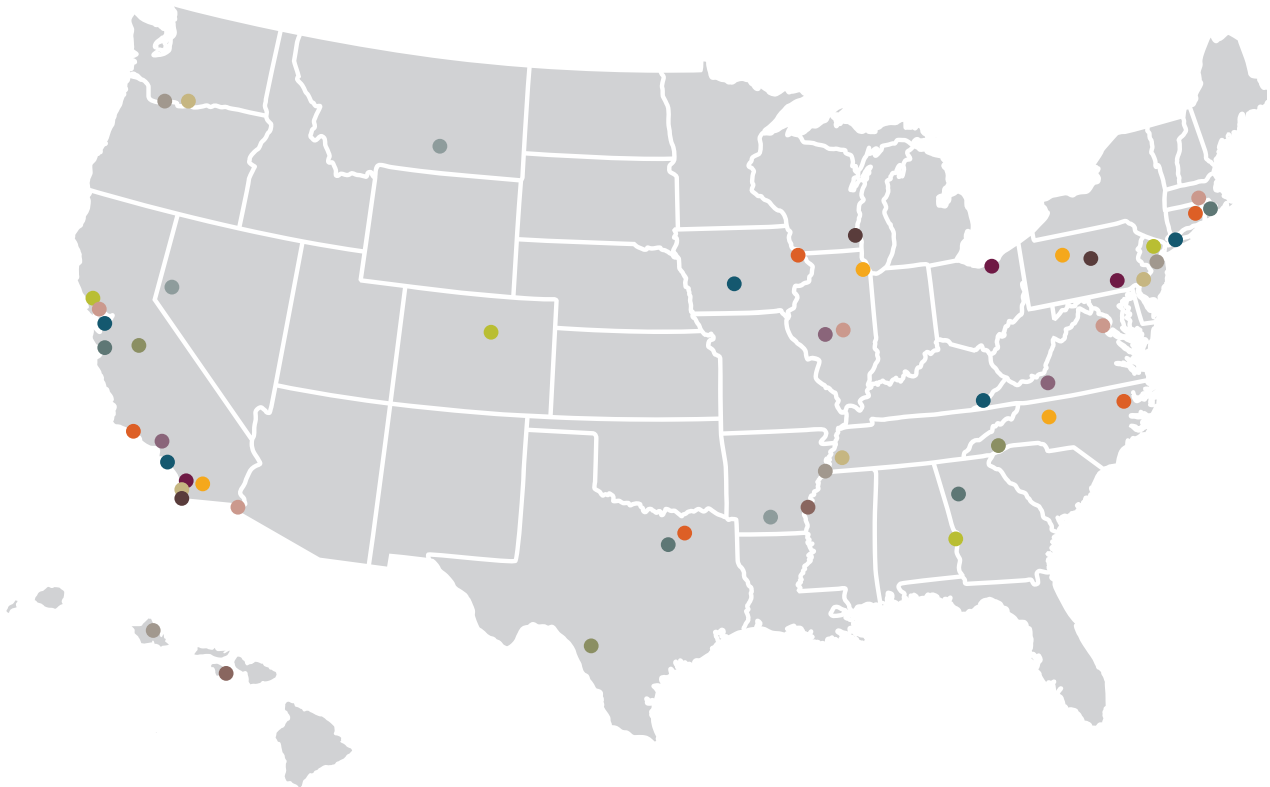

Fourteen (14) centers were selected to interview further and are presented as individual case studies in the pages that follow. They have diverse characteristics to reflect the diversity of America’s Health Centers, including region of the country, urban/rural setting and populations served. They also reflect different types of food program interventions and partnerships to give the reader more food for thought. Most of these centers actively integrate their food security efforts into their comprehensive primary care services.

SUMMARY OF FINDINGS

LOCATION OF RESPONDENTS TO FOOD OASIS QUESTIONNAIRE

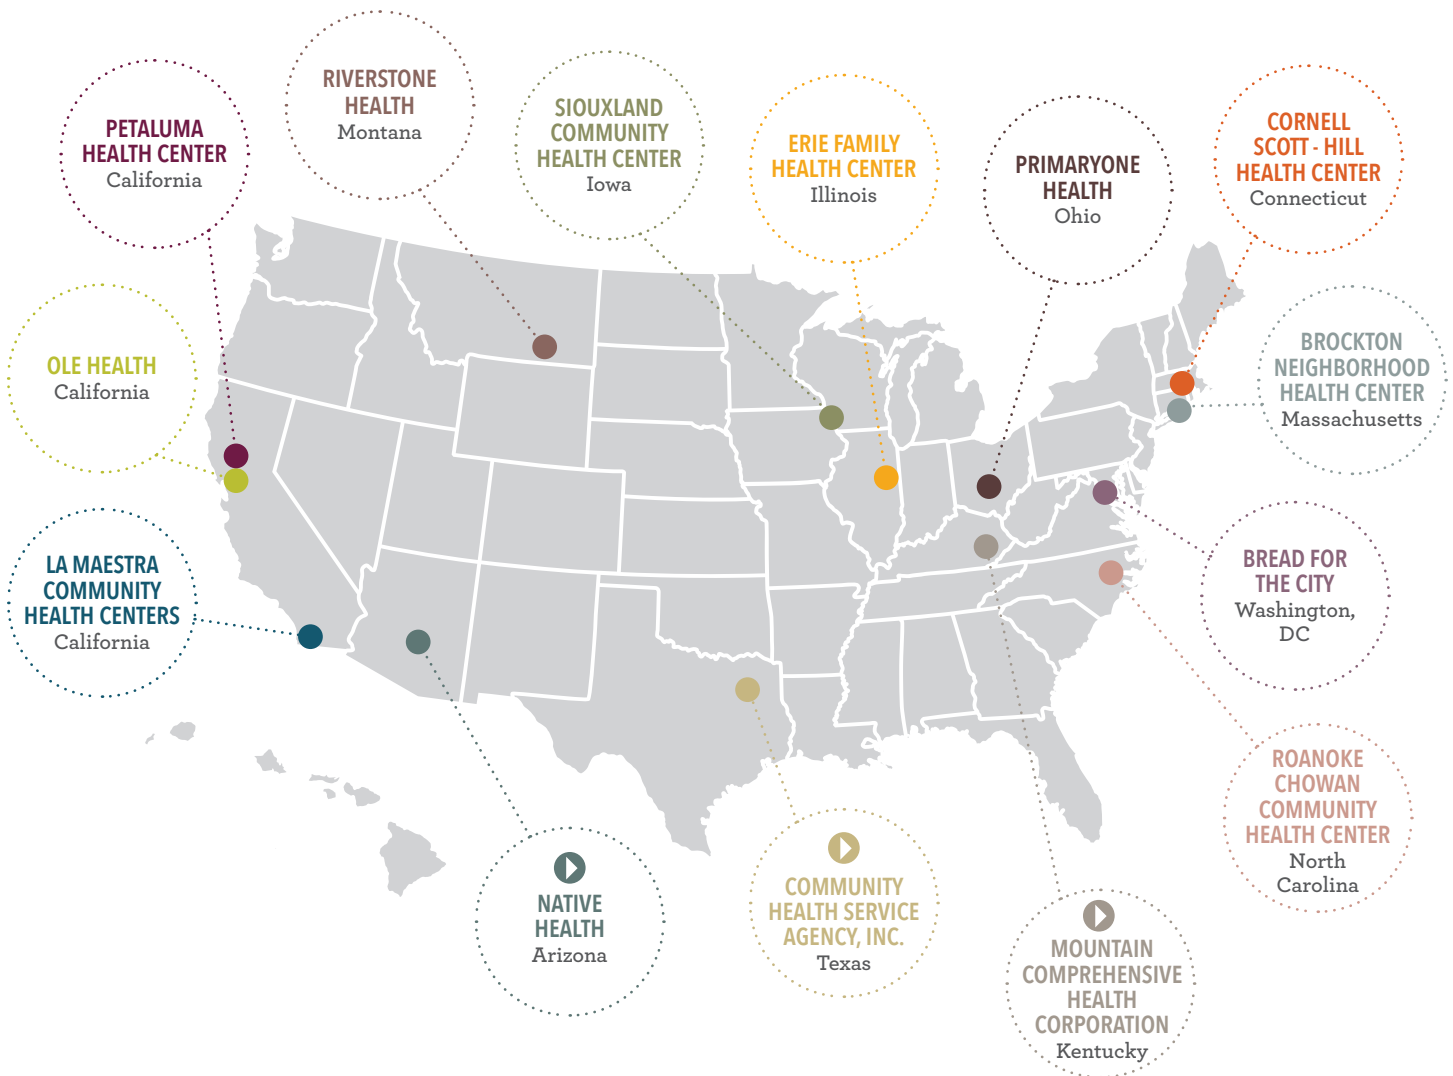

Health Center Case Studies

NACHC conducted telephone interviews with key stakeholders at 14 health centers represented in the following case studies. Interviews revealed examples of promising practices that are replicable and sustainable and how interventions impact health outcomes in target populations. Stakeholders described how their food program was initially created, who is served, how the program is funded, how leadership and community members are involved, how surprise encounters have been managed, hopes for the future and advice for centers that wish to embark on similar efforts.

NACHC visited three of these health centers for deeper understanding and to video record their work to share with health centers nationwide. The site visits provided a richer appreciation of the patient experience. The NACHC team visited the Community Health Service Agency, Inc., in Greenville, Texas; Mountain Comprehensive Health Corporation in Whitesburg, Kentucky; and Native Health in Phoenix, Arizona. NACHC is grateful to these centers for their time, insight and support in assisting with the development of these case studies.

HEALTH CENTER CASE STUDIES

The food security programs hosted by these health centers include but are not limited to:

- › Community and native gardens
- › Food vouchers and food prescriptions
- › School-based programs
- › Youth camps
- › USDA meal programs
- › Community supported agriculture distributions
- › Food demonstrations and cooking classes
- › Immigrant and culturally specific interventions
- › Partnerships with farmers markets and/or grocery stores

Bread for the City

WASHINGTON, DC

FOUNDED ON FOOD ACCESS, WITH ROOFTOP GARDENS, GLEANINGS, PANTRIES AND A FARM

Its name reflects its origins. Bread for the City (BFC) started as a hunger relief organization over 40 years ago. Partnering with Capital Area Food Bank in 1976, it opened a food pantry serving Washington DC's low-income families and elderly. The medical clinic started in 1974, standing alongside the pantry. The organization grew to include legal, social and educational services, becoming a Health Resources and Services Administration (HRSA) funded health center about five years ago.

operated by the University of the District of Columbia (UDC). Staff and volunteers grow orchard fruit, including pears, apples and berries.

George Jones, CEO, says the farm has become a laboratory for volunteers and patients to work together just outside of the city, enjoying the fresh air, building garden skills and participating in alleviating food insecurity. About 10-15,000 pounds of produce has been harvested for the pantry from the farm (UDC also contributes extra produce from some of their field).

Rooftop gardens have also been added at both clinic sites. Volunteers, including patients, tend the plants. Classes are held on the rooftop, covering topics such as nutrition, food preparation and garden skills.

Glean for the City is a program started by the center that is in partnership with metro area farmers markets. Volunteers pick up donated food from the markets that didn't sell. They receive 1-2000 pounds of donated food on these weekend gleanings, adding it to the week's pantry offerings.

Despite all the success, Jones wishes they could grow more and do more. He notes that the farm food costs more to produce than it would to simply buy. But BFC is about transformation, and that process requires more than simply handing out food. Bread for the City lives up to its name.

The food pantry operates five days a week, eight hours a day. Patients and community members may access it once per month, with about 5000 families using it monthly. Most families visit the food pantry six to seven times per year.

The pantry is designed as a supplement to assist families to make ends meet. Originally, three days

worth of food was given, but this has increased to five. It bridges the gap between Supplemental Nutrition Assistance Program (SNAP) benefits, which typically last 3.1 weeks, and the end of the month. Staples are included, so there is always a meat, fresh food and some shelf stable food.

In recent years, BFC increased its ability to provide fresh food by leasing a three-acre portion of a farm

For over 40 years, Bread for the City has provided the urban poor with a food pantry and access to tools that assist community development and health justice.

Community gardens, produce bags, gleanings and connections to social services are fundamental to the health care at the center.

PROMOTING EQUITY WITH CHOICE

Bread for the City (BFC) promotes economic and racial justice. Addressing food insecurity is one piece of that effort. They also provide legal, housing, medical, literacy and other social services. As they examine ways in which structures deter equity, Jones says they are also looking at how BFC might have unrecognized implicit bias in its practices.

Giving clients power over their choices is one way BFC tries to promote equity. Clients select what they want from the varieties

of produce, meat, grains and shelf stable items available. They have a distribution allotment, but if they prefer all their vegetables to be broccoli, that is their choice. This simple act changed the way food transactions are perceived by staff and clients.

The center also avoids offering non-nutritious foods. Their gardens, gleanings and farm allow them to limit pantry food to about 60% of the total. Patients with literacy problems are assisted reading labels and making their own choices without being stigmatized.

Brockton Neighborhood Health Center

BROCKTON, MASSACHUSETTS

COMMUNITY HEALTH WORKERS, GROCERIES, GARDENS AND MARKETS

Two years ago, Brockton Neighborhood Health Center (BNHC) opened a new site with a teaching kitchen. Just next door, Vicente's Market opened a new grocery store. A collaboration to reduce food insecurity flourished as they shared resources.

Vicente's is a well-known market that caters to Cape Verdean immigrants but also has a wide variety of foods that are part of the diets of the health center's diverse cultural groups. BNHC is an urban clinic with a long history of addressing food insecurity through food vouchers, public programs and charitable partnerships.

Brockton Neighborhood Health Center partners with a statewide program, a local grocer, a college and hospitals to comprehensively fight hunger.

One of those partnerships is Project Bread, a statewide coalition that raises funds to help area organizations meet the food security needs of their communities. BNHC

has participated with Project Bread for 13 years, receiving funds on an annual basis.

Providers refer patients to a social worker who determines their needs and links them with community resources. Food vouchers are given to meet immediate hunger needs and can be spent at Vicente's. Vicente's gives store credit for healthy choices and displays nutritional content of foods. Sample recipes are shared using products

from the store cooked in BNHC's teaching kitchen. Funds also allow the purchase of several Community Supported Agriculture (CSA) subscriptions. The produce is brought to the center and used in the kitchen as well as given away.

Alexandra Avedisian, Community Health Program Manager, leads the food security initiatives. She says the key to success is using community health workers (CHWs). Trained in health promotion and case management, they represent the distinct cultural communities of the patients. As one CHW put it, "We work with, not for, the patients."

Stonehill College is another partner to BNHC. It has a campus farm, and the manager brings produce from that farm to sell at BNHC during the summer months. This mobile market supplies fresh produce at low cost to patients at the center. Some of the patients also receive vouchers from Project Bread monies to assist their purchases. Patients learn about foods they might not find familiar and enjoy learning from the Stonehill manager. This mobile market plans to expand to a public housing site that BNHC serves.

Avedisian has a word of caution. A hospital partner wanted to double their vouchers because they recognized BNHC's good work. However, that strained the capacity of the CHWs in other areas. Sometimes you have to limit even successful ideas until funding supports infrastructure.

GARDENS AS THERAPY

In the course of assisting women with depression, Ginger, a Brockton Neighborhood Health Center (BNHC) social worker, realized the center’s Ecuadorean women immigrants all shared a common longing. They missed farming the land and contributing food to their family’s table. Ginger got permission to use some of the land associated with Vicente’s Market as a garden plot and a group therapy project was sown in that soil.

Groundbreaking was on a wet rainy Sunday in April. Women not only came, but brought their young children dressed in Sunday suits. The work became a celebration. An elderly woman lent a hand from her wheelchair, eager to do her part.

Every Friday they met, working for an hour in the garden and then gathering in group therapy in the teaching kitchen. Harvests were plentiful, with food brought home weekly to the women’s families. When the weather turned dry, members of the group showed up during the week to water and tend the plants.

It may not be Ecuador, but these women have a new sense of home and land. Strong community bonds are forming along with a sense of purpose and pride. Mental health needs are met with physical health activities and new opportunities for work. The center hopes to replicate this idea in the coming years.

Community Health Service Agency, Inc.

GREENVILLE, TEXAS

FOOD 4 HEALTH: NUTRITION ASSISTANCE IS PREVENTIVE HEALTH CARE

Serving five areas in rural northeast Texas, Community Health Service Agency, Inc. (CHSA) confronts many obstacles when facing the issue

of food security. These rural areas are spread out with few services between them. Public transportation is limited and many of the patients have language barriers as well. Despite the presence of some local food pantries, there are limited local resources to assist patients.

for the program. Health data are collected after the patient is enrolled in the program.

Staff identified 25 patients in just the first day of screening. About half of the enrollees were Spanish speaking and most were in young families. Family size is a factor in determining food needs.

After enrolling, patients are given vouchers to use at the NTFB distributions. Distributions are coordinated with patient tracking, which includes information on body mass index (BMI), chronic disease status, blood pressure and glycated hemoglobin level (HgbA1c). NTFB staff visit the site weekly for three months.

The weekly food packages include shelf stable foods such as rice and beans, as well as fresh produce. Recipes are included and patients get a weekly gift, like an oven mitt. If they attend all distributions they get a graduation gift and additional resources.

CHSA is rolling the program out to all of its sites, 25 patients at a time. They are already seeing real change. Patients report less food insecurity, healthier selections and increased fruit and vegetable consumption. Complete data isn't in, but one woman dropped her HgbA1c from 12 to 8 percent and also lost 20 pounds.

CHSA hopes to expand and show how food assistance impacts the overall well-being of their patients.

Community Health Service Agency, Inc. partners regionally with the North Texas Food Bank to couple food distribution with continuity of health care, addressing health outcomes as well as food quality and access.

The North Texas Food Bank (NTFB) approached CHSA about partnering to identify and address food insecurity in these rural locales. Rather than just add extra food delivery sites, the NTFB designed the Food 4 Health program, which includes screening for needs, tracking health outcomes associated with nutritional practices, distributing fresh healthy foods and educating about healthy food choices that are budget friendly. The goal is to assist patients to overcome food insecurity through a three-month program intervention.

Outreach and enrollment workers at health center sites screen patients for food insecurity using a standardized brief assessment (see Getting Started with your Own Food Insecurity Program on page 48). The screening is done in Spanish and English, with positive answers qualifying patients

IMPROVING FOOD INSECURITY LEADS TO IMPROVING HEALTH OUTCOMES

Community Health Service Agency, Inc. (CHSA) has been serving patients and community members for close to 40 years in Northeast Texas.

Among those served is a patient by the name of *Bobby. Bobby has lived in Northeast Texas most his life. Once Bobby was diagnosed with diabetes a few years ago, he knew he had to make some lifestyle changes.

Bobby began coming to CHSA in 2015 where he quickly learned how to manage his diabetes through care coordination that included education and self-management. He was screened in 2016 for the Food 4 Health program and anticipated the start date in early 2017.

Bobby began his weekly distributions with the North Texas Food Bank and quickly made friends with the staff. He enjoyed discussing the various healthy food topics and new recipes provided by the staff. Sometimes his wife would even tag along to hear the good news.

Bobby saw a dramatic decrease in his glycated hemoglobin level (HgbA1c) levels from before the program at 13.5 in late 2016 to end of the program at 10.8 in the summer of 2017.

He says he's feeling great and has really enjoyed the new recipes and will continue with this lifestyle change even though the program has ended for him.

Cornell Scott-Hill Health Center

NEW HAVEN, CONNECTICUT

FOOD FOR HEALTH: INPATIENT, OUTPATIENT, MOBILE AND FESTIVE

Homeless, working poor, HIV infected, mentally ill, elderly, chronically ill, school-based, immigrant: Cornell Scott-Hill Health Center (CSH) serves all of these subpopulations and more in inner city New

Haven, Connecticut. The diversity of their patients is matched by the diversity of their food security efforts. CSH brought food to 4400 patients through its multiple programs last year, collectively called Food For Health.

CSH believes food security is central to its mission.

Because it manages two inpatient treatment facilities, it has an industrial kitchen and a chef. That has helped CSH spread food interventions throughout the organization.

The center has a number of wellness food initiatives where patients learn nutrition and food preparation. Cooking Matters is one course used. Many of the patients have not been previously taught how to prepare fresh food and lack food preparation tools. CSH also enrolls patients in Supplemental Nutrition Assistance Program (SNAP) as part of eligibility assistance.

Healthy Snacks for Children started when behavioral therapists realized children were hungry after school. They needed to eat before they could focus on the

appointment. At first, therapists supplied the food. Now the program is funded by grants and donations.

Child and family guidance centers have a snack closet, which every child visits when they arrive. Staff believes it builds retention and enables visits to be more effective.

The Grow Truck is an intervention aimed at preschoolers and their families. The center partners with the Connecticut Food Bank and the University of Connecticut to bring this supermarket on wheels to the center January through May. Parents are allowed to select fresh fruit, vegetables and meat. They are given education on food, budgeting and reading to their children as part of the intervention.

CSH started the Summer Supper Meal Truck and the Connecticut Mobile Food Pantry collaborative in partnership with public schools and United Way. Each summer weekday, the truck delivers hot meals to children between 4:30 and 5:00 pm. Staff report the children come running when they see the truck. The mobile pantry accompanies the truck four times during the summer, giving parents the chance to select groceries while their children get supper.

CSH looks forward to evaluating the health impact of these programs. Last year they offered services to 4428 patients, 1444 SNAP enrollees, 2984 summer meals, and 50 holiday baskets. They estimate 279 employee hours per year on their food initiatives.

From preschool to old age, inpatient rehab to outpatient assistance, Cornell Scott-Hill Health Center addresses food scarcity in an integrated fashion as part of its mission. With a host of community partners, it is transforming community health.

A HOLIDAY FOOD-BASKET PROGRAM

RECOGNIZING FOOD CHALLENGES DURING HOLIDAYS

For many families living paycheck to paycheck, the end of the month is marked by scarcity. So it is especially difficult that our biggest holidays are also at month's end. Thanksgiving, Christmas and Kwanzaa are tough for Cornell Scott-Hill families to navigate. Food resources are often stretched in favor of a little gift or travel money.

For several years, the center sponsored an employee and community food drive, donating all collections to a local charity. Last year, they

decided to focus on patient families and put together 50 large baskets of food. Each basket supplied a full holiday feast.

Families are nominated by staff at the 20 sites. Volunteers deliver the baskets to patient homes. The response has been overwhelming. The personal aspect of care from center to patient family has kept it from feeling like a handout—instead it is received as an embrace. Next year's goal is to serve 100 families with baskets.

Erie Family Health Center

GREATER CHICAGO, ILLINOIS

ACCESS, NUTRITION, EDUCATION AND PARTNERSHIP

During any given week, Erie Family Health Center's (EFHC's) calendar is filled with Zumba, swimming, line dancing, walking, low impact aerobics, yoga, meditation, cooking classes and more. Patients, staff and community find health care is a lot more about well-being than diagnostic codes and exam room encounters. Food security activities flow naturally from this design structure.

When EFHC CEO Lee Francis, MD, MPH, responded to NACHC's survey, he remarked that seeing all of their food activities in one listing helped him see the breadth

and depth of what they are doing. Like many community health centers that are fully engaged with their communities, it was easy to see the trees but not the forest they are growing. Food security efforts at EFHC include almost a dozen interventions that span child-centered to elderly-based activities. Building on existing strengths with their school-based health centers, EFHC started a community garden in a district designated as a food desert. The garden is part of the school health program, introducing children to

new foods while also building in nutrition and exercise components. As others with school gardens have said, sharing in the growing, cooking and eating of the food has transformed the children's food experiences.

Top Box Foods (see Top Box Foods in Food Oasis Partners At a Glance, p. 42) partners with EFHC to deliver boxes of fresh produce and frozen meat at deeply discounted prices. Patients, staff and community members preorder boxes, which are then delivered on a regular route every month. The center's kitchen is used to create sample meals from the boxed food selections. This mobile food program brings high quality grocery items into food deserts and is supported as a social enterprise. Future plans are to have a mobile food bank delivery route as a complementary food source.

Other food programs include Cooking Matters and diabetes prevention classes for Hispanic women. These programs include grocery store visits and meal planning. Children are offered the BALANCE program, focusing on nutrition education and the prevention of childhood obesity. Fun events such as mini marathons are also sponsored by EFHC.

With care like EFHC's, doctors may become obsolete!

Now celebrating its 60th anniversary, Erie Family Health Center serves 70,000 patients in 13 Chicago area locations. Community-based work is integral to their operations, with schools, kitchens, food depositories and community partners joining together to improve food security and health.

PARTICIPATING WITH TOP BOX FOODS IS A COMMUNITY AFFAIR FOR BOTH STAFF AND PATIENTS.

A SHIFT IN FOCUS

With 25 years' experience at Erie Family Health Center (EFCH), including work as an internist, CMO and CEO, Dr. Francis has seen special initiatives in health centers come and go. Health Disparities Collaboratives, Patient Centered Medical Homes, electronic health records and social determinants of health have all been in fashion. But in interviewing Dr. Francis, it's clear he sees wellness and health promotion as a community-based effort that encompasses the best of these initiatives and that outlasts any jargon-laden concepts.

An MPH trained staffer directs patient programs and support services. This includes most of the food security efforts. It also

encompasses the many exercise and mind-body fitness programs available, as well as nutrition and cooking classes. Programs are designed to be inclusive of all the different cultural groups at the center, from Hispanic women, to schoolchildren to African-American seniors. The fact that teaching kitchens are being incorporated into all new facilities enhances these efforts.

Like most centers, many staff are from target communities. By empowering the whole community, health outcomes are optimized for patients, staff and local families with children in local schools. Health promotion is not limited to a chronic disease or an age group but seen as the fundamental work of primary care.

La Maestra Community Health Centers

SAN DIEGO, CALIFORNIA

CIRCLE OF CARE JOINS FOOD, FAMILIES, HEALTH

From its beginning as a community-based literacy project, La Maestra Community Health Centers (LMCHC) has rooted care in the social determinants of health. Now serving low-income residents of San Diego, with a population that includes homeless, refugee and immigrant patients, LMCHC has a design model it calls “Circle of Care.” The focus is on compassion and self-sufficiency through community advocacy, community development, community promotions, networking and collaboration.

Literacy, employment, housing and food access have always been integrated into La Maestra Community Health Centers’ Circle of Care. Through 15 years of persistent transformation, the center now offers garden spots, fresh food, a food pantry, holiday meals and resources for immigrants, refugees, homeless and other urban underserved in San Diego.

mornings a week and includes special services to assist those with homeless situations and chronic diseases or dietary needs. Health educators and volunteers link pantry users to other needed services.

The “Circle” has individual health at its center, growing outward into well-being. It includes the recognition of housing, job training, food assistance, medical care, eligibility assistance and legal aid within the model.

The food pantry began when LMCHC realized their patients needed more consistent access to donated food and that they could ensure quality and availability. Formally registered in California, it operates three

Zara Marselian, founder and CEO, shares that the pantry requires a lot of oversight and paperwork. Despite coordinating with churches and farmers, the food still was not always available or fresh. That changed when they partnered with Feeding America. (see Feeding America in Food Oasis Partners At a Glance, p. 40)

La Maestra collaborates with a church to provide food for a hot meal, which then gives them access to Feeding America resources. The food quality is consistently high and they supplement with donations from bakeries and other garden food producers.

Community gardens are the newest features. LMCHC has the only true garden in their designated food desert. Patients and community members can lease one of the 36 plots for \$36 per year. Gardeners feed their families and also use produce in local restaurants and sell it in the local farmers market. Micro-enterprise is another of LMCHC’s emphases, and this combination of food production with marketing fits right in.

Education, nutrition, business skills, exercise and community building are all benefits of the gardens. Children, mothers and seniors all participate and share cultural favorites, explaining the uses of different herbs and spices. What has been labeled a desert is flourishing with growth and health.

SENIORS FIND SUPPORT AND COMMUNITY AT FOOD PANTRY

One of the surprises to La Maestra staff is how the food pantry has become a social venue for the area's seniors. The doors don't open until 9:00 am, but by 7:30 am there is a group of people in line. They aren't just waiting—they are visiting, sharing recipes and, sometimes, sharing secret concerns.

La Maestra staff notice that a number of seniors will not mention problems like elder abuse to a doctor, but they do tell their neighbor. They share with volunteers and staff who mingle with them at the pantry. Many of the seniors also serve as volunteers at the pantry and are trained to facilitate helping anyone in need of clinic care get connected into

the center through a warm hand off. It is a safe and culturally appropriate setting for those in need.

Health educators assist clients in food selections from the pantry that are tailored to their housing and health conditions. Recently, a man walked up to staff at the pantry who were discussing health selections and told them they had changed his life. Despite a 4th grade education and homelessness, he said he now understood how to manage diabetes and lost 45 pounds while receiving integrated food and health care from La Maestra. He felt hopeful and healthy.

The pantry produces more than meets the eye.

I WANTED TO LET YOU GUYS KNOW YOU CHANGED MY LIFE.

Mountain Comprehensive Health Corporation

WHITESBURG, KENTUCKY

THE FARMACY FOOD PRESCRIPTION PROGRAM

In the southeastern Kentucky coal fields, rates of diabetes, obesity and cardiovascular disease are among the highest in the nation. Communities are isolated by the mountainous terrain, with few local health and human services available in the sparsely populated towns. High chronic disease can be tied back to deeply embedded cultural habits like frying most food, smoking and being sedentary.

Mountain Comprehensive Health Corporation (MCHC) designed the Farmacy program to overcome these obstacles

to health. Now in its second year, the Farmacy program has documented significant improvements in family health while also providing financial incentives to local farmers. The farmers market has become a community gathering spot that relieves isolation and renews local pride in Appalachian made goods.

From June to September, MCHC provides food prescriptions for patients to use at the local farmers market. These are worth \$2 per day per household member, meaning a family of four gets a prescription worth \$56/week. Providers write prescriptions for those who have a chronic disease, Type 1 diabetes, pregnancy or poverty. Patients bring their prescription to a case manager who determines level of family need. Wooden tokens serve as currency.

The Farmacy program at Mountain Comprehensive Health Corporation provides fresh local produce prescriptions to needy families while helping to sustain area farmers and support community development in rural Appalachia. Health outcomes tracked by University of Kentucky show significant improvements in BMI, HgbA1C and blood pressure control among participants.

ONE FAMILY'S STORY

*Bill and *Alice were sweethearts who traveled together on truck routes before settling again into the Kentucky foothills. Changes in the economy led to multiple job changes for them both, from trucking to coal to unemployment. A combination of scarce resources and despondency sapped their reserves, with Bill becoming morbidly obese and diabetic, and Alice obese and sedentary.

The Farmacy program turned their lives around. Faced with insulin dependence and a deteriorating lifestyle, Bill enrolled in the program. He thought it would just help his family afford some food. But nutrition education helped him choose to grill or bake food rather

than fry. Vegetables at the market were unfamiliar, but Bill found he enjoyed trying them. He learned to eat okra as a fresh food, snacking on it when hungry and becoming satisfied. Meanwhile his body mass index (BMI), blood pressure, cholesterol and glycated hemoglobin level (HgbA1c) all dropped dramatically.

Bill found himself taking more walks and leading his family to a healthier lifestyle. He no longer needs insulin. Alice has a new sense of community and looks forward to seeing folks at the Saturday market, swapping stories of recipes, canning and feeling healthy. The family puts away food for the winter and looks forward to many healthy years ahead.

*Names have been changed for anonymity.

WELL CARE

Native Health

PHOENIX, ARIZONA

NATIVE AND COMMUNITY GARDENS, READ-IT-AND-EAT, FOOD BACKPACKS, KIDS CAFÉ, WELLNESS WARRIORS AND MORE

On a bright February day, preschoolers sprawl on the floor in the community room as they listen to a story about corn, beans and carrots. “Corn grows UP, carrots grow DOWN, and beans grow ROUND and ROUND,” says the librarian, teaching hand motions to the children.

Meanwhile, the adults sit at tables, listening and joining in. As story time ends, fresh produce is distributed, along with today’s recipe for lunch: tuna apple salad and raw veggies with dip in a

bell pepper bowl. Children help prepare the food while parents learn about healthy eating on a budget.

Read-It-And-Eat is Native Health’s latest innovative food project. Linking literacy and healthy food, the Phoenix library staff host

story time every Wednesday while the center staff educate about nutrition and food preparation. A meal is prepared and shared, and everyone leaves with library resources and a bag of fresh produce.

This is just one of the many ways Native Health serves as a food oasis. Serving urban tribal members as well as other underserved Phoenix residents, the center is in a food desert with a 30 minute drive to the nearest grocery stores.

Native Health invited leaders from the U.S. Department of Agriculture (USDA) to examine the needs of their population, becoming the first health center to offer Summer Meals. Partnering with St. Mary’s Food Bank, breakfast, lunch and dinner are served. Called “Kid’s Café,” cold meals are prepackaged and handed out on site to any child requesting one. No eligibility is required, and not all recipients are patients of the center. A Sharing Basket in the lobby allows families to put in extra food they don’t want so that it is available for others. A refrigerator on-site holds all the meals.

The Backpack Program is typically done at schools, but Native Health is piloting it as a health center activity. Nonperishable food provided by the food bank is given to families for weekend and emergency use. Any child in need may receive a backpack.

Cooking Matters, a national program, is linked with Read-It-And-Eat as well as other classes. Kitchen supplies, cooking classes and produce are shared with participants.

What are their keys to success? Susan Levy, the staff person overseeing these projects, credits CEO, Walter Murillo, with vision and a spirit of collaboration. The leadership allows staff to try ideas, even if they fail. Native Health grows not just food, but community, health and innovation.

At Native Health, addressing food insecurity is integrated into all center operations. A spirit of innovation, participatory leadership and volunteerism permeates this health center.

TRADITIONAL AND COMMUNITY GARDENS AND ADAPTATIONS

Native Health partnered with the city of Phoenix and Native Seed Search to plant a half acre traditional garden using indigenous seeds such as Hopi corn and beans. The same site also contains many community gardens, over 30 of which are sponsored by Native Health and open to the community. Several are designed for wheelchair access.

Garden-based activities include plant and nutrition education, Wellness Warriors meetings, indigenous recipes and cooking classes. A walking path is adjacent to the beds and passive exercise equipment is planned.

The gardens are part of a downtown beautification project and directly across from the center. When the land suddenly became slated for urban development, the gardens had one week to relocate before being removed. Native Health tried to intervene, and then got busy preserving the gardens. In the space of one week they had secured a new site, and with volunteers, were able to relocate their work!

A site visit showed this vision permeates the center, with every staff member a part of making a difference.

OLE Health

NAPA VALLEY, CALIFORNIA

ADDRESSING DIVERSE PATIENT GROUPS THROUGH CENTER MARKETS, COMMUNITY GARDENS, CAMP COOKS AND COMBINED AREA RESOURCES

OLE Health has a long history of serving agricultural workers in Napa Valley. Ongoing work includes meal planning with cooks at farmworker housing sites, offering a monthly fresh food market, growing community gardens, accessing area resources and surveying all patients for food insecurity.

Most health center staff recognize that their patients face barriers to care, but the extent of the problems becomes clearer after asking a few simple questions. That's what OLE Health learned when they surveyed about food security challenges faced by their community.

Using a validated food security instrument (see

Getting Started with your Own Food Insecurity Program, p. 48), patients were asked if they were worried their food would run out before they had money to buy more, and if they actually had run out of food for a period of time. An overwhelming 84% of patients responded that they faced these situations in the previous 12 months. The same number desired more resources to help them acquire food.

OLE Health responded. Every third Friday of the month patient services staff host a free fruit and vegetable market at center sites. The market is a festive occasion, used also as an outreach and health screening event. There they feed about 180-200 people per month. Screenings are repeated at each market to track current

needs. No identification card is required at the market, which increases access for patients often facing barriers as immigrants.

A monthly calendar of food resources is distributed, showing where and when things like hot meals are available and what one needs to qualify. Patients are diverse, with the elderly, homeless, farmworkers, HIV infected, chronically ill and children identified with food insecurity.

Staff said they don't identify needs if they aren't committed to responding to them. Social determinants of health are increasingly collected around the country, but OLE Health is concerned any data collected that identifies problems should be acted upon. One surprise for staff was how many resources were actually available in the community. The efforts to provide resources resulted in stronger collaborations between the center and a number of outside organizations. The Food Bank donates food for the market, medical residents from Kaiser Permanente teach about healthy food options and volunteers from the community assist with the food distribution.

Plans for the future include building a teaching kitchen in a new clinic site, gathering needs from patient-centered focus groups and expanding community gardens.

FOOD INSECURITY SURVEY RESULTS

July 2015–July 2017

TRANSFORMING THE CULTURE OF FARMWORKER FOOD OPTIONS

Despite working in the fields from sunrise to dusk, agricultural workers are often trapped in their own food deserts. Seasonal workers may live in rural locales without access to markets selling fresh food. Migrant workers face greater barriers, including unfamiliarity with local resources, inadequate transportation, uncertain migration plans and housing that is often unsafe and without kitchen access. Groups of farmworkers still depend on shared housing with cooks who supply all the food and meals.

OLE Health is working with three farmworker housing sites serving about 180 men. They are coordinating meal plans with cooks, facilitating community gardens and inviting the farmworkers to participate in all food security efforts.

Health screenings done at the housing sites showed many problems associated with poor diets. Having the survey data allowed the center to collaborate with cooks and housing staff to improve well-being in a collaborative fashion. Farmworkers now have the self-management skills to continue this change as they migrate.

Petaluma Health Center

PETALUMA, CALIFORNIA

INTEGRATIVE MEDICINE PROMOTES WELLNESS THROUGH GARDENS, FARMACY AND PLAY

When most people think of a California-based wellness and integrative medicine center, a community health center serving low-income farmworkers may not come to mind. Yet, Dr. Fasih Hameed is changing stereotypes as well as

health outcomes at Petaluma Health Center (PHC) in Northern California. Since starting a small garden program eight years ago, PHC has grown an innovative array of food interventions for the families they serve.

Located in a rural food desert, Petaluma school district data show a third of children are food insecure. Over 50% of youth are over-

weight and obese. Low quality filling food meets caloric needs but not nutritive ones. The situation is more tragic because many of the families are current or past migrant farmworkers. Surrounded by produce fields, they lack access to fresh food for themselves.

The original clinic garden started as a community effort. PHC volunteers dubbed themselves the Gang Green! Produce was given away to patients and used to conduct nutrition and cooking classes. Youth took part through PLAY—Petaluma Loves Active Youth. Overweight children helped garden and also took part in food preparation and in eating together.

When the center relocated, its small gardens were replaced by a huge 10,000 square foot garden. Many volunteers helped with this effort, acknowledging its impact on food security. Produce is distributed to families, used in the pediatric and diabetes programs, and harvested by patients. Anyone can pick ripe produce as long as they don't uproot the plants.

The new site has a teaching kitchen that uses garden produce to demonstrate healthy cooking. Staff worked with the area food pantry to tailor donations to include only healthy choices. Donated food boxes are opened so clients can be shown how to prepare unfamiliar foods. The center even has an online cooking show!

Dr. Hameed started PHC's FARMACY food program several years ago. The PHC FARMACY is an organic food market set up in the health center in partnership with Petaluma Bounty, a community organization that provides multiple programs to expand the community's capacity to feed its members today and into the future. Produce originates from Petaluma Bounty's local nonprofit farm that sells shares to the center as a Community Supported Agriculture (CSA). Gleanings from area farms are also donated. Produce is sold on a sliding fee scale, with CalFresh benefits and Electronic Benefit Transfer (EBT) cards and food stamps accepted.

PHC's keys to success? Start small but think big. See gardens as symbols of beauty and plenty, and let that be conveyed to your patients as a symbol for the goodness of their own self-care.

Petaluma Health Center is countering the reality of high rates of obesity and food insecurity in their farming communities with programs directed at children and their parents that include gardens, play, produce boxes and food preparation.

“ START SMALL BUT THINK BIG.

PETALUMA LOVES ACTIVE YOUTH: PLAY

The PLAY initiative aims to reduce childhood obesity by emphasizing behavioral change, food access and education. Collaborators with PHC include Petaluma Bounty, nutritionists, exercise instructors, college students, neighbors and Kaiser Permanente. Weekly groups held with children and parents have activities that support family change.

The program started with the realization that obtaining labs on an obese child, or referring him to an endocrinologist, didn't fix the problem at the root. Specialty help was two hours away and culturally foreign. Sustainable change required a program that would be acceptable to the child and his or her parent.

Borrowing from the style of an organization called Centering Pregnancy, Dr. Hameed planned group medical visits for the children. Visits include a variety of activities: gardening, food preparation, fun exercise and healthy snacking complement weight and blood pressure checks.

Real change is a slow process, but body mass indexes (BMIs) are trending down. The words of an eight year old: "I like the program because I'm eating healthy foods, and it's helping me lose weight... it's changed my life, so I can be healthier in the future."

PrimaryOne Health

COLUMBUS, OHIO

UNIVERSAL SCREENING AND FOOD BANK COLLABORATION IMPROVE HEALTH OUTCOMES

It started with a student internship in dietetics. Patients with diabetes were taught self-management and given food baskets in collaboration with the Mid-Ohio Food Bank. Tracking health outcomes, the student showed the positive impact of the nutrition education coupled with food.

PrimaryOne Health (POH) calls that model “produce pass outs.” The Food Bank decided to further couple food distribution with health outcomes, and expanded its partnership with POH to include

produce prescriptions. Any patient found food insecure is given a “produce prescription” to receive food from the Food Bank.

Not only people with diabetes, but all patients at POH are screened for food insecurity using the validated two question form (see Getting Started with your Own Food Insecurity Program, p. 48). The screening is incorporated with other screens such as for depression, dental and visual problems. The center found patients prefer to fill out a paper screening form themselves rather than tell the answers to staff. The self-administered screen is given to the medical assistant who records it in the electronic record.

Produce prescriptions are then faxed to the Food Bank and put in its PantryTrak software system. The prescriptions are viewable at any of the 10 partner food pantries where patients receive their food. Use of the prescriptions is tracked and patient outcomes can be associated with pantry use.

Produce pass outs are not prescription-based and occur at the center sites. Tents and tables are set up outside for a food market. The Food Bank delivers fresh produce to both patients and community members. The center tracks patients who use the market and invites community members to receive health care as new patients.

Same day and walk-in appointments are available at the markets. Enabling services, including enrollment assistance, are also provided. Health education is offered as well as food demonstrations.

The center has hired more dieticians and is expanding the food programs. Dieticians also use screening to refer patients to Meals on Wheels. More partnerships are in the works.

Outcomes are impressive. Over 300 patients have been screened as food insecure, with 54% of these using the produce prescriptions. Of those filling the prescription, 74% showed a decrease in glycated hemoglobin level (HgbA1c), weight loss or both. Over 12,000 individuals have been fed through POH food programs. One quarter of market attendees enrolled in health care while at the markets.

PrimaryOne Health incorporates screening for food insecurity into all visits. Through collaboration with the Mid-Ohio Food Bank, Ohio State University and local partners, they feed over 12,000 people a year and have an evidence-based practice showing improved health outcomes in food recipients.

LESSONS LEARNED

Staff credit their program success to the depth of relationships they have in the community. Investment in student education, collaboration on grants and participation in area events has strengthened their ties with the Ohio State University, Mid-Ohio Food Bank and community members.

The produce pass outs have drawn large numbers of community members to the center. Over half of market users are not current patients. The center enrolled over 600 families into care through market attendance.

Patient preference in screening design is important. Self-administered screens were more successful in identifying and

responding to need. Using one central location for the faxed food prescriptions also helped tracking. Originally, faxes were sent to the ten participating pantries, but the data were lost or discarded. The Food Bank is able to track using its software, which streamlines data collection and follow-up.

Staff learned how much hunger exists in their own area. They tell the story of an unkempt man who appeared homeless and refused all medical services. He did accept produce from the pass out. After receiving a bag of food, he sat on the curb, cracked open a watermelon, and devoured the whole thing. His hunger was raw. He's not a health statistic, but his outcome is real.

RiverStone Health

BILLINGS, MONTANA

HEALTHY BY DESIGN: MAKING GOOD CHOICES EASY

A few years ago, some home gardeners brought in surplus squash to share at RiverStone Health. Informal offerings became regular donations to a table in the lobby. This mini gardeners market grew bigger and moved to the parking lot. A natural way to assist patients with food insecurity was born.

Like most city farmers markets, the one in downtown Billings charges a fee to vendors. Small gardeners didn't find it practical to sell there, but were happy to offer their overflow

produce to RiverStone when asked. RiverStone's center-based gardeners market soon became too large for their space. So they partnered with the parks and recreation department in Billings to start a gardeners market in the park across the street.

The project grew with a partnership called Healthy By Design and other community agencies wishing to combat obesity and address food insecurity. Master gardeners joined in, teaching community members how to cultivate their food. Supplemental Nutrition Assistance Program (SNAP) and Women, Infants & Children (WIC) vouchers became accepted at the market as well. Informal in approach, the market is held on Wednesday evenings during the summer, with food available for purchase and for donation.

A booth at the gardeners market gives youth a \$2.00 voucher to use if they try fresh produce. Recipes and cooking classes are also on display, helping consumers try unfamiliar fresh foods.

RiverStone currently uses a paper screening tool to screen patients for social factors that affect their health. Their goal is to screen every patient annually. By using the social risk screening questions from the PRAPARE tool¹, they ask if patients have had trouble accessing food in the past year. Those with difficulty are referred to case managers who help them with resources such as the food bank, SNAP, meal programs and produce markets. In addition to annual screens, case managers ask about food needs at every encounter with high-risk patients.

RiverStone staff scan paper screening forms into patients' electronic health records to facilitate team-based management of patients' social needs. However, staff hope to routinely integrate social risk screening using information technology strategies, such as having patients independently complete electronic screening forms prior to visits so staff could better plan for their visits. RiverStone remains committed to screening patients and expanding health care to include interventions for social factors.

RiverStone advises patients about resources available in the community. Slowly but surely they feel confident that needs can be addressed in collaboration with others.

RiverStone Health screens patients for needs, then responds with the community to share garden surplus, integrate programs and help youth and seniors start a greenhouse garden together. Montana is largely frontier, with a climate and geography that harshly challenges food security.

“ EVERY PATIENT IS SCREENED ANNUALLY FOR SOCIAL DETERMINANTS OF HEALTH.

A GREENHOUSE FOR YOUNG AND OLD

The latest development in RiverStone’s work with Healthy By Design is a greenhouse project. Three South Side neighborhoods in Billings have been without a single grocery store for over three years. The only place to buy food without leaving the community was a Family Dollar store.

Obtaining a small neighborhood planning grant from the Kresge Foundation, a community coalition that included a youth program, senior center and the health center considered what would best fit the community’s needs and culture. Establishing a greenhouse adjacent to the community center appealed to them as it would both build community relationships and

offer community-driven solutions to food insecurity.

Children in after school, summer and preschool care join in with elders at the Senior Center, learning how to plant fruits and vegetables and making friendships with seniors who have much experience to share. Master gardeners offer advice and support. Families learn the joy of eating home grown food, and new habits are born.

This next step in combating food insecurity is one that has the potential to create generational change. Melissa Henderson of RiverStone Health says the key is to move forward methodically.

Roanoke Chowan Community Health Center

HERTFORD COUNTY, NORTH CAROLINA

FARM TO SCHOOL TO HEALTHCARE

When Catherine Parker asked a class of high school students if anyone had ever been to a farmers market, only three students raised their hand. Then she asked how many students had eaten at a fast food restaurant that week. Every

hand went up. In fact, they had all been twice.

Parker and her team at Roanoke Chowan Community Health Center (RCCHC) changed those statistics this year with the implementation of Farm to School to Healthcare. In coordination with the schools as well as a host of community partners, RCCHC helped create and implement a food oasis in rural northeast North Carolina. Unlike most interventions, this one integrates youth into every aspect of the work.

Parker is the Director of the Hertford County Student Wellness Center, a school-based program of RCCHC. High school and early college students learn about food security as a social

justice and a health issue. School gardens at primary and high school levels are designed and constructed by the students. Literacy and writing classes incorporate farm and garden knowledge into the curriculum.

Approximately 125 students helped to build the gardens, earning credit for physical education hours. Volunteers from the community pitched in with materials and labor. Almost 100 students work to maintain the gardens.

The Roanoke Chowan Community Health Center's Farm to School to Healthcare Initiative recognizes that many things from family habits to geographic barriers to poverty and health literacy all impact health outcomes. Through youth-led gardens and markets, integrated nutrition education in the schools and construction of walking trails, the community landscape has literally been changed for good.

After building the garden and cultivating it, participants sell the produce at a student-run market. Early college students learn about small business operations by setting up displays, answering customer questions and preparing samples of healthy recipes from the produce for sale. Community partners assist the student education.

Student-run markets are set up at the health center. Patients in need receive Prescription Produce Vouchers, which allow them to purchase market produce in \$10 increments. Over 226 pounds of fresh produce was sold at the first market and a remaining 146 pounds donated to a local food pantry. Those

shopping at the center market said they'd shop this way again, with 80% stating it leads them to eat more fruits and vegetables and 40% believing it improves their health. Customers expressed gratitude for the market and optimism for the future based on the student-led concept.

Before the market, parents believed fresh produce was more costly than frozen or canned. More than half said they couldn't access fresh produce. With the markets at the center and the gardens at the schools, families in this rural North Carolina area are seeing fresh food options that are accessible and affordable.

CHANGING THE BUILT ENVIRONMENT

As health centers increasingly address social determinants of health in their populations, they are becoming innovators beyond the walls of the clinical buildings. From her office window at Roanoke Chowan Community Health Center (RCCHC), Catherine Parker could see three schools. However, none of the schools could be reached on foot. Ravines and other obstacles prevented anyone from walking between the schools and the center.

RCCHC received a grant to create an Americans with Disabilities Act compliant walking trail between the schools, the center and the Main Street sidewalks. True to their youth-led emphasis, the center had students name the trail. They

chose P.A.W.—Promoting Active Wellness—which also incorporates their school mascot, the Bears.

A school-wide Walk Day celebrated the trail construction. Approximately 775 students participated, logging over 500 combined miles. The primary school is building a garden alongside the trail, which will be incorporated into the garden-market program.

Not only school children, but also community patients of the center benefit from the trail. As there is a connection with Main Street, many patients can now walk to the center rather than drive. This example of changing the built environment is one that can have an enormous impact on improving health outcomes.

Siouxland Community Health Center

SOUTH DAKOTA, IOWA, NEBRASKA

INTEGRATING SOCIAL DETERMINANTS OF HEALTH AND GROWING AN EXTRA ROW

When many of us think of South Dakota, Iowa or Nebraska, we don't think of refugees, HIV and immigrants. But where these three states meet, so do these special populations. Siouxland Community Health Center serves them as well as other rural

residents in the heartland of the United States.

Siouxland has a large number of Somali refugees and immigrants who work in meatpacking. They often arrive with nothing but a few clothes and do not have formal organizational support. The center has responded with a clothing program as well as grocery gift cards. They purchase discounted grocery cards from a number

of area grocers, and case managers then give these to patients in need. Mari Kaptain-Dahlen, who leads food security efforts at Siouxland, reports that cards are given away on a daily basis.

Siouxland's system goes beyond free grocery cards. It addresses the social determinants of health that lead to hunger. Kaptain-Dahlen recognizes that the

populations they serve need more than food and clothes. They may lack safe housing or equipment with which to cook a meal. Language, literacy and transportation are real obstacles.

Siouxland has its own foundation to address the unmet needs of their community. If transportation is a barrier, food is delivered. If housing is an issue, legal aid is available. For patients living with HIV, additional supports are available. Partners from the community assist the foundation: Walmart gives discounted clothing and a local union adopted them as their holiday charity. Emergency dental needs are supported by the local hospital.

Siouxland encourages local gardeners and farmers to sign up and "grow an extra row" of produce to assist those in need. The food is collected and distributed to participating community agencies.

The Grow an Extra Row initiative is done in collaboration with the district health department. It is now in its third year at the center. Patients in need receive food prescriptions from staff. Food is delivered seasonally from May through October, transforming the lobby of the health center into a mini farmers market. Patients, staff and growers are enthusiastic about the benefits of this program.

Siouxland Community Health Center recognizes food security as integral to health and is responding in a coordinated fashion that allows them to track and respond to their patients' needs. This Tri-State area has a short growing season, harsh winters and a diverse rural population.

INTEGRATING SOCIAL DETERMINANTS OF HEALTH INTO ALL ASPECTS OF CARE

Siouxland Community Health Center was an original pilot site for the Protocol for Responding to and Assessing Patients' Assets, Risks, and Experiences (PRAPARE)¹, incorporating social determinants of health data into patients' electronic health records using GE Centricity. Siouxland is now aiming to screen all patients using PRAPARE, which includes food security, transportation issues, language used, educational level and other social risk factors. The health center also documents which patients report needing legal aid assistance. Needs related to this information are flagged for the care team to see.

In addition to food issues, the center has realized how many needs there are related to substandard housing for their populations. Iowa Legal Aid

is partnering with them to find solutions to problems such as mold, faulty heating and safety hazards. The response has been powerful, with many more patients now sharing needs that have previously been hidden. The providers have stated they had no idea their patients were facing so many problems that clearly impacted their ability to be healthy.

The center plans to examine next the relationship between meeting some of the social needs and impacting health outcomes. Iowa Legal Aid is working with a children's hospital, tracking emergency department use and hospital admissions as it relates to asthma and substandard housing. The center hopes to collaborate with them on a similar model.

Food Oasis Partners At a Glance

NACHC interviewed some of the national, regional and local organizations leading the way to address food insecurity in the United States. The purpose of these interviews was to learn about promising practices and identify mechanisms for collaboration between food security programs and community health centers. Programs were selected based on literature reviews, health center recommendations, media coverage and word of mouth. Nine programs are highlighted here. Thank you to these organizations for providing NACHC with the information below.

AMPLEHARVEST.ORG

www.ampleharvest.org

DESCRIPTION/MISSION

A web-based organization to encourage and enable fresh food donations from local gardens

REACH

Serves all 50 states

Sharing about 277 pounds of food per gardener per year

Almost 20% of US gardeners know of AmpleHarvest.org for donations

KEY ACTIVITIES/SUCCESSSES

» AmpleHarvest.org connects food pantries and feeding programs together so that area gardeners can share their food programs to be recognized locations where area gardeners can share their food

HIGHLIGHTS

- ✓ Food waste in home and community gardens exceeds 11 billion pounds annually — this could be shared!
- ✓ Reducing waste can also reduce hunger

*partners with health centers

ARCADIA CENTER FOR SUSTAINABLE FOOD & AGRICULTURE: ARCADIA MOBILE MARKET

www.arcadiafood.org

DESCRIPTION/MISSION

Non-profit dedicated to creating a more equitable and sustainable local food system in the Washington, DC area

REACH

Clients are mainly African American (8,000 - 10,000 households)

Now in its fifth season, it serves 14 regular weekly stops and sold nearly \$450,000 in fresh, wholesome, local and sustainably raised food

Arcadia's Mobile Markets serve about 30% of all SNAP transactions and 15% of all Produce Plus Program benefits (a \$10 free fruit and veggie voucher from DC)

KEY ACTIVITIES/SUCCESSSES

- » Brings farm food to low-food access neighborhoods
- » School bus fit with refrigerators, freezers and racks for produce
- » It doubles the value of SNAP, WIC and Senior FMNP credits

HIGHLIGHT

- ✓ They hope other retailers will compete for their customers' business so they can move to new food deserts and begin the process again

CANSTRUCTION*

www.canstruction.org

DESCRIPTION/MISSION

Canstruction combines art and food security by hosting free events in communities where donated cans of food are fashioned into imaginative sculptures

REACH

Events have helped raise over 40 million pounds of food to local foodbanks since 1992

KEY ACTIVITIES/SUCCESSSES

- » Events include youth focused efforts as well as community-wide competitions to build the best sculpture
- » Some Citywide Can Art Exhibition participants compete to win titles for the best structures

HIGHLIGHT

- ✓ Recognized for commitment to art, innovation and hunger relief and art exhibitions

**partners with health centers*

FEEDING AMERICA*

www.FeedingAmerica.org

DESCRIPTION/MISSION

The nation's largest domestic hunger relief organization

REACH

Serves over 46 million Americans each year

- Provide over 4 billion meals
- Work with 200 food banks and 60,000 plus partner agencies nationally

KEY ACTIVITIES/SUCCESSSES

- » Source foods from large food manufacturers for food banks
- » The Washington DC office works with Congress to support hunger relief programs

HIGHLIGHTS

- ✓ Addressing the meaning of living with a comprehensive approach
- ✓ Closing the “map the meal gap,” (a research project examining state and county food insecurity rates)

MEALS ON WHEELS AMERICA*

www.mealsonwheelsamerica.org

DESCRIPTION/MISSION

The oldest and largest national organization supporting the more than 5,000 community-based senior nutrition programs across the country that are dedicated to addressing senior hunger and isolation

REACH

Coordinates more than 2.4 million meals annually to homebound adults age 60+ through home delivery or by congregate meals to senior centers and other senior gatherings

KEY ACTIVITIES/SUCCESSSES

- » Coordinate health activities like immunization campaigns into their meal events
- » More health organizations are starting to get involved, and NACHC's survey shows that health centers are indeed partnering with them

HIGHLIGHT

- ✓ More integration with the health care community to show the health impact of this social and nutritional service

NORTH RISING, PILLSBURY UNITED COMMUNITIES

www.health-rise.org/healthrise-us/pillsbury-united-communities/

DESCRIPTION/MISSION

A chronic disease community-based program in Minneapolis, MN that incorporates access to food and nutrition as part of a focus on wellness

REACH

North Minneapolis (mostly African Americans)

KEY ACTIVITIES/SUCCESSSES

» The work includes community gardens, family meals at a community center, a grocery store and community health worker engagement

HIGHLIGHT

✓ Social determinants of health must be addressed to change long-standing chronic diseases within communities

SECOND HARVEST HEARTLAND

www.2harvest.org

DESCRIPTION/MISSION

One of the nation's largest, most efficient and most innovative food banks

REACH

Over 500,000 lbs. of food distributed

Somali immigrants, Hispanics, Caucasians, African Americans and other urban poor in southern MN and western WI

Serves about 530,000 people per year, with 1500 food Rx referrals

KEY ACTIVITIES/SUCCESSSES

- » Expanded to include food resource referrals (Food Rx)
- » Patients are screened for food insecurity in the Hennepin County Medical Center electronic medical record
- » Staff can order a food Rx to Second Harvest, which intakes patient food needs and triages them to sign up for SNAP, food pantry resources and other available programs

HIGHLIGHTS

- ✓ Also known as Food Rx
- ✓ Interventions must be patient-centered and individually tailored but also easy on the health system workflow

**partners with health centers*

SHOP HEALTHY NYC*

www1.nyc.gov/site/doh/health/neighborhood-health/shop-health.page

DESCRIPTION/MISSION

Increases healthy food options and engage residents and organizations to support sustainable food retail in the community

REACH

Serves 86,468 residents in Brownsville, 83,268 in East Tremont and 120,511 in East Harlem

KEY ACTIVITIES/SUCCESSSES

- » Works with the community, stores and food distributors so healthy food options are optimized
- » Helps retailers display healthy options well, assist distributors in identifying healthy options and work with community members to promote those options

HIGHLIGHTS

- ✓ Putting healthy items into corner stores in underserved areas
- ✓ An implementation guide is available at <https://www1.nyc.gov/assets/doh/downloads/pdf/pan/shop-healthy-implementation-guide.pdf>

TOP BOX FOODS*

www.topboxfoods.com

DESCRIPTION/MISSION

Offers fresh produce and frozen meats to fill the gaps in food deserts

REACH

Serves 8,000 people, mostly working poor elderly who raise grandchildren

Primarily targets Chicago but are expanding to New Orleans and Atlanta

About 3,000 produce and protein boxes are sold each month

KEY ACTIVITIES/SUCCESSSES

- » Sells affordable fresh produce and proteins to people living in food deserts through a network of local partners
- » Sells fresh produce and high quality frozen meats which are difficult to find in food deserts. Most food banks have limited supplies.

HIGHLIGHT

- ✓ Use market-forces to address a societal problem at the root
- » Local partners coordinate monthly distributions. People order at 40% of retail prices, and food is delivered to central pickup locations.
- » Top Box processes the payments, accepts SNAP benefits and gives 5% of sales back to their community partners

**REACH OUT TO THOSE LOCAL
RESOURCES AND THEN JUST
BUILD THOSE RELATIONSHIPS
AND CONTINUED PARTNERSHIPS.**

—Audrey Ketchum, Compliance Officer, Community Health Service Agency, Inc.

Reflections and Recommendations From Health Centers

COMMUNITY HEALTH CENTERS respond in diverse, creative and sustainable ways to issues of food insecurity within their communities. Some have been doing it for over 40 years, while others are just getting started. A number of centers are able to tie food program use to health outcomes and hope to show real benefits over time. While there is great variety in methods used to combat food insecurity, a number of common recommendations and words of wisdom have emerged that contribute to success.

ENGAGE LEADERSHIP

Health centers repeatedly reference the importance of having health center leaders endorse food programs so they can be prioritized for implementation. Leaders typically aren't involved in the operational side of things, but they do have a deep knowledge of program goals, methods and needs. They can serve as ambassadors for the programs as well as guides.

COMMIT TO COMMUNITY HEALTH

Successful health centers see their mission as one that extends beyond the walls of clinics. The goal is to engage in measuring and addressing community health needs with similar energy and resources used to engage individuals in the exam room setting.

KNOW YOUR COMMUNITY RESOURCES

Health centers describe the importance of knowing community resources and how to leverage them. Many centers find that there are food resources readily available so they don't need to replicate what's there, but they can collaborate with them and link people in need with existing services. With stronger community partnerships, a variety of center activities can be enhanced. The "ownership" of innovative programs is often shared with others, with every partner playing to its strength.

CONSIDER THE STRENGTH OF INNOVATION AND RISK

The health centers profiled here are risk-takers. They start programs based on need without being certain of success. They have, in fact, admitted failure at a number of points. But they keep trying. They are open to change and to testing ideas. They allow champions of the project to run with an idea to explore possibilities. They transparently document their mistakes so they can learn. Unlikely partners, such as libraries, emerge in these settings.

FOCUS ON PROGRAM INTEGRATION

For a health center, the staff must learn to incorporate screening for food insecurity and improve food security program(s) as a regular function of care. It is not contained to nutrition, health education, outreach or other such departments, but integrated throughout the organization. Staff has opportunities for participation, whether programmatically or through volunteer efforts.

PATIENT-CENTERED CARE MEANS CHOICE

Old methods of giving pre-packaged food are largely discarded by these health centers. Creating opportunities for patients to make their own food selections and participate in food preparation based on their interests yields improved use of resources. Patients collaborate with each other as well as staff as they choose food, share recipes, comment on likes and dislikes and learn new skills. Food is an important social connector and element of identity.

CONSIDER SCALE, BIG IS NOT ALWAYS BETTER

As with anything, rapid expansion can hurt a food program. Sustainability depends on being realistic about the time, effort and resources needed to accomplish the goal. Several health centers had early success that sparked interest among partners but found they couldn't expand without dramatically changing their departments. They chose to continue to do well in their committed roles while meeting some, but not all, food needs. Successful centers have well-organized program directors who avoid burnout and manage multiple demands with competence.

NAYSAYERS ARE THERE

Not everyone is positive about food resource development. Health centers face opposition both in the community and in the organization. Some food pantries compete with each other, some staff think patients take advantage of programs, and some people think efforts are too small to matter in the long run. Successful centers handle negativity without being compromised by it.

HEALTH IMPACT IN ITS INFANCY

Most health centers want to measure the health impact of their efforts but don't have the tools and resources to do so. Even those who incorporate food insecurity screens into their electronic records have difficulty associating food receipt with health outcomes. Those that have been successful have university and large health care organizations as partners. Clear relationships between changes in food insecurity and changes in obesity, hypertension and diabetes control are non-existent. Still, a number of centers are collecting data that associate changes in health conditions with changes in food access and these efforts will assist future development of measures.

HUNGER IS MORE PRESENT THAN MOST CENTERS KNOW

Every health center interviewed said that although they knew patients were medically underserved, they did not know how extensive the problem of hunger is in their community. Most centers commented that many staff also experience food insecurity and need better resources in their food desert communities. Hunger is often hidden and stigmatized. Obesity is misunderstood as a sign of food security rather than of malnutrition based on inadequate food availability. The end of the month is particularly difficult for many, when food money competes with bills and other obligations. Benefits such as the Supplemental Nutrition Assistance Program (SNAP) do not last all month. School programs are interrupted seasonally. Weekends can be times of particular hunger. Holidays can be as well, especially when they occur at the end of a month and include extra expenses for travel and gifts. Every successful center tries to incorporate staff, patients and community into food programs to improve access in an inclusive way.

SCREENING REQUIRES TIME AND RESOURCES

Medical staff is asked to screen on more issues every year. Screenings that require patient questionnaires, such as depression, food insecurity, housing and smoking status, burden the office visit at the front end. Patients often don't understand why these personal questions are being asked and staff are pulled away from more typical medical tasks. If findings do not have an organized resource intervention available, all are frustrated by positive findings. Successful health centers use patient-administered screens and have clear processes for responding to positive findings. Before adding a new screen, centers must be assured it will be efficient, effective and culturally acceptable.

MOST SUCCESSES HAVE MANY FACETS

Most successful health centers have multiple methods of alleviating food insecurity. They blend gardens, pantries and markets. They offer U.S. Department of Agriculture (USDA) meals on site and sponsor innovative literacy and nutrition classes. They target youth and elderly. Centers start with one intervention but build on it so that food programs can reach any patient at any point of need. These centers show no signs of stopping or diminishing their programs, but are constantly looking for ways to grow.

AT FIRST WE WERE WORRIED: Was it going to be difficult? Would it work? Yet, it has been so simple and our staff has been so awesome at this. It takes very little staff time and no extra money. It has shown amazing results over time. Partners come forward and want to help and want to get involved. This is what solves the problems – people coming together and working together.

—Susan Levy, Communications and Community Relations Director, Native Health

Getting Started with Your Own Food Insecurity Program

WITHOUT A DOUBT, individual health center and partner food organization efforts to address food insecurity and related health effects are innovative, productive and show positive results.

The following recommendations are offered to health centers that wish to take steps to address food insecurity in their communities:

COLLECT DATA

- ✓ Create a map of existing food distributors/resources in your community
- ✓ Include food insecurity and food desert measures in your Community Needs Assessment
- ✓ Implement the validated two question Hunger Vital Sign™ food insecurity screen into your practice and document results (available in English and Spanish at www.childrenshealth-watch.org/public-policy/hunger-vital-sign/)
 - We (I) worried whether our food would run out before we (I) got money to buy more
 - The food that we (I) bought just didn't last and we (I) didn't have money to get more
- ✓ Create a database to measure desired outcomes in any food intervention started at the center
- ✓ Track food resource usage and link to health outcomes
- ✓ Show the medical economics argument for the cost of food programs as they reduce risk for cardiovascular, endocrine and mental health morbidity and mortality

PLAN

- ✓ Engage community partners in problem solving
- ✓ Contact regional and national food security organizations for assistance
- ✓ Offer staff a chance to develop food resource solutions
- ✓ Contact successful health centers for mentorship and advice

ADVOCATE FOR FUNDING AND PARTNERSHIPS

- ✓ Advocate for policies that allow health centers to fund food resources for patients through national, state and local departments of education, agriculture and labor
- ✓ Link food security efforts with health, racial and economic justice activities in your community for better state and national policy and program development

FOCUSING ON FOOD INSECURITY AND THE FACTORS THAT MAY CAUSE ILLNESS, OR THE SOCIAL DETERMINANTS OF HEALTH, HAS ALWAYS BEEN THE MISSION OF COMMUNITY HEALTH CENTERS SINCE THEIR INCEPTION SOME 50 YEARS AGO.

—Malvise A. Scott, Senior Vice President for Partnership and Resource Development, NACHC

NACHC Food Oasis Glossary

COMMUNITY GARDEN

A piece of land gardened collectively by a group of people, which can have various therapeutic, lifestyle and educational benefits.

COMMUNITY HEALTH CENTERS

Community health centers serve as the primary medical home for nearly 26 million people in more than 10,400 rural and urban communities across America. Health centers, sometimes called Federally Qualified Health Centers, are community-based and patient-directed organizations that deliver comprehensive, culturally competent, high-quality primary health care services. Most health centers receive Health Center Program federal grant funding to improve the health of underserved and vulnerable populations. Some health centers that meet all Health Center Program requirements do not receive Federal award funding. These are called Health Center Program look-alikes.

COOKING/KITCHEN PROGRAMS

Programs aimed to teach patients how to replicate low-cost, healthy recipes at home; offered as a holistic approach to health and wellness.

ELDERLY

Any individual over the age of sixty-five.

FARMERS MARKET

A regular event in which farmers come to a defined location to sell their local and sustainable products.

FOOD BANK

A non-profit organization that collects and distributes food to hunger relief organizations.

FOOD DESERT

Geographic area lacking affordable fresh fruit, vegetables, and other nourishing whole foods within walking distance or simple bus travel of residential spaces. This is largely due to a lack of farmers markets, grocery stores, and affordable healthy food providers. A food desert may be rural or urban.

FOOD INSECURITY

The state of being without reliable access to a sufficient quantity of affordable, nutritious food.

FOOD OASIS

A place where self-sustaining and innovative practices are developed to empower inhabitants of food deserts to have better access to healthy eating environments and foods.

FOOD PANTRY

An independent facility that receives, buys, stores and distributes food directly to those in need in their community.

FOOD RX

A prescription for healthy food, often with financial incentives, intended to provide nutrition education, to connect patients to local resources and to promote behavior change.

FOOD VOUCHERS

A type of healthy food assistance; often used as an incentive to participate in healthy living programs.

HIV

Human immunodeficiency virus. If left untreated, HIV can lead to acquired immunodeficiency syndrome (AIDS), a chronic and potentially life-threatening condition.

HOMELESS

Multiple definitions, but inclusive here as those who are unsheltered; residing in charitable sheltered spaces; doubled up in a household with another family; or living in a residence without tenant rights, exclusive of parent-child relationships.

MIGRANT/SEASONAL AGRICULTURAL WORKERS

A person who, for purposes of employment, must travel across geographic boundary lines to obtain work in agriculture, resulting in the necessity to change residences while working/a seasonal worker obtains their principal income through agricultural labor but does not have to move in order to do so.

MOBILE MARKET

A farmers market on wheels that delivers local, sustainable, and fresh food to underserved communities.

NATIONAL ASSOCIATION OF COMMUNITY HEALTH CENTERS (NACHC)

Founded in 1971, NACHC serves as the national health care advocacy organization for America's medically underserved and uninsured and the community health centers that serve as their health care home. NACHC works in conjunction with state and regional primary care associations, health center controlled networks and other public and private sector organizations to expand health care access to all in need.

- » Serves as the national and unified voice to advocate on behalf of medically uninsured and uninsured populations.
- » Advocates for growth and development of health centers and the needs of all medically underserved and uninsured populations.
- » Provides training and technical assistance to health center staff and boards in operational, financial, clinical and governance areas.
- » Conducts research — independently and in collaboration with others — to advance the body of community healthcare knowledge.
- » Develops strategic partnerships in both the public and private sectors to support the work of health centers and improve the health of patients and communities nationwide.

PROTOCOL FOR RESPONDING TO AND ASSESSING PATIENTS' ASSETS, RISKS, AND EXPERIENCES TOOL (PRAPARE)

The PRAPARE tool is a national standardized patient risk assessment protocol designed to engage patients in assessing and addressing social determinants of health. The tool was developed by the National Association of Community Health Centers (NACHC), the Association of Asian Pacific Community Health Organizations, the Oregon Primary Care Association and the Institute for Alternative Futures. PRAPARE is available as templates for the following four Electronic Health Records: NextGen, eClinical Works, GE Centricity and Epic. For more information, visit www.nachc.org/prapare.

PUBLIC HOUSING

Program established by the U.S. Department of Housing and Urban Development to provide rental housing for eligible low-income families and individuals, the elderly, and persons with disabilities.

RURAL

An open countryside with population densities less than 500 people per square mile and areas with fewer than 2,500 people; refers to a population type served by health center food assistance programs or activities.

SCHOOL-BASED

Population served by health center food assistance program or activity.

SPECIAL SUPPLEMENTAL NUTRITION PROGRAM FOR WOMEN, INFANTS, AND CHILDREN (WIC)

A federal aid program of the Food and Nutrition Service (FNS) of the United States Department of Agriculture, that provides nutrition education, federal grants to states for supplemental foods and healthcare referrals for low-income pregnant, breastfeeding, and non-breast-feeding postpartum women and to infants and children up to age five who are at nutritional risk.

SUPPLEMENTAL NUTRITION ASSISTANCE PROGRAM (SNAP)

A federal aid program of the Food and Nutrition Service (FNS) of the United States Department of Agriculture that provides nutritional assistance benefits for low- and no-income people living in the United States. SNAP helps supplement monthly food budgets of these individuals and families to buy the food they need to maintain good health and allow them to direct more of their income toward essential living expenses.

UNITED STATES DEPARTMENT OF AGRICULTURE (USDA)

The federal executive department that develops national laws related to agriculture, forestry, food, and farming. The department aims to meet the needs of farmers and ranchers, work to assure food safety, promote agricultural trade and production, foster rural communities, protect natural resources and to end hunger in the United States and internationally.

URBAN

Densely settled area of 50,000 or more people; refers to a population type served by health center food assistance programs or activities.

Health Care Without Harm, Healthy Food in Health Care Program

Policy Priority Areas

Investing in local and sustainable food initiatives and enterprises can play an important role in building community health, wealth, and climate resilience by growing a reliable regional food supply, increasing food access and affordability, and creating new job and ownership opportunities. In [Delivering community benefit: Healthy food playbook](#), Health Care Without Harm identified programs and partnerships pursuing “triple win” opportunities that improve healthy food access, support economic and workforce development, and strengthen local and sustainable food systems. Examples of such work in New England include the Vermont Community Foodbank’s Vermonters Feeding Vermonters program, which contracts with local farms to grow foods for distribution to its clients, and Community Servings’ medically tailored meal program, which incorporates locally sourced foods and includes a job training component. A new initiative seeks to build on existing partnerships and collaborations to catalyze further growth in the regional food system through comprehensive planning efforts. The [New England Feeding New England Partnership](#) is examining agricultural production, emergency preparedness, and food security with consideration for changing climate, environmental, and health conditions. Principles of equity and resilience serve as the foundation of this work to grow and strengthen the regional food system. New policies and programs focused on food system development can be designed to ensure equitable access to opportunities for building health and wealth. The outcome of these efforts will be a stronger, more resilient, regional food system capable of nourishing our communities on a daily basis and in the face of disruption.

Place-based project sites (for visits)

- [Western Massachusetts Food Processing Center/Franklin County Community Development Corporation: Western Massachusetts Food Processing Center](#) (FPC) was created by Franklin County Community

Development Corporation in 2001 to support new and growing food businesses. In partnership with local farms, the FPC processes 150,000 pounds of local produce annually to produce Valley Veggies, a line of fresh frozen vegetables. As part of the Northeast Food Collective, FPC is collaborating with other regional processors to grow reliable and year round access to locally produced foods.

- [Cooley Dickinson Hospital](#): Cooley Dickinson Hospital is a long time partner of Health Care Without Harm. Chef Gary Weiss takes part in Health Care Without Harm's Regional Leadership team and has been a leader in local food procurement. Cooley Dickinson's community focused efforts have engaged partners and community members in growing food access. In 2017, the hospital partnered with Healthy Hampshire to conduct a local food assessment. Cooley Dickinson [secured a grant](#) in 2020, through the Moving Massachusetts Upstream Investment fund, to support creation of the Hampshire County Food Policy Council to address healthy food access, a need identified in its recent Community Health Needs Assessment.
- [UMass Carbon Farming Initiative](#): UMass is the site of a temperate climate silvopasture plot. Silvopasture systems combine trees with pastures to increase productivity and biosequestration of carbon. The UMass plot combines plantings of hybrid chestnut trees and pasture for rotational grazing of sheep.
- [Springfield Food Policy Council](#): Under the leadership of Liz O'Gilvie, the Springfield Food Policy Council is working to address nutrition inequity and hunger in the community. Its work to increase access to fresh, affordable food includes expanding urban agriculture and partnering with the City of Springfield and Sodexo to establish the Springfield Culinary Nutrition Center.
- [MAACHI](#): The [Alliance for Community Health Integration](#) Coalition, coordinated by Massachusetts Public Health Association, brings together public health, consumer advocacy, social service, and community organizations to engage health care to address social determinants of health and advance health equity.

Recently supported legislative actions:

- 1115 Waiver Recommendations to MassHealth
 - Massachusetts' 1115 Waiver designs MA state Medicaid system and must be renewed approximately every five years. Supported the inclusion of health care systems' addressing health-related social needs (e.g. food

insecurity) and reimbursement for services like Food is Medicine programs.

- MA Farm to School Grant Program
 - [This bill](#) was reintroduced by Senator Lesser and Representative Pignatelli in MA.
 - Establishes a competitive grant program to help more schools provide students with healthy, locally grown foods in school meals and support new markets for farmers and fishermen.
 - The proposed program supports infrastructure investments, staff training, and educational initiatives that lead to farm to school program success and sustainability; supporting local economies and regional food systems.
- CAAB368 - Medically Supported Food Prescriptions:
 - Aims to directly address racial and ethnic health disparities, combat chronic disease, and reduce health care costs as well as nutrition and food insecurity among Medi-Cal beneficiaries by establishing a two-year, food prescription pilot in partnership with the health plans
 - Food prescriptions are an effective medically supportive food intervention used to treat, reverse, and prevent chronic health conditions like diabetes, hypertension, and depression.
 - Improving the health status, nutrition security, and overall resiliency of Medi-Cal beneficiaries is especially important in light of the COVID-19 pandemic and the disproportionate impact it is having on low-income households and communities of color.

General policy recommendations:

- [USDA Supply Chain Recommendations](#)
- CMS address food insecurity and improve community resilience by supporting medically tailored nutrition interventions (including medically tailored meals, produce prescription programs and others):
 - Include medically tailored nutrition interventions as a covered/reimbursable service and expense;
 - Create nutritional and procurement criteria for these programs that address locally, sustainably, and equitably grown and produced food and beverages (consider leveraging the [Food Services Guidelines for Federal Facilities](#) for this);
 - Establish accountability measures for these programs to report against this criteria;

- Incentivize (through increased reimbursement/meal budget) these programs to source food and beverages that are locally, sustainably, and equitably grown and produced (i.e., purchasing medically-tailored meals prepared locally).
- CMS include procurement of locally, sustainably, and equitably grown and produced food and beverages, and food waste reduction, recovery and management in [Conditions for Coverage \(CfCs\) and Conditions of Participations \(CoPs\)](#).
 - Create nutritional and procurement criteria that addresses locally, sustainably, and equitably grown and produced foods (consider leveraging the [Food Services Guidelines for Federal Facilities](#));
 - Establish accountability measures to report against this criteria;
 - Incentivize (through increased reimbursement/meal budget) these programs to source foods that are locally, sustainably, and equitably grown and produced.
- Federal health care facilities conduct a comprehensive assessment of:
 - Current implementation of local, sustainable and equitable food and beverage purchasing, baselining this purchasing using available programs and tools being used by some institutional entities and municipalities (example tool: [Good Food Purchasing Program](#));
 - Progress made and barriers encountered in implementing the current [Food Services Guidelines for Federal Facilities](#) in both selling (in cafeteria) and serving (in patient service) food.
 - Use the information collected through the assessments above to establish criteria and set goals and targets related to local, sustainable and equitable food and beverage purchasing, and establish a tracking system with mandated regular reporting on progress.
- Health Care Without Harm and its partners recently launched the development of a food purchasing standard for local, sustainable and equitable procurement for use in hospitals, school, universities, municipalities and other institutional food sectors. This [Anchors in Action](#) food procurement standard will be integrated into and support the above recommendations.

April 26, 2021

Representative James P. McGovern
Chairman, The Committee on Rules
U.S. House of Representatives
H-312 The Capitol
Washington, DC 20515

Re: Rules Committee Hearing Examining the Hunger Crisis in America

Chairman McGovern:

Thank you for your work on food insecurity in the United States and for holding a Rules Committee Hearing on the hunger crisis in this country. We appreciate your leadership in this area and look forward to working with you on policy initiatives to help patients in Northern New England and across the country.

Dartmouth-Hitchcock Health (D-HH) is one of the most rurally-located academic medical centers in the country. We recognize that food security and dietary quality are key factors driving health outcomes among children and adults in both rural and urban settings. The rate of food insecurity in our region has nearly doubled since the onset of the COVID-19 pandemic, bringing healthy food access to the forefront for our rural communities. Even before the pandemic, food insecurity affected rural communities at higher rates compared to urban areas across the country.¹

D-HH is New Hampshire's only academic health system, committed to providing all of our patients with high quality care. We serve a regional population base of 1.9 million people in New Hampshire, Vermont and across New England, providing access to more than 1,400 primary care doctors and specialists in almost every area of medicine. The health system includes Mary Hitchcock Memorial Hospital, our flagship hospital in Lebanon and part of Dartmouth-Hitchcock Medical Center, as well as member hospitals in Lebanon, Keene, New London and Windsor, Vermont. Mary Hitchcock Memorial Hospital is classified as both a Rural Referral Center and Sole Community Hospital and three of our member hospitals are rurally-designated critical access hospitals.

In addition to our member hospitals, the health system includes the Norris Cotton Cancer Center, one of 51 NCI-designated comprehensive cancer centers in the country, the Children's Hospital at Dartmouth-Hitchcock, the Visiting Nurse and Hospice Association for Vermont and New Hampshire, and 24 ambulatory clinics throughout New Hampshire and Vermont. Dartmouth-Hitchcock trains nearly 400 residents and fellows each year and performs world class medical research in partnership with the Geisel School of Medicine at Dartmouth. D-HH is the largest private employer in New Hampshire with over 13,000 affiliated employees throughout the region.

¹ USDA, Household Food Security in the United States, 2019 ; Internal D-HH data, 2021.

Recognizing the importance of food and nutrition for the health of our communities, even before COVID-19 underscored this need, we began implementing a **Food is Medicine strategy**. Our Food is Medicine approach is centered on identifying food insecurity, referring patients to nutrition supports, and hosting healthy food provision and nutrition services. We have implemented several new services to help address food and nutrition needs, narrowing an important gap in health care prevention and treatment.

As a key first step, we are implementing a **standard screening tool** in our primary care clinics to systematically screen for social determinants of health, including food security, building on past experience with patient assessments. With the support of strong community partnerships, we have six **Food is Medicine** programs currently offered with additional services under development:

1. We provide **emergency shelf stable food bags** to food insecure patients in our clinics. This program served approximately 1,000 individuals with 600 food bags in its first year and continues to grow. This program is offered in partnership with a local food pantry, the Upper Valley Haven, and serves patients in pediatrics, adult primary care, the emergency department, and obstetrics and gynecology.
2. We provide fresh, **organic farm shares for pregnant women at risk for substance use** on a weekly basis during the growing season. This program, supported by the Dartmouth College Organic Farm, is now in its third year and reaches about 15 women at risk each week. Farm shares provide a valuable source of free, nutritious food during a period of high nutritional demand, supporting women's wellbeing during the prenatal period.
3. We are currently piloting **healthy food prescriptions for pediatric patients** and their families. Patients who screen positive for food insecurity or are otherwise identified by their care team as having a need are referred to the Community Health Worker in the Children's Hospital at Dartmouth-Hitchcock. The patient's family receives a food prescription for a selection of healthy foods, including ample fresh produce, tailored to the household's dietary needs. Food prescriptions are packaged and provided by the Upper Valley Haven, where families are also connected to additional resources. This pilot program provides transportation support to help overcome a crucial barrier to food access for rural families.
4. We established a **Farmacy Garden** on our medical center campus in partnership with Willing Hands, a local food recovery and distribution organization. Our Farmacy Garden includes a 6,000 square foot garden and an orchard of 50 fruit trees and shrubs. The Farmacy grew over 500 pounds of produce during its second growing season in 2020. Over 200 volunteers contributed approximately 400 hours at the Farmacy in its first two years. Now in its third season, the Farmacy provides an opportunity for physical activity, a way to connect with the food system, and a respite from the clinic for garden volunteers, many of whom are D-HH employees. Produce grown in the garden supports Willing Hands' distribution network, supporting access to fresh fruits and vegetables for over 60 nonprofit organizations serving the region's food insecure populations.
5. We have a **Culinary Medicine** program that is on the cutting edge of service delivery and research. Directed by Dr. Auden McClure, the Culinary Medicine program designs and offers cooking classes that teach basic skills and nutrition education to enable long lasting dietary change. During the pandemic, we offered several courses and cooking demonstrations virtually. Part of a national teaching kitchen collaborative, research is integrated into culinary programs to contribute to the evidence base for teaching kitchens as a nutrition and health intervention.

6. Finally, in 2019 we conducted a pilot of a **rural Medically Tailored Meals** program for patients with congestive heart failure. Evidence from MTM programs, primarily from urban areas, shows promising results for reducing health care utilization and improving health outcomes. Our rural population faces unique challenges in food access and service delivery. We partnered with a local senior center and the existing meals on wheels service to create and deliver meals to patients. This small pilot demonstrated that MTM was both feasible and acceptable, and that sustainable funding models are needed to support these programs in rural areas.

These efforts represent a starting point to address food insecurity and nutrition in our region. Our population faces a high risk of food insecurity with limited transportation options to access food and nutrition supports. We are committed to improving health and wellbeing in our communities and aim to continue integrating Food is Medicine approaches into patient care and treatment. We look forward to working with you to help develop impactful, sustainable strategies toward ending hunger in America.

Sincerely,

Chelsey Canavan

Washington, D.C. 20515

The Honorable Tom Cole
Ranking Member of the Rules Committee
U.S. House of Representatives
2207 Rayburn House Office Building
Washington, D.C. 20515

Dear Chairman McGovern and Ranking Member Cole,

On behalf of Children's Hospital Colorado (Children's Colorado), we write in support of the efforts of the House Committee on Rules to end hunger in the United States, and we sincerely appreciate the opportunity to share our strategies to address population health through our Resource Connect model and to reduce food insecurity through our Food as Medicine initiative.

At Children's Colorado, we see, treat and help to heal more kids than any other hospital in our seven state Rocky Mountain region. In addition to our patient care, Children's Colorado supports families by providing care coordination, advocacy and facilitating access to community programs and resources. In 2019, we proudly established Resource Connect, a centralized model to address the various social needs that impact families' health. Through Resource Connect, our clinical providers are able to address a multitude of family needs, including tackling food insecurity through our Food as Medicine initiative.

To promote and support the health of patients and their families, our Healthy Roots Food Clinic at Children's Colorado provides a plentiful selection of shelf-stable and fresh, nutritious food including multiple protein and dairy options to accommodate a variety of meal plan needs that consider allergies and medical conditions, guidance on community resources and basic nutrition and safe food education support to the Children's Colorado Health Pavilion patients and their families. The Healthy Roots Food Clinic represents one of the aspects of our multi-pronged Food as Medicine Initiative.

The Healthy Roots Food Clinic is based on the principle of food as medicine and the belief that hunger is, at its core, a health issue. In the *New York Times*, the journalist David Bornstein captured this belief in the vivid terms espoused by one of its early proponents:

In 1965, in an impoverished rural county in the Mississippi Delta, the pioneering physician Jack Geiger helped found one of the nation's first community health centers. Many of the children Geiger treated were seriously malnourished, so he began writing "prescriptions" for food – stipulating quantities of milk, vegetables, meat, and fruit that could be "filled" at grocery stores, which were instructed to send the bills to the health center, where they were paid out of the pharmacy budget. When word of this reached the Office of Economic Opportunity in Washington, which financed the center, an official was dispatched to Mississippi to reprimand Geiger and make sure he understood that the center's money could be used only

for medical purposes. Geiger replied: “The last time I looked in my textbooks, the specific therapy for malnutrition was food.” The official had nothing to say and returned to Washington.¹

Unfortunately, notwithstanding Dr. Geiger’s defiant approach, since 1965 the federal government’s willingness to treat hunger and food insecurity as a health issue, with policy solutions rooted in the healthcare system, hasn’t progressed nearly as far as it should have. Resource Connect does not send bills to Medicaid for the food or the nutrition services we provide to our patients and families. Nearly all of the work detailed below is currently enabled by generous support from philanthropic organizations.

This letter first outlines our current programmatic approach to supporting community social and food-security related needs. Second, and more importantly, it underscores the urgent importance of Medicaid and other federal health programs adopting Dr. Geiger’s approach. For Children’s Colorado to sustain our work in the long-term, and for other organizations to expand similar programs to other communities across our state and nation, the federal government must use the policy levers at its disposal to drive a transformation in the healthcare delivery system to treat food as medicine. The good news is that we believe that via funding and reimbursement changes, support for technical assistance, and the active sharing of best practices across health systems, dramatic progress is possible.

Resource Connect Model

According to the American Journal of Public Health, 50 percent of the variables we can modify to impact community health outcomes are either social or environmental - including factors such as housing stability and food security.² Behaviors like diet and exercise, make up another 30% of modifiable health factors. That means removing common obstacles to practicing healthy habits can make a big difference in supporting healthier communities.

In August 2019, Children’s Colorado opened its new Health Pavilion. On the first three floors are outpatient primary care and specialty providers, dentists and mental health therapists. Through a universal psychosocial screening tool delivered to each patient, patients and families seen in the Health Pavilion who indicate an unmet social need—such as accessing regular meals or uninterrupted electricity at home—are referred to the facility’s fourth floor, Resource Connect, where a network of community health navigators and partners are ready to provide wraparound care and support.

Resource Connect comprehensively addresses social needs, including food security, energy assistance, eligibility for public benefits, legal services, community resource navigation and more. The services provided through Resource Connect promote equitable access to the resources that all families, including families of color and families with low incomes, need to improve their comprehensive picture of health and well-being. This is all accomplished through robust partnerships between Children’s Colorado and community-based organizations.

Any patient who is seen at the Children’s Colorado Health Pavilion—which has seen approximately 551,707 healthcare visits since opening—can be referred to Resource Connect by their provider. Patients and families can access Resource Connect on the same day and within the same building as their clinic visit. Community health navigators and clinical social workers identify families’ particular needs and connect them to partners who are co-located a few doors down in a shared space. Since opening in October 2019, Children’s Colorado providers and other team members have referred 4,062 families to Resource Connect.

¹ <https://opinionator.blogs.nytimes.com/2011/07/28/treating-the-cause-not-the-illness/>

² Social Determinants of Health Equity | AJPH | Vol. 104 Issue S4 (aphapublications.org)

Resource Connect anchors the Children's Colorado strategy for population health, delivering healthcare that lasts beyond a clinic visit and enhances care for patients and families by creating a centralized place to access the most common social needs. Resource Connect represents Children's Colorado's contribution to an ongoing, nationwide shift towards whole child health.

Overall, Resource Connect has been valuable because families are able to access wraparound services in one location. This reduces one of the biggest barriers for families: the time it takes to get connected to and then access services in multiple locations. Referrals are made to various types of programs by organizations who are collaborative and co-located partners, and by using "warm-handoffs," referrals are often more likely to be successful and families in turn get what they need. Lastly, our integrated care model has the ability to keep track of our referrals to community-based resources, which is rare in cross-system support models such as this.

Focus on Food Insecurity and Food as Medicine Initiative

In Colorado, food insecurity in many communities was exacerbated by the COVID-19 pandemic. Hunger Free Colorado reported in April 2021 that 16% of Colorado children were not getting adequate nutrition³. Within Children's Colorado's own primary care patient population located in the Child Health Pavilion nearly 6% of families self-reported food insecurity in 2021.

There is a growing body of research demonstrating inextricable links between food security and health outcomes, hunger and healthcare costs. The American Academy of Pediatrics states, "Children who live in households that are food insecure...are likely to be sick more often, recover from illness more slowly, and be hospitalized more frequently. Lack of adequate healthy food can impair a child's ability to concentrate and perform well in school and is linked to higher levels of behavioral and emotional problems from preschool through adolescence."⁴ In its 2021 publication, "Food Is Medicine: Final Project Report⁵," Feeding America noted that food insecurity has been linked to over \$77 billion in additional health care expenditures each year in the U.S."

Limited access to nutritious food is driven by many factors, including the inability to purchase nutritious food, lack of availability of nutritious food, and cultural differences that are not congruent with typical American processed foods. All of this can harm vital health, growth and developmental factors that start in childhood and compound over the lifespan.

Children's Colorado has responded by developing a multifaceted Food as Medicine initiative in which we are committed to the philosophy that nutrition *is* a vital element of medical care; further, we are activating services that will ensure all children and families have easily accessible, affordable and nutritious foods for optimal health and well-being. In addition, we also provide education and support for families on a wide range of food topics such as recipe reading, organizing and shopping based off a food plan, storage and preparation practices.

In the summer of 2018, we opened the Healthy Roots Garden, a garden on our main hospital campus that produces around 1,500 pounds of produce annually with 65 different produce varieties. All produce from our garden is distributed in our food clinic. Due to the pandemic, for much of 2020, we paused on advancing our Food as Medicine strategy and instead mounted a mobile grocery distribution in response to the increased need for food wrought by COVID-19. Over time, fortunately, several other community

³ <https://hungerfreecolorado.org/facts/>

⁴ <https://publications.aap.org/pediatrics/article/136/5/e1431/33896/Promoting-Food-Security-for-All-Children>

⁵ <https://hungerandhealth.feedingamerica.org/wp-content/uploads/2021/04/Food-is-Medicine-Final-Report-and-Key-Learnings-2021.pdf>

organizations also mobilized food distribution programs and were able to meet the exacerbated need, allowing us to return attention to our long-term, systems-level Food as Medicine work. Several other community organizations continue to lead mobile distribution at this time.

In 2021, the Healthy Roots Food Clinic received 1,149 referrals from primary care clinics in our Health Pavilion and served 2,851 people (1,237 children and 1,614 adults). One hundred percent of visits were “successful,” meaning that all families who sought food were provided nutritious groceries and basic food education. Most of these referrals came from our Health Pavilion’s primary care clinic which provides comprehensive, team-based, family-centered primary care in a medical home model to more than 12,000 children annually from birth to 18 years, regardless of their ability to pay. More than 85% of Children’s Colorado’s children are insured by Medicaid/publicly funded insurance or underinsured/not insured. Families seen at the Health Pavilion are ethnically and racially diverse; many identify as Latino and there is a growing population of immigrant families from Africa, Nepal, and southeast Asia. Approximately 60% of children seen are age 3 and under. Significant health disparities exist amongst these children. For example, within the three zip codes immediately surrounding the hospital and from which the majority of our Children’s Colorado’s families come, children have higher rates of hospital utilization than their peers in bordering zip codes, and use hospital services like the emergency room at a rate of 70% more.

Thus far in 2022, we are working towards adding clinical nutrition care by hiring a registered dietitian. We are also taking steps towards full integration with our electronic medical record system. This is a crucial step in integrating our Healthy Food Roots Clinic into a clinical model that operationalizes the Food as Medicine initiative.

School Partnerships

In the summer of 2021, with generous philanthropic support, we launched pilot replications of the Healthy Roots Food Clinic and Resource Connect model in two schools within the Aurora Public School district (APS). The program is implemented in partnership with the communities we serve. At Children’s Colorado’s Aurora Public School food clinic partnership sites, Crawford Elementary and Central High School, we served approximately 1,185 students in 2021. Both schools are part of the APS ACTION Zone⁶, a network of five schools that serves 4,200+ students, roughly 10% of all APS students, and demographics include:

- Students come from 50+ different countries and speak over 150 languages
- 66% of students are Hispanic, 15% Black, 12% Asian, 1% Native American and 4% White
- 82% qualified for Free or Reduced Lunch
- 75% English Language Developers

The Future of Food as Medicine - Expansion Ambitions, Sustainable Funding and Supports

Over the next several years, Children’s Colorado’s Food as Medicine initiative aims to evolve to a more holistic and integrated model by progressing from simple food practices (i.e., food distribution) to nutrition planning to improved health outcomes. This will entail a variety of different efforts such as:

- Expanding our food practices and our education sequence to families around nutrition planning to ensure a comprehensive understanding about food quality, portion sizes, age-appropriate quantities based on individual needs, eating behaviors, and nutrition plans for specific medical needs. We also plan to expand a basic food care package that will include community resources to be provided to families upon discharge of inpatient visits.
- We will seek to hire a registered dietitian as our Food as Medicine model centers much of the clinical program elements around care plans developed by a registered dietitian. The

⁶ ACTION Zone - The Office of Autonomous Schools (aurorak12.org)

registered dietitian will co-embed in the Child Health Advocacy Institute (the department under which the Food as Medicine model and food clinic are housed) and Lifestyle Medicine, a specialty clinic that provides multidisciplinary treatment options for obese or overweight infants, toddlers, school-age children and adolescents.

- We will seek to continue the replication of the Food as Medicine model in nonclinical settings to magnify the impact of holistic, integrated approaches. Children's Colorado will continue to provide robust technical assistance to Aurora Public Schools to evolve the program into a fuller clinic model by providing continuing training opportunities for the APS-hired Community Health Navigator as well as evaluation oversight.
- We will strategically and intentionally partner with other enterprise divisions and service lines such as the Pediatric Mental Health Institute so that our patients, their families, and community members can gather in the garden's holistic, healing environment and experience naturally grown and harvested nutritious fruits and vegetables.
- We will also develop vigorous data and evaluation practices so we can gain meaningful insights about how best to bridge addressing social determinants of health in clinical and community settings. Data will continue to play a critical role in understanding indicators of success so that we can better tailor our medical and nonmedical interventions as well as share our learning to inform the larger Food as Medicine movement and population health programming.
- We will seek to disseminate our model replication information and findings to raise awareness as we advocate for legislative and regulatory change. We will help build upon mounting public awareness of the intersection of food and well-being, and the growing understating that there are pervasive challenges to the food system that go beyond individual responsibility.

The Need for Sustainable Solutions

As noted above, philanthropy is a primary source of support for Food as Medicine efforts and activities. The Children's Hospital Colorado Foundation is fortunate to have steadfast partners who are helping us advance this body of work while also financially supporting it. Significant and multiyear gifts propel this work forward over the longer timeline required to demonstrate the transformative, cross-sector solutions necessary to influence state and federal policy change. In short, philanthropic support has been essential to these efforts thus far. But philanthropy has always been intended as a bridge to a more sustainable payment solution to allow this work to advance and expand.

Food as Medicine, alongside Resource Connect, is pivotal to Children's Colorado's strategy to advance a holistic model of care that bridges clinic and community in equitable and accessible ways, and sustainability continues to be a focal point of our work. It's important to note that 88% of patients referred to Resource Connect are enrolled in Medicaid, and 89% of patients referred to the Healthy Food Roots Clinic are enrolled in Medicaid. However, there currently is no clear pathway to healthcare funding that accounts for investments that address social determinants of health. Therefore, we believe the Centers for Medicare and Medicaid Services should enable transformation in the healthcare delivery system can be implemented through funding and reimbursement, technical assistance, and sharing of best practices across health systems.

Over the next several years, we aspire to leverage our philanthropic support to test, refine, and scale health programs such as Food as Medicine. We will then clearly articulate the value of such social interventions and develop a strong case for direct support through non-philanthropic means such as federal grants and eventually Medicaid payments and reimbursement. Integrating programs that address social determinants of health that impact our patients and family's ability to lead healthy lives, like food insecurity, into Medicaid reimbursement is an essential and critical need towards eliminating health

disparities and leveraging social health interventions that can have an impact at an individual and population level. Federal Medicaid policy changes that would best support this innovative work include the following:

- Expanding the activities eligible for HITECH grant funding to include support for building data system capacity to track outcomes of cross-system referrals to community-based supports
- Ensure equitable access to healthy eating/active living and other health-related social needs programs by expanding:
 - Provider eligibility rules
 - Reimbursable CPT and HCPC code sets
 - Federal match for data and evaluation activities required to build an evidence base and drive quality improvement for these supports
 - Direct federal reimbursement for a broad array of activities associated with “care coordination”: case management, peer services, resource navigation, and cross-system, team-based care management
 - Funding and technical assistance to scale out lessons learned from InCK pilot models
 - Policies limiting diagnosis-based reimbursements, such as guidance ensuring that dietitians, exercise physiology, and nutrition education services are reimbursed at the same rates and provider requirements for any diagnosis
 - Policies reimbursing at cost and incentivizing a broad array of prevention and health promotion services
 - Direct reimbursement of community-based services at non-medical settings, such as exercise physiological education provided by a licensed clinician at a community recreation center.

In closing, Children’s Hospital Colorado truly appreciates the Committee’s interest in our models for addressing hunger and facilitating broader pediatric population health transformation related to Resource Connect and the Food as Medicine Initiative. Please do not hesitate to contact Zach Zaslow, Senior Director of Government Affairs and Medicaid Strategy, at Zach.Zaslow@childrenscolorado.org for more information.

**ROUNDTABLE: “Ending Hunger in America: Examining Hunger
on College Campuses”**

September 8, 2021

Roundtable Examining Hunger on College Campuses ([link](#))

Testimony by: Ruben E. Canedo (he/they), Director Strategic Equity Initiatives, UC Berkeley

Thank you for your invitation to participate in today's roundtable discussion. I'm honored to be here with you and to call in the generations of students who have previously, are currently, and who will experience basic needs challenges across food, housing, health, transportation, dependent care, etc.. We also call in our communities who have dedicated and those still dedicating some or all of their time to supporting students' basic needs. This is a multigenerational journey that we are honored to serve as bridges, organizers, and alchemists of possibilities with you today.

Chairman McGovern recently visited both our UC Berkeley campus and the Berkeley Food Network. I had the honor of attending both sessions and learned from the powerful stories and efforts happening in our Bay Area, State, and across the country. I was left in awe and energized knowing that we are not alone in believing and contributing every day to the basic needs of our communities. Within a matter of days we learned about the formal letter signed by the 25 Chairs of House Committees encouraging President Biden to convene a national conference to vision and design a roadmap to end hunger in America by 2030. Immediately after, I received the invitation to join today's roundtable.

I share the journey to my participation today to frame the depth of my awe. The abundance that has flowed leading up to today is unheard of:

When I was in Calexico High School, despite being part of federal and state funded programs like TRiO, AVID, and Mock Trial ... despite being part of the chosen few in AP courses ... despite being heavily involved in leadership roles - no one ever spoke to us - much less - trained us to understand and navigate our basic needs into and through college. At best, we were told about application requirements, applying for FAFSA, and some factors to consider in making our decision of where to attend college. No one ever spoke or prepared us for what to do, how to navigate, and succeed in college - only how to get there.

When I received a full ride scholarship to attend UC Berkeley, I was told that I didn't have anything to worry about because of my full ride scholarship. Then I got there and I learned that I wouldn't be allowed to work because of my full ride scholarship, despite the scholarship not providing enough funding to cover my basic needs year round - much less support my family the way I had earned the honor of doing so. When I asked college counselors, state and federal campus programs, and equity support services about support with basic needs - they would each share that I wasn't alone in my struggles. Many had experienced the same challenges 5, 10, and 20 years ago when they were in college. In their effort to norm and affirm me that I wasn't alone, I was only further heartbroken that so many of us were struggling to eat, remain safely housed, care for our health, and there were no organized or coordinated efforts to support us. We had no idea that all of our challenges would get even worse through the 2008-2009 recession and the 82% UC tuition increase as a result of less funding directed to our UC system from federal and state budgets.

We speak so much about higher education being the great social equalizer in our country. I guess, in its literal sense, my college experience was equal in that I was expected to attend and perform through the rigorous academic landscapes of UC Berkeley just like all my peers. Never did a professor in any of my undergraduate or graduate courses provide an equitable quantity or rigor of reading, assignments, midterms, or finals to adjust for the fact that some of us had to work multiple jobs and had responsibilities beyond our academics... and others... did not. I had peers who were generationally wealthy, legacy students, and other intersectional privileges where they could solely focus on their

academics. To this day I haven't heard of a college or university across the country that has an equity centered academic policy to honor the health, wellbeing, and capacity of students through their undergraduate and graduate degree completion.

Today, the total cost of attendance, which includes both tuition and cost of living, are more expensive than ever before. Not only are things more expensive, students are having to navigate college through ongoing environmental catastrophes, compound pandemics, extreme political swings that impact budgets and decision-making, and no navigational training or preparation prior to entering college.

Thankfully, we've been in an emergent community organizing journey since I graduated. Today, at UC Berkeley our Chancellor actively names basic needs as a priority, our new Vice Chancellor of Equity & Inclusion actively shares about her lived experiences & commitments to improving basic needs, and all new admits and continuing students are welcomed with information and invitations to our UC Berkeley Basic Needs Center. This is not just at UC Berkeley, all 10 UC campuses have an institutionalized basic needs committee, we have a UC Systemwide Basic Needs Committee that coordinates research, prevention services, sustainability, and advocacy with all 10 campuses, all student elected and organizing entities are organized to improve student basic needs, we've built infrastructure for basic needs and health equity efforts at the UC Office of the President, and we have a very proactive UC Regents Board dedicated to improving student basic needs. Beyond UC, we created the California Higher Education Basic Needs Alliance (CHEBNA) to unite and coordinate basic needs efforts across the public higher education segments of California: California Community Colleges, California State University, and University of California. Our UC and CHEBNA efforts have earned us trust-centered relationships with state departments and committees, state associations, and state coalitions dedicated to improving basic needs of all people, including college students. Through this emergent journey, we have learned with great detail timely solutions and possibilities that can move us towards ending hunger in America:

- **Name College Students**
 - Name college students amongst our federal priority populations alongside children, single parents, disabled, veterans, and elderly community members.
 - College students have intersectional identities, they are single parents, disabled, veterans, elderly, and/or have dependents that are children or elders.
- **Design for College Students**
 - Design college student policies, protocols, and cultures across all federal departments.
 - We cannot only name college students as a priority population in the existing systemic and institutional landscape.
 - We must be intentional about advancing our current systems and institutions towards serving college students with a sense of belonging, equity, effectiveness, and accountability.
 - We already have solutions to existing challenges and even more possibilities will be generated by finally naming & designing for college students as a priority population for all federal departments.
 - Additionally, college students, especially our first-generation college students, are the ones assisting and translating federal programs and processes for our families.
- **Prevent Systemic Crises**
 - As we name and design college students into our federal ecosystem we must also do everything possible to prevent students experiencing challenges that need crisis interventions.

- We can prevent students from experiencing basic needs challenges by ensuring that students can cover their cost of attendance. Beyond tuition, the cost of living is the true debt generator. Doubling the Pell Grant for undergraduate students will move us in that direction.
- We need to understand and commit to our graduate and professional school students who will not benefit from Doubling the Pell Grant. We must ensure that they can also cover their cost of attendance, especially given their more challenging landscape of starting with higher levels of debt and having less financial aid to fund their graduate/professional degrees.
- **Organize for belonging, equity, and justice**
 - As we energize the healthiest and best journey ahead, we must organize.
 - Organize our data, tracking, and reporting. We need a student basic needs assessment at the start, midpoint, and end of year to track the non-linear basic needs experiences of our students. This data will inform effective practices to share out, equity centered decision-making for resources, policy-making, and implementation.
 - Organize these and future roundtables and hearings to connect participants, efforts, and possibilities to make progress according to capacity rather than wait for everything to be ready.
 - Organize the journey towards, success of, and strategy beyond the upcoming White-House Conference to End Hunger in America. We are ready and energized to contribute to the planning, facilitation, and implementation of agreements reached at the White-House Conference.

We are not interested in placing college students in a hierarchy of human value over the rest of our communities. Rather, we understand the many transformative ways that taking care of college students will allow them to go off and take care of communities they will live in, work with, and lead. We thank you for your invitation to today's conversation and to the efforts ahead that will end hunger in America.

I leave you with what became a guiding compass for me through our compound pandemic times, an offering from Octavia Butler:

“God is Change,
 And in the end,
 God prevails.
 But meanwhile...
 Kindness eases Change.
 Love quiets fear.
 And a sweet and powerful
 Positive obsession
 Blunts pain,
 Diverts rage,
 And engages each of us
 In the greatest,
 The most intense
 Of our chosen struggles.”

May our positive obsession be ending hunger in America and may our chosen struggle be to end hunger in America with values of belonging, equity, pleasure, and justice.

Testimony of Dr. Sara Goldrick-Rab

President and Founder
The Hope Center for College, Community, and Justice at Temple University
Professor of Sociology & Medicine
Temple University

Prepared for the U.S. House of Representatives Committee on Rules
Ending Hunger in America: Hunger on College Campuses

September 8, 2021

Chairman McGovern, Ranking Member Cole, and distinguished members of the Committee, thank you for your commitment to highlighting and taking bold action to end hunger in America—including on college campuses. The opportunity to speak today is a bright sign of progress, and a true honor.

My name is Sara Goldrick-Rab, and I'm the founder and president of The Hope Center for College, Community, and Justice. I'm also Professor of Sociology and Medicine at Temple University. Founded at Temple in 2018, The Hope Center is transforming higher education into a more effective, equitable, and impactful sector using a powerful combination of applied scientific research, technical assistance to colleges and universities, policy advising with state and federal governments, and strategic communications. We view students as humans and lifelong learners whose college educations will improve their communities and the nation. **Our primary expertise is in basic needs security, including food security, among college students.**

The evidence is clear: addressing students' basic needs is required for ensuring their success in college.¹ In addition, while these hearings are focused on ending hunger, many students facing food insecurity are also in need of safe, secure, and adequate housing—to sleep, to study, to cook, and to shower; healthcare to promote sustained mental and physical well-being; affordable technology and transportation to learn and get to class; resources for personal hygiene; and childcare and related needs. Without these basic needs met, students struggle to learn, achieve, and graduate. They fall deeply into debt, often leaving college without degrees needed to repay it.

This problem wastes talent and moves our country backwards. We must address the root causes driving food insecurity on campus and beyond. This goes far beyond the high price of college and failures of the financial aid system; it includes the paucity of living wage jobs, the extraordinary levels of wealth inequality and the racial wealth gap, and the systemic flaws in the so-called safety net.²

Having been deeply engaged in this work for more than 20 years, I assure you that basic needs insecurity in higher education, particularly food insecurity and hunger, is real, pervasive, and something that we can absolutely solve with the right combination of political will and strategic investment.

KEY FACTS ABOUT FOOD INSECURITY IN HIGHER EDUCATION

The Hope Center was the first to collect data on college food insecurity across the nation at a time when it was hardly recognized. The #RealCollege Survey, which we created in 2015, is the nation's largest annual assessment of students' basic needs that provides a detailed assessment of the problem by institution, and often by state. The survey has been completed by more than 550,000 students at 530 colleges and universities in all 50 states. We assess food insecurity using the validated 18-item instrument developed by the U.S. Department of Agriculture, which is especially appropriate because an estimated 1 in 5 students has a child and the instrument takes their needs into account.³

Our most recent survey, fielded in the fall of 2020 during the COVID-19 pandemic, included responses from nearly 200,000 students attending 202 colleges and universities in 42 states. Consistent with prior surveys, we found that 1-in-3 students experienced food insecurity in the 30 days prior to the survey;

¹ Broton, K. & Cady, C. (2020). *Food Insecurity on Campus: Action and Intervention*. Johns Hopkins University Press; Wolfson, J. et al. (2021). The effect of food insecurity during college on graduation and type of degree attained: evidence from a nationally representative longitudinal survey. *Public Health Nutrition*, DOI: [10.1017/S1368980021003104](https://doi.org/10.1017/S1368980021003104)

² Goldrick-Rab, S. (2016). *Paying the Price: College Costs, Financial Aid, and the Betrayal of the American Dream*. University of Chicago Press.

³ U.S. Department of Agriculture, Economic Research Service. (2012). U.S. adult food security survey module: Three-stage design, with screeners.

1-in-3 students who struggled to learn because they could not access or afford balanced meals; because they were worried about whether food would run out before they could buy more; because they were experiencing hunger. As with so much across our economy and our education system, we detect profound inequities:

- Students at community and technical colleges are 10 percentage points more likely to experience food insecurity compared to their peers at four-year institutions. Students attending Historically Black Colleges and Universities and those attending Tribal Colleges and Universities experience food insecurity at much higher rates than students at Predominately White Institutions.
- Compared to non-Hispanic white (28%) students, rates of food insecurity are much higher among African Americans (47%), Hispanic or Latinx students (40%), Indigenous and Native (51%), and multi-racial (40%) students.
- Pell Grant recipients (44%) experience higher rates of food insecurity than their counterparts (27%).
- Students with children (47%) experience higher rates of food insecurity when compared to non-parenting students (31%).
- Older students, including those over 25 years old (40%), experience significantly higher rates of food insecurity than younger students aged 18 to 20 (26%).
- Rates of food insecurity are also much higher among LGBTQ students, veterans, former foster youth, and students who pursuing higher education after exiting the criminal (in)justice system.⁴

This problem cannot simply be attributed to the pandemic and the current economic crisis. Our pre-pandemic surveys found persistent, and sometimes higher, rates of food insecurity in the five years leading up to 2020.⁵ This is because higher education and safety net policies have failed to address the new economics of college and evolve with the students they are meant to serve. Stagnant incomes, declining state support for higher education, the rise in college prices that affect all but the top earners, and a threadbare social safety net have all made a college degree less attainable and students more likely to face trouble affording all of the costs associated with attending school. The pandemic-induced recession and economic uncertainty exacerbated these trends and dynamics, but it did not create them.

Public benefit programs like SNAP are a critical tool to help reduce hardship among students. Yet these programs contain unnecessary restrictions that limit students' ability to access the very benefits that would reduce hunger and help them succeed.⁶ Our 2021 survey showed that only 1 in 5 students facing food insecurity utilized SNAP benefits, largely due to restrictions on who can access them and the difficulty in applying.⁷ Even students deemed eligible for SNAP or other supports are blocked by complex bureaucracies and administrative burdens.⁸ As a result, according to a 2019 study by the Government Accountability Office (GAO), 57% of students who are likely food insecure and eligible for SNAP do not receive it.⁹ While Congress and the Biden administration should be commended for temporarily expanding

student eligibility for SNAP, and expanding benefits during the public health emergency and beyond, there is much more to do to align benefits with the needs of today’s students.

HOW HIGHER EDUCATION IS ADDRESSING FOOD INSECURITY

In the absence of significant federal leadership, and with modest state support, over the last five years many colleges and universities and their off-campus partners have taken it upon themselves to go beyond food pantries in addressing food insecurity. This is important because while campus food pantries help draw attention to the problem, they are not effective in reducing food insecurity.¹⁰

Centralizing access to public benefits, emergency aid, case management services, and a food pantry in one location is a particularly promising approach.¹¹ Evaluations of the model used by Single Stop USA, and results of a randomized controlled trial evaluating Amarillo College’s Advocacy and Resource Center, are revealing. With their basic needs addressed, students have substantially greater likelihoods of success in college.¹²

Nonprofits can assist: on 10 community and technical college campuses throughout Seattle, the United Way of King County operates Benefits Hubs with the support of AmeriCorps VISTAs.¹³ RISE, a California-based nonprofit, utilizes a peer-to-peer modeled approach via Student Navigator Networks, in which students help their peers locate information and apply for public benefits.¹⁴ This year the California legislature passed AB132, providing \$30M to community colleges and requiring them to establish basic needs centers. Many California four-year colleges and universities already have these centers, thanks in part to the state’s 2017 Hunger-Free Campus legislation (today’s testimony from Ruben Canedo will address this). Hawaii is also funding programs that incorporate support for applying for SNAP benefits with other supports like tuition assistance and reimbursement for educational materials, transportation benefits, and more.¹⁵

Recognizing that the National School Lunch Program abruptly ends when a student finishes high school, some colleges and universities provide free meals on campus. Compton College in Los Angeles partners with Everytable to provide daily free meals to students as well as free home meal delivery.¹⁶ In 2019, following a student hunger strike, the University of Kentucky partnered with Aramark to open the ONE Community Café. The café serves to-go meals for \$1 and in its first year fed about 24,000 students.¹⁷ White Mountains Community College in New Hampshire recently began providing daily breakfast and

lunch and one dinner per week to all enrolled students.¹⁸ This month, Ozarks Technical and Community College in Missouri announced that it will expand its successful free breakfast program to all of its campuses.¹⁹ The Swipe Out Hunger program, whose CEO Rachel Sumekh is testifying today, offers a swipe donation program that also helps students eat on campus. Students at Spelman College and Morehouse College led a 2017 hunger strike in order to bring that program to campus.²⁰ It appears the effort is warranted: The Hope Center’s rigorous evaluation of a meal voucher program at Bunker Hill Community College in Massachusetts found that it boosted credit attainment, likely improved students’ well-being and reduced the severity of food insecurity.²¹

Emergency cash aid is another promising approach to addressing food insecurity in a way that centers students’ dignity and choice. The latest #RealCollege survey found that “having more or better food to eat” was one of the top five most-cited uses of emergency grant aid funds, including by 6 in 10 two-year college students.²² In partnership with the American Federation of Students, the nonprofit Believe in Students operates a FAST Fund program engaging faculty to distribute emergency aid in a compassionate and rapid manner to students across the nation.²³ Compton College, Dallas College, the San Diego Community College District, Western Governors University, and many others offer fast and easy access to emergency funds using an app called *Edquity*.²⁴ Among the more than 97,000 students at 18 institutions who have applied for emergency aid using that app, an estimated 44% were food insecure. An initial evaluation suggests that students who received \$250 in support via *Edquity* were twice as likely to graduate.²⁵ Given Congressional support for the Higher Education Emergency Relief Funds (HEERF), campuses have an opportunity to use federal emergency aid funds to prevent students from going hungry or leaving school because they cannot afford food or other necessities. Moreover, several states including Wisconsin, Minnesota, California, and Washington offer state funding for student emergency aid.

RECOMMENDATIONS

These initial actions by colleges and universities, and a handful of states, are a good start but far from sufficient to address a problem that affects at least five million college students. At a time when education beyond high school is more essential than ever to family stability and community health, federal higher education and public benefit programs must be designed, funded, and implemented to ensure that food insecurity is not an obstacle.

(1) LEVERAGE FEDERAL FINANCIAL AID

Americans care about what we count and count what we care about. Until recently, no one systematically assessed food insecurity among students and the problem flew under the radar. The federal

government has tremendous leverage through Title IV federal financial aid programs to require institutions to document and address food insecurity. At minimum, institutions should be required to regularly assess and report levels of basic needs insecurity (both food and housing) among their students. Colleges that receive GI Bill and Veterans Benefits should be required to report and have a plan to address food and basic needs insecurity for veterans and servicemembers.²⁶

Congress must also ensure that colleges receive sufficient appropriations to address food insecurity. Most current funding allocates funds by aggregating part-time students into full-time equivalents (FTE), which greatly reduces support for the ~6 million part-time college students, many of whom have children and are at greater risk of food insecurity. It is far more effective and equitable for federal and state policymakers to distribute funds based on total headcount rather than FTE.²⁷

(2) EXPAND SNAP BENEFITS AND THE NATIONAL SCHOOL LUNCH PROGRAM

Joint action by agencies including the USDA, the Department of Education, Housing and Urban Development, and Health and Human Services is required to expand and align programs to address food insecurity for students. During the pandemic, Congress took the necessary step of temporarily expanding SNAP eligibility for students with a \$0 Expected Family Contribution and those eligible for work study. In addition, we commend the Biden Administration and the USDA for revising and updating the Thrifty Food Plan which will expand SNAP benefits by nearly 25 percent from pre-pandemic levels.²⁸ It is now time to go further. Congress should pass and the Biden Administration should sign the Student Food Security Act, which would permanently expand eligibility for SNAP to students eligible for work study or those with a \$0 Expected Family Contribution and provide grants to institutions that serve high numbers of low-income students & students of color to identify and reduce food insecurity. In addition, the Enhanced Access to SNAP Act (EATS) Act would include attending an institution of higher education as a form of SNAP qualification, similar to work.

Congress should also expand the National School Lunch Program (NSLP) to students in higher education. The NSLP is a program that has been successful in reducing malnutrition and expanding health and academic well-being.²⁹ It is only logical, given the pervasiveness of food insecurity in higher education, to expand the program to college students who have already demonstrated financial need.

(3) MAKE FEDERAL FUNDING FOR EMERGENCY AID PERMANENT

Through the three rounds of HEERF funding, Congress has allocated billions of dollars in direct emergency grants to students coping with the financial and health fallout from the ongoing pandemic. Critically, emergency grants are available to students who cannot complete the FAFSA and they can be

²⁶ In our experience, community colleges and regional four-year institutions are much more likely to voluntarily collect and report these data; colleges with high-research activity and low admissions rates, and for-profit colleges, are less likely to collect and report data and should be required to do so in order to receive federal aid.

²⁹ Goldrick-Rab, S., Broton, K., Colo, E. (2016). *Expanding the National School Lunch Program to Higher Education*. The Hope Center for College, Community, and Justice. <https://hope4college.com/expanding-the-national-school-lunch-program-to-higher-education/>

disbursed quickly, filling in where standard Title IV financial aid falls short.³⁰ This support will be needed well beyond the pandemic, as students continue to endure economic volatility, the effects of climate change, and so much more. Congress should work to make the emergency aid a permanent fixture of federal higher education policy, drawing on groundwork laid by The Emergency Grant Aid for College Students Act. Funds could be allocated to institutions that report high levels of basic needs insecurity among students, and increased during regional or national economic downturns. Administrative support must be provided to help institutions establish and scale their infrastructure for this work to ensure funds are distributed quickly and without hassle.

(4) PROVIDE INCENTIVES AND ACCOUNTABILITY FOR INSTITUTIONS TO ADDRESS FOOD DESERTS AND FOOD PRICES

Campus food insecurity is also a function of the availability of nutritious food, as well as high food prices imposed upon students. For example, in North Philadelphia—the neighborhood around my institution, Temple University and the home to many Community College of Philadelphia students—30% of residents are food insecure.³¹ Meanwhile, most grocery stores in the city are clustered in higher-income neighborhoods, leading to food deserts in the exact areas where many #RealCollege students live, study, and work. Congress should provide incentive funds for both institutions of higher education and the communities in which they reside to address food deserts and expand the availability of nutritious, low-cost food to students at all campuses. Believe in Students is working with area organizations in Philadelphia to offer a low or no-cost off-campus food option.³²

Finally, we must hold institutions accountable for prioritizing affordability, student health, and academic success when setting meal prices for campus dining, particularly when negotiating with private food service providers. Colleges and universities should be required to submit regular information regarding campus food prices and how they compare to food prices locally, regionally, and nationally.

CONCLUSION

Federal higher education and public benefit systems are behind the times. Students are dropping out of college not for lack of talent but for lack of food. We are eating our seed corn. This is the legacy of a lack of public investment, rising prices, dramatic increases in inequality, and above all, a basic misunderstanding of who students are and what they need to succeed.

I thank this committee for its leadership and willingness to hold this series of roundtables on how to combat and end hunger across the country, and for a particular willingness to shine a light on the very real problem of campus hunger and food insecurity. I also thank #RealCollege students, who have known about this crisis for a long time and been ignored. Their actions and advocacy are why we are finally here today. Now is our time to make the investments necessary to end this absurd problem once and for all.

**U.S. House of Representatives Committee on Rules Hearing on
*Ending Hunger in America: Hunger on College Campuses***

Allen University: An HBCU Perspective on Ending Food Insecurity on Campus

Thank you Chairman McGovern, Ranking Member Cole, and distinguished Members of the House Committee on Rules for holding this hearing and providing me with the opportunity to speak today about food insecurity on college campuses. My name is Dr. Joseph Ray and I am the Acting Director of Counseling and Placement at Allen University located in Columbia, South Carolina.

Data Shows that Food Insecurity is a Widespread Problem on College Campuses.

Food insecurity is a major issue on college campuses across the country, with recent studies indicating that 20-50% of college students in the U.S. experience food insecurity. This is far higher than rates of food insecurity among the general population, which is closer to 12%.¹ It is also important to note that not all students have equitable access to food supports and services, with recent research showing that Historically Black Colleges and Universities (HBCUs) are significantly more likely to be located in low food access areas than public non-HBCUs.² Food insecurity can have a negative impact on student academic performance as well as overall health and well-being.^{3,4,5} Yet, the misconception that food insecurity doesn't affect college students remains commonplace. This is fueled in part by outdated perceptions of what the "typical" college student looks like. For example, not all students come from middle-or upper-class backgrounds. Many are the first in their family to attend college and work full-time jobs while attending school to support themselves and their families.

Knowing that Columbia has a host of colleges and universities, and that food insecurity on college campuses is a rising issue across the U.S., the Columbia Food Policy Committee voted in 2020 to create a subcommittee to help bring about programmatic and policy change on Columbia campuses and across the city to reduce the rate of college students experiencing food insecurity. The subcommittee is currently comprised of five institutes of higher learning: Allen University, Benedict College, Columbia College, the University of South Carolina, and the University of South Carolina School of Law, with 2-3 College Student Organizers and a minimum of one faculty/staff mentor representing each school.

The Columbia Food Policy Committee believes that the insights and voices of college students are vital to this work, however, they also recognize that many students face financial barriers to completing their schooling and must prioritize employment over other opportunities. To create a more equitable opportunity for students to participate in this subcommittee, the committee secured funding to compensate students for their time and efforts in the form stipends and food vouchers.

Since beginning work in the Fall of 2020, the subcommittee has focused on a variety of topics including:

- Sharing best practices surrounding campus food pantry management.
- Supporting Benedict College's successful opening of a food pantry on their campus.
- Reducing the stigma associated with food insecurity.
- Exploring the feasibility of and planning for a Food Pantry Reciprocity Program. The program would allow students from participating schools to gain access to all food pantries located at participating schools.
- Conducting student-led virtual focus groups to explore the ideas, concerns, and perspectives of college students, faculty, and staff regarding food insecurity on their campuses. Findings will be shared with the full Columbia Food Policy Committee, the Columbia City Council, and be used to inform future directions of the subcommittee.
- Expanding transportation options for students to access grocery stores.

Future plans include:

- Creating a central hub/platform for college food pantries to share resources.
- Developing food security trainings to present to different campus and community organizations.
- Creating policies that will increase healthy food options available at the food pantries housed in our academic institutions.

Allen University's Food Pantry Provides Welcomed Relief to HBCU Students Experiencing Food Insecurity.

Today's college student does not fit the profile of the typical college student of the late 1950s and 1960s. During this era college students were warned that they would be 20-25 pounds heavier by their senior year. Eating an abundance of campus cafeteria food was blamed for the massive weight gain of students which drastically increased the waistlines and ring sizes of many students who never dreamed that they would have a weight problem. As a freshman at South Carolina State University in 1969, I heard the rumors about becoming overweight if you ate too much of the cafeteria food. To complicate matters even further, I was a work study student assigned to the campus cafeteria.

During my four year (1969-1973) stretch as an undergraduate and work study cafeteria worker, I noticed lots of bloated waistlines around campus. I am proud to say that the bloated waistlines at SC State University, an HBCU located in Orangeburg, South Carolina, were a direct result of Black students having adequate financial aid, scholarships, and work study jobs that allowed them the luxury of having access to an adequate food supply (Campus cafeteria) and to live on campus as a fulltime student. Many of my classmates chose to live on campus because the nearest grocery store was at least 4 miles from campus. In essence, the HBCU I attended, and 98 other HBCUs were in Low food access areas (LFAs)

according to a study published in the *American Journal of Health Promotion* titled: *Examining Disparities in Food Access Between Historically Black Colleges and Universities and Non-Historically Black Colleges and Universities*.² As one of the co-authors of this research study, I was surprised to learn that so many HBCUs are in LFAs.

In May of 1969, President Nixon addressed Congress with a message that according to a Time magazine report exposed the problem. In his message to Congress he promised to revamp the Food Stamp program. However, despite his promises, things got worse, and by 1974 he resigned in the wake of the Watergate scandal when the United States was now experiencing a full-blown food crisis. In 1984, *President Reagan's Task Force on Food Assistance* failed because the task force infuriated community activists when they stated that they could not find widespread evidence of hunger. Now here we are today dealing with a food crisis that will cause a young student to fail a class because they had to choose between paying rent or buying food. Today's HBCU college students are having it rough. So many of our students must work fulltime jobs to help pay for their tuition because they are not receiving enough Pell grant money to cover the cost of their tuition. They do not have the luxury of having enough to eat, devoting enough time to study, getting adequate rest, and experience prolonged bouts of stress and anxiety.

Allen University Food Pantry.

I started the *AU Food Pantry* in *April of 2019* when I was hired as the campus counselor in the division of Student Affairs. In my job description, it clearly stated that starting a food pantry was a top priority of Dr. Ernest McNealey, President of Allen University. I was hired on a Monday and had the food pantry up and running on Friday. The tremendous sense of urgency to start the food pantry was very evident in the *110 students* that showed up during the Grand Opening ceremonies.

The success of the AU Food Pantry is due to the generous help of one community nonprofit that stepped in to help me set up the food pantry from the very start. I have also picked up two additional sponsors which have helped the food pantry to continue distributing weekly food bags throughout the academic school year. We also have two student organizers who serve as volunteers and on the College Food Insecurity Subcommittee. To date, the AU Food Pantry has distributed **2,878 food bags** to students living on and off-campus. In addition to providing students with healthy snacks, we also include a variety of fruits and nuts.

Recommendations for Addressing Food Insecurity at HBCUs:

- Increase the amount of Pell Grant money to offset the rising costs college tuition.
- Establish an Emergency Fund Account to help students from creating debt to pay for living expenses like rent, utilities, food, car repairs, and other incidentals.
- Allen University has a cooperative agreement with Comet City Bus Transportation to allow our students to ride the city bus “free” anywhere throughout the city (Students only must show their Student ID).
- Since many of our students are from rural, low-income families, where many of their family members also face food insecurity, efforts should be made to conduct a needs assessment to ensure that the food insecurity problems are not ongoing when they leave campus to return to their respective hometowns. For instance, monthly food packages can be sent to families from nonprofits in the area in which they live.
- Improve the financial wellbeing of students by teaching them financial literacy.

Thank you for your time and for helping to bring national attention to this important issue.

HUNGER SOLUTIONS
INSTITUTE

**Testimony of Dr. Alicia Powers
Managing Director
Hunger Solutions Institute**

September 8, 2021

**U.S. House of Representatives Committee on Rules Hearing on
*Ending Hunger in America: Examining Hunger on College Campuses***

The importance of a quality college education in the American workplace cannot be understated. In our modern society, a college education continues to be a major contributor to financial opportunity for the American family. Pop culture references further lend importance to the college experience as a rite of passage for a burgeoning adult, filled with independence, social events, coffee shop study groups, and life-long friendships. Yet, research suggests more than 30% of American college students struggle to meet even basic needs as they pursue a better future¹. To ensure all students have the opportunity to pursue higher education and the benefits it provides to their personal lives, the American economy, and our democratic republic, colleges and universities must have the capacity to strategically address student basic needs. Focusing specifically on the issue of college student food insecurity, this paper will provide a research-informed picture of college student food insecurity, explore factors contributing to a student's difficulty accessing adequate food resources, and review promising efforts of the

¹ Government Accountability Office [GAO]. (2018). Food Insecurity: Better Information Could Help Eligible College Students Access Federal Food Assistance Benefits. (GAO Publication No. 19-95). Washington, DC: U.S. Government Printing Office.

Hunger Solutions Institute at Auburn University and partnering universities of the Alabama Campus Coalition for Basic Needs (ACCBN) to address college student food insecurity throughout the state of Alabama.

College Student Food Insecurity Prevalence and Risk Factors

While data on the prevalence of food insecurity in college students remains sparse, many researchers are working to develop common methods to measure food insecurity in the college student population. In a recent United States Government Accountability Office report² that included a review of 31 studies, estimates of food insecurity among college students ranged from 9 percent to more than 50 percent. Twenty-two of the 31 studies indicated food insecurity rates of more than 30 percent, which translates to about 1 in 3 college students being food insecure.

Hunger Solutions Institute is supporting Alabama colleges and universities in utilizing common metrics and methods to determine the prevalence of food insecurity in college students throughout Alabama. A study aggregating food insecurity prevalence among nine Alabama four-year universities is underway and completed analyses of six individual universities reveal food insecurity prevalence ranging from 30% to 63% of responding students. The diverse results of these analyses imply that *all* universities have work to do to address basic needs and promote student success; a third of the student population facing food insecurity, at the very least, is far too many students struggling to juggle academic responsibilities with accessing adequate food resources.

² Government Accountability Office. (2018).

While data also is sparse on risk factors of college student food insecurity, researchers have found specific groups of students face food insecurity to a greater degree. Student groups facing food insecurity to a greater degree include first-generation college students, students receiving SNAP, being a single parent, being disabled, being homeless or at risk of homelessness, being a former foster youth, students of color, LGBTQ+ students, and students that were primary caretakers for children^{3 4 5 6}.

Hunger Solutions Institute also is supporting Alabama colleges and universities in determining target indicators of food insecurity in college students throughout Alabama. Preliminary data in four-year universities indicate that student demographics and food insecurity risk factors vary substantially, even among universities within the same state. Although aggregate data has not been fully analyzed at the time of this report, initial results from three Alabama universities suggested interesting trends among student responses: Food insecurity was higher among younger students, Black students, individuals enrolled full-time, and students working more than one job. Individuals facing higher levels of food insecurity were more likely to receive at least one form of public assistance (such as SNAP, TANF, housing assistance, etc.).

The Food-Insecure College Experience

In addition to broadening understanding of the prevalence and target indicators of college students facing food insecurity, Hunger Solutions Institute and the Alabama Campus Coalition for Basic Needs (ACCBN) seeks to give a voice to students experiencing food insecurity on Alabama college campuses. With the expertise of qualitative researcher Dr. Crystal Garcia, professor of Educational Administration at University of Nebraska, Lincoln, Hunger Solutions Institute and ACCBN desire to bring awareness to the unique struggles of students who are food insecure while trying to obtain a higher education. Experiences of these students humanize statistics presented in this paper and contemporary research on this topic; every number has a name.

A full-time undergraduate student at a typical four-year university in Alabama attends 12 to 18 hours of class each week, and university policy states this assumes approximately 2 to 2.5 hours of work outside of instruction per course credit, totaling between 34 and 60 hours per week of class attendance and related study. One interviewed student highlighted the impact of food insecurity on her ability to complete her studies, noting, “Food was impacting my ability to go to class and perform because I’d be in these three-hour classes where I had to focus for those three hours. I couldn’t because I was hungry, and I didn’t have anything to eat. I just didn’t.” Even the most diligent student may struggle to meet requirements of their academic responsibilities when experiencing food insecurity.

Hunger Solutions Institute and ACCBN’s recent qualitative research further demonstrated that students who independently attempt to fund living expenses while pursuing their studies face difficult decisions about paying bills and buying food. One student mentioned,

“It's an overall issue of students only being able to work [on campus] a maximum of 20 hours, and they're not the highest paying jobs and you know, students have to live as well. And sometimes it came with harder choices, paying for rent and for school related things over having something to eat.”

It was encouraging to hear the availability of campus food aid has a profound impact on student success. Students remarked that having reliable access to food was “life changing,” that it was “something to keep you going,” and “one less thing to have to tackle” from an overwhelming list of responsibilities. Poignantly, one student remarked, “I would not have been able to hold on if food was not, if that did not keep me going. I know that sounds like really, that doesn't sound that great, but that's just the truth of what it is. During those times I had mental health resources. I had food resources. All of my basic needs were pretty much covered. So I was able to continue to prioritize education.” One thing highlighted from speaking directly with college students who struggle with food insecurity is that assistance from their institution of higher learning can essentially be a deciding factor if a degree is within reach.

Contributing Factors to Campus Food Insecurity

Americans who attain college degrees are more likely to make higher wages^{7 8}, experience healthier lives^{9 10}, are less likely to experience poverty¹¹, and contribute positively

⁷ Abel, J. R., & Deitz, R. (2014). Do the benefits of college still outweigh the costs? *Current Issues in Economics and Finance*, 20(3).

⁸ Trostel, P.A., (2015). It's not just the money: The benefits of college education to individuals and to society.. *Government & Civic Life*, 4.

⁹ Schafer, M. H., Wilkinson, L. R., & Ferraro, K. F. (2013). Childhood (mis) fortune, educational attainment, and adult health: Contingent benefits of a college degree? *Social Forces*, 91(3), 1007-1034.

¹⁰ Trostel, P (2015).

¹¹ Trostel, P. (2015).

to the social and economic well-being of society¹². Yet, as the desire for higher education and college enrollment has increased, the attainment of a college degree has become less affordable; American families incur more debt, work longer hours, and spend a larger percentage of their income on a college education than ever before¹³. This notably impacts students within lower socio-economic households more than their middle-class and affluent counterparts, with financial barriers hindering their opportunity to leave behind generational poverty and participate as a contributing member of the American economy.

Students who benefit from public assistance throughout K-12 education, such as the National School Lunch Program, become vulnerable to food insecurity as they pursue higher education. The expansion of SNAP eligibility to college students under the Consolidated Appropriations Act of 2021 made public food assistance available to an estimated 3 million college students¹⁴, but when these temporary adjustments expire, these students will return to the familiar experience of choosing between paying for their studies, paying bills, and accessing food. Research suggests many food insecure college students experienced hunger prior to matriculation (Forman, Managing, Dong, Hernandez and Fingerman 2018; Martinex, Maynard, and Ritchie 2016), and reduced access to public assistance programs compounds food insecurity as students pursue higher education.

National Association of Student Financial Aid Administrators. https://www.nasfaa.org/news-item/24792/Millions_of_Additional_College_Students_Now_Eligible_for_SNAP_Benefits_Through_Coronavirus_Relief

Minimal information available to students for accessing food resources and stigma that may accompany accessing assistance further exacerbates college student food insecurity (King 2017¹⁵, Twill, Bergdahl and Fensler 2016¹⁶; Henry 2017¹⁷). A key aspect of Hunger Solutions Institute and ACCBN-led research is to assist universities in identifying campus policies, practices, and culture that may impede students' ability to address food insecurity. Utilizing the Campus Food-Aid Self-Assessment Tool (C-FAST)¹⁸, ACCBN partnering universities conduct a comprehensive evaluation of student supports, campus awareness and advocacy, and education about food insecurity on each individual campus. Awareness of institutional shortcomings addressing students' basic needs is key to effectively reducing college student food insecurity.

Broadening Capacity to Address College Student Food Insecurity

In 2019, the Hunger Solutions Institute, in partnership with the Auburn University Nutrition, Dietetics, and Hospitality Management Department launched the Alabama Campus Coalition for Basic Needs (ACCBN). Initially, ACCBN was made up of 12 four-year universities in Alabama, including three Historically Black Colleges and Universities. In 2021, ACCBN expanded to include the Alabama Community College System and its corresponding 27 community colleges. The mission of ACCBN is to unify college campuses throughout Alabama to ensure

student basic needs are met, thereby empowering all students to succeed in school, earn their degrees, and open doors to opportunity. ACCBN is focusing its initial efforts on college student food insecurity.¹⁹

ACCBN serves as a statewide network of Alabama colleges, universities, and key stakeholders seeking to eliminate college student food insecurity. Additionally, ACCBN strives to increase awareness of college student food insecurity; make college student food security a priority on college campuses; and support strategies to ensure access to healthy, affordable, and culturally appropriate foods on Alabama college campuses, at universities, and in surrounding communities. Hunger Solutions Institute supports capacity building and collaborative research at each college and among all university partners to assist ACCBN in realizing its goals.

Collaborative Hunger Solutions Institute and ACCBN research efforts confirmed there is no “silver bullet” solution to addressing college student food insecurity at every college/university; the diversity of our nation is reflected in the variety of higher education institutions across the United States. Rather, the Hunger Solutions Institute posits the solution for each college or university rests in a careful assessment of strengths and challenges at each institution, led by a coalition of passionate and diverse advocates for student needs. Recognizing and respecting the diverse demographic make-up and unique campus culture of each institution, each ACCBN partnering university follows a six-step process to address student food insecurity:

¹⁹ See Addendum A for more detailed information on ACCBN.

- ENGAGE a coalition of passionate and diverse stakeholders throughout the college setting and surrounding community.
- ASSESS the prevalence of student food insecurity and elements of campus culture that may be improved to reduce college student food insecurity.
- IMPLEMENT a plan with measurable goals, based on the collected data, to address the needs and target indicators.
- EVALUATE the impact of the intervention(s), assessing the direct effect on students and including post-intervention measures of food insecurity prevalence and campus culture.
- CELEBRATE successes throughout the process, recognizing progress and sharing lessons with others to replicate throughout colleges and universities within the United States and abroad.

The Hunger Solutions Institute supports ACCBN in systematically addressing college student food insecurity throughout the state of Alabama in data-driven ways. A comprehensive investigation of the prevalence of student food insecurity, target indicators of students facing food insecurity, and campus culture and resources available to address student food insecurity informs a deliberate plan aligning with the university's strategic plan and maximizes use of available human and financial resources.²⁰ The Hunger Solutions Institute emphasizes that supporting data-driven, innovative solutions specific to each college is critical in addressing college student food insecurity.

²⁰ See Addendum B for a brief sample report and Addendum C for a detailed sample report HSI provides Alabama colleges and universities following the comprehensive assessment and supporting development of the deliberate plan.

Although current endeavors to guide Alabama colleges through the capacity building and collaborative research process are currently funded by private foundations, opportunities remain for federal and state governments to facilitate this kind of targeted, long-term change on campuses nationwide. The Hunger Solutions Institute at Auburn University urges each member Congress to carefully examine legislation that may provide universities the opportunity to address the critical issue of college student food insecurity and appropriate funds accordingly. The collaboration of financial and legislative support from the federal government, and the prioritization of colleges and universities to this crucial issue, will inevitably promote opportunities for all Americans - regardless of humble beginnings or unexpected obstacles - to become educated and engaged citizens.

Addendum A
Alabama Campus Coalition for Basic Needs Overview

Alabama Campus Coalition for Basic Needs

The Auburn University **Hunger Solutions Institute** (HSI) leverages collective efforts of postsecondary education institutions to promote adoption and advancement of best practices to address food and nutrition insecurity. In 2019, HSI in partnership with the Auburn University nutrition, dietetics and hospitality management department established **Alabama Campus Coalition for Basic Needs** (ACCBN), made up of 12 Alabama four-year universities and 13 Alabama community colleges:

- Alabama A&M University
- Alabama State University
- Auburn University
- Jacksonville State University
- Troy University
- Tuskegee University
- University of Alabama
- University of Alabama at Birmingham
- University of Montevallo
- University of North Alabama
- University of South Alabama
- University of West Alabama
- Bishop State Community College
- Calhoun Community College
- Central Alabama Community College
- Coastal Alabama Community College
- Drake State Community and Technical College
- Lawson State Community College
- Northeast Alabama Community College
- Northwest-Shoals Community College
- Shelton State Community College
- Snead State Community College
- Trenholm State Community College
- Wallace Community College
- Wallace State Community College

ACCBN focused its initial efforts on food insecurity. Through support of ECMC and Ichigo Foundation grants, each partner university engages a campus coalition to lead student food security efforts and identifies a campus champion to serve as a liaison between the campus coalition and ACCBN. The universities also complete assessments measuring student food insecurity prevalence and target student indicators as well as campus food aid resources and culture.

Mission

The Alabama Campus Coalition for Basic Needs seeks to **unify** colleges and universities throughout Alabama to ensure student basic needs are met, thereby **empowering** all students to succeed in school, earn degrees and open doors to opportunity.

Goals

- Increase **awareness** of college student hunger at colleges, universities and throughout Alabama.
- Cultivate a **strong** statewide **network** of Alabama colleges, universities and key stakeholders seeking to eliminate college student hunger.
- Strive to make college student hunger a **priority** on college campuses, in surrounding communities and throughout Alabama.
- Support strategies to ensure **access** to healthy, affordable and culturally appropriate foods on Alabama college campuses, at universities and in surrounding communities.

FOOD INSECURITY REPORT

PREPARED BY THE HUNGER SOLUTIONS INSTITUTE, MARCH 2021

Executive Summary

The Auburn University **Hunger Solutions Institute** (HSI) leverages collective efforts of postsecondary education institutions to promote adoption and advancement of best practices to address food and nutrition insecurity. In 2019, HSI in partnership with the Auburn University Department of Nutrition, Dietetics and Hospitality Management established **Alabama Campus Coalition for Basic Needs** (ACCBN), made up of 12 Alabama four-year universities and 13 Alabama community colleges:

- Alabama A&M University
- Alabama State University
- Auburn University
- Jacksonville State University
- Troy University
- Tuskegee University
- University of Alabama
- University of Alabama at Birmingham
- University of Montevallo
- University of North Alabama
- University of South Alabama
- University of West Alabama
- Bishop State Community College
- Calhoun Community College
- Central Alabama Community College
- Coastal Alabama Community College
- Drake State Community and Technical College
- Lawson State Community College
- Northeast Alabama Community College
- Northwest-Shoals Community College
- Shelton State Community College
- Snead State Community College
- Trenholm State Community College
- Wallace Community College
- Wallace State Community College

ACCBN focused its initial efforts on food insecurity. Through support of ECMC and Ichigo Foundation grants, each partner university engages a campus coalition to lead student food security efforts and identifies a campus champion to serve as a liaison between the campus coalition and ACCBN. The universities also complete assessments measuring student food insecurity prevalence and target student indicators as well as campus food aid resources and culture.

Mission

The Alabama Campus Coalition for Basic Needs seeks to **unify** colleges and universities throughout Alabama to ensure student basic needs are met, thereby **empowering** all students to succeed in school, earn degrees and open doors to opportunity.

Goals

- 1 Increase **awareness** of college student hunger at colleges, universities and throughout Alabama.
- 2 Cultivate a **strong** statewide **network** of Alabama colleges, universities and key stakeholders seeking to eliminate college student hunger.
- 3 Strive to make campus food security a **priority** on college campuses, in surrounding communities and throughout Alabama.
- 4 Support strategies to ensure **access** to healthy, affordable and culturally appropriate foods on Alabama college campuses, at universities and in surrounding communities.

Campus Overview

(Removed to maintain confidentiality)

Student Food Insecurity Prevalence and Target Student Indicators

A total of **25%** of responding students indicated the highest level of food insecurity, **12%** of responding students indicated marginal food insecurity and **63%** indicated food security.

As adverse experiences students reported during college increased, so did their food insecurity prevalence. A moderate, direct correlation ($r=0.56, p<.05$) was noted between the total number of adverse life events identified and total food insecurity score.

As supportive personal relationships students reported experiencing increased, their food insecurity prevalence decreased. A weak, indirect correlation ($r=-0.12, p<.05$) was noted between total number of indicated social-emotional supports and total food insecurity score.

Campus Food Aid Resources and Culture

A series of indicators were used to measure the university's performance in student food security support across six dimensions: (1) student services and supports, (2) involvement, (3) advocacy, (4) campus culture and awareness of food insecurity, (5) education and training and (6) research, scholarship and creative works.

Campus performance was scored on a scale from 1.00 (early action stages) to 4.00 (best practice achieved). The university scored highest in campus culture and awareness of food insecurity, achieving the best practice in all associated indicators (mean score = **4.00**). The university also scored highly in student services and supports with a mean score of **3.67** for both fall 2019 and fall 2020. The mean score for involvement was **3.00** followed by a **2.75** in advocacy. The university showed the greatest opportunity for improvement in education and training (mean score = **1.00**) and research, scholarship and creative works (mean score = **1.00**).

Recommendations for Next Steps

- 1 Establish an experiential learning **curriculum** in hunger/food insecurity for undergraduate and/or graduate students.
- 2 Create an opportunity for student-faculty **research** collaboration on hunger/food insecurity issues.
- 3 Develop opportunities for students currently engaged in student food insecurity activities to formalize involvement through establishment of a **student organization** addressing basic needs.

Detailed Sample Report

_____ **University**

FOOD INSECURITY REPORT

PREPARED BY THE HUNGER SOLUTIONS INSTITUTE AT AUBURN UNIVERSITY

Data collection and analysis by **Malerie Goodman** and **Sara Rains**,
Hunger Solutions Institute graduate research assistants, in collaboration
with the _____ **University**.

To protect the privacy of ACCBN partner institutions, all information identifying the university featured in this report has been removed.

Thank You from the Hunger Solutions Institute

The prevalence of college student food insecurity is alarming. Even more alarming is the impact of college student food insecurity on student persistence, academic performance and course attendance. Action must be taken to optimize college student success for all.

Alabama colleges and universities are taking action using a data-driven, systematic approach focused on improving a broad array of campus resources and culture. Through collaborative efforts of the Alabama Campus Coalition for Basic Needs (ACCBN), Alabama students will succeed in school, earn their degrees and open doors to opportunity. Universities partnering with ACCBN must be commended for their leadership and action in addressing student basic needs collectively and on their own campuses. Alabama college and university administrators, faculty, staff and students also must be commended in swiftly acting to ensure students' most basic needs are met. Funding partners, like the ECMC and Ichigo Foundations, must be applauded as their funding support inspires and facilitates improvements in educational outcomes – especially among underserved populations – through evidence-based innovation.

I am honored to co-facilitate ACCBN and support its associated colleges and universities as we all seek to ensure Alabama thrives in the 21st century.

Sincerely,
Alicia Powers
Managing Director, Hunger Solutions Institute

- 25 | Appendix of Resources**

Executive Summary

The Auburn University **Hunger Solutions Institute** (HSI) leverages collective efforts of postsecondary education institutions to promote adoption and advancement of best practices to address food and nutrition insecurity. HSI serves as secretariat for **Universities Fighting World Hunger** (UFWH) and **Presidents United to Solve Hunger** (PUSH). UFWH began in 2004 through a partnership with the UN World Food Programme. To date, UFWH has engaged more than 300 postsecondary student groups dedicated to producing graduates who are globally aware and socially engaged. PUSH is a global consortium of more than 100 two- and four-year colleges and universities whose presidents have prioritized food and nutrition security through teaching, research, outreach and student engagement.

HSI launched **End Child Hunger in Alabama** (ECHA) in 2013. ECHA's network has grown to include more than 50 key state leaders from government, nonprofit, faith-based communities, education and the private sector and has supported successes involving child nutrition programs, state legislation, public campaigns and many others. In 2019, HSI in partnership with the Auburn University nutrition, dietetics and hospitality management department established **Alabama Campus Coalition for Basic Needs** (ACCBN), made up of 12 Alabama universities:

- **Alabama A&M University**
- **Alabama State University**
- **Auburn University**
- **Jacksonville State University**
- **Montevallo University**
- **Troy University**
- **Tuskegee University**
- **University of Alabama**
- **University of Alabama at Birmingham**
- **University of North Alabama**
- **University of South Alabama**
- **University of West Alabama**

ACCBN focused its initial efforts on food insecurity. Through support of ECMC and Ichigo Foundation grants, each partner university engaged a campus coalition to lead student food security efforts and identified a campus champion to serve as a liaison between the campus coalition and ACCBN. The universities also completed assessments measuring student food insecurity prevalence and target student indicators as well as campus food aid resources and culture. This report provides assessment findings along with evidence-based recommendations for next steps.

Mission

The Alabama Campus Coalition for Basic Needs seeks to **unify** colleges and universities throughout Alabama to ensure student basic needs are met, thereby **empowering** all students to succeed in school, earn degrees and open doors to opportunity.

Goals

- 1** Increase **awareness** of college student hunger at colleges, universities and throughout Alabama.
- 2** Cultivate a **strong** statewide **network** of Alabama colleges, universities and key stakeholders seeking to eliminate college student hunger.
- 3** Strive to make college student hunger a **priority** on college campuses, in surrounding communities and throughout Alabama.
- 4** Support strategies to ensure **access** to healthy, affordable and culturally appropriate foods on Alabama college campuses, at universities and in surrounding communities.

Campus Overview

(This section removed for confidentiality)

Student Food Insecurity Prevalence and Target Student Indicators

Based on a survey administered fall 2020, **30%** of responding students experienced food insecurity within the past 30 days. The mean total food insecurity score was **1.40 (± 2.14)** on the United States Department of Agriculture (USDA) Household Food Security Survey scale of 0 to 6 with scores of 0 to 1.99 indicating no/marginal food insecurity, 2 to 4.99 indicating moderate food insecurity, and 5 to 6 indicating high food insecurity.

Roughly **35%** of respondents indicated they accessed food resources on campus, in the community or from personal networks in the past 12 months.

Students who did not receive public financial assistance were at lower risk for food insecurity than those who had received public assistance since the COVID-19 pandemic began. Students who used a job, Pell Grant, other government grants, university scholarships, student loans, savings, credit cards, and/or family and friends to fund their education demonstrated higher mean food insecurity scores than those who did not.

Campus Food Aid Resources and Culture

A series of indicators were used to measure institutional performance in student food security support across six dimensions: (1) student services and supports, (2) involvement, (3) advocacy, (4) campus culture and awareness of food insecurity, (5) education and training, and (6) research, scholarship and creative works.

Campus performance was scored on a scale from 1.00 (early action stages) to 4.00 (best practice achieved). The university scored highest in student services and supports, achieving the best practice in five associated indicators (mean score = **3.56**). The university also scored highly in advocacy, achieving best practices in two associated indicators (mean score = **3.50**). The mean score for campus culture and awareness was **3.00** followed by involvement (mean score = **2.67**), and research, scholarship and creative works (mean score = **2.67**). The university showed the greatest opportunity for improvement in education and training with a mean score of **1.50**.

Recommendations for Next Steps

1

Establish an experiential learning **curriculum** in hunger/food insecurity for undergraduate and/or graduate students.

2

Build and strengthen campus relationships through the establishment of a campus food security **coalition**.

3

Encourage and/or incentivize student-faculty **research** collaboration on hunger/food insecurity issues.

Prevalence and Target Indicators

The university administered an 82-item survey to measure basic needs of attending students. Leaders administered the online survey in November 2020. Staff solicited survey responses from a stratified random sample of 50% undergraduate students, 50% graduate students and 50% professional students who were enrolled in both spring and fall 2020. A total of 7,551 students were contacted to participate in the survey. Participating students were offered the opportunity to register for a drawing for a \$100 Amazon gift card. A sample of **2,011** students responded to the survey, a response rate of 26.6%.

Survey questions addressed demographic information (gender, relationship status and enrollment status), resources available to the student (public assistance, financial aid) and adverse experiences impacting the student's college experience. Questions regarding basic needs included inquiries about financial hardship, housing and food insecurity.

The survey included the six-question version of the USDA Household Food Security Survey (2012) to gauge the prevalence of food insecurity among attending students. The survey inquired about food insecurity experiences during the fall 2019 and spring 2020 semesters as well as within the last 30 days (as specified by the USDA Household Food Security Survey [2012]). Participant responses regarding current food insecurity were used in the following analysis.

This survey was conducted during the novel coronavirus pandemic, which may significantly impact student responses. The survey included a number of items that compared the respondent's current experience to pre-COVID-19 conditions or previous semesters.

Demographics of Survey Respondents

The majority of survey respondents were female (**69%**), full-time students (**81.9%**) and undergraduate students (**62%**). Approximately **62%** of the respondents were White. Three-quarters of participating students currently live in on-campus housing. Of the students who responded, **12%** utilize a Pell Grant to assist with tuition expenses, and **46%** have accessed public assistance (such as TANF, SNAP, WIC, etc.) since the beginning of the COVID-19 pandemic.

Student Food Insecurity Prevalence

Food security was determined using scoring procedures prescribed by the USDA (2012). Responses to questions addressing food insecurity were scored as binary variables (0 or 1). Responses of Sometimes True or Often True were scored affirmative (1), and when indicating how often food insecurity was experienced in the last 30 days, responses of three days or more were scored affirmative (1). Affirmative responses were summed to provide an overall measure of food security. Total raw food security scores ranged from 0 to 6. Total raw scores are defined by the USDA (2012) as follows: 0 to 1, high or marginal food security; 2 to 4, low food security; 5 to 6, very low food security. For the purposes of this report, a score of 0.00 to 1.99 will be defined as food secure and a score of 2.00-6.00 will be defined as food insecure.

Based on results of the survey, 30% of responding students indicated food insecurity. The mean total food insecurity score was 1.40 (± 2.14).

Holding all else constant within a statistical regression, student indication that they had accessed assistance for food resources in the past calendar year was associated with a food insecurity score more than two points higher than those who had not ($p < .05$). Roughly **35%** of respondents indicated they had accessed the campus food pantry, a community food bank, a soup kitchen, a dumpster, a charity or church, and/or a family/friend for food assistance in the past 12 months.

Students who did not receive any public financial assistance (TANF, SNAP, WIC, SSI, SSDI, Medicaid, CMA, unemployment, aid for utilities, housing, transportation, tax refunds or veteran benefits) were at lower risk for food insecurity than those who had received public assistance since the COVID-19 pandemic began. Holding all else constant within a statistical regression, student indication that they had not received public assistance during the COVID-19 pandemic was associated with a lower food insecurity score of approximately **0.3 points** ($p < .05$).

¹ TANF – Temporary Aid for Needy Families; SNAP – Supplemental Nutrition Assistance Program; WIC – Women, Infants and Children Program; SSI – Supplemental Security Income; SSDI – Social Security Disability Insurance; CMA – Childcare Management Assistance program

MEAN FOOD INSECURITY SCORE BY TYPE OF PUBLIC ASSISTANCE ACCESSED SINCE THE BEGINNING OF COVID-19

Students experienced a number of adverse circumstances that negatively impacted their food security in the 30 days preceding the survey. Students who had to underpay rent ($W=32114$, $p<.05$), experienced a rent increase ($W=61812$, $p<.05$), had to underpay utilities ($W=59716$, $p<.05$), moved homes ($W=12150$, $p<.05$), moved in with others ($W=39570$, $p<.05$), lived in situations that exceeded housing capacities ($W=20854$, $p<.05$), had received calls from debt collections ($W=34227$, $p<.05$), or had to remain in an unsafe living environment ($W=17830$, $p<.05$) in the past 30 days reported significantly higher mean food insecurity scores than those who did not. Students living on campus indicated a higher mean food insecurity score than students living off campus ($W=68046$, $p<.05$).

Interestingly, students who had a job since the COVID-19 pandemic began indicated higher mean food insecurity scores than those who did not ($W=316993$, $p<.05$). Students working more than one job demonstrated the highest mean score of food insecurity ($M=2.736$). Individuals who reported they were looking for work at the time of the survey also indicated a higher mean food insecurity score than those who were not ($W=39947$, $p<.05$).

MEAN FOOD INSECURITY SCORE BY ADVERSE CIRCUMSTANCE IN THE LAST 30 DAYS

Students who used a job, Pell Grant, other government grants, university scholarships, student loans, savings, credit cards and/or family/friends to fund their education demonstrated higher mean food insecurity scores than those who did not. Holding all else constant, students utilizing a Pell Grant or student loans to fund their education was associated with greater food insecurity (**0.53 and 0.27 points higher, respectively, $p < .05$**).

A variety of Ordinary Least Squares (OLS) regression models were explored to identify reliable risk factors for food insecurity among the student sample. A model including student access of food assistance in the past 12 months (binary variable), student access of government assistance since the COVID-19 pandemic began (binary variable), student using the Pell Grant to fund their education, student utilizing student loans to fund their education, sexual orientation (heterosexual or not), and gender (female or not) explained approximately **36%** of the variance among food insecurity scores (**$R^2 = 0.3557$**). All variables in the model were statistically significant (**$p < .05$**).

Target Student Indicators

The following student characteristics may suggest a heightened level of risk for food insecurity as indicated by analysis of data:

Students who sought out food resources within the past 12 months.

Students who accessed public assistance since the beginning of COVID-19:

- TANF, SNAP, WIC, Medicaid, CMA, unemployment insurance, utilities assistance, housing assistance, transportation assistance, tax refunds/incentives and/or veterans benefits

Students who do not identify as heterosexual.

Students who use the Pell Grant and/or student loans to fund their education.

Students who recently experienced adverse circumstances such as:

- Experiencing an increase in rent
- Underpaying utilities or rent
- Moving or moving in with others
- Living in an unsafe environment or in an environment beyond its typical housing capacity
- Receiving calls from debt collectors

Students living in public housing.

Students living on campus.

Students who are working or looking for work.

Students who participate in extracurricular activities.

Students who are no longer considered dependents of their parents.

Students who are not American citizens.

Students who have transferred from another university.

Students who do not live with a partner.

Resources and Culture

Representatives of the university submitted the **Campus Food Aid Self-Assessment Tool (C-FAST)** in fall 2020. C-FAST is a survey-based tool designed to gauge college campus performance in six dimensions: (1) student services and supports, (2) involvement, (3) advocacy, (4) campus culture and awareness of food insecurity, (5) education and training, and (6) research, scholarship and creative works. Campus representatives rated the institution's performance in each dimension using a series of indicators defined within the tool.

Campus Overview

Campus performance was scored on a scale from 1.00 (early action stages) to 4.00 (best practice achieved). The university scored highest in student services and supports, achieving best practice in five associated indicators (mean score = 3.56). The university also scored high in advocacy, achieving best practices in two associated indicators (mean score = 3.50). The mean score for campus culture and awareness was 3.00, followed by involvement (mean score = 2.67), and research, scholarship and creative works (mean score = 2.67). The university showed the greatest opportunity for improvement in education and training opportunities with a mean score of 1.50.

Student Services and Supports

Providing emergency and long-term food and financial services are imperative to reducing student food insecurity and among the most common actions taken by colleges and universities to support students experiencing food insecurity. Locations and methods of aid distribution are important factors ensuring students can access needed aid. In C-FAST, student services and supports were defined as aid available to serve immediate and long-term food security needs of students, which may come in the form of food, financial or other direct aid. Aid distribution included processes for distribution, audiences to whom aid was distributed and effectiveness of distribution methods.

The university achieved best practice in the majority of indicators relating to student services and supports.

Fall 2020 mean C-FAST score (on a scale of 1.00-4.00): **3.56**

MEAN C-FAST SCORE

Best Practices Achieved

Emergency and long-term services and/or supports for students facing food insecurity are:

- **Consistently available**
- **Sufficient to serve all students facing food insecurity**
- **Single, clear and easy to follow (process) for access**
- **Broadly advertised to students on campus using methods of communication that reach all students on a regular basis**
- **Provided by one or more faculty and/or staff members with these responsibilities included in their job description as a primary job responsibility**

Opportunities for Improvement

Current Status: Emergency and/or long-term services and/or supports for food insecure students are available during all hours of university operations.

Next Steps: Partner with campus departments/offices that are active even when the university is not in session to increase accessibility to services and/or supports.

Best Practice: Emergency and/or long-term services are available during all hours of operation and when the university is not in session. Times of availability do not hinder student access.

Current Status: Multiple services and supports for students facing food insecurity are available at differing locations on campus.

Next Steps: Centralize student services and supports, so students can access all resources with a single visit.

Best Practice: Multiple services and/or supports for students facing food insecurity are available at a single location on campus.

Current Status: Services and/or supports for food insecure students are advertised broadly to faculty and/or staff on campus but are not communicated via a method that reaches all faculty and/or staff on a regular basis (hiring orientation materials, campus-wide emails, etc.).

Next Steps: Work with offices that communicate with all faculty and staff to find opportunities to include support information in faculty/staff communication.

Best Practice: Services and/or supports are advertised broadly to faculty/staff using methods that reach all faculty and/or staff on a regular basis such as orientation materials, campus-wide emails or other methods.

Current Status: Available services and/or supports make it possible for students facing food insecurity to meet most of their nutritional needs.

Next Steps: Develop services and/or supports to meet all nutritional needs of students facing food insecurity.

Best Practice: Available services and/or supports make it possible for food insecure students to meet all nutritional needs.

Involvement

Increased involvement from a variety of campus constituents can aid greatly in the effort to minimize student food insecurity. In this study, involvement is defined as individuals and/or groups taking action and the extent to which they are acting to reduce student food insecurity. A strong group of actors from diverse backgrounds on campus can make an effective impact on minimizing student food insecurity.

The university has made progress in multiple areas relating to campus involvement but has not achieved best practices for indicators. Opportunities exist to develop efforts toward the achievement of best practices.

Fall 2020 mean C-FAST score (on a scale of 1.00-4.00): **2.67**

Opportunity for Improvement

Current Status: A formal group(s) of students with a limited impact is involved in addressing student food insecurity.

Next Steps: Support the student group(s) in expanding their impact through partnerships with other organizations, departments or offices across campus.

Best Practice: A formal group(s) of students with a campus-wide impact is involved in addressing student food insecurity.

Opportunity for Improvement

Current Status: Only individual faculty, staff and/or administrators, or an informal group(s) of faculty, staff and/or administrators, are involved in addressing student food insecurity.

Next Steps: Identify faculty, staff and/or administrators currently involved in addressing student food insecurity and present opportunities for them to formalize their involvement.

Best Practice: A formal group(s) of faculty, staff and/or administrators with a campus-wide impact is involved in addressing student food insecurity.

Opportunity for Improvement

Current Status: Individuals and/or groups on campus are working together cohesively to coordinate efforts to address student food insecurity.

Next Steps: Institute a campus policy appointing leadership of student food insecurity efforts to ensure long-term collaboration among involved parties.

Best Practice: An individual, office or other entity is mandated to lead collaboration, and individuals and/or other groups are working cohesively.

Advocacy

Research indicates the importance of having students, faculty, staff and administrators at multiple levels and positions who are aware of student food insecurity and advocate on behalf of student basic needs.

In this study, advocacy is defined as the presence of diverse campus actors who promote awareness and encourage policies/practices to support students facing food insecurity.

The university has achieved best practices in advocacy processes and policies. Opportunities for growth exist relating to the impact of advocacy groups on campus.

Fall 2020 mean C-FAST score (on a scale of 1.00-4.00): **3.50**

Best Practices Achieved

Processes and/or policies on campus (1) support student advocacy, and they are utilized by students across campus and (2) support faculty, staff and/or administrator advocacy, and they are utilized by faculty staff and/or administrators across campus.

Opportunity for Improvement

Current Status: A formal group(s) of students with a limited impact is involved in advocacy for student food security issues.

Next Steps: Seek opportunities to increase the impact of student advocacy through partnerships and campus-wide platforms.

Best Practice: A formal group(s) of students with campus-wide impact is involved in advocacy for student food security issues.

Opportunity for Improvement

Current Status: A formal group(s) of faculty, staff and/or administrators with a limited impact is involved in advocacy for student food security issues.

Next Steps: Seek opportunities to increase impact of faculty, staff and/or administrator advocacy through partnerships and campus-wide platforms.

Best Practice: A formal group(s) of faculty, staff and/or administrators with a campus-wide impact is involved in advocacy for student food security issues.

Campus Culture and Awareness of Student Food Insecurity

Stigma has been recognized as one of the greatest barriers to serving and reaching students facing food insecurity. Creating a culture that accepts and normalizes student needs can help reduce the stigma students face. Additionally, increased campus awareness can be a key element in creating and improving programs for students facing food insecurity. In this study, campus culture indicators determined the extent of actions taken by the campus to improve the pervasive attitudes and beliefs held by those on campus toward students, student food insecurity and food insecurity supports. Indicators also determined the extent of actions taken by the campus to increase awareness of the issue of student food insecurity.

The university has made great strides in multiple areas relating to campus culture and awareness but has not achieved best practices for indicators. Opportunities exist to develop efforts toward the achievement of best practices.

Fall 2020 mean C-FAST score (on a scale of 1.00-4.00): **3.00**

Opportunities for Improvement

Current Status: Efforts or programs to increase student awareness of food insecurity are promoted/run regularly on campus but are shared using methods that do not reach all students.

Next Steps: Identify ways to increase reach of student awareness campaigns through campus partnerships and creative avenues of communication.

Best Practice: Efforts or programs to increase student awareness of food insecurity are promoted regularly on campus and shared using methods that reach all students.

Current Status: Efforts or programs to increase faculty/staff/administrator awareness of food insecurity are promoted/run regularly on campus but are shared using methods that do not reach all faculty/staff/administrators.

Next Steps: Identify ways to increase reach of faculty/staff/administrator awareness campaigns through campus partnerships and creative avenues of communication.

Best Practice: Efforts or programs to increase faculty/staff/administrator awareness of food insecurity are promoted regularly on campus and shared using methods that reach all faculty/staff/administrators.

Current Status: Efforts or programs to reduce stigma of food insecurity and normalize the need for food assistance are promoted/run regularly on campus but are shared using methods that do not reach all students.

Next Steps: Identify ways to increase reach of efforts to reduce food insecurity stigma and normalize the need for food assistance through campus partnerships and creative avenues of communication.

Best Practice: Efforts or programs to reduce the stigma of food insecurity and normalize the need for food assistance are promoted regularly on campus and are shared using methods that reach all students.

Current Status: Efforts to reduce the stigma of services and/or supports for food insecurity are promoted/run regularly on campus but are shared using methods that do not reach all students.

Next Steps: Identify ways to increase reach of efforts to reduce the stigma of food insecurity services and/or supports through campus partnerships and creative avenues of communication.

Best Practice: Efforts or programs to reduce the stigma of services and/or supports for food insecurity are promoted regularly on campus and shared using methods that reach all students.

Education and Training

Education and training of administrators, faculty, staff and students on issues relating to food insecurity have been shown to improve academic outcomes for students facing food insecurity. In this study, education and training indicators encompassed a strong curriculum in hunger and/or food insecurity to help inform students, faculty and staff, as well as call students to action and reduce stigmas and misconceptions regarding hunger and/or food insecurity. Education and training opportunities include academic curriculum, professional development and other non-curricular learning opportunities for administrators, faculty, staff and students.

Opportunity for Improvement

Current Status: An undergraduate course on hunger/food insecurity is not offered.

Next Steps: Incorporate information on hunger/food insecurity in an undergraduate course already taught on campus.

Best Practice: An undergraduate course(s) is offered regularly on a scale that meets demand within institutional constraints.

Opportunity for Improvement

Current Status: A hunger/food insecurity minor is not offered.

Next Steps: Formally or informally incorporate hunger/food insecurity information in a minor already offered on campus.

Best Practice: A hunger/food insecurity minor is offered to undergraduate students.

Opportunity for Improvement

Current Status: A graduate course on hunger/food insecurity is not offered.

Next Steps: Incorporate information on hunger/food insecurity in a graduate course already taught on campus.

Best Practice: A graduate course(s) on hunger/food insecurity is offered regularly on a scale that meets demand within institutional constraints.

The university has many opportunities for growth in education and training relating to food insecurity.

Fall 2020 mean C-FAST score (on a scale of 1.00-4.00): **1.50**

Opportunity for Improvement

Current Status: A hunger/food insecurity graduate certificate is not offered.

Next Steps: Formally or informally incorporate hunger/food insecurity information in a graduate certificate already offered on campus.

Best Practice: A hunger/food insecurity graduate certificate is offered.

Opportunity for Improvement

Current Status: Student education and/or skills training to manage food insecurity are offered but not regularly and/or are only offered to a limited number of students.

Next Steps: Identify resources needed to expand student education and/or skills training in order to meet institutional demands.

Best Practice: Student education or skills training to manage food insecurity offered on a scale that meets demand within institutional constraints.

Opportunity for Improvement

Current Status: Faculty, staff and/or administrator continuing education or professional development offerings on campus food insecurity are available but only taught as part of continuing education or professional development offering on another subject/topic area.

Next Steps: Develop continuing education or professional development offering focused on college student food insecurity, and identify ways to share with faculty, staff and/or administrators.

Best Practice: Continuing education or professional development is offered that meets demand within institutional constraints.

Research, Scholarship and Creative Works

Research, scholarship and/or creative works are primary functions of higher education institutions. By examining food security issues, colleges and universities contribute to the growing body of knowledge aimed to improve awareness, practices and policies addressing food insecurity.

C-FAST indicators included the conduct of research, scholarship and/or creative works relating to food insecurity to add to the body of knowledge on food insecurity and bring attention to the issue through presentations, publications and conversations prompted by research.

The university has made great strides in multiple areas relating to research, scholarship and creative works but has not achieved best practices for indicators. Opportunities exist to develop efforts toward the achievement of best practices.

Fall 2020 mean C-FAST score (on a scale of 1.00-4.00): **2.67**

Opportunity for Improvement

Current Status: Undergraduate research, scholarship and/or creative works on food insecurity engages students in multiple departments and/or disciplines, but there is little collaboration among different departments/disciplines for this work.

Next Steps: Identify a leader in research collaboration on campus, and partner to develop an opportunity for undergraduate research collaboration on food insecurity.

Best Practice: Undergraduate research, scholarship and/or creative works occur in multiple disciplines with interdisciplinary collaboration.

Opportunity for Improvement

Current Status: Graduate research, scholarship and/or creative works on food insecurity engages students in multiple departments/disciplines, but there is little collaboration among different departments/disciplines for this work.

Next Steps: Identify a leader in research collaboration on campus, and partner to develop an opportunity for graduate research collaboration on food insecurity.

Best Practice: Graduate research, scholarship and/or creative works occur in multiple disciplines with interdisciplinary collaboration.

Opportunity for Improvement

Current Status: Faculty and/or staff research, scholarship and/or creative works on food insecurity engages one or more faculty and/or staff but is isolated to a single department or discipline on campus.

Next Steps: Identify or develop an incentive for research collaboration on food insecurity issues, and share with relevant faculty and/or staff.

Best Practice: Faculty and/or staff research, scholarship and/or creative works occur in multiple disciplines with interdisciplinary collaboration.

Recommendations for Next Steps

The university's **Strategic Plan** presents a framework for progress in its mission to (removed to maintain confidentiality). The following recommendations align the evidence-based findings of the college student food insecurity prevalence survey and C-FAST with the goals and objectives of the university's strategic plan.

University Goal – (removed to maintain confidentiality)

Strategic Goal: (removed to maintain confidentiality)

Evidence-Based Recommendation for Next Step

Establish an experiential learning curriculum in hunger/food insecurity for undergraduate and/or graduate students. This can begin with the modification of an existing course to address food insecurity in its course content. Over time, efforts can progress to develop a full course and even an undergraduate minor or graduate certificate.

Example: The Auburn University Hunger Studies Minor emphasizes problem-based learning to engage students representing every discipline – from agriculture to marketing, from finance to design – to apply their major studies in cross-disciplinary classes and interactive coursework to study and address the causes, consequences and responses to hunger. The Hunger Solutions Institute at Auburn University will openly share curriculum information to support the adaptation of a Hunger Studies course and/or minor on new campuses. See appendix for more information.

University Goals – (removed to maintain confidentiality)

Strategic Goal: (removed to maintain confidentiality)

Strategic Goal: (removed to maintain confidentiality)

University Goal – (removed to maintain confidentiality), cont.

Evidence-Based Recommendation for Next Step

Build and strengthen campus relationships through the establishment of a campus food security coalition. Identify faculty, staff and administrators with influence and/or interest in food security issues, and invite them to form a coalition on food security and basic needs. Once a core group has been identified, determine an appropriate route to formalize the coalition within the university's framework to establish and strengthen the influence of the coalition. The development and implementation of a campus action plan can serve as an excellent opportunity to establish member commitment and engagement.

Example: The University of North Alabama (UNA) established a diverse and active coalition to address campus basic needs. Members include representatives from the Office of Student Engagement, the Campus Food Pantry, Dining Services, Housing and Residence Life, Financial Aid, Disability Support Services, Military and Veterans' Services, faculty, a community member, a recent alumnus and a student resident advisor. Regular action items for coalition members have promoted commitment and sustained engagement from members. See appendix for more information.

University Goal – (removed to maintain confidentiality)

Strategic Goal: (removed to maintain confidentiality)

Evidence-Based Recommendation for Next Step

Encourage and/or incentivize student-faculty research collaboration on hunger/food insecurity issues. This research could follow up on student food insecurity issues identified in this report or expand locally, statewide, nationwide or globally. Aim to establish annual support for continued research collaborations.

Example: The Deaton Scholars Program (DSP) engages students from every college and discipline at the University of Missouri in the fight against global poverty and hunger. As DSP participants, students join diverse teams and delve head-first into creative problem solving. With the help of program leaders, students gain hands-on experience proposing, funding and implementing their own solutions. See appendix for information.

Testimony of Rachel Sumekh

Founder and CEO
Swipe Out Hunger

Prepared for the U.S. House of Representatives Committee on Rules
Ending Hunger in America: Hunger on College Campuses

September 8, 2021

STUDENT HUNGER IS REAL. WE CAN HELP END IT.

SwipeHunger.org
818-636-5002
800 Wilshire Blvd
Los Angeles CA 90017

Chairman McGovern, Ranking Member Cole, and distinguished members of the Committee,

I'm speaking to you today on behalf of Swipe Out Hunger and the nearly 1 in 3 American college students who despite experiencing chronic food insecurity show up to class every day¹. Who take placement exams on empty stomachs, write essays and study for finals with minds that work twice as hard to stay focused because as Maslow taught us, there's a hierarchy to our most basic needs. Who despite all the odds and challenges, choose to show up and seek a better life by pursuing their degree. I thank you for this opportunity to help tell their story and to discuss how we can end the crisis of college student hunger once and for all.

For the past 11 years, since the age of 18, I've served as the CEO of Swipe Out Hunger, a national nonprofit founded while I was a student at UCLA. We began as a group of friends who had excess dollars on our meal plans and after months of negotiating, convinced our campus administration to allow students to donate their extra meal points to hungry individuals around our Los Angeles community. It was less than one term before we became aware that our very own peers were struggling with hunger. We began channeling the tens of thousands of dollars in meal points we were collecting into our on campus food bank and in a new program we started— a meal voucher program which gave food insecure students dining hall credits. Now, every student could enter and have a warm, nutritious meal just like everyone else. For us, it was simple – If I have access to incredible dining so I can show up to class able nourished and able to focus why shouldn't my food insecure peers? From its beginnings as a grassroots movement at UCLA in 2010, Swipe Out Hunger has since served 2.5 million nourishing meals across 41 states and more than 142 campuses.

During this time, I've crossed the country visiting campuses and speaking with students at every level of higher education institution our nation offers. From large state schools such as Pennsylvania State University to urban campuses like California State East Bay, to community colleges such as Mass Bay Community College. While I meet with uniquely individual students, staff and faculty on every campus, I have come away with a few universal lessons.

First, despite media narratives to the contrary, our current generation of college students are brighter, more innovative and equipped with a higher level of work ethic than any generation before. According to a 2019 report from the Hope Center, 70% of students who had a basic needs insecurity also were employed². Few stories better illustrate this than Suraiya, a recent graduate from Monroe College in Bronx, NY - Suraiya dropped out of high school, raised three

¹ Goldrick-Rab, S., Richardson, J., Schneider, J., Hernandez, A., & Cady, C. (2018). STILL HUNGRY AND HOMELESS IN COLLEGE. Wisconsin Hope Lab. <https://hope4college.com/wp-content/uploads/2018/09/Wisconsin-HOPE-Lab-Still-Hungry-and-Homeless.pdf>.

² Baker-Smith, C., Coca, V., Goldrick-Rab, S., Looker, E., Richardson, B., & Williams, T. (2020). #RealCollege 2020: Five Years of Evidence on Campus Basic Needs Insecurity. The Hope Center . https://hope4college.com/wp-content/uploads/2020/02/2019_RealCollege_Survey_Report.pdf.

beautiful children while struggling with poverty, food insecurity and domestic violence. Yet despite those challenges and the responsibilities she had to raise her family, Suraiya got her GED, enrolled in college and continued to pursue her dream of one day becoming a homicide detective. During the pandemic, Swipe Out Hunger helped Suraya successfully enroll in SNAP, receiving \$300/mo to support her family while she pursued her degree. I'm so proud to say that just this year, Suraya has been accepted into the NYPD detective academy.

The second truth I have witnessed is that these challenges existed for college students well before the COVID-19 pandemic exacerbated them to an unfathomable level. According to pre-pandemic reports, nearly 1 in 3 or 6.5 million college students experienced food insecurity, while 1 in 5 experienced homelessness or housing insecurity³. When I visited the University of Maryland College Park, just 8 miles from the US Capitol building, I heard first hand the severity of the issue. One student Tania said to me "[Before going to school,] I made sure that I drank a lot of water because it's free and makes you feel fuller. I'm used to powering through the pain."

We know that the level of need has only grown since the pandemic. According to a report by Swipe Out Hunger and Chegg.org, more than half of all college students nationally (52%) visited food pantries during the pandemic to meet their needs and nearly a quarter (24%) have had to take out a loan to cover food costs.⁴

Third, I learned that dedicated staff and administrations are endlessly innovating on nearly every campus nationwide to serve their students in this time of need - despite a lack of governmental support and funding. More than 1,000 campuses from the smallest community colleges to the largest state schools are operating food pantries on their campuses. Staff use a toolbox of direct service and public benefit programs to serve students immediate and long term needs. For example, California State University East Bay (CSUEB) helps more than 1,000 students with SNAP pre-screenings, applications, and reporting each year. The University of Pittsburgh works with a neighboring church to run a food pantry and provide fresh produce, meat and dairy to students; Bucks County Community College students can receive a \$50 grocery store gift card and help from a case manager on accessing other resources.

One such staff member is Waleek Boone, a Student Life Specialist at Medgar Evers College in Brooklyn, NY who has worked around the clock with a team of only three student volunteers to keep the pantry open throughout the pandemic and its darkest days in New York. They distributed thousands of bags of groceries to students, many of whom recently lost their jobs and are struggling with housing insecurity.

³ Goldrick-Rab, S., Richardson, J., Schneider, J., Hernandez, A., & Cady, C. (2018). STILL HUNGRY AND HOMELESS IN COLLEGE. Wisconsin Hope Lab. <https://hope4college.com/wp-content/uploads/2018/09/Wisconsin-HOPE-Lab-Still-Hungry-and-Homeless.pdf>.

⁴ Chegg.org and Swipe Out Hunger. (2020). 2020 state of the STUDENT: Covid-19 & food insecurity. Swipe Out Hunger. <https://www.chegg.org/covid-19-food-insecurity-2020>.

To cite the Hope Center again, 1 in 3 students lost their jobs during the pandemic⁵. Waleek reiterated to us that “They know we’re risking our lives to help serve them. Without the goodwill of these volunteers, however, this lifeline for hundreds would have been forced to close.”

Despite groundbreaking programs, institutions are too underfunded and understaffed to address the level of need on their campus. Pantries struggle with finding space, acquiring refrigeration and purchasing food. Restricted SNAP eligibility makes it burdensome and too time consuming for enrollment assistance. When so many of the support teams on campuses are working for free, there is only so much you can ask of your students or part time staff.

This leads me to my last and most important lesson learned, with the right combination of priorities - college student hunger can truly be solved. How often do we get to say something like that? Despite the challenges that lay ahead, the solutions to ending this crisis and building back a stronger, healthier and more thriving nation are right in front of us. We believe that there are three initial steps that Congressional members can take today to begin this process.

First, we can make the most powerful and effective tool in our arsenal (SNAP) more available and accessible to low-income college students. For too long outdated and draconian eligibility rules made millions of American college students ineligible to access this critical program.

Generally, college students must work 20 hours a week to be eligible for SNAP benefits. For many, meeting this burdensome requirement while also attending school full-time, studying for classes and so on is near impossible. The recent changes by Congress in the Emergency Coronavirus Relief Act, temporarily expanded eligibility to SNAP for more than 3 million students by waiving the onerous work requirement for students with either a \$0 expected family contribution or eligible for work study⁶. These additional dollars have an enormous impact on a student's ability to provide for themselves and their families while performing academically.

Rep. Jimmy Gomez (D-CA) and Sen. Kirsten Gillibrand (D-NY) have introduced the EATS Act, legislation that would make permanent the added eligibility for low-income college students. I would like to personally ask each of you and your colleagues to pass the EATS act today and help bring this essential resource to millions of new students in a time of great need.

Our second recommendation is to learn from our state legislatures across the country for how we can tackle these challenges. Over the last 4 years numerous states have introduced, passed and invested in a program known as Hunger Free Campus. Hunger Free Campus, originally developed and written in the hallway of the California state capitol on the very laptop I’m speaking to you through today, sends funds to public colleges who are already taking action on student hunger on campus. Hunger Free Campus is an incentive bill that has proven to add

⁵ Goldrick Rab, S., Coca, V., Kienzl, G., Welton, C. R., Dahl, S., & Magnelia, S. (2020). *#REALCOLLEGE DURING THE PANDEMIC*. RealCollege. https://hope4college.com/wp-content/uploads/2020/10/Hopecenter_RealCollegeDuringthePandemic_Reupload.pdf.

⁶ Granville, P. (2021, February 3). Congress made 3 million college STUDENTS newly eligible for SNAP food Aid. Here's what must come next. The Century Foundation. <https://tcf.org/content/commentary/congress-made-3-million-college-students-newly-eligible-snap-food-aid-heres-must-come-next/>.

additional ability of campuses large and small to serve their student communities in need. Rather than creating a new program, Hunger Free Campus is built on the foundation that each of our campuses have the answers on how to solve basic needs insecurity, they just need the added capacity and support.

First passed in California in 2017, the Hunger Free Campus Bill was then passed in New Jersey in 2019, and Maryland and Minnesota in 2021. It is currently in the legislative process in Massachusetts, Pennsylvania, New York, North Carolina and states across the country such as Colorado have enacted portions of the program within their departments of higher education.

To date the Hunger Free Campus grant program has distributed more than \$70 million dollars in the last four years to campuses. Our state legislatures have shown that they are willing to heed the call during this emergency and stand by their most vulnerable students. The success of Hunger Free Campus programs have prevented thousands of students from being subject to food insecurity and its impacts. We call on this committee and your colleagues in Congress to create a national Hunger Free Campus program that provides investments to our campuses and their staff working to end hunger.

Lastly, any funding we pass to end college student hunger will simply be a bandaid to the greater crisis which is our severely underfunded financial aid system. We must double pell and provide students, up front, with the dollars they need to succeed academically through a reformed financial aid program and more funding for emergency grants.

When we began Swipe Out Hunger, universities were reluctant to acknowledge and actively denied having food insecure students on their campus. Today, universities from rural community colleges to ivy league institutions are boasting their available pantries and basic needs services. There is no better moment for Congress to take action and finally end the extremely solvable problem that is college student hunger. Thank you for your time and leadership on this critical issue.

The Implications of Food Insecurity at a HBCU (P04-086-19)

Linda Thompson, Chimene Castor, Rajae Gayle, and Allan Johnson

Howard University

Objectives: The objectives of the study were: 1) to determine whether there is food insecurity among matriculating students attending a Historically Black College/University (HBCU), 2) to investigate the associations between food security status and the demographic characteristics (gender, classification, housing status) of students, 3) to examine the relationship of food security status to the consumption of fruits and vegetables (FV), 4) to investigate the association of student food security status with overweight/obesity, and 5) to assess fast food consumption among food insecure students.

Methods: Five hundred Seventy undergrad and graduate students were recruited to participate in an online survey. The survey was voluntary and anonymous. Data were collected via a 20-item survey using Qualtrics, an online software program that allows its users to create and distribute survey instruments. The main survey questions were derived the Six-item United States Department of Agriculture-Adult Food Security Survey Module (USDA-AFSSM). The survey also included questions which measured: height and weight, daily fruit

and vegetable consumption, fast food purchases and potential food pantry utilization. The remaining questions in the survey determined demographic characteristics which included gender, class, meal plan, and housing status.

Results: Data indicated 77.7% (405) of the sample had experienced some level of food insecurity over the last 12 months, whereas 116 (22.2%) were determined to be food secure. The prevalence of the four categories of food security status is shown in Figure 1.

Food insecure students were significantly more likely to purchase fast foods two or more times a week and had significantly lower mean fruit and vegetable intakes than food secure students.

Sophomores were least likely to be food secure (11.1%), while graduate/professional students were most likely to be food secure (37.6%). Students living on campus were found to be more likely to be food insecure.

Conclusions: The present study provides evidence of significant food insecurity. More fast food and decreased fruit and vegetable consumption was found among the food insecure vs food secure. Food security on college campuses bears further investigation.

Funding Sources: Howard University.

FEED *the* PACK

THE FOOD PANTRY AT NC STATE

The mission of the Feed the Pack Food Pantry at NC State is to help meet the food needs of all members of the NC State community with dignity and respect.

How We Began...

Students, faculty, and staff from across the university began recognizing the amount of food insecurity experienced at NC State in the spring of 2012. A steering committee was formed to research other college food pantries in the area and determine the feasibility of opening one at NC State. After realizing the great need for a pantry at NC State, the steering committee worked on gathering donations and developing a Student Leadership Team that would run the pantry's operations while the steering committee was transformed into an Advisory Board. The first space in 379 Harrelson Hall was donated by NC State Facilities, and the initial funding for our shelving came from Rodgers Construction—the company that built Talley Student Union.

The original location of the pantry was in a small classroom, 379 Harrelson Hall. In 2015, Feed the Pack had a brief seven month stay in 127 Carmichael Gymnasium. In December 2015, Feed the Pack found themselves moving to another temporary location in 1333 Broughton Hall. Finally, in August of 2018, Feed the Pack made its final and hopefully permanent move to the Quad Commons, a location that was previously a C-Store.

Feed the Pack first opened its doors to students, faculty, and staff in November 2012. Since that time, it has served over 16,000 visits to the pantry and given out over 325,000 pounds of food. Countless student organizations, individuals, departments, offices, and community partners have helped Feed the Pack reach its goals over the past eight years.

College Students and SNAP: The New Face of Food Insecurity in the United States

Over the last decade, multiple studies of food insecurity among college students have found rates from 20% to more than 50%, considerably higher than the 12% rate for the entire US population.

Reasons for higher rates of food insecurity among college students include a growing population of low-income college students, high college costs and insufficient financial aid, more financial hardship among many low- and moderate-income families, a weak labor market for part-time workers, declining per capita college resources, and Supplemental Nutritional Assistance Program (SNAP) policies that specifically exclude many college students from participation.

This essay reviews the causes and consequences of food insecurity on campus, explores reasons for the low SNAP participation rate, and describes how campuses have responded to food insecurity. It summarizes federal, state, and local changes in SNAP policies that can facilitate college student participation and retention and suggests strategies for more robust and effective university responses to food insecurity, including SNAP enrollment campaigns, a stronger role for campus food services, and a redefinition of the goals and purposes of campus food pantries. (*Am J Public Health*. 2019;109:1652–1658. doi: 10.2105/AJPH.2019.305332)

Over the last decade, multiple studies of food insecurity among college students have found rates ranging from 20% to more than 50%, depending on the population studied, sampling methods, and measures used to define food insecurity.^{1–4} These rates are considerably higher than the 12% food insecurity rate that US Department of Agriculture (USDA) reported for the general US population in 2017.⁵

At the end of 2018, the US Government Accountability Office (GAO) released a report on food insecurity among US college students. The GAO estimated that although approximately 7.3 million US college students had household incomes below the level that qualifies them for eligibility for the Supplemental Nutritional Assistance Program (SNAP; formerly known as Food Stamps), only 2.26 million (31%) were actually enrolled in SNAP.⁶ Moreover, a recent survey of more than 86 000 students at 123 colleges and universities found that just 20% of food-insecure college students received SNAP.¹ These rates are far lower than the 85% participation rate for SNAP-eligible individuals in the general US population in 2016.⁷ What accounts for the high levels of food insecurity among college students and why are so few students enrolled in SNAP, the nation's largest food benefit and poverty reduction program?

To answer these questions and suggest solutions, we summarize evidence from recent literature reviews and multicampus studies

of college food insecurity,^{1–4} public and media reports on campus food insecurity,^{8,9} our own experience studying and addressing food insecurity for 10 years at multiple universities, and our participation in national coalitions that seek to reduce college food insecurity.

Consistent with the GAO report,⁶ we demonstrate that college students are a new population at risk for food insecurity, joining other demographic groups such as single-parent households, those living in poverty, recent immigrants, low-wage workers, and older people. By analyzing the social, political, and economic forces that have put college students at risk for food insecurity, we hope to inform efforts to ensure that SNAP and other responses to food insecurity address the changing face of hunger and food insecurity in the United States.

WHY ARE SO MANY COLLEGE STUDENTS FOOD INSECURE?

Five trends explain the rise of food insecurity among college students; together, these

constitute the “new economics of college,” which we argue is the fundamental cause of high college food insecurity.

First, a much higher proportion of college students face financial challenges today than in the past. By 2016, 39% of college students were from households with incomes at or below 130% of the federal poverty line, an increase from 28% in 1996.⁶ In the past, traditional college students enrolled in college full-time immediately after high school, depended on parents for financial support, and worked part-time or not at all during the school year. Now, such students account for less than a third of college enrollment.⁶ In 2016, about half of all undergraduate students were financially independent from their parents. One third attended public 2-year colleges, also known as community colleges. More than a fifth had dependent children themselves, and 14% were single parents. A quarter worked full-time. Overall, 71% of college students had at least 1 of the characteristics of “nontraditional” students,⁶ showing that the more diverse populations that

doi: 10.2105/AJPH.2019.305332

have entered college in higher numbers have now become the new collegiate norm.

Second, college has become more expensive. Between 1989 and 2016, the price for a 4-year degree doubled, even after inflation.¹⁰ Between the 2005–2006 and 2015–2016 school years, prices for undergraduate education at public institutions rose 34% and at private nonprofit institutions by 26%, after adjustment for inflation. Living expenses—including rent, food, transportation, books, and supplies—are also rising rapidly. Although the calculation of a student's financial need includes estimated living expenses, those estimates are often unrealistic and financial aid is rarely sufficient to cover them.¹¹

Third, as the proportion of students from low-income households has increased, the purchasing power of the Pell Grant, the main federal subsidy for low-income undergraduate students, has declined. When the program started in 1972, Pell Grants covered more than four fifths of the cost of attending the average 4-year public university. Now Pell Grants cover less than one third of the costs. The original Pell Grant covered all costs of the typical community college; today it covers about 60%.¹¹ Overall, the growth of federal Pell funding has not kept pace with the rise in the number of recipients, and out-of-pocket college costs have risen dramatically.

Fourth, it is now harder to pay for college by working. The value of the minimum wage has declined substantially, and college students are competing in a labor market where people are often underemployed and wages are low. Coupled with rising college prices, students must work nearly full-time to afford

full-time community college.¹¹ To avoid paying for benefits, today's employers, including universities, often divide full-time hours across multiple part-time workers, contributing to the growing number of students working several jobs to make ends meet. This can be especially hard because employees with class schedules (and often child care schedules) may find employers reluctant to offer the flexibility they need. When shifts change, students must adjust too, even if it means missing class. Students, then, are often forced to choose between work and school, which can lead to lost wages or lower grades.¹¹

The Federal Work-Study (FWS) program was supposed to help students work on campus rather than off, but the program is significantly underfunded and poorly allocated, resulting in insufficient resources for community college students. When students are fortunate enough to have FWS support, they often receive too little pay to make that their only job.

Finally, today's public colleges have less money to put toward supporting students and providing affordable food and housing. State funding for higher education has decreased by 25% per student over the last 30 years, and states have cut \$9 billion from higher education in the last 10 years alone. In public universities, budget cuts have led to significant reductions in student services.¹¹

WHY ARE SO FEW STUDENTS ENROLLED IN SNAP?

SNAP is widely regarded as the nation's first—and most important—line of defense against hunger. Had SNAP kept pace

with changing collegiate demographics and economies, the problem of rising college food insecurity might have been prevented or contained.

Why are so few seemingly eligible college students receiving SNAP? The answer lies in the program's rules and an explicit intention to keep college students from using the program. In 1980, responding to complaints that college students from middle-income and wealthy families were qualifying for the program by establishing independent households, and to what the *New York Times* described as the appearance “that food stamps were fueling the iconoclastic culture and radical politics of the nation's youth,” Congress declared that full-time students, defined as students attending classes at least half-time, were ineligible for food stamps unless they were working 20 hours a week or more or qualified for 1 of several possible exemptions. Four fifths of the 250 000 students then in the program lost their benefits.¹²

Students can be included on their parents' SNAP grants only if the family shops and eats as a single unit and students eat at least half their meals at home, a rule that may not fit the schedules of commuter students, who may sleep at home but study, work, and socialize elsewhere. Moreover, the GAO report notes that “Most students we identified as not receiving SNAP were financially independent and could likely apply for SNAP as their own household; dependent students who are potentially eligible can only receive SNAP as part of their parents' household.”^{6(p18)}

Unless they have children, part-time students are considered “able-bodied adults without dependents” and subject to the stringent work requirements

introduced with the 1996 Welfare Reform. Able-bodied adults without dependents are eligible for only 3 months of SNAP benefits out of every 36 months unless they are working 20 hours a week or more or are engaged in a recognized SNAP Employment and Training Program.¹³ For students with and without dependents, the 20-hours-per-week rule creates many challenges, in part because it is often difficult to obtain 20 hours from a single employer and because work interferes with academics.

Even though the rules do allow some full-time students to receive SNAP, they are written in a confusing manner that leads many to mistakenly conclude that students simply are not eligible^{14,15} (see the box on page 1654). The main message sent by the USDA and many intermediaries, including colleges, is that most college students are not eligible for SNAP. A search for “college students” on the USDA Food and Nutrition Service SNAP Web page finds the statement that “Most able-bodied students ages 18 through 49 who are enrolled in college or other institutions of higher education at least half time are not eligible for SNAP benefits.” The site then lists 6 categories of “exemptions,” 1 of which has 5 subcategories.¹⁵ Students who persist beyond the initial rebuff must assess their situations considering these categories. Thus, it is no surprise that many eligible students do not know they are eligible. The GAO study found that both students and college officials expressed confusion and uncertainty about the student eligibility rules.⁶

Even when students believe they are eligible for SNAP, stigma and the daunting process of application and enrollment may deter them from applying.¹⁶

EXEMPTIONS FOR SUPPLEMENTAL NUTRITION ASSISTANCE PROGRAM (SNAP) QUALIFICATIONS FOR COLLEGE STUDENTS: UNITED STATES, 2019

Students who meet the income and assets limits, immigration status requirements, and household qualifications, and are enrolled in college at least half-time may qualify for SNAP through any ONE of these criteria:

- Are responsible for a dependent child younger than 6 years
- Are responsible for a dependent child between the ages of 6 and 12 years for whom they have trouble securing child care
- Work at least 20 hours per week in paid employment
- Receive Temporary Assistance for Needy Families (TANF) cash assistance or services
- Are aged 17 years or younger or aged 50 years or older
- Are single parents enrolled full-time and responsible for a dependent child aged 12 years or younger
- Participate in a state or federally funded work study program
- Participate in an on-the-job training program
- Are in school through a state or federally approved employment and training program
- Are unable to work for health reasons

Source: Welton¹⁴ and Supplemental Nutrition Assistance Program.¹⁵

And even when they apply, misunderstanding of the application by students or errors on the part of caseworkers may result in denial of students who are actually eligible.¹⁷

Because students receiving FWS are exempt from work requirements, in theory, FWS-eligible community college students facing a shortfall of funds for food should be able to obtain SNAP. In practice, however, only a fraction of students eligible for FWS actually have it, and many thus miss this exemption. In this way, SNAP rules restrict rather than enable food-insecure students' access to food.¹⁴

In sum, a problem created by a significant policy success—expanded enrollment of low-income students in college—was followed by the failure of federal policy to address 2 other trends: rising college costs and reduced financial assistance. These changes have led to growing food insecurity for college students, an example of a social problem exacerbated by policy-induced obstacles. The situation was further aggravated by a policy fix for

an ideologically constructed problem: deterring “undeserving” college students from enrolling in the food stamp program. That this stereotype is increasingly false as the new economics of college unfolds has not altered the policy debate. In 1980, and still today, the portrayal of food-insecure college students as undeserving of help fits into a wider conservative discourse that seeks to separate the “deserving” from the “undeserving” poor and then stigmatize the latter.¹⁸

WHY DOES COLLEGE FOOD INSECURITY MATTER?

For some observers, concern about college food insecurity is much ado about nothing. If some college students occasionally run short of food money, choose to go to a movie instead of buying food, or regularly fill up on ramen noodles, what's the harm? As James Bovard, a libertarian newspaper columnist, asks, did those students reporting food

insecurity “oversleep and miss breakfast?” He observes that “redefining hunger as abstaining from second servings makes for a push-button crisis.” He concludes “a national goal of ‘no college kid hungry’ would bloat more students at a time when obesity wreaks more havoc than a few missed meals. In the long run, obliterating individuals' responsibility for feeding themselves is the worst possible dietary outcome.”¹⁹

More broadly, a national discourse that demonizes the poor, recent immigrants, and people of color and discourages public investments that buffer the adverse consequences of growing income inequality²⁰ reinforces skepticism at the idea that college students might be struggling with food insecurity.

Despite political criticism of SNAP, public health evidence suggests that food insecurity contributes to adverse outcomes for college students. First, it worsens several health conditions. Gundersen and Ziliak's recent review of food insecurity and health²¹ found that in adult

populations, food insecurity was associated with diabetes, obesity, depression, decreased nutrient intakes, and poor self-rated health status. They conclude that a “compelling picture of food insecurity's association with negative health outcomes has emerged based on a wide array of data sets and empirical methods.”²¹ (pp1835–1836) Food insecurity contributes to obesity, especially for females, by encouraging consumption of lower-cost, calorie-dense food.²² Although the causal relationship between food insecurity and health is clear for many adverse outcomes, for others, data are lacking or the relationships may be reciprocal. Depression, for example, can be both a cause and consequence of food insecurity.²¹

Second, food insecurity appears to be associated with negative academic outcomes, a primary concern for universities. Several studies have found that food-insecure students are more likely to have low grade point averages, delayed graduation, or higher dropout rates than their food-secure peers.^{2,23,24} Other studies show that food-insecure students report higher levels of stress—itsself a barrier to academic success.²⁵ Because most of these studies are observational and represent a single point in time, the direction of causal pathways as well as the strength of the association in different student populations require further elucidation.

Given the reciprocal relationships between education and health, reducing food insecurity may have a synergistic impact on both health and educational outcomes. College completion is a powerful predictor of longevity, lifetime health, healthier behaviors, income, and life satisfaction.²⁶ The precautionary

principle, a basic public health value, suggests that in the face of compelling but uncertain evidence, health professionals should take action. This would seem to justify acting to reduce food insecurity on college campuses on the basis of the strong evidence of the health benefits of a college degree²⁷ and emerging albeit not yet definitive indications that food-insecure students are less healthy and less likely to complete college than their food-secure peers.

Further consideration of the most appropriate methods for assessing campus food insecurity is warranted. Some investigators using data from the Current Population Survey, which is based on household data rather than student surveys, have identified lower levels of food insecurity.²⁸ However, as the GAO noted,⁶ college students may not be well captured in those surveys, especially if it is their parents doing the reporting, the students meet the SNAP definition of independence, or (for students with unstable housing) they lack an established household with which to share food. The consistency of results across campus studies in different settings, time periods, and using different methodologies suggests that the findings on the magnitude of food insecurity and its impact on academic success and well-being warrant policy attention. Finally, the lifetime health, economic, and social benefits of college²⁷ justify public investment in programs that increase the attainment of degrees, including by ensuring that investments in financial aid are not undermined by shortfalls that leave students without enough to eat.

HOW DO CAMPUSES RESPOND TO FOOD INSECURITY?

In response to the growing recognition that many college students are food insecure, universities have launched a variety of interventions. The most common responses include creation of campus food pantries, meal vouchers for free meals in campus cafeterias, emergency assistance funds, and programs of outreach and information to assist students to obtain public benefits and community resources, including SNAP. Less common are garden programs, community-supported agriculture, farmers market-based food boxes, and projects associated with the diversion of food waste.

Food Pantries

Food pantries are spaces on campus where students can pick up free food to prepare and consume. A 2016 scan of student emergency aid provisions in higher education by the National Association of Student Personnel Administrators (NASPA) found that 45% of the 706 responding institutions, and 55% of public 2- and 4-year colleges, had food pantries.²⁹ They were the second most common form of emergency assistance in public colleges, after emergency loans, and their numbers have grown rapidly.^{29,30}

Pantries are appealing to both administrators and student groups seeking to respond to hunger. They are relatively easy and inexpensive to establish; 79% of the food pantries reported in the NASPA scan had annual budgets of less than \$10 000.²⁹ They have high visibility and symbolic resonance, allowing the institution to assert its responsiveness. They provide multiple avenues for students, staff, and faculty to get

involved: raising funds, securing donations, volunteering time. In the NASPA survey, food pantries were far more likely than any other form of emergency aid to rely upon campus fundraisers or funds allocated by a student government.²⁹ Food pantries are also magnets for outside donations. They impose a limited administrative burden, and they can expand or shrink with need. In many communities, a local food bank can make food available at deeply discounted prices.

Meal Vouchers

Meal vouchers provide students with free or subsidized meals in campus cafeterias. Vouchers are funded by the college itself, donated by campus food vendors, or given by other students through 1 of several “swipe-card” programs in which students donate unused meal-plan meals to other students. The national organization Swipe Out Hunger now partners with 50 campuses and reports having supplied 1.7 million meals since its creation.³¹ Arrangements differ substantially across campuses, but participation by the food service vendor is necessary.

Some colleges also make free food available to students via an app that identifies campus meetings that offer refreshments or by establishing a central location where leftover refreshments can be distributed. Like food pantries, meal donation programs provide only immediate and temporary relief. Recognizing this limitation, Swipe Out Hunger has crafted and promoted state legislation to encourage campuses to increase student access to SNAP and other public benefits.³¹

Emergency Funds

Emergency funds offer cash assistance or loans to help students prevent utilities cutoffs, pay for rent or emergency health care, and sometimes to purchase food or transportation. The goal is to address life circumstances that threaten to interrupt progress toward a degree. In the NASPA study, emergency loans were the most common form of emergency aid, typically offered to tide a student over while waiting for promised financial aid, but many institutions now also offer direct grants.²⁹ Other studies confirm the importance of emergency loans.¹⁷ Both Wisconsin and Minnesota now provide state support for college emergency loan grants.³²

Access to Benefits

Access to benefits, programs to educate students and college staff about SNAP, the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC), and other public programs constitute another way in which campuses can assist students in need. Programs such as Single Stop and The Benefits Bank screen students for a wide array of public assistance and help them to apply, as well as assist them in the preparation of tax returns. Since Single Stop USA began its education program in 2009, primarily on community college campuses, it has helped 269 272 students obtain \$548 million in benefits and tax refunds.³³ An evaluation of Single Stop’s Community College Initiative by the Rand Corporation found that Single Stop use was associated with increased college persistence, defined as attempting more credits, earning more credits, and reenrolling for the next semester.³⁴

TABLE 1—Overview of Proposed Changes in Policy and Institutional Practices to Increase College Student Enrollment in Supplemental Nutrition Assistance Program (SNAP) and Reduce Campus Food Insecurity: United States, 2018–2019

	SNAP-Specific Changes	Other Changes
Federal		
Longer term	<p>Eliminate college student exemption for those who otherwise meet SNAP eligibility requirements.</p> <p>Align SNAP and Federal Work-Study and other financial aid eligibility requirements to reduce application and enrollment burden on colleges and students.</p>	<p>Create law and federal funding to provide subsidy for healthy affordable food on college campuses.</p> <p>Allocate funding for hunger-free campuses in Higher Education Reauthorization Act.</p> <p>Expand school lunch and breakfast programs from public schools to public universities.</p>
Shorter term	<p>Define college study as “training” or “work” for purpose of SNAP eligibility for full- and part-time students.</p> <p>Reduce work requirement for SNAP eligibility from 20 h per week to 15 h per week.</p> <p>Provide federal incentives for states and localities to move to electronic application and processing of SNAP benefits, to enable more time-pressed and technologically savvy college students to enroll.</p> <p>Support SNAP demonstration projects on college campuses that increase access to healthy food.</p>	<p>Increase Federal Work-Study funding to better meet needs and make more students eligible for SNAP.</p> <p>Encourage universities to distribute Federal Work-Study grants to maximize enrollment of eligible recipients in SNAP.</p>
State and local	<p>Designate community college enrollment as meeting the employment and training requirements for SNAP,^a using regulation rather than legislation as permitted by a federal law, the Perkins Career and Technical Education Improvement Act of 2006.</p> <p>Plan state- or municipal-wide SNAP education and enrollment campaigns that denormalize stigma and promote enrollment of eligible individuals.</p>	<p>Increase state funding for work-study</p> <p>Contribute state or local funding to hunger-free campus acts.^b</p> <p>Encourage on-campus restaurants and cafeterias to accept CalFresh (SNAP in California) benefits and to provide designated funds for on-campus food pantries.^c</p> <p>Provide state support for emergency loans to students.^d</p> <p>Require each campus to ensure that at least 1 staff member is designated to help students enroll in SNAP.^e</p>
University	<p>Launch university-wide SNAP education and enrollment campaigns that denormalize stigma and promote enrollment of eligible students using campus e-mail, text messages, classroom announcements, listing on syllabi, and peer outreach programs.</p> <p>Assess student food insecurity at time of registration and financial aid distribution and link students with needs to services.</p> <p>Train student-services personnel to identify food-insecure students and assist them to apply for and enroll in SNAP.</p> <p>Train students and faculty to assist food-insecure students to enroll in SNAP.</p>	<p>Designate a single campus official to take responsibility for assessing and addressing food insecurity and other social needs.</p> <p>Coordinate and integrate food security programs with other basic-needs initiatives such as housing assistance and homelessness prevention, emergency assistance, child care, and mental health services.</p> <p>Distribute College Work Study strategically to increase the number of students who achieve SNAP eligibility through participation in state or federal work study. Even a single hour each week of Work Study qualifies students for an exemption to the blanket ineligibility, but colleges have typically not distributed these very limited Work Study resources widely.</p> <p>Make food pantries hubs for connecting food-insecure students to the multiple services they need.</p> <p>Require university food service vendors to contribute to reducing food insecurity.</p> <p>Bring Single Stop or The Benefits Bank to campus to provide comprehensive benefits screening for students.</p> <p>Engage faculty, student-services staff, and student leadership and peer programs in active campaigns to destigmatize food assistance and promote participation.</p>

^aMassachusetts and Pennsylvania already do this.

^bCalifornia does this.

^cCalifornia has done this.

^dWisconsin and Minnesota do this.

^eCalifornia and New Jersey provide financial incentives for colleges to do this.

Other campuses have partnered with The Benefits Bank to use online screening software to conduct comprehensive screening and assistance, with similar findings of positive impact on academic progress toward a degree.³⁵ California and New Jersey have passed legislation—originally designed by Swipe Out Hunger—that provides incentives for campuses to ensure that at least 1 staff member is designated to help students enroll in SNAP.³²

Campus responses to student food insecurity include both top-down and bottom-up actions—and some hybrid models. Students have led most of the meal donation projects and have encouraged campus food service providers to enable such donations. Students at Spellman and Morehouse Colleges in Atlanta, Georgia, for example, recently staged a successful hunger strike to persuade college administration and the vendor Aramark to permit donations of meal-plan swipes.³⁶ The City University of New York organized a Campus Food Security Advocate Program that trained and deployed undergraduate students to conduct outreach and raise awareness of food insecurity on 2 campuses.³⁷ The students then organized food justice clubs that continue the work.

RECOMMENDATIONS

Recent attention to college food insecurity by policymakers, media, students, and higher education leaders has led to a robust portfolio of policy recommendations at the federal, state, local, and university levels.^{1,3,4,6,11,14,16,17,29–31,34,36–40}

We summarize these in Table 1, identifying recommendations at each level in 2 categories. The left column shows changes that contribute to the broad policy goal of

maximizing enrollment of food-insecure college students in SNAP, and the right column shows changes in policies and institutional practices that address other influences on college food insecurity.

Overall, these recommendations suggest that government and universities have a wide menu of options they can pursue to increase the low SNAP enrollment rates of low-income, often food-insecure college students. Table 1 distinguishes between federal policy changes to increase college students' access to SNAP that seem feasible to pursue in the short run—that is, in the current political climate of conservative opposition to safety net programs—versus the longer run. Other proposed changes will require deeper changes in the federal policy climate but may be pursued now at the state and local level, setting the stage for federal action at a later date.

In our experience, most colleges and universities in the public sector are willing to embrace some of the policy and programmatic changes listed Table 1, actions that can lead to further campus mobilization and measurable progress toward raising awareness and reducing campus food insecurity. There is more work to be done to engage private nonprofit and for-profit universities, which together enroll about 1 in 4 students.

Ultimately, the recommendations summarized in Table 1 provide a starting point for a national dialogue among higher education leaders, student groups, and advocates about a comprehensive, coordinated policy agenda that, we propose, could seek to end campus food insecurity in the next 5 years. Such an ambitious but feasible goal could encourage proponents to set priorities, establish effective

alliances and partnerships, and help update SNAP for the 21st century.

The recent introduction of federal legislation to enable more low-income college students to enroll in SNAP and increase awareness of the program,⁴⁰ coupled with state-level action in Pennsylvania and Massachusetts³² to designate all community college students as meeting SNAP training and employment requirements, show that some public officials are ready to act on this issue. They also provide an opportunity to engage college students in education and advocacy for such policy changes.

One key task is to move beyond the appealing but misguided belief that simply expanding college food pantries can end campus food insecurity. Pantries play an important role in addressing the acute, immediate needs of food-insecure students, but they do nothing to address the underlying cause: what we have labeled the “new economics of college” that make it harder for many college students to meet their basic needs. At worst, pantries relieve pressure for more fundamental solutions. Moreover, as a recent review noted, “not a single study has examined the effectiveness of food pantries at decreasing food insecurity on postsecondary education institutions.”^{3(p1788)}

Because food pantries are often the first point of contact between food-insecure students and university resources, they can become hubs for screening and enrolling eligible students in SNAP and other public benefits, publicizing affordable meals on campus, and engaging students in organizing for food justice as well as distributing food. By considering food pantries as the starting point rather than the

totality of a comprehensive response to food insecurity, advocates of ending food insecurity among college students—and other populations—can contribute to more sustainable solutions.

To implement these changes in policy will require a broad coalition of students, faculty, public health, higher education and food justice advocates, public officials, and social justice organizations. This coalition can frame the effort to end food insecurity among college students and fulfill the promise of SNAP as an integral part of related movements for equitable access to higher education, reductions in income and wealth inequality by race/ethnicity and class, improved well-being for all college students, and a food system that can ensure food security and dietary health for all Americans. **AJPH**

CONTRIBUTORS

N. Freudenberg and J. Poppendieck wrote the first draft, and all 3 authors reviewed and revised subsequent drafts and the final draft.

ACKNOWLEDGMENTS

Our work on college food insecurity has been supported by several foundations, including the Carroll and Milton Petrie Foundation, the Jewish Foundation for the Education of Women, the Robert Wood Johnson Foundation, and the ECMC Foundation.

We also gratefully acknowledge the contributions and insights from our colleagues at City University of New York and Temple University and the many students, faculty, and university staff from around the country who have educated us about campus food insecurity.

CONFLICTS OF INTEREST

Sara Goldrick-Rab is also chief strategy officer for emergency aid at Edquity, a private company, where she is a paid consultant and holds stock. The terms of this arrangement have been reviewed and approved by the Temple University Human Participant Review Board. Edquity played no role in the preparation or review of this manuscript.

U.S. HOUSE OF REPRESENTATIVES
COMMITTEE ON RULES
EST. 1789 | JAMES P. McGOVERN (MA-2), CHAIRMAN

U.S. HOUSE OF REPRESENTATIVES

Committee on Rules

ROUNDTABLE: “Ending Hunger in America: Examining the Role Schools Play in Ending Hunger and Improving Nutrition”

September 15, 2021

United States House Committee on Rules
Ending Hunger in America: The Role of Schools in Ending Hunger and Improving Nutrition
September 15, 2021

WRITTEN TESTIMONY

DENISE FORTE

INTERIM CEO OF THE EDUCATION TRUST

WRITTEN TESTIMONY

Chairman McGovern, Ranking Member Cole and members of the Rules Committee, thank you for the opportunity to testify on the issue of childhood hunger and improving access to nutritious food in our schools. My name is Denise Forte, and I am the Interim CEO of The Education Trust, a national nonprofit organization dedicated to closing opportunity gaps in education that disproportionately affect students of color and students from low-income backgrounds. I also was a congressional staffer for 20 years, most recently as the Staff Director for the Education and the Workforce Committee under Bobby Scott. In my early years on the Committee, I led a number of child nutrition reauthorizations, working closely with the House Hunger Caucus under Chairman McGovern's leadership, so I am very honored to be asked to share with you The Education Trust's thoughts on an issue that is near and dear to my heart.

Over the past year and a half, our nation has faced unprecedented challenges. From the COVID-19 pandemic and its devastating impact on our country's personal and economic health, to our long-awaited national reckoning with the realities of racism and police brutality, the inequities in our society have never been more apparent. Amid these ongoing national struggles and the outsized impact on communities of color and low-income communities, The Education Trust has worked to combat the inequities in our schools.

During COVID-19 school closures, Black, Latino, and Native American students have disproportionately suffered from the negative effects of the pandemic. While remote learning became the primary means of educating our children, Black, Latino, and Native American students had [less access](#) to devices and home internet service. Additionally, students of color more often had teachers with less support to execute online learning, parents whose jobs did [not allow for](#) telework or time to assist with schoolwork, and [more](#) socioemotional stressors than their White counterparts. This has contributed to [disproportionate amounts](#) of unfinished learning experienced by students of color. As we have worked to stem inequities in education over the past 18 months, it has become clear that we must also address other fundamental issues at the intersection of all the challenges affecting students in this country, including students who are experiencing homelessness, which is why it's great you have Barbara Duffield here, and the issue that brings us together today: childhood hunger and food insecurity.

Research has shown that hunger is deeply detrimental to learning. Properly nourished children are able to [more fully and actively participate](#) in school, which not only benefits them as students, but also benefits their peers and the entire school community. A healthy eating environment teaches children good nutrition and the elements of a proper diet, which can have [positive effects](#) on children's eating habits and physical well-being throughout life.

We have also learned that, at its core, food insecurity is a racial justice issue. Even before the pandemic, people of color were [disproportionately](#) surrounded by food deserts. Only 8% of Black Americans [have a grocery store](#) in their census tract, and 24% of Black Americans, 17% of Latinos, and 13% of Asian Americans [do not own cars](#), making grocery shopping more difficult and more time-consuming. In addition, individuals in communities of color have to travel [farther](#) to food stores than individuals in majority White communities and have access to fewer healthy, high-quality food options than White families. These racial disparities in food access have endured over decades and are a product of systemic racism and many of the same structural barriers that affect communities of color in healthcare, education, housing, and the workforce.

The pandemic has laid bare the many challenges that are present in our country's safety net and that have exacerbated food insecurity among communities of color. Hunger levels at the beginning of the pandemic were the highest they have ever been, and during the course of the last 18 months, the hunger epidemic has disproportionately affected communities of color. Two in five [Black and Latino households](#) (nearly 40%) with children struggled to put food on the table at the beginning of the pandemic. Last fall, The Education Trust-New York polled parents in the state of New York and found that [40% of parents](#) skipped or reduced the number of meals they consumed personally because of the pandemic. In addition, according to data released last week by USDA, the gap between White and Black households experiencing food insecurity widened during the pandemic.

To help stem the tide of rising childhood hunger, the country came together to deploy unprecedented resources to ensure students and families in need have sufficient access to nutritious food. The Pandemic Electronic Benefits Program (P-EBT) [provided essential benefits](#) to over 8 million families with children while schools were closed last school year. These Pandemic EBT benefits reduced food hardship experienced by low-income families with children and [lifted at least](#) 2.7 to 3.9 million children out of hunger. The Department of Agriculture expanded eligibility for the Supplemental Nutrition Assistance Program (SNAP), which has long been essential to ensuring many families have food on the table, alongside a 15% increase in maximum benefits. More recently, since the [Child Tax Credits payments began](#), the number of families reporting they do not have enough to eat dropped by 3.3 million.

These programs have played a critical role in stemming the rise of childhood hunger and mitigating the disproportionate impact of the pandemic on students and families of color experiencing food insecurity. Unlike in past recessions, food insecurity [did not increase](#) overall between 2019 and 2020.

But the work is not over, and the fight has never been more important. As school doors re-open this school year, [1 in 6 children](#) may be hungry as they return to school. The Biden-Harris administration has taken additional steps to combat the issue of food insecurity by [reimbursing](#) schools and childcare centers for free meals for all students this year. Additionally, the House Committee on Education and Labor last week recognized the need to remove structural barriers for students and families in the Build Back Better Act. The bill would extend and expand Summer EBT, expand student eligibility for school meals, and create a Healthy Foods Incentive demonstration pilot. The bill also proposes that local education agencies conduct Medicaid direct certification so all students who participate in Medicaid can automatically receive free or reduced-price meals.

Now is not the time to lose momentum. We must build on the successes of the government's response to the COVID-19 pandemic over the last year to ensure all students have sufficient access to quality and nutritious food.

To end hunger, we need bold ideas and a national commitment to achieve that critical goal. We need to be able to share best practices and innovation. A White House Conference can help us do that. Just as the series of Children's Conferences hosted by U.S. presidents from President Roosevelt to President Nixon sparked real change, so too can a conference to catalyze support to end hunger. The last such Children's Conference, held in 1969, sparked the creation of critical programs we still rely on today, but we need new commitments to meet this moment. A national conference will help create critical partnerships, bringing together stakeholders from all the sectors that have a role to play in ending hunger. Together, they can foster the next big ideas.

We need to double down on what works, including permanently expanding and extending summer EBT. Meals provided at school, while absolutely essential to student success, cannot alone solve child hunger issues and bridge existing inequities in access to food. Students need access to nutritional supports

before, during, and after the school day, including on weekends. Efforts in this area must both improve and expand access for students to participate in the school meal programs as well as make it easier for community-based organizations to provide meals to children and students during out-of-school time. Permanently extending and expanding Summer EBT can ensure that more children have access to healthy food during the summer months, and more families will take advantage of the program if there are coordinated efforts to provide families with information about it.

One way to redouble our efforts is to begin to address longstanding silos between education, agriculture, healthcare, and hunger. For example, in many states, despite shared goals of providing adequate nutrition to every child, education and nutrition data systems are not coordinated. During the pandemic, this created barriers to implementing Pandemic EBT. However, in states such as Michigan, we have a roadmap to fixing this coordination issue and removing barriers to the distribution of benefits. As a result of the Michigan Department of Education's proactive efforts to share complete education and nutrition data with the Michigan Department of Health and Human Services, the state was able to quickly distribute P-EBT benefits to families in need. While 34.5% of SNAP users [reported](#) skipping meals nationwide, only 25.4% of P-EBT recipients in Michigan reported skipping meals.

Another example comes from Virginia. At Virginia institutions of higher education, nearly 1 in 10 students are [suffering from food insecurity](#). College students face [unique barriers in accessing meals](#); many are balancing schoolwork with parenting, while others are working full or part time. In addition, college students, as well as those pursuing professional certifications or licensing, face unique barriers in meeting eligibility for SNAP. Virginia's General Assembly recognized its collective responsibility to create policy that simultaneously ensures no student goes hungry and that students can focus on learning. The Assembly [passed legislation](#) to create employment and training exemptions for this demographic so that they can receive SNAP benefits and thus reduce food insecurity.

These are just a few examples of the power of creating opportunities to better collaborate across sectors, something that a White House-hosted conference would facilitate.

We have seen the potential of rallying resources around ensuring that children have access to nutritious food. And, we know there is much more to do. As we look forward, our students are depending on us. There has never been a more pressing time to double down on giving our students all the supports they need – thoughtfully, comprehensively, and without barriers. We must not think about food and meals as separate entities from education, but think of them as integral to one another and entwined.

Thank you to the caucus for recognizing the importance of and potential for addressing hunger in America. Without addressing child nutrition, we cannot close the educational opportunity gaps that disproportionately affect students of color and students from low-income families. We look forward to being partners in this effort.

Written Testimony of Chef Ann Cooper
Founder and President of the Board, [Chef Ann Foundation](#)
Founding Member, [ScratchWorks](#)
Former School Food Service Director

House of Representatives, Committee on Rules
“Ending Hunger in America: The Role of Schools in Ending Hunger and Improving Nutrition”
Roundtable
Wednesday, September 15, 2021

Chairman McGovern, Ranking Member Cole, and distinguished Members of the Committee,

My name is Ann Cooper, and I am the Founder and President of the Board of the Chef Ann Foundation as well as a founding member of the ScratchWorks Collective and a former School Food Service Director for over two decades.

I am grateful for the opportunity to address this committee regarding childhood nutrition and the benefits of scratch cooking in school meal programs. Our country, our planet, our food system, and our children are facing many challenges today. We have an opportunity to address some of these challenges through our national school food programs.

I grew up in Hingham, MA and became a well-known chef in my early career, focused on creating culinary art in high-end restaurants. Through my work in sustainable food and agriculture, I was introduced to Alice Waters who helped me understand that our nation's school food system was broken and adding to our challenges around childhood wellness, planetary health, academic achievement, and health equity. As a young—and somewhat naive—chef, I was drawn to the challenge of school food and blazed a new career path in the early 2000's as the Food Service Director for Berkeley Unified School District in California.

I was shocked to learn of the reliance on packaged, processed foods there and felt that I had found my life's mission in helping to create the food that would shape the life-long nutritional habits of children. With the experience I had built from opening and running kitchens in restaurants, hotels, and cruise ships as well as overseeing catering events of 20,000 people, I worked with my school food team to create a new paradigm, relying on my culinary, procurement, labor training, and fiscal modeling skills. Dubbed “The Renegade Lunch Lady” by the media for serving fresh food, cooked from scratch in schools, I began to understand that the road I was embarking on would be a long one.

Nearly 20 years later, one of the things that makes me smile is meeting, hearing stories from and reading about all of the “Renegade” School Food Professionals in their communities across our country striving—under seriously adverse conditions—to serve kids fresh, scratch-cooked meals made with whole ingredients.

The Healthy Hunger Free Kids Act of 2010 was our nation's most monumental legislation passed to support healthier school meals. Over the last decade, even as it got “watered-down,” that act has ensured that our kids have access to more fresh fruits, veggies, and whole grains, as well as less sodium and saturated fat. It is now time to build on those 10 years of success.

While we have been able to increase the nutritional guidelines through HHFK, we have not been as successful moving the school food system away from ultra-processed foods. Large food manufacturers have simply reengineered their packaged, processed foods to meet the new guidelines. Chairman McGovern, you yourself have said that “we shouldn’t have to wait for a once-in-a-century pandemic to think boldly about addressing fundamental injustices in our society.” Myself and our school food partners across the country couldn’t agree more. Because of the pandemic, some people learned for the first time how important school meals are and how reliant families are on them. We need to make sure that we are not just addressing hunger relief through calorie relief, but that through a health equity lense we provide nutrition relief.

Over two-thirds—or 67%—of the calories consumed by children and adolescents in 2018 came from ultra-processed foods, a jump from 61% in 1999, according to a [peer-reviewed study published in the medical journal JAMA](#). “A diet high in ultra-processed foods may negatively influence children's dietary quality and contribute to adverse health outcomes in the long term,” says the study's author, [Fang Zhang](#), a nutrition and cancer epidemiologist at Tufts University's Friedman School of Nutrition Science and Policy. School food cannot keep contributing to kid’s increased consumption of ultra-processed foods; it is simply not okay.

By supporting scratch cooking in schools, we are putting the power of procurement back into the hands of school food operators. I have worked with school districts to help them take their ultra-processed chicken nuggets, mac and cheese, and pizza off the menu and replace them with scratch-cooked items. A processed chicken nugget has up to 30 ingredients in it, many of which you can’t even pronounce. When you replace that with oven-fried chicken that has only 8 ingredients in it, you are able to affect the health of the meal, procure (some) higher quality, more sustainable ingredients, and build out your workforce that has more value and skill. I don’t want to paint an unrealistic picture. Districts still only have about \$1.30 to spend per lunch on the food; the reimbursement rate needs to be increased. However, even with that small amount of money, districts can start making better procurement decisions and create impact in their local economies when they scratch cook. In fact, a 2017 study from the National Farm to School Network found that every dollar invested in farm to school stimulates an additional \$0.60-\$2.16 of local economic activity. In other words, scratch cooking can ultimately support small and medium sized farms and help to stabilize our country’s farmers.

Over 30 million kids eat school lunch in our country every day, and that number is growing with increased need. Approximately two-thirds of those children qualify for “Free & Reduced” meals, which means they are living in households with total income within 180% of the poverty line; many are children of color. Our country spends almost \$19 billion annually on school [breakfast](#) and [lunch](#), so it’s time that we made sure those dollars are working hard for our children and for

our planet. It should be a birthright in this country, one of the richest on the planet, that every child has access to healthy food every day and that no child is ever hungry!

Prepared for the U.S. House of Representatives Committee on Ending Hunger in America: The Role of Schools in Ending Hunger and Improving Nutrition

September 15, 2021

Chairman McGovern, Ranking Member Cole, and distinguished members of the Committee, thank you for your commitment to highlighting and taking bold action to end hunger in America – especially within public schools. The opportunity to speak today is a bright sign of progress, hope for a better tomorrow, and truly an honor.

ABOUT ME

My name is Stephen Ritz, I'm the Founder of Green Bronx Machine, Senior Fellow of Social Innovation at Babson College, Director of Health, Wellness and Innovation for ESOL Education and lifelong teacher / administrator from the South Bronx since 1984. I am a Top Ten Finalist in the Global Teacher Prize, 2021 NYC Food Policy Center COVID Food Hero, 2021 Controlled Environmental Agriculture Disruptor Award Winner, 2019 NYC WellCare Champion, 2018 Emmy Award Winner, 2017 Global Food Educator, amongst other accolades. Our work has been featured in almost every major news outlet, highlighted at the UN and around the world, and is the subject of a soon to be released, full-feature, award-winning national documentary. I am a best-selling author and routinely asked to consult nationally and globally on issues related to education, teacher training, health, wellness, urban farming, project-based learning, food education, and workforce development.

I am also a former athlete, now lifelong educator, and community advocate – who swelled to over 300+ pounds eating the food that was in my neighborhood – becoming diabetic, chirotic liver disordered, coronary disordered and diseased – and reversed all by eating the food that I grow with children in-school, indoors, while transforming school performance and student behavior in my school in the poorest Congressional District in America. Today, we have scaled to 500 schools across America and growing inclusive of successful programs at colleges, universities, and programming with Native Americans, special needs students, foster care youth, and disconnected youth. I have gone from needing multiple medications daily, to a plant forward diet with ZERO medication. Today, I face and interact with a new generation of students who have never seen me obese or consume a sugar sweetened beverage. Bears noting that I am full-time volunteer here in the Bronx determined to grow something greater.

I believe that the greatest lever this nation has for equity and ending poverty are successful public schools. Communities like mine across our great nation are not only under-resourced, but we are also over-extracted. In communities like mine, children are the canaries, and our schools are the coal mines. Every societal issue manifests in public schools – either overtly or covertly – hunger and malnutrition are real. Simply put, my experience has led me to one overwhelming conclusion: **THE MOST IMPORTANT SCHOOL SUPPLY IN THE WORLD IS FOOD. CHILDREN CAN'T LEARN IF THEY ARE HUNGRY, MALNOURISHED OR HOPPED UP / DOWN BY SUGAR OR EMPTY CALORIES. CHILDREN WILL NEVER BE WELL READ IF THEY ARE NOT WELL FED. FOOD CONSUMED OR FOOD ACCESS ISSUES ARE ALWAYS AT THE CORE OF ALMOST ANY**

BEHAVIORAL OR SELF ESTEEM ISSUE IN SCHOOLS. TO ENSURE OPTIMAL LEARNING, ALL CHILDREN NEED ACCESS TO HEALTHY FOOD IN SCHOOL FOR 2.5 MEALS DAILY.

WHAT WE DO

Green Bronx Machine is a locally birthed and grown organization from the South Bronx that specializes in the art and science of growing vegetables indoors aligned to daily instruction in all content and subject areas. Our children grow vegetables all year long – indoors using 90% less water and space – in route to outstanding academic performance and transformational health outcomes. I like to say: “We grow vegetables, our vegetables grow students, our students grow schools, and our schools grow happy, healthy, resilient communities.” We grow high performing schools, and happy, healthy children who love eating fresh fruits and vegetables. Green Bronx Machine designed the first edible classroom in the world which routinely grew enough vegetables - indoors - to feed 450 students a healthy, vegan meal in school. Today we thrive across 20 states and six nations. Dollar for dollar, we are one of the most effective education and health / wellness programs in the nation. Our disruptive and inexpensive, non-profit program – costing only several thousand dollars complete – has succeeded in schools and communities where millions of dollars spent have not.

Our program – in the least healthy county in all of NYS, won the first-ever NYC Strategic Alliance for Health Citywide Award of Excellence and is named a Platinum Wellness Program by NYC Department of Education, Top Ten Health and Wellness Program in America by the Harkin Institute, Top 100 Educational Innovation in the World – three years in a row – by HundrEd.org, Top 100 Global Showcase School by World Education Week. During COVID, our response was cited as international exemplar – featured on CNN. Green Bronx Machine is regarded as an exemplar program by Whole Kids Foundation, Newman’s Own Foundation, Sodexo Stop Hunger Foundation, American Heart Association, Steven and Alexandra Cohen Foundation and others. We are one of the nation’s preeminent School Garden to School Café programs. Be it local or distant, our teacher/classroom/student-centric program is proven effective. In partnership with Jonathan Toews Foundation and Chicago Blackhawks, we have transformed academic performance and behavioral outcomes for 60 school across Chicagoland in partnership with Chicago Public Schools resulting in Jonathan Toews being named Chicagoan of the Year.

At the heart of our work is our award-winning, nationally, and internationally acclaimed curriculum – based on two years of research, beta-testing, and data analysis with over 30,000 trial students. Designed to be highly disruptive, it is offered with a lifetime site license to entire schools and all the faculty, no tiered subscriptions, no annual fees, with complete data management and unlimited professional development. It is available for the price of a teacher textbook. We use safe, teacher/child-friendly, indoor academic learning gardens as the focal point for all learning and activities; going from a box to a garden that can feed a class,

assembled and fully functional in under 40 minutes, and in under 15 minutes if you choose to watch the video and read the instructions. In over 500 schools, we have had 100% teacher satisfaction and our primary clients are school principals and district administrators – looking to provide a whole school, project-based learning program rooted in hands-on learning. That we grow copious amounts of food – indoors and all year round – is also important to them. Today, more than 7,500 schools in America are utilizing the technology we brought to the classroom.

Our schools have consistently moved from under-performing to outperforming their peer equivalents as evidenced by School Quality Reviews, test scores, teacher satisfaction, attendances rates and community engagement. Case in point, our school here at Community School 55, once in danger of being closed for poor performance, now outperforms citywide and statewide benchmarks in every performance indicator. This happened in under three years. Our children LOVE coming to school. These results are typical across the nation. Our curriculum is now used to train teachers in all subject and content areas by the State University of NY College at Potsdam where we also have a commercial greenhouse program which provides fresh and healthy food for the campus and community along with jobs. We have had highly successful pilot programs with Native Americans – from elementary school to college and beyond in St. Lawrence County – the second least healthy county in NYS – the “rural Bronx” of the great North Country where the nearest grocery store is Dollar General.

Our students from public housing, and 99% under federal poverty thresholds – have presented and built farms at the Obama White House three times: Champions of Change, State of STEM, South by South Lawn, have graced the stage to standing ovations at TED and WOBI. Here in NYC, they have won science fairs, STEM contests and the hearts of our local elected officials – they also register folks to vote and become engaged citizen advocates. In a community with limited means and access to either healthy OR fresh food, 130,000+ pounds of locally grown vegetables later, our favorite crop is organically grown citizens, children who are growing and eating their way to good health and envisioning a better brighter world.

Our model is inclusive, flexible and highly accessible; it has evolved from working with over-age, under-credited youth, foster care students, adjudicated youth and special needs students to a whole school, K-12 model. In each case, we have had spectacular success. Green Bronx Machine has built the first completely ADA accessible commercial farm and training kitchen for children of determination / unique learners / limited mobility in the nation. In partnership with Stepping Stones Inc., a residential treatment facility, we have visioned and built the first foster-care children run, commercial farm in America – in Appalachia – complete with tiny homes for the graduates to live in – our model is based on production and creation rather than extraction and consumption. The site is becoming the first eco-village, tourist destination, and training facility in West Virginia. Using the lens of food production, community development, health,

and wellness, we connect education to opportunities. In a community with some of the highest unemployment and chronic under-employment, we have partnered towards 2,200 local jobs.

Our children go on to colleges across the nation and careers at places like Gotham Greens, Whole Foods, NYC Government, Department of Education, NYC Department of Parks, Ernst and Young. Our graduates become essential workers, health care providers, service providers, the backbones of goods, services, and infrastructure that run our cities and our nation. They return to our community, happier, healthier, employed and as home-owners, entrepreneurs, advocates, and taxpayers.

Closer to home, in partnership with Memorial Sloan Kettering Cancer Center – our elementary students grow 30 bags of prescriptive leafy greens and highly nutritious micro-greens every week for local seniors living in public housing who are both food insecure and recovering from cancer. Not only are they learning that food is medicine, but they are helping to heal the heart of our community who return to us as mentors, reading partners and volunteers.

During COVID school closure, from our very classroom, on the fourth floor of a 110-year-old, walk-up building, in the heart of public housing, with nothing more than a cell phone, GBM orchestrated the access and delivery of over 100,000 pounds of food, rescued over 10,000 pounds of food from landfill, grew over 5,000 pounds of vegetables in the Bronx, helped feed 2,300 people daily, and delivered groceries door to door to 55 of the most vulnerable families in our neighborhood and 30 seniors. We provided over 300 devices, delivered over 200 lessons, offered daily online instruction to students, professional development for teachers, launched Zoom cooking programs – with ingredients delivered in advance – and launched an open-access public television show in partnership with PBS – Let’s Learn With Mister Ritz – 2M views in NYC.

Bears nothing that our staff consists of one full time employee, two part-time consultants, volunteers, local residents and children, an amazing Board of Directors, and me. We are the folks we are waiting for!

WHAT WE HAVE SEEN

- Children are getting sicker and fatter.
- Onset of puberty is happening at an earlier and earlier age – often for girls as early as second grade in certain communities – particularly where is a glut of fast-food, processed food, meat and dairy focused diet.
- Children are increasingly disconnected from real food. Instead, they are obsessed with the “celebritization” of food, “official products of” and packaging.

- Marketing of fast food, cheap food, highly processed food is increasingly aimed at children, in particular at low-income and marginalized communities.
- Fast food franchises are experiencing double digit growth in low status / low-income communities – often displacing local / small businesses and driving out whole food / good food / fair food competition and competitors. Their ability to pay high rent offset by low wages is devastating local economies and farmers as well.
- COVID has created epic food-insecurity as well as obesity problems.
- Obesity is often the face of hunger.
- Cheap, abundant, and empty calories are everywhere – they are not good for people or the planet and are unfair to farmers.
- Many of our children consume the bulk of their nutritionally dense calories in school.
- Children love communal meals, particularly pre-elementary school children and elementary school children – they enjoy eating together. This time can clearly form good habits and be educational.
- Peer pressure matters
- Let me reiterate, **COVID HAS CREATED EPIC FOOD-INSECURITY AND DIET RELATED ISSUES. SCHOOLS CAN CHANGE THAT OVERNIGHT.**

WHAT WE HAVE LEARNED

- According to the CDC, the best way to naturally build your immunity is via the consumption of fresh fruits and vegetables.
- Children who are exposed to nature, the natural world, soil, and microorganisms develop healthier immune systems and have better attendance in school.
- According to USDA, children with a salad bar in school eat 43% more fruits and vegetables.
- At our schools, we have had 93% success rate using USDA Fresh Fruit and Vegetable Program to replaced processed food as snacks – and we have seen a 54% transfer rate to families as well. Little one’s love citrus, bananas, apples, hummus, raisins, grapes, bananas, carrots. Salad parties work. This is good for children, farmers, and the planet.
- Banning chocolate and whole milk works – children quickly move on from chocolate milk to water – with increased consumption of fruits, veg, and protein. When chocolate milk is removed from school cafeterias, food waste goes down.
- 94% of elementary school children exposed to our programming “like” or “love” growing vegetables indoors in school.
- Children who grow vegetables understand there is nothing wrong with imperfect food.
- Children who grow kale, eat kale!

- Children who grow vegetables, encourage their parents and grandparents to buy them more frequently – this can be further encouraged via incentives such as “Health Bucks” which also support local farmers and markets – win-win-win.
- Nutrition based education, garden education and culinary skills absolutely serve as the basis, critical lens of entry, and facilitators of major academic skill set acquisition – plus children love connecting with nature, animals, plants, and cooking / culinary experiences. They start children off on a hockey-stick trajectory of healthy behaviors.
- Indoor agriculture, controlled environment agriculture, fresh casual food, good food / gourmet food, and hospitality represent some of the biggest growth sectors in our economy, they are a conduit to living wage opportunities, combatting climate change, and providing people with highly nutritious food with the smallest footprint – all win-win-win. It is essential to cultivate this awareness as early as possible.
- We have generated market demand and viable business opportunities within our community – where there was no market / business model prior – simply by exposing children and families to healthy fresh food. This is real growth and local opportunity.

THIRD PARTY VALIDATED DATA BEHAVIORAL RESULTS – 30,000 trial students

- 96% of students now know eating fruits and vegetables is important
- 87% of students now know about growing food
- 76% of students know how to make something healthy to eat
- 75% of students have tried new foods
- 66% of students report eating better
- 58% of students are now eating 3-5 servings of fruit and veggies daily
- 54% of students talk to their parents about eating healthy at home.

STUDENT DATA IMPLEMENTATION – 50,000 students

- 94% of all students want to repeat the program
- 86% of all students can now read and understand a nutrition label and read them regularly, up from 13%
- 72% of students can now identify sufficient number of appropriate nutrients found in food, up from 6%
- 75% of all students now choose to eat fresh fruits and vegetables daily, up from 37%
- 66% of all students now understand the relationship between the consumption of fresh fruits and vegetables and obesity, diabetes, and heart disease, up from 48%
- 82% of all students now report talking about healthy eating habits with their families, up from 29%.

TEACHER SUMMATIVE FEEDBACK

- 100% report the program exceeded their expectations
- 100% would recommend the program and curriculum to their colleagues
- 100% believe their students changed their eating habits because of their participation in the program
- 100% claim they believe that the indoor gardening experience had a positive impact on their students and families.

ADDITIONAL OBSERVATIONS VIA TEACHERS

- Increased empowerment of students
- Increased excitement around science
- Science became favorite subject
- Increased interest in science as a career
- Increased excitement to be on a team
- Children bonded with their plants and consistently evidenced more empathetic behaviors toward other students
- Increased enjoyment of hands-on activities and project-based learning
- Behavioral incidents in classes with indoor gardens decreased from years prior without
- Children worked hard to maintain the gardens – there was genuine involvement
- Often the students that became the most involved in the program were students that teacher thought would be the least likely to be
- Particularly noteworthy were results with disconnected youth, special needs students in all areas of academic and social-emotional development, responsibility, and workforce readiness.

WHAT WE NEED

It is time to get what I call CRAP – Calorie Rich and Processed and MESS – Manufactured Edible Synthetic Substances – out of schools. When you look at the data from programs like ours, Whole Kids Foundation, and others, it becomes increasingly obvious that school-based programs work - BOTH academically and nutritionally / behaviorally. I always say, you can't go from seed to harvest without cultivation in the middle. This work is about cultivation. This work is about exposure. This work is about access. Children need to see it and experience it, to aspire to it. Once they grasp it, they have it. Ensuring that good food and healthy food is on every child's plate is tantamount to me and cultivating that palate – at the youngest age possible – is the express ramp to the highway of health and achievement for our children. Young children who grow food in school and bring it home to their families, consistently consume that food with their families, and seek it out.

Every school needs an indoor academic learning garden and a salad bar. Every school needs to serve fresh fruits and vegetables along with whole food products as part of snack instead of processed, single serve items. Schools need to start teaching nutrition and scratch cooking at an early age as part of the comprehensive curriculum. Mandate that all schools provide free, only healthy food options for 2.5 meals per day. Green Bronx Machine has pioneered the use of our GBM Mobile Classroom Kitchen. This is a complete, classroom-ready, mobile food truck fully equipped with cooking, washing, refrigeration, serving components, with a television broadcast option. 100% portable, lightweight, it is on wheels – can travel classroom to classroom - and is Department of Education approved. Food education programs and food pantries across the nation use it for education and teaching outreach. It can be used same day it arrives – zero assembly and construction costs, no building permits. Self-care beats healthcare!

In communities like mine where there are over 30 bodegas / convenience / bullet-proof stores per one “supermarket,” businesses should be incentivized to provide healthy options at lower prices, even if it requires subsidies. The health of our children, small farmers, and our environment are worth it. Zoning laws need to favor fresh food and healthy food distribution access rather than fast food / junk food proliferation. The amount of information we have access to in real time now is staggering. We need to learn to maximize access to information and benefits in seamless ways for all. Imagine schools as the epicenter – hubs – one stop shops. School facilities should be opened longer with access to classrooms, kitchens, dining spaces and food distribution.

Post COVID, the amount of retail ready space for pop up shops, small retail, fresh food, farmers markets, add value products – complete with refrigeration and production kitchens has never been greater or more community ready – we can create blended communities and hyper-local, hyper-connected economies.

Our work is cultivating the next generation of children who want to eat healthy, perform well in school, understand that they are part of a living breathing ecosystem – and these approaches can transfer to any community, anywhere! Along the way, we grow the next generation of social, environmental, food justice, and sustainability champions / equity warriors. Our [Green Bronx Machine Impact Report](#) captures our impact across many silos and serves as a template for what is possible: greenbronxmachine.org/2020-impact-report/. Everything we do is designed for scale and replication.

Simply put, if I could convince every school to teach children how to grow their own food, cook their own food, consume less crap, and care about themselves and the planet, we'd be living in a very different, far less complicated, much healthier world. Green Bronx Machine is here to help. We are not asking for a handout; we are asking for a handshake. Walk with me, work with me. Our experience has taught us we have everything to gain and nothing to lose.

MY RECOMMENDATIONS

Academic Programs – Every school needs an indoor, academic learning garden aligned with whole school curriculum. Green Bronx Machine Classroom Curriculum is a prime example. Realize this, when children learn to grow and eat their own food, it inherently moves them away from the perfect food model. It also teaches children to be producers, not just bottom end consumers. Across the nation, children who grow food come to respect the planet and resources at an earlier age with benefit for all – the use less water in all their activities, they waste less food, become concerned with environmental and social justice issues, engage in student government and advocacy. The Community School Model, pioneered here by NYC Department of Education is a perfect model – embedding local organizations into local schools. I could not be more excited about NYC's next Mayor, Eric Adams, and remain forever grateful to NYS Commissioner of Education and President of the State University of NY – Dr. Betty Rosa, NYC Schools Chancellor Meisha Ross Porter, NYS Senator Gustavo Rivera, Bronx Borough President Ruben Diaz Jr. and NYC Councilmember Vanessa Gibson – they have put the health of all our children front and center. They understand the obstacles our children face and the role good food plays in schools and in our communities.

Scratch cooking / revamping meals in schools – Reduce the amount of processed food / heat and serve options in public schools and replace with scratch cook / whole food options. Every school needs a salad bar, School Garden to School Café Program, and every school should have the USDA's FFV Program – this would help students and local farmers as well. Eliminating sugar sweetened beverages and whole milk, adding water fountains, water jets, fruit infused water. Make the best choice the easiest choice in schools. Have lunch peer ambassadors. Children

listen to peers – let’s make people and planet healthy eating cool and user friendly. Make the healthiest choice the first choice. Instead of Meatless Mondays, let’s work towards meat only on Mondays with people and planet friendlier options instead. Children want to save the planet. Research indicates when the healthiest choice is also the easiest choice, people willingly opt in. We only need look at the work of Michiel Bakker and Linda Femling at Google to understand that – they also know a thing or two about scaling.

Technology – Expanding the use of Health Bucks / SNAP / EBT is critical. Kudos to the P-EBT Program. Imagine creating applications on phones that could alert people to benefit-eligible products and coupons or local food hubs at schools where families could pick up food, access benefits, learn to cook, store and prepare good / healthy food. Further, using technology to look at approaching expiration dates, sourcing left over foods, food waste, local logistics and availabilities puts unprecedented opportunities right at our fingertips.

Zoning for School Safety – We need to create proactive zoning laws that keep our schools and immediate school communities sacred. Stores proximate to schools and public housing should be mandated (or incentivized) to have a certain percentage of fresh and local food available to qualify for the redemption privilege. Stores within proximate school zones that are predominately CRAP, MESS, soda, chips, candy, alcohol, tobacco should not be allowed to be redemption sites. I’m not saying close them, I’m saying incentivize folks to go to places that provide better options. That said, stores with seven-foot store fronts and six-foot “hookah or smoke products” in the window should not be allowed to be access points for SNAP / EBT redemption. Our children need not shop there or be exposed to that element so close to school.

We need to have caps on the proliferation of fast-food chains proximate to immediate school vicinities. Post COVID with so much business loss, we have unprecedented and unique opportunities to look at developing and reinventing blended communities, and walkable communities, in ways we never imagined, particularly proximate to schools. We can convert empty restaurants, commercial, and retail space to pop up shops, kitchen incubation sites, nonprofit sites, reduce school crowding and host local farmers markets at reduced rents. We know that dollars spent locally – and with local people – circulate and remain local. Further, we need to eliminate the tax incentives that enable speculative landlords to hold property at exorbitant rents and take the tax deduction. We should fine speculative landlords proximate to schools who don’t actively rent property at fair market rates and / or incentivize local businesses to develop instead. We must respect and build sacred spaces proximate to our schools in support of education, health, wellness, and community nutrition.

The Green New Deal for Public Schools – inviting and facilitating students to imagine a society based on principles of ecology and social equality. It is critical for all to understand that brutal

inequality affects those who are least responsible for it. This happens in classrooms. Schools have a critical role to play in creating new realities and alternatives to the problems we are facing daily. Understanding food and health is critical. Let me be clear, food justice is racial justice. Who has access to what, where, when, how, and at what price, determines everything. I support HR 109 and that former school principal, now Congressman Jamaal Bowman, championing HR 109, speaks to hero educators / activists / equity warriors / parents and the challenge before us. Let us all come together to support him, HR 109, and our children.

CONCLUSION

I thank this committee for its leadership, open-mindedness and willingness to address our nation's problems and for hearing me today. As a nation, we absolutely have the ability and resources to end hunger and malnutrition today, the question is: Do we have the collective appetite? Many people remain rich and well fed off the dysfunction our food system and failing public schools have created. It is time for decisive leadership and bipartisan commitment. We need not lose one more child or generation to poverty, dis-ease, or disease. This is the battle cry that can unite all of us a nation. **No child should go to bed hungry or malnourished in America, EVER!** Access to health food should be a basic human right and it amplifies impact when it happens in schools. Children will never be well read, if they are not well fed. Fueling bodies fuels minds, nourishing bodies nourishes minds. Children must be fueled for optimal performance.

I have spent my collective career working with and advocating for children who are born into situations that most people would not want to be caught dead in. I fight for children whose monsters are real, who often don't get dinner and never get dessert. I fight for children who don't have rooms to clean up, have never seen a dentist, often go to bed hungry, cry themselves to sleep and aren't spoiled by anybody or anything. It all starts with food and public education. This is the work we must do. Remarkably, we have the resources and capacity to solve this problem today. Do we have the collective appetite? Are we ready to do the work? How can we continue to afford not to?

The eyes of the future are looking back at us, they are demanding we get this right. We have the ability and capacity to do so today. Don't waste me, don't waste us, don't waste this moment – let's make epic happen. If not us, who? If not now, when? I am always available for service. I remain a call, email, text message or classroom visit away. Thank you for your time.

Manzo Student Kyesha Villa distributes school grown produce at Manzo Market

Manzo School Garden Origins

Manzo Elementary School is a Title 1 neighborhood school in the Tucson Unified School District (TUSD), located in the Barrio Hollywood neighborhood of Tucson. [The Manzo School Garden Program](#) started in 2006 as a facet of the school counseling program to better respond to students in crisis and connect with parents of students who struggle with attendance, behavior, and academic achievement. At that time Manzo was under-enrolled by over 100 students and was underperforming academically based on state standardized testing. Standard-practice interventions such as in-the-office crisis response counseling, unannounced home visits, and cold-calling parents were not working.

Fall 2006 Manzo Student Council organized a neighborhood cleanup on a vacant lot across the school which soon became the Manzo counseling office. When students were in crisis they would be taken across the street with rakes, watering cans, and shovels. Ongoing care for the space greased the wheels for meaningful conversation and connections with the natural world. Compared with conventional school counseling in the office, counseling in the garden elevated self-awareness and self-management, and responsible decision making. Through conversations with students it became apparent family members were steeped in trade skills and there was a deep neighborhood culinary and food production heritage. Parents who were once

called regarding student behavior and poor attendance were called to share their expertise in the building and maintenance of gardens. Parents who were once difficult to reach were on campus weekends and after hours, and began coming to school early and staying late. Students who were labeled as difficult took leadership roles garden and were proud to show off parent contributions.

[Over a 6-year period](#) multiple gardens were built across campus and Manzo was producing upwards of 1000 pounds of produce per school year. Manzo began distributing produce at parent pickup and in 2014 was certified by the AZ Dept. of Health Services to use student grown produce in the cafeteria. Today Manzo hosts a Food Literacy Lab which serves a community culinary teaching space, and an [agrivoltaics](#) research garden where students grow produce and conduct research under a photovoltaic overstory. The impacts of the program are broad and deep, breaching artificial silo doors. The Manzo school gardens have transformed school climate and culture by boosting student self-esteem and self-efficacy, supporting academic achievement, informing food choices, and improving food access.

As the Manzo program grew, University of Arizona interns became an integral part of the maintenance and operations of the Manzo gardens. In 2014, a formal arrangement between the University of Arizona and TUSD was forged through a joint-funded liaison who supports school gardens across TUSD and the University of Arizona Community and School Garden Program (CSGP). The liaison has access to institutional support systems in both organizations and navigates both systems as an insider. On the university side, access to financial systems and fundraising is a workaround to the draconian finance and procurement regulations placed on public schools. On the school district side, keys and badges provide access to school buildings

and garden sites. Working for the district also allows for easier collaboration with the continuing education department for teacher professional development trainings and creates a more seamless working relationship with district facilities departments integral to the installation and maintenance of gardens on district property.

University of Arizona Community and School Garden Program (CSGP)

The heartbeat of CSGP is a university course (the Community and School Garden Workshop or CSGW) that enrolls over 50-60 undergrad and graduate students each semester and is cross-listed in nine UA units from American Indian Studies and Geography to Nutrition, Plant Science, and Teaching Learning and Sociocultural Studies. The course trains these students to extend their own classroom learning through internship placements in 24 Title I schools with gardens in Tucson. The fundamental ethos of the class is that schools are foundational to the greater good and school gardens expand that ethos into equity, justice, and healthy food access. This hands-on course facilitates a form of learning by doing where genuine listening, group decision-making and collaborative problem-solving are practiced and a commitment to furthering the well-being of under-resourced people introduces them to gardens not just as sites of food production but also of community empowerment. University interns provide stability to fragile school garden programs that are routinely hobbled by budget cuts, teacher and administrative turnover, and now COVID-19 school closures.

In creating a larger program around the course, we have been able to further extend outreach to Title I schools that are too distant from campus to host UA interns. And so, through fundraising efforts, the CSGP team also includes three program coordinators who help maintain gardens and train teachers to use the gardens as experiential learning sites through standards-based curriculum that has been rewritten to reflect local natural history, ecology and culture. With both the course and the larger program, we partner with nine community organizations ranging from

the Pima County Department of Health Services and Community Food Bank of Southern Arizona, to Flowers and Bullets Collective—a grass roots organization dedicated to sustainability, art and food production—to the National Park Service, and Native Seed/SEARCH. Another very important component of the CSGP is the Green Academy, a monthly professional development series that trains over 60 K-12 educators from across the region each month in garden-based teaching. CSGP also hosts annual multi-day teacher conferences in garden-based education each summer. Finally, we have established a pre-K-to-UA pipeline through donor support for Title 1 high school students to take the university school garden course for university credit with the aim that they will see themselves in higher education. As a recently-designated Hispanic Serving Institution, the UA is a place that welcomes them and will support their goals to address, as professionals, the issues critical to their communities' success.

Replicable Program Components:

- Joint-funded program liaison: .5 Postsecondary, .5 public school district
- Postsecondary community engagement course which:
 - Trains postsecondary interns
 - Places and supports interns within a network of school gardens
- Ongoing professional development (PD) trainings for teachers
 - PDs occur during paid district time
 - PD hours count towards continuing education and recertification requirements
- Mechanisms for channeling community knowledge and expertise into school gardens
 - Utilize parent trade skills to build and maintain gardens
 - Capture [traditional and family knowledge](#) around growing and preparing food

-
- Utilize school gardens as a conduit for local knowledge and skill to enter schools and flow back into student homes
- Program for encouraging higher education among first generation students
- Student-to-student connections between Title 1 schools and UA
- Bringing philanthropy into the school district

Synthesis

The Manzo school garden program was created as a social-emotional learning tool and evolved into a food production and food systems hub, providing nutrition education and food access in a community overrepresented in both food scarcity and food related illness. The evolution was a natural progression and over time it has become clear nutrition and social-emotional wellness are interconnected: the way we feel impacts the way we eat and the way we eat impacts the way we feel.

Beyond therapeutic benefits and improved food access, school gardens also can provide context for classroom learning, boost achievement and serve as a conduit for community knowledge to enter school campuses. The UA Community and School Garden Program sits at the nexus of K12 and postsecondary education; gardens provide K12 enrichment and serve as a community engagement experience for UA students. The multifaceted benefits of school gardens are synergistic and defy the artificial silos we use to categorize services and outcomes. The key to pushing this forward is identifying synergies and asking the question: how can my work move forward your work? Within these alignments we see institutional change.

**Testimony of Barbara Duffield, Executive Director, SchoolHouse Connection,
Before the U.S. House of Representatives Committee on Rules**

How Schools Can End Childhood Hunger and Improve Nutrition

September 15, 2021

Chairman McGovern, Ranking Member Cole, and members of the Committee. Thank you for the opportunity to discuss the role of schools in ending hunger and improving nutrition. My name is Barbara Duffield and I am the Executive Director of SchoolHouse Connection, a national non-profit organization working to overcome homelessness through education.

Public schools are positioned to see what no other entity sees: the child who hoards food before a three-day weekend; the child who falls asleep in class because she was keeping watch over her siblings all night long; the child who gets off at different bus stops each day — the child who is homeless.

Schools must be front and center in solutions to both hunger and homelessness. As universal institutions and community hubs, schools know the needs of children, youth, and families in their communities—including those who are largely out of sight.

Homelessness is a marker for so many other vulnerabilities, gaps in systems, and traumas that a child might experience -- it is so much more than a housing issue. Contributing factors include job loss and underemployment, evictions and lack of affordable housing, natural disasters, domestic violence, international violence, addiction, mental illness, low educational attainment, and generational poverty. For youth who experience homelessness on their own, abuse, neglect, abandonment, and family conflict are causal factors. Systemic racism is a profound driver of homelessness, as demonstrated by [racial disparities in the likelihood of families and youth becoming homeless](#), in the prolonged harmful consequences of homelessness, and in barriers to accessing education and services.

Homelessness is inextricably connected to hunger, and therefore hunger cannot be addressed in isolation from it. Families and youth stay hungry in order to stay housed; they eat less in order to pay rent. Once homeless, the logistics of finding food or accessing meals becomes much more challenging. Moving from place to place, lacking transportation and lacking cooking

facilities (or refrigerators, places to store food, or even can openers) are all real barriers. Shelters might not accommodate the foods, times, and ways in which infants, toddlers, and adolescents need to eat. Families and youth who stay with other people eat less, or not at all, in order not to get kicked out of where they are staying. One of our staff who experienced homelessness recalls exclusively eating one-dollar frozen meals because she was not allowed to use the kitchen to cook where she was temporarily staying, and she did not have space to store food. She did not have adequate nutrition as she tried to complete high school. Hunger also puts homeless children and youth in harm's way: children and youth who are without housing and food are [prey for human traffickers](#), who can offer them both. It should come as no surprise that high school students experiencing homelessness are nearly three times as likely to have not had breakfast each day, compared to their stably housed peers.¹

A significant impediment to solving the problem of child and youth homelessness is its invisibility: we cannot solve what we do not see. Homelessness is [equally prevalent in rural, suburban, and urban communities](#), but is largely hidden. Many communities lack shelters for families and youth, or the existing shelters are full or have reduced capacity. Families and youth often fear shelter – especially during COVID-19. For these reasons, families and youth move frequently between hidden, unstable, and sometimes unsafe situations — situations that make it hard to social distance, and impossible to stay “at home.” Of the [1.4 million children and youth identified by public schools as experiencing homelessness in the 2018-2019 school year](#), only 12% were staying in shelters when they were first identified as homeless; 76.7% were staying with others temporarily; 7% were in motels; and 4% were unsheltered. **In the areas represented by the Members on the Rules Committee alone, 61,796 children and youth experiencing homelessness were identified by schools in the 2019-20 school year (Appendix A).** In Appendix B, I've provided the numbers of students experiencing homelessness reported to the U.S. Department of Education by every school district in Rules Committee districts. These numbers do not include children too young for school, or those who were not identified as homeless, or those who were not enrolled in school. Still, you may find them eye-opening and disturbing.

When we understand *how* children and youth experience homelessness — that most of these students are not in shelters, but rather stay in hidden situations — and the reality of *how many* children and youth experience homelessness, it becomes even clearer that schools are not only the *best*, but often the *only* source of food and support. Proper nutrition, in turn, helps children focus on the education that is ultimately their lasting path to security and well-being. Indeed, [lack of a high school degree or GED is the single greatest risk factor for homelessness](#) as a young adult, making education a critical protective factor against homelessness. Yet homelessness creates barriers to school enrollment and attendance: high mobility, lack of paperwork, lack of transportation, and for youth who are on their own, the lack of a parent or guardian. And hunger makes success in school all the more difficult.

¹ Forthcoming analysis of 2019 Centers for Disease Control (CDC) Youth Risk Behavior Survey (YRBS) data, [Student Homelessness: Lessons from the Youth Risk Behavior Survey](#).

Congress has recognized these barriers and has taken important steps to remove them. Under the education subtitle of the McKinney-Vento Act, most recently reauthorized by the Every Student Succeeds Act, every local educational agency (LEA) is required to designate a homeless liaison who ensures that children and youth experiencing homelessness are identified, stabilized, provided transportation, and connected to services in the school and in the community. Under the Child Nutrition Act, children and youth who are homeless are categorically eligible for school meals; expedited processes allow school district homeless liaisons simply to notify child nutrition departments when a child is identified as homeless, in lieu of families completing applications. School, then, can be a refuge — a home for children and youth who have none of their own.

In March 2020, when the pandemic took hold in the United States, children and youth experiencing homelessness lost that home, too; they lost the most stable places in their lives. Without in-person teachers, cafeteria workers, bus drivers, enrollment staff, coaches, and others to notice potential signs of homelessness, schools faced enormous challenges identifying families and youth experiencing homelessness. Last fall, together with the University of Michigan, we conducted a national survey that showed [a 28% decrease in the numbers of children and youth identified as homeless](#), compared to the previous fall — a drop of about 420,000 students. Looking at the numbers for the school districts that are represented on this committee, there is a drop of 4.5%, with only three months of virtual learning represented in the data. As the final 2020-2021 numbers come in, we are seeing much larger decreases. These numbers are cause for great concern, because there is no evidence that homelessness actually has decreased during the pandemic; and if children and youth experiencing homelessness are not identified by schools, they may not be enrolled, supported, or fed. Even otherwise effective pandemic-related anti-hunger programs, such as Pandemic EBT, have faced [challenges reaching highly mobile children](#), including children who are homeless or in foster care.

Despite the many upheavals of the pandemic, educators and community partners have worked diligently to devise creative means to stay connected to families and youth experiencing homelessness, to arrange food, and to meet needs holistically. At the center of these efforts are school district homeless liaisons and homeless education programs that keep a laser-like focus on the basic and educational needs of children and youth experiencing homelessness, and that spearhead school-community partnerships to ensure identification and support.

- **Adams 12 Five Star Schools, Colorado.** Prior to the pandemic, Adams 12 Five Star Schools significantly improved homeless student graduation rates, while decreasing mobility and drop-out rates — the results of a comprehensive, innovative, and integrated “Whole Child Initiatives” program (see Appendix C for details). The pandemic is presenting challenges on a level not seen before: more families and youth living in cars due to exposure to COVID, difficulties maintaining connections with youth and families, and more food insecurity. With nearly ten dedicated staff, the district is tackling these challenges with a multi-faceted approach that includes wrap-around coordinators in schools, host homes for unaccompanied youth, a mentoring program, and new housing partnerships. While all of these efforts reduce hunger for students, the district is working

to ensure that families have access to fresh food, particularly for those who culturally do not eat the processed, canned, or boxed food that is typical in local food pantries.

- **In Lawton, Oklahoma**, over 700 children and youth experiencing homelessness were identified by public schools, with less than 10% in shelter. In addition to regular breakfast and lunch, the district offers an option for virtual students to pick up 5 days of breakfast and lunch, by appointment, at any school cafeteria in the district. The district also provides meal bus routes to virtual students. Still, lack of transportation creates barriers to both of these options for students experiencing homelessness who cannot get to a school or a bus stop for food. These are barriers that the school district homeless liaison can address only once she learns about individual students or families experiencing them — such as when a mother who was not close to a bus route walked two miles to pick up food for her four children. The homeless liaison also arranges for school safety officers to deliver meals to the families experiencing homelessness that she identifies, and places mentors at secondary schools who keep snacks and drinks in their offices for youth.
- **In Frederick County, Maryland**, Frederick County Public Schools recognized that strong relationships are a key factor in keeping students connected to school, even when their housing situation changes frequently. This past summer, the McKinney-Vento program created a system for school staff to provide regular check-ins for all students identified as McKinney-Vento eligible to ensure they remained connected to school and had their needs met. Frederick County created a Food Distribution Food App that has helped schools, students and families: when an address is entered, all the food drops are listed, as well as any necessary paperwork. The district will be using the American Rescue Plan funds to hire a resource navigator who will have two directives: 1) to work within schools and communities to identify young people who are experiencing homelessness and 2) to connect students/families with community resources.
- **In Comanche Public Schools, Oklahoma**, approximately 18% of the student population is identified as homeless. The pandemic and the decrease in oil production increased the number of families in crisis: more children who are hungry and who don't have the school supplies and clothing they need. The McKinney-Vento grant helps students with food, counseling, necessities, fees, and other resources. The homeless liaison and social worker work with administrators, counselors and teachers at each school site, as well as with community partners, to make sure students experiencing homelessness receive the food resources they desperately need. The Regional Food Bank supplies the food in all school pantries. Over 60% of alternative school students are considered homeless; these and other students can “shop” for free in the food pantry and take food with them. The high school is working to become a Regional Food Bank or Oklahoma Food Pantry Site.
- **In Thompson School District, Colorado**, the pandemic has disrupted both the identification of students experiencing homelessness and food delivery, with fewer families getting connected to community food resources. The homeless liaison has begun putting food bags by the front door in some of the secondary schools, hoping that students will grab them on their way out. This year, she also has fielded many questions about food cost coverage for seconds at lunch, and has had many families reach out
